But I have forgotten to tell you of the caribou we saw on the lake when we first got there. I had told the boy that I expected to see caribou on this lake, and when we first got there and he went out to the lake to cut a hole for water, he came back and said he had seen two caribou some mile and a half up the lake. We took our guns and went out, it was cloudy and a few flakes of snow were falling. The boy's eyesight was better than mine and he said that he could see three, but I could not see anything. He pointed out where they were on the opposite side of the lake, so we went across and followed the shore on the opposite side. He then said one was going out into the lake, I could now see the game; he made a halt and the boy said that he had laid down. We followed close to the shore. After a while the caribou got up, and when he did so the boy laughed and said it was a fox, and sure enough it was; and the other two came out from the shore and started up the lake on the run. I did not laugh much at the boy, for the first sight I got of them I thought that they were caribou, and as the old saying runs, "They loomed up like a skunk in the fog."

On our cruise the next day we saw the tracks of seven moose, three at one place and two at two other places; but we did not follow any of them as I thought they were cows and smaller moose. We returned to camp that night to put in another such a night as I have described; but during the day we had had several snow squalls and the weather was getting much colder. I told the boy that we would get out of this the next morning and he was agreed to it. The wind was now having such fun with the snow on the lake that at times we could not see six rods; but one thing was in our favor, the wind was on our backs, and we trapped across the lake lively for a boy and an old man, but the boy reached camp first, his legs being the nimblest.

During the night the camp caught on fire. I, of course, awoke and I took my hands at first to throw snow on the fire, the wind still howling. I checked the fire a little and found that my fingers were freezing. I warmed them a little and then had to go to the roof of the camp to put out the fire. There was over a foot of snow on the camp, but the fire was on the inside and too high for me to reach from the ground.

The next morning we started back, as I thought I knew where there was a better site for us to camp and get a bull moose. We stopped at the lumber camp a few days to make up our sleep and look around a little. I was sure I could find moose easily enough on the same ground where my brother and I killed two last year; but I wanted a fall of snow to kill the sound of the crust. While we were waiting we followed several droves of caribou and started them without even seeing them.

On Monday of the last week of the open season we took the same kind of supplies and camp kit I have described and started for another old camp. It was a warmer camp and a better place for a fire, but the weather was very cold and there was a high wind. We took our hunting sled with us this time. We had our choice to follow an old road or go on the ice on a brook. The caribou tracks were plenty on the brook and it looked as though a drove of twenty had gone up the brook several days before, and two had gone some time during that night. Each of us had on a pair of wool mittens and buckskin mits outside, and were well bundled up, but the boy froze his cheeks and ears. When we got to camp we left our sled, etc., ate our lunch and started to look for signs of moose. We went about two and a half miles to where I expected to find them, and discovered new tracks. The weather had moderated some, but it was still cold. I told the boy that it was so cold and late in the day that we would go to camp and try the game the next morning. I told him that it was a bull all right. We started for camp and had not gone over fifty rods, the boy being some rods behind me, when I heard him shoot. I turned round and asked him what he was shooting at. He said, "I guess I have killed your moose. There was some big animal looking at you, and I fired at him, and by the way he went his shoulder was broken."

We went a short distance and found a big bull caribou, but he had shed his antlers and it was healed over where they came off, so he must have shed them in November or the first of December. We built a little fire and soon had his skin off and dressed his carcass and started for camp. I did not forget his hide, as we only had one pair of thin blankets. We collected wood for the night, boiled our oyster can full of tea, and had our bread and fried pork, but we changed the tin plate for a fry pan we found hanging in the old camp. We spread out our skin for an under blanket, and with a good hardwood fire we got along very well, but it was frosty just the same.

The next morning we started for the moose; the wind had changed and I thought I knew just where he was, and went to the place against the wind. I was afraid that we had started him the afternoon before. We wore our snowshoes, but intended to take them off as soon as we were sure that we were on his fresh track. He had been feeding for some four days on not more than two acres of ground, and we had passed within a short rifle shot of him the day before, but the wind blew so hard that he did not hear us, or, if he did, he did not scare and did not scent us. When we first struck his yard I kept to the outside, as he had criss-crossed in all directions, and I

expected the boy to keep in sight of me. I had not gone ten rods when I saw him looking at me. I brought up my rifle and pointed at his breast. It missed fire. The moose wheeled, but I was too soon for him. He got about ten rods and fell, when we came up to him lying stretched out on his side. The boy stood and looked at him a minute and then said: "I wish we had a camera; I guess our game bag is all right, if it is hard hunting." The first move now was to start a fire and get the moose on his back for skinning. Soon as we got him skinned we selected some meat for a roast or lunch. We had some salt with us, and roast moose meat we found good for hungry people. It took us quite a while to dress him and quarter him for hand-sledding out. Then we took the hide and some steak and started for camp, with the anticipation of a good supper and a warmer bed. When we were ready for bed we put the wool blankets on us and the moose hide for an outside comfortable. We slept warm, but the hide in the morning, which was flesh side up, was frozen like a rock.

The next day we tramped a trail from the brook to the moose and caribou, and hauled the caribou and two quarters of the moose. At night we thawed out our moose hide and turned it hair side up. This prevented it from freezing.

The next morning I sent the boy to Trout Brook to get a team to come in and get our game, and I went and hauled out the remainder of the moose. During the night a very large moose had passed by within a few rods of the one we had killed. I went to Trout Brook Farm that night. The boy had engaged a team, and the next morning he went back with us to follow that big moose for a while. But it was ten miles from the farm to the moose, so he did not have long to follow the game as he had to get back to the farm that night. He did not take his snowshoes and he only followed about a half mile and came back, and said it was too hard work to follow without snowshoes; but I thought he did not care to follow such an ugly looking fellow unless I was with him, and if it had not been so near close time I should have gone with him until he did kill one.

Saturday night brought us to Patten with our moose and three caribou. It was just six days from the time we had started for this moose and big caribou until we landed them in Patten, forty miles from where we killed them. I have made up my mind that I will never go into the woods in December without taking plenty of bedding and provisions on the start. I should have done so this time, but was expecting a party to follow with all necessities, but unexpected business prevented them. On this hunt I did not travel over much of a territory, but I saw the tracks of fourteen different moose, mostly cows and small moose, that I did not disturb at all; we only followed the one I killed.

I find that there are many more moose in Maine than is believed by many or the most of our people, and every means of preventing them being killed in close time should be put in operation. While I was on this hunt I heard, from what I consider a good, reliable party, of seven moose being killed last winter. I am going to investigate the matter, and if that number was killed at that place I can find them out.

LOWELL, Me.

J. DARLING.

TURKEY HUNTING IN MIDDLE GEORGIA.

LIVING at Macon, the central city of Georgia, where many sportsmen live and likewise many pot-hunters, I have found my favorite game (quail) greatly reduced in numbers. I have bagged only about 150 birds this past season. The game season for Bibb county closes March 1, in some adjoining counties April 1 and in some May 1, the last being subject to State law and the others to local county laws.

My largest bags were eighteen and nineteen, both having been made on score of two out of three shots bagged. My shooting this season has been a little better than every other shot bagged; and as we have much underbrush and covert shooting, I consider this very satisfactory.

I have been shooting 28in., 16-gauge Parker hammerless. This bore, with 36grs. E. C. powder and 1oz. No. 8 shot, is *par excellence* for quail shooting.

Now to the turkeys. A few miles below us, on the Ocmulgee River, on which Macon is situated and along which the E. T. V. & G. R. R. runs, wherever the swamp is large enough turkeys abound; and on nearly every large creek flowing into the river from the east side, for some miles up the creek and in the old fields and pine woods adjacent thereto, they range in the fall and winter in goodly numbers, though not often in large flocks. In the county below and east of this (Twiggs) there are some very successful turkey hunters, and I have several friends among them who invariably ask me to go down and take a hunt with them whenever I meet them. I took one unsuccessful hunt last fall, the rain having broken up our hunt. We hunted them then with a pointer dog, and generally are successful in that way.

W. H. F. (the very efficient sheriff of Twiggs and splendid fellow generally) is one of the most successful turkey hunters of all my acquaintances. Several years ago he killed sixty in one season, or during the year. One season, out of large number killed, he had ten successive gobblers that averaged 20lbs. gross weight. One day he killed six and could have killed more, but had as many as he wanted. Such success does not always attend the turkey hunter, as he sometimes walks or rides many weary miles and does not see even a feather. I can testify to that experience a number of times myself.

They tell a good joke on Will about killing two bronzed turkeys. He was visiting his plantation and while on the way found a fine flock, killed two, went to his plantation, had the turkeys dressed and next day carried them home. On the following day his brother dined with him, and while they ate this brother remarked that a great many people claimed that wild turkeys were not as fine eating as the domestic turkeys, but he knew that no tame turkeys could equal that delicious fowl as he then enjoyed it. Well, shortly after Mrs. W. called to see Will's good wife, and while there she informed Mrs. F. that Will had killed two of her turkeys. "Oh, no," she says, "that can't be so, Mr. F. killed two wild turkeys a few days ago." But her visitor insisted that they were her bronzed turkeys. As soon as her liege lord came home she asked him whether or not it were true, and why he had not told her. They were two miles from home. But Will has not heard the last of it yet.

W. H. F. was in the city not long ago and arranged to meet me at Adams Park station on E. T. V. & G. R. R.

I went down as agreed and not finding him there I went four miles below to take a hunt with another great turkey hunter. We went to Savage Creek that afternoon. My friend M. P. is 6ft. 6in. high and weighs 215lbs. I guess you would have smiled could you have seen us on our way to the hunting grounds. I am only 5ft. 6in. high and weigh 130lbs. He is a great hunter and is as familiar with the turkey's habits and ranges as any one I know. He has killed scores of them and has the patience necessary to kill a turkey, if any one has. In proof of this let me illustrate. The day before I went down, about 8 o'clock A. M., one of the plowmen had notified him that a turkey was gobbling on a creek at the far side of the field. He secured his gun and went at once, and though he had not eaten any breakfast, followed the turkey all day, never more than 100 or 150yds. from him, making him start and gobble, but never succeeding in calling him close enough for a shot. At sundown he heard the gobble fly up to roost and after he had gobbled a few times located his tree. After the twilight hid his approach to the tree he quickly worked his way underneath it and shot the 21-pound gobble out of it. Since I was there he has killed another, working at him till 11 o'clock before getting a shot. Don't you call that patience? When we entered the river swamp below Savage Creek we had to cross several wet places, and as P. had on rubber boots he called to me to hand him my gun, then stooping forward said, "Mount on my back." I refused, but he said, "Oh, get up," and in a few moments I was on dry land. This was repeated several times.

We failed to locate any turkeys that evening, went to Adams Park to spend the night, and at daybreak were on the turkey ground again. The birds were making the woods vocal with their sweet notes, and as the glorious king of day was approaching from the east two gobblers sounded the welcome *gobble, gobble*, that so thrills the hunter's being.

P. looks after one above the creek and I give my attention to the one below. In a short while after I begin calling I hear a shot above the creek. The one I am after is a wary old fellow and I soon learn that my chances to get him are very poor. Patiently awaiting his hoped-for coming I find him moving at right angles but getting nearer. My hope rises, but I soon realize that he is moving back toward the starting point. I leave my position and start to work around ahead of him, when to my surprise, after going a short way, I hear P.'s gun and then his call. I make my way rapidly to him and find him standing over as handsome a gobble as I have seen in a long time. His beard was over eleven inches long and he weighed seventeen pounds net. Two days later I found him as good eating as he was fine looking. Mr. P. had fired and missed a flying shot at his turkey and then killed mine after seeing I could not call it to me.

W. H. F. went down near Adams Park, but there was some misunderstanding, it seems, about our meeting. I have, since then, heard from him, and with many regrets that I wasn't there, as I learned that he killed two fine turkeys that day. I intended giving them another trial that afternoon and the next A. M., but a very heavy rain-storm forced me to, very reluctantly, abandon the hunt and take the first train home. There are a good many deer at that point and some bears. One party made a fine double near Adams Park, killing a large and smaller bear, one with each barrel of a shotgun with buckshot.

OLD SUBSCRIBER.

PATTERN AND PENETRATION AGAIN.

BERLIN, March 23.—*Editor Forest and Stream:* Mr. O. H. Hampton is in error when he assumes that if one gun will give a better pattern with nitro powder than with black, and another gun produces the opposite result, this phenomenon must either be due to the gas pressure near the muzzle of the barrel or to the bore of the latter.

There are a great many other causes, each of which may account for such a singular result. Mr. Hampton certainly deserves credit for his endeavors to solve at least one of the many questions still surrounding the behavior of shotguns, but the theory advanced by him is not in accordance with the facts as obtained by me and others who have devoted more or less time to researches in the direction pointed out by him. He may, however, take one point as pretty well settled. The most even and uniform pattern is obtained with such explosives as produce the least initial gas pressure and continue to exercise a uniform pressure in a gun barrel from the moment the powder commences to develop the gases until the shot charge has left the muzzle of the gun. As a rule the coarse-grained black powder will approach this condition the nearest, and hence it will and does give the best average pattern.

All explosives produce a higher gas pressure in and near the cartridge chamber than at the muzzle of the gun, but as a rule the black powder will distribute its pressure more evenly along the entire gun barrel than a nitro explosive.

Nitro powders generally develop the gases much too suddenly; the force of the gases is brought to bear on the shot charge almost simultaneously, and before it has reached the muzzle. The quicker the combustion of the powder takes place, the more suddenly the gases are developed, and the less the probability for a satisfactory regularity of the pattern.

But Mr. Hampton is curious to know why some guns will nevertheless give the best pattern with nitro powder. No one is capable of answering this question satisfactorily, for all explanations are based on theories only. These theories may approach the real truth and they may not, still, as long as we have not the means at command for determining the question conclusively and convincingly, we must in this instance like in many others rely on such theories which appear to be plausible. One of these theories is that the expansive quality of the metal of the gun barrel has much to do with the pattern, and another is that the bore governs to a great extent the penetration, irrespective of the explosive used. This last theory may be traced back to the fact that all chokebore barrels will as far as the pattern is concerned, do better than cylindrical bored barrels.

Mr. Hampton further fails to understand what I mean when I say that the merits of a gunpowder must to a great extent be judged from the uniformity of the gas pressure, since evenness of pattern is governed by regularity of the gas pressure. On this point I can fortunately furnish a more satisfactory explanation. Black powder as a rule gives a very even gas pressure; I have measured the gas pressure of hundreds of black powder charges and have found that the pressure did not vary more than 5

per cent.; the patterns showed the same degree of evenness. On the other hand, the difference in the gas pressure of some nitro powders runs as high as 300 per cent., and every charge which produces an exceptionally high pressure as a rule showed a poor pattern. There can be no doubt that a powder producing such great variations in the gas pressure can never be relied upon for uniformity of pattern, and no nitro powder in the market will, as far as evenness of gas pressure is concerned, compare with a good quality of black powder. This assertion may be construed as if I were prejudiced against smokeless powder as such. This is not the case. I have not fired a charge of black powder for sporting purposes for years, and use the smokeless powder exclusively and in the shotgun as well as in the rifle, and have not the least desire ever to fall back upon the old explosive. I use the Walsrode powder for trap-shooting and for game shooting.

Mr. Hampton explains how he proceeded to ascertain whether the pellets of a charge of shot would cross in their flight through the air or not. I made the same experiments and arrived at the conclusion that they do not. Had Mr. Hampton used the same number of shot instead of using Nos. 6 and 8, I think the results of his experiments would have been different. It will not do to use two different numbers of shot, for the reason that the heavier pellets naturally will fly faster than the lighter and drive the latter to the side. The pellets as loaded by Mr. Hampton likely became mixed before they even left the muzzle. The pellets next to the sides of the barrel are subjected to a higher friction than the pellets in the center; they show as a rule more or less deformation before leaving the gun. The friction has absorbed some of the force imparted to them before they reach the air, and a deformed pellet again has to combat with more resistance in the air than one which has retained its spherical form.

I have made extensive experiments recently to ascertain to what extent the various powders are affected by cold or damp. How they compare in regard to recoil pattern and penetration. The result of these tests will be submitted to the readers of *FOREST AND STREAM* in a short time, and I hope that my report will answer some of the questions for which Mr. Hampton seems to nourish a special interest. Meanwhile I extend to him a hearty "Waidmann's Heil."

ARMIN TENNER.

BERLIN, Germany.

BUSINESS WITH A BEAR.

In the winter of 1876 Joe Pettengill, myself and the dog Jack took it into our heads to go on a gunning and hunting trip up in letter E township. I think it was in the month of March, so we got together our traps, shock, etc., including one double old style shotgun and an axe. We were to go on snowshoes. Joe was comparatively unused to the woods, but had seen some service and could snow shoe. The dog was a hound of the old style and well acquainted with bears. Our chief object was, if possible, to secure a few fisher pelts.

We started one day bright and early over the hills into the great woods of No. 6, which borders the Great Lakes. Jack was kept behind until we found a likely trail. We tramped until noontime without finding game, but had gathered some spruce gum. I was using a pair of new snowshoes, which were badly hung and gave me much trouble; they would now and then come off or trip me up occasionally.

About noon we came to a stream and selected a good spot and made a roaring fire. We found that the tramp had fitted us out with first-class appetites. After lunch we gathered up our sacks and struck still deeper into the gloomy dark spruce forest. No one but those who have tramped in these great pathless evergreen forests in winter know how silent and desolate they are. Joe was ahead passing over a bluff when my snowshoe came off. Jack took to whining and I told him to go and find a bear, so he struck for higher ground. In about five minutes Jack gave some unearthly howls. I knew well what was up and told Joe to run and see what Jack had, while I got rigged up and started as soon as I could. I hallooed that big tracks had come out from under an old root or stump. Joe said it surely was a bear and our meat.

I hurried up as best I could, but those plaguy snowshoes were half coming off. I had the gun and was much needed at the front, so when I came to Joe I asked for a bullet, as he was supposed to have them. But as luck, or no luck, would have it, he had forgotten to take them. Jack had got about 100yds. away and was barking like mad. We pulled on and after going a few rods off came my snowshoes. I handed the gun to Joe and told him to run and shoot the bear in the ear, and the small shot would kill him.

I took Joe's axe and got on the snowshoes. I had just started when I heard the gun. Joe hollered, "Jack, come out or you will be killed." I rushed along and when I came in view, such a sight; it was like a snow plow to see an enormous bear plowing through four feet of snow. Joe was trying to load the gun, one barrel having failed to go off, but he had about as bad an attack of bear ague as ever any one had. He was actually putting into the gun a big brass army button he had cut off his coat. I called for the gun, but he insisted that he could kill him with the button. I ran down after the bear with the axe on one side and got up to the bear by a bush, and with the other hand I fetched him one with the pole of the axe on top of the head, when he dodged down into the snow a little; and I fetched him another, when he rose up on his hind legs and whirled and grabbed for me. I dodged back, and over I went out of my snowshoes and down the hill on my back about 6ft. below.

Joe now came to the front like an artillery charge and whirled around, and whang went the gun. I climbed up and dug out my snowshoes and got into them, for no one could go at all without them. Joe got some shot into the gun and rushed up and fired, hitting the bear over the eye, the first not having hit him at all and the button did little more. This charge knocked the old bear down. But he was up in a minute. Joe says, "Give me the axe and I will kill him in a minute." So he handed me the gun and took the axe. Joe ran up behind the bear; I told him to keep out of the bear's clutches, but he ran up and struck him with the pole of the axe on the middle of his spine, as he said to break his back. But it was like striking a cotton bale. Bruin took this as an insult and made a grab over backward to gobble up Joe; but Joe gave a back jump with his snowshoes as high as his head. The bear's claws came within an ace of Joe's pants, but he sung out "No you don't!" I said it came near being "Yes he did!"

I came in with the old gun about quarter-full of shot and powder. I got up by the side of him, keeping Jack away to save him, the bear all the time snorting at me; I put the gun back of his ear and fired. He pitched over but in an instant he stood on his hind legs and snapped his teeth fearfully. Joe was cutting a big club that he said would surely settle his hash. I took to loading up the old gun, with the bear snarling in my face; and I tell you it came near destroying all I knew about which ought to go in first, the shot or the powder. But at last (it seemed an age) I got the gun loaded.

But the old bear had improved his time and took to an old leaning tree and started up about 25ft., and on to the standing tree on which the slanting tree had lodged, and began to back down the standing tree. I got to the foot, ready to give him a warm reception. Down he came until his hind feet struck into the snow, when he turned on me and showed his teeth with a grunt. It was a bad sight for weak nerves, and as I was hampered with those clogs on my feet and could not dodge nor run, I lost no time, and placing the gun to one of his ears about 4ft. away, fired. Down he went into the snow. Up came Joe with the axe and big club. He gave the bear a crack on the nose with the axe and I went for him with my hunting knife and cut his throat. The bear was dead, but I tell you I never want to try that over again, to try to shoot a bear with an old muzzleloader without balls, shooting on snowshoes. If I did I should want them to stay on.

We had a big time hauling that 400lb. bear out of the woods. It was well into the night before we arrived at a house.

ADDISON YOUNG.

BYRON, Me.

ACCIDENTS WITH FIREARMS.

In a late number of the *FOREST AND STREAM* a correspondent suggests that we tell of our "errors and accidents" in the use of the gun. The carelessness of many people is deplorable. Since I have been in West Virginia I have witnessed four accidental discharges of the gun while hunting. It was not the discharge of my gun I may say, but of the guns of others of whom I was in company, but they were all discharged close enough to me to kill me instantly. Two of the accidental discharges were from the gun of the same man. Once he was getting over a fence, and again the hunting party were grouped and talking. The third discharge was when my companion set his gun over a board fence, the hammer striking the lower strip. By the way, he came near shooting his head off. The fourth discharge was when the man made a mistake in putting his finger on the wrong trigger in letting down the hammer. I remember during the war that my brother had an army pistol, and accidentally discharged it when persons sat all around the room.

I will mention a case of fatal accident in Centerville, N. Y. Pete Calhoun came from a family of hunters. He was a little fellow, tough as a knot, and almost lived with his gun in the woods. One day he came in from a hunt, and as he was getting over his door-yard fence his gun went off and tore away his shoulder. When the doctor came to see him he said: "Doctor, I have hunted for many years—often drunk—and never got hurt, but now I have killed myself while sober and at my door." He died. I may state, incidentally, that Pete, though ignorant and uneducated, had been a guide for "Frank Forester" (Herbert).

A man named West, living in West Virginia, sent a load of shot through and through his biceps muscle while pulling his gun through a fence by the muzzle. I was astonished, however, at the small size of the hole made by the full charge of shot, and about as much surprised that the wound did not cripple him, nor prevent him from going about at once, as though nothing had happened. He was a tough one.

I close with this oft repeated warning: Keep the muzzle of your gun away from yourself and everybody else.

N. D. E.

A press despatch from Rome, N. Y., dated April 23, says: "Frederick Besock, with two friends, William Mack and Eugene Elliott, started on a duck hunt early this morning. Near the Four-Mile bridge on the Erie Canal the hunters came to a small creek which they jumped across. As Besock landed across the creek the trigger of his shotgun struck a fence and was discharged in his abdomen. He died while being taken home. He was about 30 years of age and leaves a wife and four children."

We Should Say He Had the Right.

ONCE at Merston there is a good deal to be seen—a plant that covers several acres and a finer utilization of lumber than is common. The principal proprietor, W. B. Merston, is something of a unique figure. Besides being a rattling good business man—one of the kind that, seemingly never in a hurry, gets through a pile of work—he has artistic tastes, and is a nimrod who rolls around from one hunting field to another in a private car. Under his feet in his office there is a rug that was made in one corner of Asia, with people and animals on it proportioned about as a three-year-old child would do it. The hunting car, "City of Saginaw" is side-tracked on the premises. In the office there is a regular dead menagerie and aviary. There are stuffed animals and birds in profusion. And it would be possible to hunt up in the building a rod square of photographs representing hunting scenes. It was incidentally mentioned in these columns a few weeks ago that Mr. Merston manufactured delicate little tables—Turkish tabourettes, as he calls them. It was stated that a lady could put her bouquet, perfume outfit, or even her feet on them when she felt as men feel when they rest their feet on their desks. You strike another soft spot in Mr. Merston's heart, when you look admiringly at his band resaw that is always at work in his factory. This saw evolved, as it were, on the premises. One resaw machine after another was found wanting, and this one gradually grew up to take their place. In ten hours it has cut 30,000ft. of 1x10 boards. But don't think that this concern runs to hunting, tabourettes or band resaws; those simply compose in part the ornaments which are attached to a great solid business. In 1892, 37,213,000ft. of lumber went through the planing machines, was shipped in the form of various products, and brought into the front door of the office in the way of checks for \$971,000. Don't you think a man who shoulders such a business as that has a right to shoot ducks and deer for three or four weeks in a year if he has a mind to?—*Northwestern Lumberman*.

THE ONE BIRD ALWAYS REMEMBERED.

SCHENECTADY, N. Y.—This is the place. There is the old mill—deserted. The wheel is going to decay, but the stream runs on as it did. There is the penstock that brought the clear, cold water from the shaded nook. As I look around me, while the sun of autumn sheds a mild radiance over the scene, the thrilling interest and the companionship of other days are revived, and I live again in the past. Those were pleasant times. There is the home of the grouse, the life and ornament of the woods.

That heavily wooded hillside, covered with the pines, the hemlocks, spruce, and other evergreen and forest trees, is where the ruffed grouse finds a home. On the opposite side of the valley there is a delightful wilderness of vegetation, bordered with old apple trees, the fragrant fruit scattered over the ground; and in the distance is the cider-mill. All is silent and still, save the sound of the hunter's gun or the wood-chopper's ax, providing for the coming winter. It recalls Read's verse:

"All sights were mellowed and all sights subdued;
The hills seemed further and the streams sang low,
And in a dream the distant woodman hewed
His winter log with many a muffled blow."

The scene brings to memory the circumstances of the first grouse I shot. This to some may seem a trivial thing—the shooting a bird; but to me at the time was a notable event. I had often hunted partridge, but always unsuccessfully and had many times returned home disappointed, save for the pleasure of the charming surroundings and the healthful exercise it brought. These failures were not due to a scarcity of the birds, but to my want of skill with the gun, and my lack of knowledge of the habits and ways of the birds, and their ability at that time to outwit me; but at last I succeeded.

On this occasion, accompanied by my brother, I went down to the old farm in Clifton Park, and while we were walking through the woods together I said to him, "It is my highest ambition, to-day, to shoot a partridge." Soon after I heard a rustling in the dry leaves under the thick evergreens that bordered the wood. I followed the sound for about 50 yds. to an old road that ran into the field, when away went a grouse with a tremendous roar. Raising the gun quickly I fired in the direction it went and was electrified to see it fall. Rushing out after the bird fluttering over the ground I picked it up, and taking it by the feet held it very securely. In the excitement and enthusiasm of the moment I waved it over my head, shouting out to my brother that I had got him. We rejoiced together. Under such circumstances our grouse shooting began. On the next occasion when we were out, which it may be believed was not long after, I shot two grouse and my brother also shot one, his first. DORP.

A MASSACHUSETTS LAW.

THE lovers of fish and game protection have scored another victory in Massachusetts. The achievement has been made mainly through the instrumentality of the Massachusetts Fish and Game Protective Association, and for once the market-men have been taken rather by surprise. It was the intention of the act of 1891 that buying or selling or having in possession any game bird or animal after the commencement of the legal close season on such game should subject the buyer, seller or possessor to the force of the law, but for some unaccountable reason that part of the section was omitted. The dealers in game have taken advantage of this oversight in the framing of the law, and have boldly had in possession, sold and exposed for sale, game birds, after the close season. But an amendment has been secured of Section 1 of Chapter 142 of the Laws of 1891. The measure has passed both branches of the Legislature, and was signed by the Governor on the 12th inst. The amendment inserted reads as follows:

And whoever buys, sells or has in his possession any of the birds or animals named in this act and protected thereby, during the time within which the taking or killing thereof is prohibited, whenever or wherever the aforesaid birds or animals may have been taken or killed.

The amendment also inserts at the end of the section the words "or had in possession," so that the section as amended reads:

Section 1. Whoever takes or kills a pinnated grouse at any time, or a woodcock, or a ruffed grouse, commonly called a partridge, between the 1st day of January and the 15th day of September, or a quail between the 1st day of January and the 15th day of October, or a wood or summer duck, black duck, or teal, or any of the so-called duck species, between the 15th day of April and the first day of September; and whoever buys, sells or has in his possession any of the birds or animals named in this act and protected thereby, during the time within which the taking or killing thereof is prohibited, whenever or wherever the aforesaid birds or animals may have been taken or killed, shall be punished by a fine of \$20 for every bird so taken, killed or had in possession.

The law under which arrests are to be made is a strong one, and the game dealers are both surprised and alarmed, though they must have been aware that they were running a great deal of risk in selling game after the legal close season on the same. The enforcing act, approved by the Governor on the 17th of March, reads as follows:

An act to authorize officers qualified to serve criminal processes, and the commissioners of inland fisheries and game and their deputies, to make arrests without warrant for violation of fish and game laws.

Be it enacted, etc., as follows: Section 1. All officers qualified to serve criminal processes, and the commissioners on inland fisheries and game and their deputies, are hereby authorized and empowered to arrest without warrant any person whom they shall find violating any of the fish and game laws; provided, however, that persons engaged in the business of regularly dealing in the buying and selling of game as an article of commerce shall not be arrested without warrant for having in possession or selling game at their usual places of business.

Section 2. This act shall take effect upon its passage.

The game dealers in the Boston markets are evidently greatly disturbed and alarmed. Game has disappeared from their stores. As to what they have done with it or will do with it, they are silent. It is suggested that it will be shipped to New York, or some other cities. One dealer rather good-naturedly says that he has shipped his birds to the World's Fair. It is known that they have thousands of dollars worth of game in cold storage. The amendment to the laws is good. For a long time it has been understood that unscrupulous dealers have been in the habit of buying game in the close season, though well aware that it must have been illegally killed. The amendment makes the law very plain, and its enforcement will be a great step toward preserving what is left of game in the Bay State. It is also a good measure for the adjoining States, which generally have laws preventing the selling of game in close season. Heretofore there has

been an inducement to illegally kill game in Maine, because once smuggled into the Boston markets it could be sold without restraint. Now the illegal market for Maine game has been pretty effectually dammed, so far as game birds are concerned.

Spring shooting has not been as much of a success as usual this year along the Massachusetts coast. Mr. Gordon Plummer, of the Boston Leather Company, is one of the most successful brant shooters in the city. He returned last week from a fairly successful shoot. In his party were W. E. Plummer, Jr., A. B. Clark, of Peabody, Dr. Hanson and E. F. Sturges. They brought back some fifty brant, besides a lot of ducks and other sea fowl. They went "down the south shore," they say, not caring to give the location of their success to other shooters.

Mr. Frank Small, of Provincetown, Mass., is much interested in the propagation of game on the Cape. Some time ago he received 800 quail—from California, I believe—when the weather was yet too cold and the snow too deep to put them out. He kept them in confinement for a while, the best he could. But they died too rapidly to please him, and he resolved to take his chances in liberating them at once, though aware that the chances were against such a step, the spring having scarcely begun. He calculates that nearly 100 had died before liberating them. For a while he saw signs of the liberated birds, but later all have disappeared, and Mr. Small fears that all have perished. SPECIAL.

NOTABLE SHOTS.—IX.

ROCKLAND, Me., April 2.—There seems to be an abundance of shooters who have killed two woodcock on the wing at one shot, but where are those who have killed two grouse? Why are they silent?

I have hunted woodcock every fall for nearly twenty years, but have never known of two being killed at one shot by any one where I have hunted; but I do know of three pairs of grouse being killed on the wing.

One pair was shot last fall by my friend D. C., one of our best shots, and what he doesn't know about the tricks of that tricky bird, none of us younger ones need try to teach him. One day late in the fall, after the leaves had fallen, D. C. flushed two grouse, one on either side, and as they flew off he saw that they would cross within gun-shot. So he calmly waited, and just at the right moment off went the old 10-bore and down fell two dead grouse.

At another time Parks, Josh and I were hunting up an alder run, when Parks sang out that Vic was pointing up run and he wanted us to come over to his side. But we said no, that we would take our chances where we were, for if he failed to kill, the bird would fly to cover and would be sure to come our way. In a few minutes Parks shot and sang out for us to look out for the bird, as she was flying toward us. But no bird came in sight, and we called back to him that he must have killed it, as it could not have got out of the run without our seeing it. He replied that he did kill one of them, but that two had risen and flew directly toward us. We said that it was certain that no bird had come out of the run and asked him to send Vic in again, which he did, and in a few minutes she came out with the second bird. He said that both birds were in line when he shot, but until Vic brought in the second one he had no idea that he had killed them both.

The third pair I killed myself. Josh and I were out one day having pretty fair luck, and for once the balance was in my favor, and as that was unusual, Josh was getting a little rattled. We were hunting a side hill, Josh below and I nearly at the top, when my dog Mack came to a point between us. Josh went in near the dog, thinking that he might get a shot from there, when up jumped the grouse about 20 yds. off, and gave me a left-quartering shot. As I raised my gun to shoot I heard other birds rise, but shot at the first one and killed, and Mack soon brought him in, and as he dropped him I heard what sounded like a fluttering bird up to my left. Mack also heard it and was off, returning in a few minutes with another dead grouse. Josh soon came up and when I told him the result of my shot he went into the air and swore that he had rather have my luck than a license to steal. DOWN EASTERN.

[We have seen two grouse killed by one barrel on only one occasion. Three birds were routed from under a fence in a swamp, and flew down it close together. The two last ones were killed by the shooter.]

CORTLAND, N. Y.—Mr. B., of this town, tells me of a notable shot he once made. It was in the early spring-time, and the clamorous crow was flitting about the farm with a large degree of boldness. Opposite to his father's house, across the highway, lived a connection of the family. The carcass of a young calf was placed some ten rods in the rear of the barn and at an acute angle to the highway which ran past the two farmhouses. The crow bait was thus located at a right angle, or nearly so, to the house occupied by the aforementioned relative. The morning after thrusting out the bait the sable-coated corn-pollers were congregated about the delicious morsel in goodly numbers. Young B. discharged an army musket loaded with a heavy charge of black powder and a miscellaneous assortment of leaden slugs into the gatherers at the feast, killing seven of the ebony revellers and, as it was subsequently discovered, nearly killing his aunt, busy with her household duties at her home across the way. One of the bullets had struck a "hard-head" stone near the "bait," glanced off at right angles to its line of flight, passed through the side of the farmhouse and flattened itself against the dining room door casement, striking within two feet of the astonished and deeply mystified aunt. M. C. H.

A Different Kind of a Shot.

SAN LUIS POTOSI, Mexico.—There was no hoghead ricochet involved, and I wish it distinctly understood that I am not trying to "raise" that story.

I had come in from a round after deer among the hills, and was on my way to the cornfields for a try at the cranes. I had my shotgun strapped on the saddle in its case and was still carrying my .45-90 express rifle. Some cowboys routed out a flock of cranes as we were riding along a ditch lined with trees, and they came over our heads. This is a bird that can only rise by circling. His wings are so set that for the first few hundred yards of his flight he can only get about 50 or 60 ft. from the ground. But by the time they reached us they were up rather high. My companion let drive, but scored a miss with both barrels. I had dismounted, and in sheer dis-

gust at not having my gun ready, blazed away with my rifle. To my surprise I heard the distinct whack of the bullet and saw a tuft of feathers drop. The big bird set his wings and slowly came to the ground. When we reached him he was dead. The big express bullet (hollow) had shaved off one leg close to the body as clean as if done with a butcher's cleaver. Its diameter, where cut, must have been at least 3 in. I did not know which to be most surprised at, hitting him at all, or the effect of the bullet. AZTEC.

On and after May 1 the Western office of Forest and Stream Pub. Co. will be permanently located at 909 Security Building, cor. Fifth avenue and Madison street, Chicago.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Heavy Flight.

CHICAGO, Ill., April 22.—This spring has been notable for its heavy flight of the migratory birds. More ducks passed over this country than for three years past, and jacksnipe have not been so abundant for a time much longer than that. Heavy bags of the latter bird have been common up to within the last four days. On Wednesday last there began the prolonged cold storm which has prevailed during the remainder of the week all over the West and Northwest. We have had snow here for two days, and an unspeakably miserable rain the rest of the time. As a result of all this, the snipe are now probably scattered far and wide. On Wednesday they were wild as ghosts, and even if they come back it will probably be long before they settle enough for good shooting, and by that time the flight will be due to appear much north of here.

On last Monday there were simply thousands of snipe on the marsh three miles below Calumet Lake. Last week Mr. Ben O. Bush and a friend killed 114 in three days at Hanna on the Kankakee. John Watson, R. B. Organ and a friend killed six dozen a week ago to-day. Mr. C. E. Irvin writes me from Warsaw that he and three friends killed 96 last Monday, and he has been telegraphing me ever since to come on over. At Walkerton, at Koutts, at Shelby and other points on the Kankakee Marsh, fine bags have been the usual thing until this wretched blizzard spoiled the fun. The probabilities say warmer weather now, and it is a consummation devoutly to be wished.

One Hundred Parkers.

Capt. A. W. DuBray, in charge of the exhibit of Parker Bros., arrived in town three days ago. He tells me that he has on hand for the display, 100 Parker guns. "These are not special guns," said he, "prepared with extra care for this exhibit, but guns taken out of stock, with not a file mark of special finish on them."

What an interesting display the gun men alone will have to show the sportsmen of the country.

Noted Indians.

Rain-in-the-Face, the Sioux chief so prominent in the fateful Custer massacre, is now in Chicago and will join Buffalo Bill's show. The old Indian is permanently lame. The British officers and fighting men who have met the fighting savages of India and the Sudan, and who now are assembled here 200 strong to hold a military tournament, might look with some curiosity on this leader of the ancient enemies of the U. S. troops.

Sitting Bull, the Napoleon of the Sioux, who planned the battle of the Little Big Horn, has joined the majority of warriors, but his cabin, full of bullet holes made by the Indian police, who killed him that morning on the Grand River, is now here at the Fair.

Many Boats.

Very interesting is the display of boats in various parts of the Fair. In the Fisheries, Norway and Canada vie with each other. Fishing boats, birch barks, dug-outs, all sorts of native boats are to be seen. Aside from this, the great Manufacturers Building will show the beautiful output of individual firms engaged in the boat trade. Much of this later.

Sixty gondoliers from Venice arrived in the city this morning. They will play at gondoliering on the lagoons this summer.

There are too many Turks, Arabs, Chinese, Bulgarians, Englishmen, Kanakas, Malays and Hindoos in town now to attract much attention any longer. You can't walk without stubbing your toe against some be-fezzed, or be-slipped, or be-turbaned alien, the expression of whose face for the most part is to the effect that he wishes the climate might be d—d. Can These Things Be?

THE following extract from the *Evening Sun* of Denver, Colo., if true, reveals a most extraordinary condition of things in that State:

A lobby was formed by a gang of hunters who slaughter game in great quantities, to defeat House bill No. 386, which protects game against marauders. Money was doled out to the "corporation gang" and the bill was as good as killed by the changing of a single letter. The letter "f" in the word "food" in Section 12 was changed to "g," making "food" "good."

The section reads as follows: "Section 12. No person shall kill, wound, ensnare, trap or have in possession any deer, elk or antelope or parts thereof within this State for any purpose whatever, at any time, except that those deer, antelope and elk which have horns may be killed and had in possession between Aug. 1 and Nov. 1 of the same year for good purposes only, and then when necessary for immediate use, governed in amount and quality by the reasonable necessity of the person or persons killing the same. * * *

In the original bill the word "good" read "food" and made sense, and would have prevented a hunter from slaughtering the game, but a little money made the little change, and the deer and elk antelope for "good purposes" are made the prey of conscienceless hunters and men who exterminate them in a few years.

Governor Waite signed this bill as it now stands with all its dangerous provisions. There is no telling how many bills have been ruined in this way.

A Tale of Kansas.

EL DORADO, Kansas, April 18.—*Editor Forest and Stream:* A year ago last fall Judge C. A. Leland, William H. Ellet and others, were on the Arkansas River, west of Wichita, goose hunting. Geese from the north alight in great numbers along the Arkansas wheat fields to feed on their way south. They feed during the day, and at dusk go to the islands and sandbars for the night. One evening, just as it was getting almost dark, Mr. Ellet noticed a goodly number on a sandbar at the head of a small island. The river banks are low and there is but little protection. Circling around the island he got a fair shot with both barrels, just as the geese commenced to rise.

He killed or wounded sixteen geese, capturing fourteen, two getting away in the darkness of the evening. All the fourteen taken to camp were full grown, some of them being very fat.

Mr. Ellet, some years ago, killed three deer at two shots—right and left. Col. Murdock, of the Wichita Eagle, and D. D. McDonald, of this place, took seventeen black bass from the Walnut in sixteen minutes last fall, the smallest weighing 1½ lbs. It was evening and the bass were biting ravenously. They baited their own hooks with live minnows, but did not string the fish, throwing them in the bottom of the boat as they were caught. I sat in the end of the boat timing them as I threw them live minnows as they wanted them. The reason that I was not in it was that I had taken down my rod preparatory to quitting. An honest farmer sat on the bank within three rods of our boat, is alive and well, counted the catch, marked the time, and will support this statement. McDonald had a Chubb 15oz. bass rod, while Col. Murdock used a steel one. Of course they "yanked" them in without any foolishness. T. B. MURDOCK.

Rifle Facts and Theories.

I SUPPOSE some people will say I am a "crank" on the subject, but I can't help it, and only hope I may be the crank which will set the wheel of inquiry moving. I should be very glad if some other rifle "cranks" would answer a few questions for me, and set my mind at rest on the subject.

1. Will a slow twist and shallow grooves, such as are seen in the '86 model Winchester, give a greater velocity than a more rapid twist and deeper grooves, the same charge being used?

2. How does the rate of twist affect the trajectory?

3. Will a bullet from a rifle with a quick twist penetrate further than one from a rifle with slow turn?

4. Are Sharps rifles more accurate than the '86 model Winchester?

5. Can any one kindly tell me the reason that the Winchester Co. use such exceedingly shallow grooves in all their rifles, at least from .22 up to .50 caliber? They probably have very good reasons for it at all ordinary hunting ranges, but I like to know why. Other rifles have slightly deeper grooves, rather more rapid twist, and seem to me at least to give better results, i. e., more delicate accuracy. I think I could give a pretty good guess at the right answers to the questions I am asking, but there is nothing like being sure. I want some of the "veterans" to be kind enough to take this matter up and hope others will ask questions. I flatter myself I know something about rifles, but am woefully ignorant in many respects concerning them. I think FOREST AND STREAM will make a change for the better in some of my ideas, and will at least give me some new ones.

L. D. VON IFFLAND.

Another Two-at-a-Shot Record.

TRANQUILITY, N. J.—I have noticed two instances in your valuable paper where two woodcock have been killed at one shot, but not in either case did the experts say how they did the miracle. About forty-five years ago I did the same trick just as easily as rolling off a log, and I will tell you how. I was out on the 3d of July looking for birds, and crossing Little Swamp was walking in a cow path, when up jumped an old bird and I had her well covered, and at that instant a young bird started in the same direction. From some cause I dropped my gun below the young bird, and in the act of shooting I noticed the old bird 10 in. above the young one and 40 ft. ahead, so I divided the difference and killed them both at the one shot. C. S. S.

Ontario Bird Notes.

BELLEVILLE, April 12.—During the winter we were visited by the pine grosbeaks, also by a pair of strange birds, said to be northwest magpies. Local ornithologists tried, but in vain, to secure a specimen. Robins, crows, blackbirds and other spring immigrants arrived from their winter homes about the 1st inst. The robins were the first immigrants to be noticed here. R. S. BELL.

CONGRATULATORY.

WILKES BARRE, Pa., April 11.—Hearty congratulations on the successful issue of the Delmonico woodcock case. It would never have been heard of again, after the first notice, if FOREST AND STREAM had not taken it up. It is a great victory for you and for law-abiding sportsmen generally. E. W. L.

FERRISBURGH, Vt.—*Editor Forest and Stream:* Accept my sincere congratulations on the happy result of the long-delayed Delmonico case. Having got through the apparently endless woods of legal procrastination, you have a good right to crow. R. E. ROBINSON.

CHATTANOOGA, April 10.—*Editor Forest and Stream:* I congratulate you on your Delmonico victory. Now watch the deer. I know for a fact that a hotel keeper in Buffalo, N. Y., served venison six weeks after the close of the season, and had a couple of bucks hanging up in his pantry, but the bill of fare read, "Antelope steak," "Curried antelope," "Antelope pot-pie," etc. Dr. Kidd might also catch Delmonico on fish almost at any time, especially on brook trout.

LOOKOUT.

"Superb Service and Elegant Equipment."

This is pronounced by every one who travels the Richmond & Danville Railroad. The passenger traffic of this line has increased wonderfully within the past year. The famous "Washington & Southwestern Limited" operated between New York and New Orleans, Memphis, Augusta, Charleston and Savannah, has increased the business to such an extent that to accommodate the travel another Pullman vestibuled schedule equally as fast as the limited will be put on between New York and Southern cities within a few days.—*Adv.*

Sea and River Fishing.

ON THE NORTH SHORE.

The Return Trip.—I.

"To sit on rocks, to muse o'er flood and fell,
To slowly trace the forest's shady scene,
Where things that own not man's dominion dwell,
And mortal foot hath ne'er, or rarely been;
To climb the trackless mountain all unseen;
With the wild flock that never needs a fold;
Alone o'er steeps and foaming falls to lean;
This is not solitude; 'tis but to hold
Converse with nature's charms, and view her stores unroll'd."

AGREEABLY to promise, I again come before the readers of this interesting and enterprising paper with my return trip from the North Shore of that great reservoir, which sends its cool and crystal waters from the snowy regions that lie against the great Arctic belt, through that connecting range of lakes—Huron, Erie, Ontario—into the picturesque St. Lawrence, which goes wandering along shores ever beautiful, into the vast, salt, dread, eternal deep.

It was an early August morn, with a gentle north-east wind, a light sun that beautified the landscape, a sky enveloped in the most delicious of opaline tints, and a sea in the gentle moan of a lullaby, when we arose with our hearts firmly set for the return trip from Jackson's Cove, even if we had to depend solely for our motive power upon the aspen blades.

After a hearty breakfast, which was not at all hurried in its preparation, the emphatic order went out for a prompt dismantling of the camp, which the boys did not really relish, as they desired to tarry till a favorable breeze offered. We, however, would have no trifling delay, and so they started in to execute the arbitrary decree after they had washed up the china ware. Their movements, when they commenced work for embarkation, lacked activity, but in a short time, seeing that we were on to their slothful tactics, as well as getting into a savage humor, they got down to earnest labor, and then everything went with a hurricane rush.

Provisions were dashed into their respective boxes; the Sèvres landed, with an utter disregard of its priceless value, into its compartment; knives, forks and spoons went merrily jingling into their allotted places with the ring of honest hundred-per-cent. coin, and then the silver service, embracing only a teapot so antiquated that its value could alone be computed in three figures, was jammed along with the tableware, as if it were nothing but common American tin, made during the McKinley campaign. All the kitchen utensils and provisions being ready for their covers, a lively nailing of the same, and they were in due form for shipment. The tents came next, and down they went with a whirlwind speed, and on being folded and corded, were also billed for export duty, as were the beds and bedding.

Everything now duly prepared for the boat, the boys, after mopping the perspiration from their lofty brows and rugged faces, loaded up, and commenced carrying the innumerable boxes, bundles, packages, etc., to the glittering beach, and which they threw down with a perfect indifference to breakage. Their blood was up as well as ours, but we knew when they got to swinging the heavy oars in a placid sea, they would be as meek as Mary's little lamb.

Having everything at the landing, the loading of the boat commenced, and as it was no small job it somewhat allayed the feverish blood of the more industrious half-breeds. The heavy boxes of provisions first went into the boat, then mattresses, tents and kitchenware found safe lodgment upon them, and in the interstices at the sides went our satchels, rod cases and other small packages which go to make up the essential comforts of camp life. When the last piece of our cargo was aboard and in place, Peter really "smole a smile," and the astronomer's face, although dripping wet from toil, shone out with the radiance of a sunburst. They were again in happy spirits, and the panacea of the oars was not at all necessary for allaying their heated blood. It was seldom they displayed any moroseness, and when they did, it was not as an usual thing manifest to an extent that disturbed our serenity. As we have said in our last letter, they were good men, the best we ever had, and would not hesitate to employ or recommend them to others.

The boat being ready for departure, each one of us, as an absolute ruler of the camp, should have gone over our quarters to see if anything was remaining, but this time the precautionary measure was omitted, much to our sorrow, as the sequel will show. The boatmen, who were now in as big a hurry as we were, stripped to the buff, and on taking positions cheerfully cried out, "All aboard!" and aboard we got, and then as soon as the river was in direct line for our course, they sent her cleaving the unruffled waters with a merry cadence that tinkled like the notes of a silver bell. The boys even took the tranquil situation of the elements good-naturedly. There were no head winds to battle with and no scuds to fright the soul of the ever profound delineator of the heavens. They chatted merrily as they dipped their oars, and even Peter of the mournful voice attempted to rival the notes of a sweet piping bird that charmed as from a swaying reed. Ned and I buried ourselves in our books, and as I was in the midst of the great chariot race of "Ben Hur," you may well imagine the far-reaching beauty of shore and cliff which lost itself in bright light, were for the nonce relegated to oblivion.

The lake had become as smooth as molten silver, and the sun came down upon us with such powerful rays, that a damp handkerchief in our felt derbys was absolutely necessary for comfort. Not till the Arab steeds had won the race did I lay my absorbing book aside, and then when I took in the alpine hills, and the solid bulwarks that lined the shore with towers and bastions shattered like the ruins of an inclosure demolished by artillery, did I fully realize the grandeur of the Divine Master. Here the terrible, the sublime, and the beautiful meet together in the same view, the eye roves from mountain to mountain and then falls upon the dreamy

loveliness of the green forest as it rushes down into the valleys and to the shore. "It seems as if nature had here wrought results beyond a conscious purpose. It is a place where majesty and beauty have their own excuse for being. You forget yourself in the unconsciousness of nature. It would seem as if you could go no further, and even the desire is lost in the glory that is before you." It is rugged, grand and supernal, beautiful beyond compare, when its living green is painted in morning or sunset dyes, but when the live thunder leaps from crag to crag, and the lurid lightning flashes upon the inky clouds, then there is a picture of sublimity—

"Up where the airy citadel

O'erlooks the surging landscape's swell,"

that needs a Doré properly to illumine.

We had been gone for about three hours before any incident arose worth mentioning, then there came little ripples, scarcely discernible, merely pulsations of a zephyr breeze, and so light and strangely tranquil as to cause no comment. Soon, however, another and another came with increased tremor, and as I anticipated, the prophet of the stormy god arose and said, "Me no like it." Then he rested a while on his oars, took a survey above, looked along the shore as if for a place of refuge, and after a moment or two resumed the steady dip with the blades. He was evidently serious, profoundly so, but he was silent and oppressed. Finally the breeze perceptibly stiffened, and as it was a head one, the work at the oars became more toilsome. He was fairly dying to unburden himself, for he doubtless had formed a forecast relative to the weather that he wished to announce. Ned by way of relieving his analytical (?) mind inquired:

"What of the weather?"

"No good, blow sure."

"It is simply a noon breeze and will soon die away," said Peter in response.

This settled the weather question for a while, and nothing more was heard but the regular stroke of the oar, and the surge of the water at the bow; stronger and stronger grew the breeze, and harder and harder the work for the earnest toilers at the row-locks. At last Emery suggested going ashore on what appeared to be a few hundred feet of gravelly beach, and wait awhile and see what would be the result of the elemental disturbance. As Ned and I were indifferent about the matter, we agreed to the proposition as much to relieve the men as aught else. In we went, and when we reached the shore, instead of finding it a gravelly beach it was, much to our surprise, very uniformly paved by nature with large white boulders of at least ten or twelve inches in diameter. The bank was moderately steep, but with the boat unloaded we could manage to pull it up. Emery, however, espying a few rocks just below us, which made a very small cove, thought it a good place to harbor the boat, and there he took it. We sat down on the hot glistening boulders and interestedly watched the boys maneuver with the shapely craft. Emery wanted things one way and Peter another, and so the two had a perfect circus of it for a while in their polished language. Emery ordered the load out of the boat and Peter in hot and frenzied haste commenced throwing it with considerable violence on the shore, and in one or two instances into the water. Thinking it about time to call a halt, we insisted that no more things should be tumbled out, but that they remain undisturbed for the present. Peter, in explanation, said the old man wanted to boss him too much, and as he was captain of the craft, he would have no more of it. As they were nephew and uncle, we knew the incipient revolution would soon blow over, and the clarion of peace ring out in soothing notes.

We remained here fully an hour, during which time we took our lunch. The breeze soon let down and we again loaded and launched our craft and out into the broad lake, which was but slightly roughened, and onward for the islands of the Twin Sisters.

The meridian sky was rich in its deep azure, with here and there a few lace-like clouds edged with tints of surpassing beauty, fleeces "fit for angels' robes," and which

"Are fair resting-places

For the weary dead on their way up to heaven."

Off where we strike Agum Harbor, two sail-boats, like infantile toys, showed up in the sparkling surface, with their canvas scarcely discernible and almost motionless. Nothing aside from these could our strained vision perceive unless it were the white pinions of some hungry fish-hunting gull as it wheeled in the bright sun. The boatmen were silent as sentinels, while we lolled on the soft bundles at our backs, gazing far ahead with radiant hope, where the horizon blends with the waters, as if looking for a lost Atlantis, or the fair land in the sunset regions where the sea has music sweet in its gentle roar.

On reaching the Agum Islands the boatmen, whose faces were flushed and in beads of perspiration, rested a few moments from their wearying work. Peter, after bathing his face and taking a goblet of water, suggested stopping long enough at Agum to permit him to grind a couple of dull-edged axes. This being agreeable to us we consented, but there was evidently something else that the crafty Peter desired in this visit, and that was, I opine, a chat with the Hebes, the daughters of Mr. Schilling, the Hudson Bay agent. As Peter was a widower, it was but natural that he should delight in the company of these lovely half-breeds. It being but a mile and a half ahead to the abode of these fair divinities, the boys, when they took the oars, swung to their work quite vigorously, and soon had us to the destination desired. On landing in the immediate front of the graces' comfortable home, Peter hurriedly grabbed the axes, followed by Emery, and made hasty steps to the woodland mansion. Ned was a good second in the race, as he also had an axe of some kind to grind, but it was with the agent alone, and not wishing to remain in the blistering sun, I followed in Peter's footsteps and brought up on the front porch, where the girls were all engaged in some kind of needlework, while the mother was at the doorway busily knitting a gill-net for the fall fishing. Peter spoke to the girls as he quickly passed to the grindstone in the rear, Ned made a detour to the stone, while I took a chair that was kindly proffered, and did my best to entertain these really handsome half-breeds. One of them called Fanny had raven tresses of incomparable beauty, a soft and pensive grace that suited well her forehead high, and a form as faultless as a queen.

"Plato himself had not survey'd

Unmov'd such charms as she displayed."

She had been fairly educated and was the only one of the three who could speak English fluently. When I

related something that made her smile she instantly turned to her sisters and interpreted it, and then they smiled in unison. Peter, who was at the grindstone, hearing our merriment, was exceedingly anxious to take a hand in it, but as I had a monopoly of the girls he bashfully kept away. The axes being sharpened he timidly joined our circle, made a remark or two in Chipewewa, and then he and Emery strode rapidly to the boat. Ned by this time emerged from the store with a bundle on his shoulder and also struck a beeline for the beach. I lingered quite a while, as I was really pleased with the charming frankness of the lovely girls. Ned finally hailed for me and then I regretfully bade adieu to these winsome half-breeds. Peter told Ned when he came that I was a gay old masher, and that he stood no chance whatever with the girls while I was there, as I was entertaining them with the recital of fairy tales and witchcraft, always themes of delight to the Indian and half-breed. He, however, was determined to pay court to this charming trinity, stating that he would visit them some evening while we remained at the island, as it was only four miles distant. He wanted no white man's rival, and particularly one with the unblushing effrontery I showed myself master of. He was a little jealous, that was all.

ALEX. STARBUCK.

On and after May 1 the Western office of Forest and Stream Pub. Co. will be permanently located at 909 Security Building, cor. Fifth avenue and Madison street, Chicago.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

For Better Fish Laws.

CHICAGO, Ill., April 15.—It is proposed that there be held at the World's Fair an Interstate meeting looking toward the general enactment of better fish laws. The despatches have the following:

"The initiative was taken last Friday, when the Miles Fishing Club, of Miles, Ia., and the Mount Carroll Fishing Club, of Mount Carroll, Ill., met at Brown's Lake in Jackson county, Ia., with Fish Commissioners W. J. Griggs, of Iowa, and S. B. Bartlett, of Illinois. The two clubs formed a joint organization, of which Col. J. W. Miles was made chairman. Suitable resolutions were adopted. The following persons were chosen as an executive committee of the Interstate Fish Protective Association: J. W. Miles, George C. Heberling, S. Watts, George F. Bucher, James McCray, George L. Hoffman."

The U. S. Fish Exhibit.

The World's Fair news bulletins had the following as to the U. S. fish exhibit: "There are being placed in the aquaria several carloads of Illinois river fish, including the crappie, dogfish, sheephead, carp, pike, etc. From Lake Erie come a number of wall-eyed pike, garfish, suckers and water-dogs covered with skin instead of scales. One feature of the display consists of a fish hospital. In the tank devoted to this purpose methods of treating various diseases of the food fishes will be shown. At present the hospital contains a number of trout whose gills are inflamed from a fungus trouble. The treatment in this case consists of immersion in a strong solution of salt. The cases are rapidly improving."

"Live fish by the carload are being received at the aquarium for the government live fish display in the east annex of the Fisheries building. The finny tribes of all the world are represented in the collection, which is a particularly fine one. The decorative work on the aquarium is just being completed. It has been in charge of a half-dozen artists familiar with such work from an extensive experience in arranging like displays at former expositions. Prof. Forbes, who is superintending the installation of exhibits, thinks they have eclipsed their own best work at this exposition, and one is ready to believe it after a glance at what were three weeks ago bare, unadorned tanks, only remarkable for their great capacity. Now each tank presents the proper environment for the special variety of fish which is to live in it next summer. Some tanks present miniature cliffs, reefs and overhanging embankments cleverly wrought in cement. Submerged grottoes present themselves in others; while still others present water-logged tree trunks and stumps, so deftly formed as to defy detection of the deception except by close examination. Every detail, even to different colored mosses, lines of bark and grain, is so faithfully reproduced as to be photographic in accuracy. By the system of aeration used the picturesque effect is greatly heightened."

In the Anglers' Pavilion.

In the anglers' pavilion of the Fisheries building Col. John Gay is now making famous progress with the aquaria of his Pennsylvania exhibit. The tanks are now nearly completed, and the heavy framework which supports them is rapidly being covered with bark. I don't know where Col. Gay got that bark, but it is a good article. Taken on the whole, the installations in this building are backward, and it does not seem possible that May 1 can see the whole in order. Still, the floor is filled with boxes, and it will only take a day or so to put all in order when the crush begins.

The Main Fisheries.

In the main building the work on the 50ft. hump-backed whale progresses well. One of the whale's flippers is lost, strayed or stolen, and some anxiety is felt for its safety.

Australia has her installation well in hand, though the wires still show in the rocks below her group of sea lions. Canada of course is interesting, with her boats and fishes. On the whole, however, the Norway installation is the finest thing in this building. The whole fishing industry of the land of the midnight sun is shown in detail. Moreover, there are a number of paintings by a Norwegian artist which are magnificent works of art. These marine views are mostly devoted to the depicting of the life of the fishermen. One must go far to see on canvas such action, such life and motion in the water, such perspective and such technique in the handling of the figures. Norway is sure to hold much interest.

The Fly-Casting Club.

The Fly-Casting Club held its annual meeting Monday evening, April 10, at the Grand Pacific. Minutes were

approved. Capt. J. W. Collins and Dr. J. A. Henshall, who were elected honorary members on March 17, were duly notified by advice to the secretary. Mr. W. H. Thurston was elected a member, as was also Mr. S. A. Howes, manager of the Osgood Boat Co. The resignation of H. J. Baker was accepted. A letter from C. B. Rushmore was read, advising of good fishing (with the fly?) for bass, pickerel and carp at Kerwin on the B. & O.; Little Calumet River.

The secretary-treasurer's report showed a balance of cash on hand of \$104.22. Applications to the number of 102 had been received for membership, 82 having qualified and two resigned, leaving a total membership of 82.

Resolutions were adopted protesting against Gov. Altgeld's position as to the abolishment of the State Fish Commission. Ordered for signing and sending. A motion of sympathy and regret was passed for Mr. A. H. Harryman, the first president of the club, now at home in another State, and lately of ill health. Election of officers followed, with following result: G. W. Strell, President; W. A. Brooke, Vice-President; F. B. Davidson, Secretary-Treasurer; Executive Committee, J. S. Rossiter, G. A. Murrell, W. H. Babcock. The executive committee was given full power to build the Walton Fishing House and to arrange a programme for the summer.

No Changes in Illinois Laws.

On April 13 I wrote the Secretary of State to learn whether or not any of the bills proposing changes in the fish or game laws had become laws in this session of the Legislature and have received the following reply: "None of the bills before the Thirty-eighth General Assembly on this subject have become laws.—H. H. Hinrichsen, Secretary of State."

Early Fishing.

One could have bass fishing now if he cared for it. A good string of bass was lately taken in Cedar Lake, near Ora, Ind. Nothing yet from Fox, Wis.

In Wisconsin and the North Peninsula the snow water was all gone ten days ago, and it didn't go through the streams. It sunk into the ground. The heavy snows of last fall fell on unfrozen ground and there was no frost in the ground this spring. This keeps the water down and the season is early. Some few catches of trout have been made, none of much moment.

Yellowstone Trout Fishing.

Mr. M. H. Bryan, president of the Helena (Mont.) Rod and Gun Club, in a neat and useful little folder has the following to say, date of March 1:

"It is a curious fact that comparatively few sportsmen know of the variety and gaminess of the fish to be found in the streams and lakes of the Yellowstone National Park, or the opportunity for pure sport which this wonderful section affords."

"These waters seem to be the very home of the trout, which are so plentiful that we doubt there can be found any stream in the country which presents more temptation to the fisherman. The different varieties of trout that can be found there, in themselves, afford the true sportsman not only sport, but information as well, while the grayling, a fish so rare in this country, and which is found here in great numbers, adds extra pleasure to the day's sport. These waters are so seldom fished, that it is believed in them can be solved the question, 'To what size will the trout, when allowed to live, grow?' In the waters of the Upper Yellowstone, trout weighing 8lbs. have been caught. It would seem that a country which has become by reason of its natural beauty and wonders, the haunt of the tourist, would be fished out by this time; but it must be remembered that these pleasure seekers generally go there to see the country, grown so famous, and seldom bring their rods and tackle with them."

"Each of the different hostleries in the Park is within easy riding and driving distance from one or more of these streams, so that the sportsman, even while fishing in waters so seldom disturbed by the swish of the fly-rod, is always assured of a good resting place, for the night."

"In Blacktail Deer Creek, near the Mammoth Hot Springs, good fishing can be obtained, and trout weighing a pound each are very abundant; and in Glen Creek, above the Golden Gate, the Eastern brook trout planted by the Fish Commission some years ago are now large enough to afford good sport. It is but a day's ride from the Mammoth Hot Springs to the headwaters of the Gallatin River. In this and its various tributaries trout and the rare grayling are abundant and take the fly readily."

"From the Firehole Basin the forks of the Madison River can be easily reached over a wagon road, and here again one has the grayling as well as the trout. The road from the Upper Geyser Basin to the Yellowstone Lake passes near Shoshone Lake, where lake and Loch Leven trout are found, having been planted by the Fish Commission. The largest catches can, however, be taken at the outlet of the Yellowstone Lake. Yancy's, accessible from the Mammoth Hot Springs or the cañon, forms a convenient point from which to make excursions."

"The Yellowstone River itself affords nearly fifty miles of the finest trout fishing within the borders of the Park; the East Fork and smaller streams are easier to fish and the trout not less gamy; at Tower Falls the swift current and deep pools make ideal fishing."

"The Park is on the very summit of the Rocky Mountains and is about 7,000ft. above sea level; in fact, the springs, which are the sources of the streams, are themselves within the Park, thus making the waters cold all the year, insuring a gamy fish. One of our members in a day's fishing last summer landed 99 trout, weighing a trifle over 50lbs. for the catch."

A Good Year.

From all accounts, this bids fair to be a good fishing year. The early run is large, perhaps due much to the efficient fishway work in this region in recent times.

Michigan Fly-Fishing.

April 22.—When Mr. Ben O. Bush, of Kalamazoo, Mich., was in my office the other day, I made him stand and deliver the following information as to fly-fishing points in the South Peninsula:

KALAMAZOO RIVER.

Fishing for small-mouthed black bass is good, between Marshall and Allegan, distance about 100 miles by course of stream.

Good points are Battle Creek to Augusta, Augusta to Kalamazoo.

Fine fly-fishing can be had at Galesburg, nine miles east

of Kalamazoo, on Michigan Central R'y. Write H. Dale Adams, Galesburg, Mich.

ST. JOSEPH AND THE GRAND RIVERS

Are also good bass streams. Mendon on the St. Joseph and below Lansing on the Grand about Grand Ledge are good points.

MUSKOGON RIVER FOR TROUT.

All tributaries of this stream have been stocked with trout and the trout fishing is especially fine in and about Muskegon, Mich. The humble worm is mostly used for bait, but large creels of big trout are the consequence thereof.

TROUT.

About all of the spring streams in southern Michigan have been stocked with trout. Trout fishing is good in Kalamazoo county. Spring Brook near Kalamazoo is the best known stream, and there thousands of trout are taken each season.

Upper Peninsula Trout.

Mr. B. W. Goodsell says that along the new branch of the Milwaukee & Northern road, built northwest from Iron Mountain, fine trout fishing can be had in the Paint, the Fence, or almost any of the streams crossed by the road. It is mostly necessary to camp, but the trains will stop to let off or take on campers.

Chicago Fly-Casting Club.

The Chicago Fly-Casting Club held a special meeting Thursday evening. A tournament committee, to consist of the executive committee, with the addition of Dr. Henshall as managing director of the World's Fair tournament, was fully empowered to arrange for the tournament branch of the summer's entertainment. It is gratifying to be able to announce also that a site, and a very excellent one, has been assigned the club for its Walton Fishing House, this site, which it is to be hoped will be the last one, is on the east arm of the north lagoon, a short distance from the east wing of the Fine Arts Building.

At the World's Fair.

One week more and the gates of the great Exposition will be thrown open. During these closing days the crush and hurry of preparation is intense indeed. Capt. Collins, Chief of Fisheries, is a very busy man, but smiling withal as he looks about upon the installations now so rapidly nearing completion in his department. It would be "telling" to name all the interesting things now in place here, and a long telling, too. Work in the Angling exhibit seems to lag. The exhibitors claim that they cannot yet show case goods from the mills. Everything is crowded. Nevertheless in one week from Monday next the gates will go open upon an exposition nearly ready, and the few smoothing touches will be put on while the wheels go round. Of the things and events of interest to those absent or not yet ready to start for the Fair, FOREST AND STREAM will weekly spread the story. The center of interest in every line of activity is for now at this big White City. At this focus the development of the sporting interest can best be seen and learned.

These are great days, not so much for their brass and bunting, nor for their worthy thrills of patriotism, nor for their historic reflections, as for the determining and checking up and certifying of the many branches of human knowledge through this inimitable and extraordinary opportunity of comparison. We don't know what we know until we see what other people know. Here we can compare our locomotives with those of Great Britain, our paintings with those of France, our guns and rods and flies with those of England.

The opportunity is invaluable for not only the business man or the curiosity seeker, but for the sportsman in every rank of sport, and the latter has as legitimate a right for its improvement as the former. Certainly the most unusual attractions have been prepared solely in the interest of the latter, and among the mass of mixed material will be found much more worthy of sorting out and mentioning.

E. HOUGH.

175 MONROE STREET, Chicago.

On and after May 1 the Western office of Forest and Stream Pub. Co. will be permanently located at 909 Security Building, cor. Fifth avenue and Madison street, Chicago.

Adirondack League Club Opening.

THE executive committee of the Adirondack League Club announce the completion of the new club house, Mountain Lodge, and its opening for the reception of members, their families and guests, at the beginning of the fishing season of 1898. The club house will be ready for the use of members on Tuesday, May 16, and will remain open until Nov. 1. On Tuesday evening, June 6, a club dinner will be given in the large dining room, to celebrate the opening.

Members who will go from New York to attend the club dinner on June 6, should notify the secretary, at 203 Broadway, New York, in order that proper railway accommodations may be obtained. It is probable that the 7 P. M. train, on June 5, will attach as many sleeping cars as may be needed, and detach them at Fulton Chain station on the Adirondack & St. Lawrence Railroad early in the morning, so that members may rise and proceed to the club house at their convenience. The distance is but four or five miles.

Captain Otis, the manager, should be advised in advance whether or not a guide will be wanted by the member or party, and if they have preference for any particular guide, his name should be given.

Forest Lodge, the club house on Honnedaga Lake, will open as usual on May 15. Only members of the club, their families and guests are entitled to the privileges of the club houses, and the hunting and fishing rights of the preserve. Each member may invite a non-member as a guest for a period of two weeks each season. Guests' tickets may be obtained of the secretary on application, by giving the name of the guest and the period of his proposed visit.

FISHING was a favorite pastime of young Egyptian gentlemen, and the occupation was not confined to young persons alone nor thought unworthy of men of more serious habits. An Egyptian of rank is frequently represented in the Scriptures as catching fish with a rod and line.

FISHING SEASON IN CANADA.

I READ that bears are out again in Pennsylvania, having made their spring appearance there as early as the middle of March. I don't know how far the season may have advanced in the Adirondacks, but up here in Canada, at all events in northeastern Quebec, bruin is still in winter quarters. Mr. B. A. Scott, the Mayor of Roberval, became anxious last month for the safety of the tame bear that was to have been seen last summer around the Roberval Hotel, and so dug him out of his hole beneath the snow. When drawn from the barrel in which he was hibernating the bear opened one eye and looked at the intruders, subsequently devouring a piece of meat that they offered him and then asking for more, after which he quietly curled himself up again to resume his interrupted snooze, and was left as before beneath a deep covering of snow. That is the last that has yet been heard of him. As a rule, when bears first wake up to business in the spring of the year they are anything but ravenous, and live for some time on the tender sprouts of budding plants, the grubs which they find in the decaying trunks of trees, such berries as have survived the winter, with an occasional fish or frog. They seem to feel that after the long period of inactivity enjoyed by their stomachs, it would not be possible to digest a haunch of venison or a shoulder of mutton, and are therefore somewhat particular as to their menu. The rather extraordinary appetite of Mr. Scott's bear when awakened last month was construed by woodsmen as indicative of a late spring and of bruin's intention of remaining without further refreshment for some time to come.

The late spring we decidedly have; the ice upon Lake St. John being reported still to be nearly two feet thick, while plenty of snow remains at present writing, especially in the shade of the woods. If, as expected, and as generally happens here in the event of a late spring, the warm weather comes on with a rush when it first sets in, the ice may yet break up on the lakes as early as usual, which is generally from the 8th to the 12th of May. The most prolific trout fishing of the entire season will then be in order; but at first, at all events in the lakes, while the water is high, bait-fishing is the more successful form of the sport. Members of American clubs owning fishing territories here are usually advised by telegraph when the ice leaves their waters, and those anglers secure the best sport who can manage to arrive here immediately thereafter. The same thing is true of both Lakes Edward and St. Joseph, where the largest trout are taken in May and in the early part of June. For the spring fishing for ouananiche, whether with bait in Lake St. John or with the fly in the mouths of the Ouiaichouan and Metabetchouan, the best time is from the 20th of May to about the 15th of June. The plague of flies is avoided at this time of the year, but this fact is not much advertised, simply because the hotel does not open for some time after the commencement of the fishing season. The angler who goes to Lake St. John, however, will find comfortable enough accommodation in early spring in farm houses close to the fishing waters. I forgot to say that the fishing of both Lake St. Joseph and Lake Edward is open to the public. The latter mentioned lake usually offers the better sport, and is the rendezvous of Kit Clarke and other well-known anglers.

In the hope that they may prove useful to fishermen who desire to try spring fishing in Canada, I will endeavor, in the course of a few days, to send you notes of various experiences here last spring with different flies in different waters.

E. T. D. CHAMBERS.

QUEBEC, April 12.

FROG-CASTING FOR BASS.

Editor Forest and Stream:

Now that Mr. Abbott and "Eurus" have started the ball rolling in regard to bait-casting vs. trolling I feel at liberty to give my ideas, as they have hit on my hobby, "frog-casting." First, I wish to ask Mr. Abbott if in his long casting he can make his frog fall on to the water head first. I emphasize the word "make," for this is perfectly under the control of the caster, but I have not been able to do it by ordinary casting. If Mr. Abbott can he will shed my remarks as a duck does water.

In ordinary bait-casting, where one reels the line in till the leader touches the tip, one has very little control over the bait, except to shape its course and drop it at the distance he wishes by thumbing and by dropping the tip. This does very well for minnows and baits in which the manner of touching the water is immaterial, but whoever saw a frog jump into the water backward?

I have had a bass take a frog before it touched the water, but it would never have done so if the frog had come hurtling through the air backward, or side on, or all doubled up. I have had many strikes in an instant after the frog touched the water, but only in those cases when he landed right, head first and with a soft "chunk." If he landed with a splash or a slap no bass would take him until after he began to move and strike out to swim, which would remove all doubts of his identity, and a swirl in the water and possibly a flash of dark green would prelude the soft hissing of the line as it ran through the guides 10ft.—20ft.—then a little pull as the bass shakes his head in changing the position of his frogship or swallowing him—then the strike!

In fly-fishing there is simply the rise and simultaneous strike, but in frog-casting the seconds (they seem pretty long ones) that elapse between the swirl of the bass as he takes the frog from the surface and rushes with it to his nest in the weeds, and when he changes it round in his mouth or if he has caught it head in, before he really swallows it, are full of anticipation. This time is to me the most exciting and interesting of any fishing experience, for after the strike, if you have set your hook well, there is something of routine work in bringing him to the landing net, of course with exciting incidents and peculiar rushes interspersed.

But the judgment that is required when a bass takes the frog is unlimited. In a day's fishing one will hardly get two strikes and rushes just alike, and one's treatment of them must vary accordingly. For instance, you are using a small frog and a large bass takes it, if he goes away head from you, strike. If he goes down or comes toward you, wait. If a small one takes it, wait in either case, as also if you are using a large frog. But how can one tell if the bass is large or small if he don't see it? Partly by intuition, partly by signs. A large bass seldom breaks water when he takes the bait, but makes an angry swirl, in proportion to his size, smaller ones up to 2lbs.

will come partly or entirely from the water with a splash or slap, and I have noticed as a general thing that the smaller the bass the greater the noise. Also that the size of frog used in no way controls the size of fish that will bite, as last summer I caught a one-pounder on a bullfrog whose body was fully 4½ in. long, while I landed a 7½ lbs. large-mouth on a little spotted grass frog of 1½ in. body.

Of course the time of striking a fish cannot be governed by any arbitrary rules, but in the method of making the strike depends a great deal of success or failure to land your fish. A quick sharp jerk will lose more fish than it hooks; while a long, strong pull will set the hook through bone and meat.

If one holds his rod out in front of him, tip well down, line just taut and arm almost straight; when ready to strike and then brings his hand back nearly to his shoulder and raises the tip of his rod, both in one movement, he will not only set the hook firmly in whatever part of the mouth it may lie, but he will feel his fish and usually turn it, and from that time can guide it to suit the water it may be in.

Now as to the mode of casting I claim that the ordinary way of bait-casting is not suited to frogs. But not wishing to provoke argument I will simply give my way of casting the frog. I use a rod just sufficiently stiff, varying it to suit the size of frogs used. If fishing from a boat I make a back and a front cast, under the tip, that is I swing the frog out in front, then by a side motion of the rod bring him past me and back of me and let him carry out some line, then to make my actual cast, I draw out some line from the reel and hold in left hand and by a similar motion of the rod aided by its spring, bring the frog past me and out in front, and as he reaches the spot desired, let go of the line in left hand and the frog reverses ends and comes easily and naturally into the water. If fishing from the shore or wading I make the same under-hand cast, but with more line in left hand. In this way I keep my frog alive and swimming, and his soft drooping on the water brings the bass to him out of curiosity; while a heavy splash will send them away and one must wait for them to circle and come back. Thirty to 50ft. or over can easily be cast in this manner and I have found little necessity for more.

I consider the frog so used one of the most killing baits for either small or large-mouth bass, and right here I should like to say a few words in defense of the large-mouth or Oswego bass. Before residing here I had fished almost entirely for small-mouth bass only in the West, at St. Clair Flats and elsewhere, and I expected but little sport from the big-mouths round here; but I have had a change of heart forced upon me and have found that they possess an amount of cunning and trickiness that makes up for the reckless courage and vim of the small-mouth. And in cold spring-water lakes I have had them make a fight that would challenge a small-mouth of equal weight. One that took my frog just as the moon was rising one evening left the water five times and made three long runs before I brought him to the net and he still had enough reserve energy to have kept it up longer, but I was ready for supper; and that reminds me that a large-mouth bass if dressed and cooked properly is a dish fit for the best of sportsmen (and no man deserves better). Skin your fish and split down the back and remove backbone and if you wish, the ribs. Then rub the two pieces of pink flesh with pepper and salt, roll in flour, or rather, stew slowly in butter. Try it! But don't cook him with his skin on and bones in and then blame me.

AMPHIBIAN.

POUGHKEEPSIE, N. Y.

OREGON NOTES.

THE open salmon season commenced April 10. Remarkably heavy catches all along down the Columbia are reported. I was told yesterday that the boats were averaging about eighty fish per day. I am sure that I have never seen in the Portland markets a finer lot of Chinooks. When the weather settles a little, what fun there will be at Willamette Falls.

Many of us would like to see the open season for trout commence May 1 instead of April 1 in Oregon. Nature and old Neptune have taken the matter in hand this spring and are accomplishing, for this season at least, what ought to be the general law. Here it is the middle of April, and no trout to speak of. The incessant rains and continued cool weather since the first of March leave the streams in such a condition that nothing less than two weeks of very good weather will give the country boy and pan fisherman an opportunity to use their detestable salmon roe to any particular advantage. It may seem that I have a personal interest in this matter, and so I have. All fly-fishermen have an interest in it, and it is but natural that we should take a sort of fiendish delight in seeing the April bait-fisherman wait for the second table along with his betters.

What sportsman of the Northwest does not know Judge John W. Whalley? We recognize him as one of the oldest and most "reliable" all-round sportsmen in Oregon. We look upon him as a kind of father-in-law, for you know that we, every one of us, are wedded to either rod or gun, and he is their master if not their pater. He is very practical in some things, very theoretical in others, but always under all circumstances and in all conditions as full of fun as an egg is of meat. Good fellowship is his hobby and kindness of heart his chronic condition. He is the best story teller on the West Coast, and to hear him tell it, he is always ahead on every proposition; or in other words the judge never gets left and wins on every deal. Here is an instance: The day before yesterday he went up above Albany after snipe and got five. Happening to meet him at Court yesterday I asked him about his trip, and naturally (for me) fell to considering it from a financial point of view. I always like to know all the particulars, as the cost for the knowledge might come in handy some day you know.

Here are the items as given by the judge: Railroad fare, \$5; hotel bill, \$2; team, beer and luncheon, \$10; cigars, \$1.50; waiter at hotel, brushing clothes, 25 cents; patch for snagged rubber boot, 50 cents; shells (a very windy day you know), 50 cents; loss of time (attorney in full practice), \$20.

I called his attention to the fact that, taking his own figures, his snipe has cost him \$7.95 each. "But," said he, "you have not allowed me the proper credits." Then he fell to figuring and turned in the following "contra credits": Recreation, \$10; medicine and doctor bills avoided, \$50; snipe, 50 cents; a clear profit of \$20.75.

It occurred to me that he placed rather a high valuation on recreation and health for a man that never saw a sick day in his life. Doubtless if the snipe had cost him \$100 each, he would have simply raised the price of health and recreation proportionately and proved himself a clear winner just the same. However, may his shadow never grow less.

S. H. GREENE.

PORTLAND, OREGON, April 14.

ST. LOUIS NOTES.

FOR many years Murdock Lake, some twenty-six miles south of this city on the Illinois side, has been famous as an angling resort. A couple of years ago, however, a ditch was cut to the lake and part of the water drained off. Besides this the old club had so persistently caught out the fish that the once popular resort was given up and the old club removed to the St. Francis River. The high water of last year reached Murdock Lake, and as a consequence it is again full of game fish and some very large catches have been made this spring. The restocking of this fine body of water has led to the re-organization of the Murdock Lake Fishing Club under the following officers: President, Gen. E. A. Moore; Vice-President, G. H. Knight; Secretary, G. H. Rawlins; Treasurer, M. L. Houts. The above four are also directors and in addition there are three more, namely: P. H. Felker, Henry Feldbush and Dr. Fike, of Waterloo, who is one of the fish wardens of the State of Illinois. The new club will be chartered under the Illinois law and sixty shares of stock will be issued at \$10 per share to the club members, the number of which is limited to sixty, and is already full. It will be remembered that Murdock Lake has a record of the largest croppie caught by hook and line in the country, it weighing over 3lbs.

The King's Lake Fish and Game Preserving Association, commonly known as the King's Lake Club, has elected the following officers for the ensuing year: President, E. T. Jester; Vice-President, William J. Baker; Secretary and Treasurer, George J. Chapman. The club membership now numbers 150 and the limit is 200. There has been good duck and snipe shooting on the grounds this season and fishing will be better than ever when the water becomes settled.

Our neighboring city of Carlyle in Illinois, has a very prosperous club under the style of the Carlyle Fishing and Hunting Club. The concern has a capital stock of \$10,000 and has purchased Abbott's Lake, with 65 acres of ground near the city of Carlyle. The lake is small, covering only 10 acres and has a beautiful little island of 2 acres. The water has been well stocked with fish and furnishes excellent sport. There is a new club house costing \$1,560 built in modern style with all improvements and also a boat house 34x30ft., and other summer houses. The island will be connected with the main land by a rustic bridge, and a drive will be made around the lake. It is proposed to lay out a lawn tennis court, a race track and bowling alley are also talked of. Most of the members belong to the city of Carlyle, there are a few who belong to the city of St. Louis. The board of directors are as follows: G. Van Hoorbeke, August Schlafly, F. P. Bacon, Henry Bender and H. A. Niehoff.

ABERDEEN.

THE "B. A. SCOTT" FLY.

IN your issue of April 6, under the heading of "Angling Notes," Mr. A. N. Cheney refers to the now famous ouananiche fly the "B. A. Scott." Permit me to say that this gentleman is positively wrong when he claims that the "B. A. Scott" is an imitation of Miss McBride's "Gen. Hooker," which he describes as follows:

Gen. Hooker: Body bright yellow and green ringed alternately, red hackle (and this means chicken red); wings, tail feathers of the ruffed grouse. Mr. W. Holberton describes the Gen. Hooker as having light brown mottled wings and a green body with yellow bands.

Now for the genuine B. A. Scott and my pattern: Body pale yellow (almost white) and blue ringed alternately, brown hackle; wings stone gray (plain), duck's down of the bluebill preferred, hook No. 8.

I fail to see the likeness between these two. Moreover, the duck feather will retain its rigidity in the water, while the grouse feather will lie flat on the hook.

Three years ago, in August, Mr. B. A. Scott called upon me. He was looking for an imitation of a midget fly which had proved to be the natural food of the ouananiche in the latter part of July and beginning of August, a minute description of which convinced me that it would prove a killer. Some fair substitutes were found, the best being the queen-of-the-waters, black-fairy, grizzly-king and golden-spinner. Meanwhile we set to work and had tied what is now known as the "B. A. Scott." The first lot were immediately mailed to Mr. Scott. Having tried them he did not hesitate to proclaim them the best fly known for ouananiche at that season. With Mr. Scott's permission we named the fly after him, and this is the history of its origin.

This fly will kill when such flies as the Jock-Scott, silver-gray, Halifax, silver-doctor and fairy will fail. A peculiarity in ouananiche, this is the absence of scarlet, red or white. The B. A. Scott has made its mark as a trout fly and is getting very popular among trout fishermen. Another killer or hooker, as Mr. Cheney calls them, is the "Parmachenee-belle," which I believe to be a creation of the latter-mentioned gentleman, and I congratulate him on it. I have known it some five years, and then they came from Mr. Chas. Orvis. Since that time I have had them from T. J. Conroy, Abbey & Imbrie and English and Scotch firms, with the result that I have six distinct patterns and as different as they can possibly be, but they are all killers and called by the same name.

Ice on the lakes north of here is still 3ft. thick. We expect, however, to get our first fishing about May 20.

GEORGE VAN FELSE.

QUEBEC, CAN.

Dynamiters at Work.

By a despatch from Fort Hunter, N. Y., it is learned that four men, named Jack Morgan, Edward Rivers, John Rockefeller and James Ambridge, all of Amsterdam, have been arrested on the charge of killing fish in the Mohawk River by the use of dynamite cartridges. Thousands of fish, it is said, were killed by these men. The prisoners were held under \$250 bonds for trial Wednesday. Fishermen are indignant over the acts of the dynamiters. The prisoners will also have to answer to the charge of fishing on Sunday.

A Sandwich Island Fish Hook.

TAKOMA, D. C., April 7.—Under the above title I read a very interesting note in *FOREST AND STREAM* of April 13, '93 (pp. 315, 316), and enjoyed the excellent photographic figures that accompanied it. I have in my private collections a fish hook from the Sandwich Islands, precisely similar to the one in your illustration, with the exception that it chances to be nearly one-third larger in size. This relic I obtained as a gift from an officer of our army, to whom in 1887 I had given a sick leave for six months and a recommendation for a sea voyage. He went that year to the Sandwich Islands, and among the objects he purchased there was this fish hook. From him I learned that those hooks are still commonly in use by the natives on the coast. They bait them with various kinds of baits and employ them in shark fishing, at which amusement they are very successful. In selecting the shell from which this pattern of hook is manufactured a piece is always chosen for the "shank" which has upon its anterior aspect one or two of the raised internal convolutions of the shell. These are well seen in the *FOREST AND STREAM* photograph, and the object of the manufacturer is to have a strong undulating surface there to which the fish line can be more firmly and securely strapped. The curved portion in front is also of the same material, but chosen from an entirely different part of the shell. It is simply ground to a point, subconical in form, curved and polished. No attempt is ever made to make a "barb" at its extremity. The hook part is securely laced to the "shank" by means of a cord made of some kind of a vegetable fiber, and a stiff tassell of the same is allowed to project below. It must be evident that a shark once struck with an unbarbed hook of this kind should be pulled quickly inboard or ashore, the line being kept constantly taut, or else he could easily free himself again.

R. W. SHUFELDT.

Bangor Salmon Pool.

A DISPATCH from Bangor, Me., on Friday, the 21st, says that the first salmon of the season had just been taken from the pool. This is nine days later than last year, when the first salmon was taken on the 12th of April. Since the 21st there has been a storm and a rise of water, which has doubtless hindered the run of salmon, till the water clears again. Boston salmon fishermen do not seem to have waked up to the fact that salmon are running at Bangor. A year ago there were several anglers in waiting, but this year they do not seem to be going. I met one of them on the street the other day. He remarked that he did not like the salmon fishing at Bangor. The river is full of boats of all sorts, with all sorts of fishermen in them. But the chap with a birch pole and 100ft. of strong string prevails. After all, this chap is about as well off as the fellow with the best of rods and rigs. The fishing is all done by letting the fly or bait drift down the rapids. When the fish is hooked the boat is allowed to drift down the rapids after the fish till he is secured.

SPECIAL.

Bass of St. Mary's Reservoir.

CINCINNATI, O., April 14.—Three years ago while fishing in the St. Mary's Reservoir, I caught an exceedingly large bass; I fastened a strong string firmly to his lower jaw and tied him out in the water for three days. The third day he was nearly dead so I took him out and Sam Marshall and George Swarts weighed him; he tipped the scales at 7lbs. Have any of your readers ever caught a larger one in the Reservoir?

F. B. MAGILL.

First of the Tarpon.

FORT MYERS, Fla., April 14.—*Editor Forest and Stream:* I caught my first tarpon to-day after a very hard struggle of 45 minutes. It weighed 100lbs., and was 6ft. 1in. long. Mr. Fay, of Chicago, caught his first one to-day, weight 125lbs., and Mr. Little, of Philadelphia, caught his twenty-first. Saw three at Naples on 12th, caught that day by B. Dunn, of Rochester, weighing 157, 110 and 100lbs. respectively.

CLARENCE HOWLAND.

Not Yet.

GRAHAMSVILLE, Sullivan County, N. Y., April 20.—*Editor Forest and Stream:* The trout season has hardly opened yet in this section. In consequence of the heavy drifts of snow upon the mountains—in some cases six to seven feet deep—the waters of the different streams in this vicinity are too cold and too much swollen for trout to bite freely. I do not expect any good fishing until about May 1.

E. A. CRAWFORD.

Club Rules Desired.

The members of the Multnomah Rod and Gun Club would be glad to receive copies of the printed constitution and by-laws of the various rod and gun clubs, State sportsmen's clubs and game protective clubs, which can be mailed to Mr. D. L. Williams, P. O. Box 85, Portland, Oregon.

Thousands of Catfish.

THERE is a curious sight at the William Penn, Schuylkill county, Pa., dam, and many people of the town have made special trips to see it. The surface is covered with the dead bodies of thousands of catfish, many of which are seven inches and more in length. In one of the outlets a gentleman of the town who visited the dam on Sunday counted 500 as fine specimens as any fisherman ever caught on the hook. How so many of them died at one time seems to be a mystery to some, but it is explained that the water, which is not very deep, was frozen to the bottom of the dam during the winter. Arrangements are being made to have the fish removed.—*Shenandoah Herald.*

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work *Bird Portraits for the Young* (the price of which is \$3).

Omaha and Kansas City

Are reached most directly from either Chicago or St. Louis by the Burlington Route. Daily vestibuled trains with Pullman sleepers, chair cars (seats free) and Burlington route dining cars.—*Adv.*

The Kennel.

Communications for publication relating to business should be addressed to the *Forest and Stream* Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

May 3 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
May 30 to June 2.—American Pet Dog Club, Lexox Lyceum, New York. Marion E. Bannister, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 15.—American Field Trial Club trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.
Nov. 30.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

The Cocker as a Sporting Dog.

Editor Forest and Stream:

Well, well! So "Solus" is out with a gun. Not only is the cocker degenerated, but also the men; so that a poor old fellow cannot write his innocent plaint to his favorite paper without some little snip with a Latin tail for a name jumping on him in a most disrespectful manner.

And he is going to keep guessing who this learned Solomon is?

Dear dear! I'm sure I didn't know I promulgated any learned views. I only meant, dear Mr. Editor, to tell what very good times I had over a real cocker spaniel years ago, and to express my honest regret that, in my honest opinion, the present dogs were not half as good as the old ones.

Far be it from me to force my opinions on any one; but let not even "Solus" think I write without some knowledge of the present black cockers. I owned a short time a black bitch which was said to be a good specimen of the present style of dog, and which was also said to be well bred by persons who should know, and I know she was in no sense as good or as useful as the old ones.

Why cannot "Solus," if he will rail and sneer and quote, at least quote properly. Let him re-read and ponder, and he will learn that the words he refers to allude to a looking-forward-some time-to-be-in-the-future-dog-show and dog, and not to the present cocker at all.

And "Solus" thinks "there are those who will be glad to point out to him where the modern cocker is in many points superior to the ancient one," does he? They may be glad to do so, but they could never persuade me what I know by actual experience is not so.

Do I understand that "Solus" will breed for any customer, provided he won't write to *FOREST AND STREAM* first, a dog to order? Well, this is, to me, an entirely new idea, and perhaps one reason for the degeneracy of the cocker spaniel that I did not know.

I'll bet a new 64-cent silver dollar that "Solus" has a dog or dogs to sell, and that my poor, innocent little letter in some way doesn't seem to describe the stock on hand.

COCKER.

Which is the Best Spaniel for Work?

Editor Forest and Stream:

Mr. Fellows, in your issue of Feb. 23, says that a cocker with a big head cannot go and stay, and seems to insinuate the same ideas about a field spaniel. Now I think a narrow-headed, sniped-nosed, spindle-legged spaniel an utter abomination, and as the spaniel breed is meant for work and nothing else I say it is as bad in one type as in another. There are two good old sayings to this effect: "That the proof of the pudding is in the eating," and "That an ounce of practice is worth a pound of theory." The latter I believe, in fact, is in mind the proof of a dog's shape, broadly speaking, is in his work. Now it happens that I came by a spaniel like Mr. Fellows's, in an unexpected way, that I believe as a workman is almost perfect, both in shape and use, and I suppose "Uncle Dick" will allow that a spaniel that is not a workman is useless. I inclose his photo (which hardly shows him to the best advantage) to let our cocker breeder feast his eyes on 40lbs. of solid practice and will now proceed to give his measurements: Height 16in., weight 40lbs., length from nose to root of tail 36in., girth of chest 34in. (stick a pin in here), loin 25in., girth of skull 16½in., muzzle 10½in., forearm 5in., thigh measured round the stifle 17in., neck 16½in. Now let us dissect these points and find out their value. What is a spaniel's most important feature? A good nose by all odds. What kind of breeds have the best noses? Pointers, setters and hounds. What kind of muzzles have these dogs? Square muzzles. What kind of dog is least noted for its scenting powers? A greyhound, which has a very pointed muzzle. Then I say a square muzzle for a spaniel, with a well-defined stop. What is his next most important point? Obviously, endurance. Then I say a spaniel should possess tremendous chest room, *vide* my measurement above. Can you pick out his next attribute? Yes, easily, strength. He should have plenty of bone and substance, to which should be attached large, hard muscles, coupled with a strong loin, so rendering him better able to stand fatigue.

Is there anything else? Yes, and very important, too. A spaniel, above all dogs, should have lots of intelligence, which means bird sense; therefore I claim a broad, roomy skull is very requisite; so you see we have got to have a big head (not a swelled head). To this must be coupled a muscular, strong neck to support the head and carry the game; and lastly, a good, hard, long jacket fitted to resist the elements and the brush. Without desiring to eulogize the dog in the above picture, because he happens to be mine, but first to show that such make and shape as I have advocated means a "business" dog, I will describe his work in the field. I am bound in justice to the dog to say he is the best I have ever seen, and I have shot over a good many; his bird sense and endurance are simply marvellous; in fact, as a stayer he is tireless, and sometimes he shows almost a human intelligence. In my first day this season I used Ben, the subject of my sketch, and three cockers of Mr. Fellows's type, and at the end of the day the cockers were so utterly done up that I was almost obliged to get them carried home, while the field spaniel was quite ready to begin again. The cockers, I must tell you, did very little work. Ben has indomitable pluck and courage, facing the thickest covert; a special feature of his is, that for a spaniel he is a splendid jumper, making nothing of a four-foot jump. This he gets from his perfect back and bulldog-like loin. His nose leaves nothing to be desired, I having seen him wind birds 50yds. away. He is covered with hard-packed muscle, and also has a very willing disposition. Ben's only theoretical defect being a rather short coat, although this dog is built like a prize cart horse, his pace for a short distance is beyond belief; he saves piles of rabbits that have only been slightly wounded, and I believe many that have not been touched at

all. Is it not foolish to use a cocker when a field spaniel, or, we'll call it a practical type dog, will do the work fully fifty per cent. better. I suppose not until we get spaniel field trials will these various fancy types be thrown over, then we shall see the survival of the fittest.

CECIL COX.

Editor Forest and Stream:

In your issue of March 23 "Cocker" writes a very sensible letter which I wish to indorse, all but the last paragraph. I think he has explained why the old style cocker was better for work than the modern one that is never seen only at a dog show.

I for one do not believe that "Solus" or any one else can ever point out to "Cocker" or to any one that ever used a cocker where the modern cocker is in it at all with the working dog. I shoot only over cockers, and I am prepared to prove the modern small field spaniel that wins at our shows as a cocker is of no use afield after the second hour, if he lasts even that length of time. Please do not answer over a *nom de plume*. Let the world know if you have a right to talk about working cockers.

J. OTIS FELLOWS.

HORNELLVILLE, N. Y., April 10.

Judging Great Danes.

Editor Forest and Stream:

The superior quality and rapid increase in the number of great Danes exhibited at shows during this spring over previous years are evidence of the popularity this breed is gaining with dog fanciers. A few years ago the race was hardly known here, and at present questions like these: "What do you call that breed? Are they vicious?" are so often heard that the persons addressed become tired of answering, and at shows the reply, "Please buy a catalogue," may be in order. There are, of course, not many persons in this country who are sufficiently well acquainted with the characteristic points of these dogs to judge them intelligently, and I declare that one of the poorest judges officiated at New York and Baltimore.

At New York, where at the last show the best great Danes did not win, Mr. Muss-Arnolt said to me, "I heard that you expressed your dissatisfaction with my decisions," and my reply was, "Certainly I did, and so did all who know the breed. You should not have offered your services as a judge, and I am sure that at New York you were judge for the first time, and that at Baltimore your last judging will be done. My Stella is better than the winning bitch." We then went to Stella's stall, where I asked him, "What fault do you find in her?" He pointed to her cheeks, and I remarked: "Yes, nice head, well developed cheek muscles according to standard of points. What else?" He did not find anything. Thereupon we went to the winning bitch, on which I showed him several faults.

At first I thought that only his being unacquainted with the type and points of the great Dane had been the cause of Mr. Muss-Arnolt's perverse decisions, but I got a different opinion about him when I read in his report on the New York dog show, published in your issue of March 2: "Third, very bad tail curve, got almost too much, and his coat and general appearance has not much of great Dane character, even if his owner thinks, as he says, he and Stella were the only great Danes in the show. I agree with him if he says great mongrels."

If the above were true, a judge awarding prizes to "great mongrels" would act dishonestly and should be kept out of the ring. But it is a mixture of nonsense and falsehood; I never said that she and Stella were the only Great Danes in the show.

The *Kennel Gazette* of June last contains in the judge's—Mr. Mortimer's—report of the Washington show the following criticism: "Stella, the winning bitch, is a very cleanly made puppy of the right type that will yet be heard from. She also won in the puppy class from Bismarck II., beating him decisively in type and quality." It was my intention to exhibit Stella in Washington again, but believing she would be in heat then, I did not enter her. Although I am a member of the Maryland Kennel Club, I did not exhibit any dogs in Baltimore, because I will not enter my dogs where such a person as Mr. Muss-Arnolt judges. Breeders and fanciers of great Danes noticed with satisfaction that Mr. Muss-Arnolt's judging was upset at Washington by Mr. Mortimer, and especially that such an inferior dog as Wenzel was taken down from the pedestal on which Mr. Muss-Arnolt had unjustly placed him.

The Great Dane Club of America, at their recent meeting in New York, recommended to the kennel clubs several men as judges, at the head of whom Mr. Muss-Arnolt was placed. Most of them have only owned one dog, or a few for a short time, and are generally considered not qualified to act as judges. These men should have sense enough not to render themselves ridiculous and injure the breed they administer by undertaking a task for which they are unfit. When I read the names of the persons recommended, I thought the club members were joking, and it is to be hoped that kennel clubs will also take it as a joke. To the Great Dane Club of America belong some very clever enthusiastic gentlemen, but it seems not only to me, but others, as if some of them in their zeal, are apt to over-run the goal.

J. H. H. MAENNER.

BALTIMORE, Md.

Eastern Field Trials Club.

Editor Forest and Stream:

The Eastern Field Trials Club has decided to hold their trials of 1893 at Newton, N. C., about forty miles southwest from Salisbury, N. C. The hotel and livery accommodations are very good, and the country is a fine large open country, full of stubbles and just sufficient woods, hedges, etc., to afford plenty of shelter to the birds. It is the banner wheat county in North Carolina, and so plenty of grain is raised here, the natural food of the quail.

The club has invited Messrs. W. W. Titus, of Waverly Miss.; Simon C. Bradley, of Greenfield Hill, Conn., and J. B. Stoddard, of Thomasville, N. C., to judge the trials of 1893 and they have accepted. I trust the public will compliment their acceptance with a large field of entries, as comment on their ability, integrity and experience is unnecessary.

At a meeting held Feb. 23 it was resolved, "All persons handling a dog or dogs in the public stakes of the Eastern field trials must first obtain a license from the board of governors, which will be furnished on application without charge; said license to remain in force during the meeting for which it is issued."

WASHINGTON A. COSTER, Sec'y-Treas.

SARATOGA SPRINGS, N. Y., April 21.

Dogs for Bear.

Editor Forest and Stream:

In your issue of April 6 the question is asked what breed or cross-breed of dogs is most likely to prove successful in hunting the bear. Thinking therefore it would interest some of your readers I want to tell you that in my native country (Hungary) one hunts the bears with the dachshund. I had myself the chance five years ago to shoot one bear before these courageous and determined dogs, and saw the Count Andrássy and several other Hungarian sportsmen shoot the bear trailed by the dachshund.

MAHAR, N. J., April 10.

COUNT R. PALFFY.

The mastiff Ingleside Beaufort was bought at the Boston show as a companion dog for the authoress Mrs. Margaret Deland.

Will Let Some Other Man Try.

Editor Forest and Stream:

While indulging in a little spell of retrospection this evening, I am forced to conclude that I am a "Jonah" regarding prize winners at bench shows, and cannot understand why my luck has never changed. I go back over the list of pointers that I have owned since the days of Phil (that I bought from my old friend "Andy" Waddell), and notice that while they were my property they were, as a rule, badly left, but when I disposed of them they seemed to go right up into the champion class, and win everywhere with never-failing regularity. Among them I remember Donald II., Rosa, Queen Bow, White Rose, Pommery Sec, Lady Graphic, Pontiac and Revelation (Dame Bang has been more fortunate, sweet little dog that she is), several champions of record, since I sold them. They certainly did not change either type or form after they left my hands, still they would win. I have therefore summed it up and decided to retire from the bench show ring, as regards pointers, and see if I can produce a winning setter by way of a change, and have therefore tendered my resignation to the Pointer Club, sold my alleged bench show pointers, and wish every pointer good luck. Those that I own hereafter will be strictly field dogs, and never be disgraced by being subjected to defeat on the bench by duffers that don't know a game bird from a door mat. And I must say, the more I read "Stonehenge" the more I incline to the belief that type, correct or incorrect, has but little weight in the distribution of awards by the judges of to-day, exceptions always granted. I do not mean to criticize another man's judgment because it does not agree with mine, but for the life of me I cannot figure out what type to show to get a blue ribbon. I carefully examine a dog that is winning, get close measurements, and am fortunate enough to get one almost precisely the same, sometimes better in some respects, and enter the ring to be judged by the same gentleman who was so highly pleased with the other dog. He merely glances at my "sure thing," and hands all the ribbons to dogs of entirely different type, and I am once more in the dark as to why, etc.

I have sold champion Revelation to Mr. Wm. Howkins, Monterey, Mass., and Dame Bang to Mr. W. W. Peabody, Jr., Cincinnati, O., and have no doubt that both dogs will be heard from in the near future. These sales were also suggested by the peculiar actions of the gentlemen managing the World's Fair dog show. I would not enter a dog under such "mystifying" rules, nor to be judged by any one unless properly selected by popular vote of the owners and handlers of this country. I claim that this show is, or was intended to be, a national affair, and it is simply ridiculous that one man, Mr. Buchanan, should assume the responsibility of appointing superintendent and judges without consulting intending exhibitors and getting a published expression. My information and belief is that his slate was made up while being entertained at the late New York show, and his appointments, if as published in another journal are correct, it is not difficult for us to imagine where he was "at home."

There is a remedy left for owners. "One may lead a horse to water but one cannot make him drink." A kennel exhibit may be given in Chicago in June next, but without entries it won't be a "howling" success.

Two things are necessary to insure enough entries to make it a go, namely, the selection of judges by a vote of bona fide owners and the abolishment of the fifty cent compulsory certificate rule. I cannot imagine why the A. K. C. should charge fifty cents for information which has already been paid for and published, and don't believe the owners will stand imposition even to the extent of fifty cents. The A. K. C. as I understand do not need funds, having a handsome cash surplus. As to the selection of judges, let names be submitted and published by the different sportsmen's journals, then votes sent in and the men receiving the highest number be officially appointed. I will wager that such a course will be eminently satisfactory and that when the "round up" is taken the names of John Davidson and Hon. John S. Wise will appear more frequently than some others.

I don't want to be personal or waste time in making the wishes and demands of dog owners understood, and trust that this hint may be productive of immediate good. If not, I shall try another tack, for I do not want the public swindled by an alleged dog show when it is easier to give a genuine good one.

GEO. W. LA RUE.

CHICAGO, Ill., April 10.

Where Is the Cocker as a Working Dog?

Editor Forest and Stream:

I quite agree with what "Cocker" says in your issue of March 23 as to the desire to breed the cocker spaniel by bench show exhibitors so small and fine that he is perfectly worthless for the field and only fit for a lap dog. I cannot, however, agree with him that breeding the cocker black has anything to do with unfitting him for the field, and can assure him that there are lots of good field cocker spaniels left yet, and black ones, too. Granted that a liver and white or black and white dog can be seen in the covert later in the evening than his solid-colored brother, but that is neither here nor there, as the majority of woodcock shooters will, I am quite sure, agree with me that the black cocker can be seen long after the hunter is able to see to shoot the birds. In my opinion the black cocker and black field spaniel have no equal for woodcock and partridge (ruffed grouse). I would say to any person wishing to own a good cocker spaniel, and the same time to have him a first-class field dog, to make choice of a puppy from 4mos. to 6mos. of age, let him be black in color, of hunting parents if possible, cobby and of rather heavy build, straight in the legs and well in proportion all through, neither with a large head and small body or small head and big body, although of the two evils the latter is the least. Make choice of the merry, playful little fellow, the pup that will come up to you and not turn and run for his life if you make a motion or speak to him. Neither the puppy that appears very timid and nervous. As for weight take one that when matured will weigh from 24 to 30lbs. Having made your choice, take your puppy home, do nothing but feed and make friends with him for two weeks. We will now suppose the puppy is five or six months of age. Take him out for his first lesson on to a nice green lawn, when the grass is cut short, if you have such a lawn; if not, take him into your yard or garden, but be sure to be alone, allow no other dogs to be present, nor children. Now, procure a small ball made of soft rags, show the ball to the puppy, put it into his mouth and hold it there a minute or so at a time; after having done so several times, attract his attention to the ball and then throw it from you a few yards, tell the puppy to find. He will take no notice; most likely he will try to commence a romp with you. Take him gently by the neck and drag him to where the ball is, pick it up and draw his attention to it, place it in his mouth saying "good dog, fetch!" and drag him to the place you throw the ball from. Repeat this several times at each lesson, but do not keep him at it too long, for if you do he will become tired and sulk. Give two lessons per day, and probably in a week's time he will have learned his lesson perfectly and will fetch and carry the ball like an old dog. Now change the ball for a small stick 6in. in length and proceed as with the ball. Keep him at this for several days, and when you have him proficient at this work, procure a woodcock or snipe (Wilson's); a partridge will not do, it is too large, and the puppy instead of fetching it, will start immediately to tear and mouth the bird.

Having got your woodcock or snipe, take the puppy out as before, show him the bird, keeping your hand well over it; if you do not the chances are that with one snap (which he is almost sure to make) he will take half the skin and

feathers off the bird, and likely carry the head with this mouthful. When the puppy has done smelling and trying to bite the game, place it in his mouth with one of your fingers (do not be afraid, he will not bite you), and with the other hand, holding him by his neck, lead him up and down the lawn half a dozen times, still holding the bird, with your finger in his mouth; having your finger in the dog's mouth will prevent any attempt on his part to bite or chew the bird. In a week or so you will find that the puppy will fetch and carry the bird just as well as he will the ball or stick. Having brought the little fellow so far, and made him efficient in the above, chain him some place where he cannot see you, then trail the bird along the lawn and leave it there. Having done so let the puppy loose, and tell him to seek and find, when you will be astonished, as well as pleased, to find how quickly the little fellow will take up the scent, get the bird and bring it to you. You will want your spaniel not only to retrieve from land but from water as well. Take him to any creek, lake or pond that you have in your neighborhood, and if you have or can get a dog that takes the water, bring him along, as your puppy will learn to retrieve from the water in half the time, for his company. On your first trial at the water with your puppy he will most likely content himself with running up and down the bank or shore barking at the other dog. All right, do not on any account push or shove him in; throw a stick two or three times into the water, telling him to fetch it. The next day when you bring him to the water he will do a little better, and condescend to wet his feet and legs; in another day or so he will make the grand plunge and thoroughly baptize himself, after which you will have no more trouble with him, as far as the water is concerned. Always, when you throw a stick or anything into the water for him to retrieve, stand a few yards away from the shore, so as to teach him to bring whatever it is to you and not leave it on the first land he comes to, as so many half-broken retrievers do, which act is most vexatious when the land happens to be a small island.

Having got your puppy to retrieve nicely from the water, take him to where the water is only 10 or 20ft. to the opposite shore. First throw a stick across on to the land opposite and get him to retrieve it from there, of course swimming each way. Do not allow him to run around, which he will probably try to do, if it is possible. When you have got him to retrieve the stick (which he will do in a lesson or two) use the woodcock or snipe in the same way. You will find your puppy will retrieve the bird just as readily as he did the stick. Your spaniel will be now about eight months old, and you will of course have got the puppy at such a time that it will be now September. Take him to the coverts without loss of time, in the company of an old, proven dog, if you can; if not, take him by himself. He will pester around at first, and stand and look much surprised on flushing his first bird, and will be a little timid for a short time at the report of the gun. Never mind, fire away, he will soon get over that, and will improve every day right along; so that by the close of the following season, if you live in a good locality for woodcock and partridge, you will own a black working cocker that money will not buy from you.

I saw champion Miss Obo II., at the Toronto dog show, 1891, for the first time. She was not a bit like the cocker I expected to see, nor did I consider her like any of the cockers in the show. At the same time she is my mean ideal of what a working cocker ought to be: built in perfect proportion in every respect. I measured her three times, as the first and second measurement I thought must be incorrect. I made her each time 14in. high, she also appeared to me to be well up to the limit of 30lbs. She is not as heavy in bone as some cockers, but her legs are quite heavy enough for a working cocker; cockers to sit upon a bench may require bone, and legs as heavy as a small Newfoundland dog, but I know for a fact that working cockers do not. Strange as it may appear, Miss Obo II. has been, I believe, pronounced by judges the best cocker spaniel that ever came to America.

To-ho and charge, I never teach a cocker, as it is not necessary. I might here add that if your spaniel is very hard in the mouth, and persistently insists on biting the birds, stick a ball of rags full of pins, with the points outward, and inclose the ball in the skin of a woodcock with the feathers on, and let him retrieve this a few times.

SPANIEL.

COOKSTOWN, Can.

Handsome is as Handsome Does.

Editor Forest and Stream:

For sixteen years I have been either directly or through the local newsdealer a subscriber and earnest reader of your paper, but never during that time have I seen anything that so called for the just censure of every lover of clean sport throughout the land as the cuts on page 191, present volume. If I was a sporting man I might derive some pleasure from the pictures there presented, but being a sportsman I can but condemn the base use to which your journal has been subjected. Surely a paper can have no regard for the ardent and true sportsman which seeks the patronage of the sporting man, the bruiser and the corner tough.

Publishing, as "exceptionally meritorious" in a dog show, a class of brutes the pictures of which not only show the extreme depths to which the animal kingdom can descend, but reminds one of the ancient heathen gods whose very repulsiveness caused the uncivilized sporting man to fall prostrate at their feet and blindly worship them. Can there be anything found in the "prize beauties" pictured on this page but what is sickening to any man who has not lost the last particle of manhood with which nature has endowed him?

How much more revolting this becomes to the clean sportsman when he compares the pictures on 191 with those on page 190, and feels the insult in seeing the lowest type of brutality found among animals placed on an equal footing with the sportsman's best friend, his dog, and this, too, in a sportsman's paper.

Is the end yet or will we see in future numbers pages devoted to the "ring" and "pit." For myself I can say that I shall never patiently submit to such degradation; better a thousand times to cut loose from all that suggests it than be dragged with it to the depths to which it must inevitably descend. What have my brother sportsmen to say?

S. K. TISDEL.

ITHACA, N. Y., March 21.

The Homing Instinct in Dogs.

Editor Forest and Stream:

A case which illustrates to some extent, at least, the "homing" instinct of the pointer came recently to my notice. A gentleman of this city, finding himself cramped for room, presented his pointer dog to a party residing some 16 miles north of here, the dog going to his new home about a year ago. Last week he appeared at the door of his former master's residence, seemingly overjoyed to get back. He remained until 3 P. M. the following day, when a member of the family saw the sturdy fellow start off up the street at a telling pace. An hour and a half thereafter, according to a letter just received, the dog reached his Lansing home. Prior to this round trip venture the pointer had been over the road only when conveyed in a closed vehicle to his present owner twelve months ago.

M. C. H.

ITHACA, N. Y., Dec. 23, 1892.

[The above letter has been overlooked. It is worthy of attention, and we think that the publication of other instances of a similar nature would prove interesting to our readers.]

A farmer who wished to enter some animals at an agricultural exhibition, wrote as follows to the secretary: "Enter me for a jackass."—*Tid-Bits*.

Our Bulldog Pictures.

We scarcely know whether to treat Mr. Tisdell's letter, in another column, seriously or not. At first we supposed he intended to be humorously sarcastic, but finally we were forced to conclude that he formed one of that large portion of deluded mortals who simply judge by appearances and do not take the trouble to see any further than their noses. That he should have been a reader of FOREST AND STREAM for so many years rather aggravates than mitigates his breach of good taste. That he has not scanned the pages of the kennel department is also deplorable, else would he have learned that of all the harmless, well-intentioned and good-natured beasts which are classified as dogs in the animal world the bulldog stands as near the head of the class as any one could desire. The simple fact that his profile does not partake of the "Grecian," as exemplified in a pointer or setter, may be a misfortune, for which he is in nowise responsible, the use to which he was put in a long-past barbarous age demanding such formation. If Mr. Tisdell will look around among the many acquaintances and friends such a man of keen discernment must have, he will find that good looks do not always conceal a kind heart or a high grade of intelligence. There are many men, ourselves included, whose style of physiognomy would scarcely entitle them to a place in a beauty show, still by nature they may be trusted to shine in that high moral atmosphere with which our correspondent evidently surrounds himself.

Mr. Tisdell associates the bulldog with the "bruiser" and the "corner tough." Why should he? Has he ever seen a dog like one of the dogs so admirably portrayed in our issue of March 2 in the company of one of these gentry? We opine not. The very formation of the animal's muzzle would lead men who indulge in dog fights to discard it at once. Besides, the bulldog's very tenacity of grip and cumbersome body would be fatal to its chances in a fight with any ordinary "business" dog. The bulldog's face is his misfortune, but there is no dog along the whole gamut of dogdom with whom we would rather trust a child than a thoroughbred bulldog. Let the child pull him and tease him as much as it will, the bulldog, oblivious to pain and in its habitual good nature, will never retaliate.

A Mr. Wilton J. Rix, in the *English Illustrated Monthly* for March, has an article in which he controverts the popular fancy that the bulldog is a vicious and undesirable member of the canine family. In the course of his interesting article he truthfully demonstrates the bulldog to be the reverse and concludes with "The unprejudiced inquirer cannot fail to discover that as a true and faithful companion, a quiet, well-conducted and withal reliable guardian, few dogs can be found to equal a good, thoroughbred bulldog," and such are those, the pictures of which Mr. Tisdell complains of. So far from the bulldogs being the companions and fancy of men of degraded instincts, we will enlighten our correspondent as to the names of a few of the gentlemen who are not ashamed, but proud to own such animals and who know their worth. Knowing these men as we do, we can readily understand the feelings with which they will read Mr. Tisdell's letter. Col. John E. Thayer, of Boston and Lancaster, Mass., has always been an admirer of the breed, and this gentleman is too well known to need any defense of character or standing, and so is Mr. John Mathews, of New York, whose recently erected mansion on the banks of the Hudson, as an instance, proclaims his refinement and good taste in every particular. Mr. Woodward, of Chicago, the owner of the dogs in question, is also a business man of good standing and a man of refined bearing. Then what about Messrs. Cole, Cugle, Kendall, Capt. John Phelps, son of Minister Phelps; the late Mr. Russell, and Ed Porter, gentlemen in the right sense both. Then in England the Woodwiss family, Cyril Jackson, F. Crowther, etc., all gentlemen of standing in their communities. Is it necessary to go further in this direction? We have said enough to show that our correspondent must look deeper than he has done and remember that as with men so with dogs, it is not "all gold that glitters." A doggerel, in a late issue of *British Fancier*, a verse of which we quote, forms a fitting close to this protest:

"As in the man, so with the dog of the real old British type,
So long connected wrongly with the public house and pipe;
The British bulldog now reclaimed by those who love to see
Their friend, the dog, approaching to what every man should be."

Beagle Type.

Editor Forest and Stream:

I wish to say a few words to the beagle men through the good old FOREST AND STREAM. I arrived home from the Boston dog show with little Spots safe and sound. To say I enjoyed myself only tells one-half, for I met many that I was acquainted with before, and had the pleasure of becoming acquainted with many others that are interested in our merry little hound. Then again to look over the beagles to see their faults, as I saw them, and to hear the opinions of better judges than I am, was a good lesson.

I wish I might say something to the beagle men about breeding, if I do not tread on tender toes. While I have bred my share of the best ones, I do not claim to know it all, but will say to those intending to breed their bitches this year—don't breed to the first dog you come across just because he is called a beagle, and then expect to raise prize winners, when there are such dogs as Fitz H. Lee and Frank Forest in the stud, and you can see what their get are and what they are themselves. I do not say there are not other good ones, but use the very best to be had from stock that are in it both in the field and on the bench, and then you will be never getting such dogs as Lonely, Emeline, Topsy S. and others of that stamp. Don't breed to the long-backed, long-faced, long-legged or the little weedy kind, for they are no good and are sure to hurt the coming beagle more than you can realize at the present day. In the breeding of Lonely to Frank Forest I shall look for grand results. Let us have, two years from now, such a lot of beagles that "Honest" John Davidson will have to look for the poor ones with his glasses on.

BARTON, Vt., April 17.

Death of Lady Alice.

Editor Forest and Stream:

It is not my desire to burden the public with all the goodness embodied in my lovely St. Bernard Lady Alice, but simply to inform you that she was instantly killed on the 19th inst. by an electric car in this city. I cannot and never shall fully realize that she has left me forever; having brought her over with me seven years ago from England, and we have never been a day separated, it is easy for those who have owned and loved a dog to imagine my feeling at present. All I can say is, may God never afflict any one who has a real appreciation for the dumb brute as has been my lot.

HARRIETTE MACKENZIE HUGHES.

ROCHESTER, N. Y., April 21.

Who Owns This Greyhound?

Editor Forest and Stream:

I want to find the owner of a greyhound which has stranded on my shore. It was struck by a locomotive last Tuesday, but is not, I think, permanently injured, as no bones are broken. It is a fine dog, and evidently was lost or had been stolen, and I think the owner would be glad to find it.

I don't know how to find him, unless he is, like myself, a constant reader of FOREST AND STREAM.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

Field Trials and Entry Fees.

CHICAGO, April 22.—I received the following from a gentleman prominently identified with field trials:

"Will you kindly mention, at the proper time, to the officials of the American Field Trial Club that their proposed entry fee to their Derby—\$5, \$10 and \$10, making the total \$25, when their proposed prizes are \$150 to first, \$100 to second and \$50 to third—is out of all proportion to the amount of the prizes."

In several other instances I have heard a similar opinion advanced on this subject. On the other hand, the club may have some special reasons for so arranging the entry fees. It is a fact that a deficit in last year's trials fell on the members to be made good. If there should be a balance on the good side this year after the trials are run, it would then be but about an even balance. Still, Mr. Beck, the secretary, can give a more definite explanation, if there is such called for.

The Disposition of Dogs.

Both as showing the growing interest in dogs and to bring out a more extensive knowledge on so interesting a subject, I quote the following questions from a letter written to me by J. E. Le Rossignol, professor of psychology, Ohio University. The questions are:

1. Is bad temper hereditary?

2. Is training or environment of greater importance than heredity in determining the good or bad temper of a dog?

3. Are good temper and bad temper, respectively, characteristic of any particular breeds of dogs?

4. What is the proper method to employ in overcoming hereditary bad temper in a puppy?

5. What kind of treatment is calculated to spoil the temper of a puppy?

6. What would be the effect of castration upon the temper of a dog?

Do the answers to the above questions apply to the case of horses?

Could you recommend me any professional dog or horse trainers who are able to answer these and similar questions?

A much better knowledge of canine nature would be acquired if these and related questions were often considered. There are many experienced sportsmen whose opinions and knowledge derived from personal observation and experience could be communicated, and such writings would be interesting and instructive. The subject would be novel and would require careful thought to treat it properly. It would tend to place the dog on a higher plane than what are considered instinctive animal organisms. No writer, in making a fair analysis of the phenomena of doggy life, can make the slightest advance in establishing a theory that all acts are instinctive. In fact, no writer can tell what instinct is.

Mr. Ben O. Bush, of Kalamazoo, Mich., made us a sociable call yesterday. He said that there were prospects of a permanent bench show organization in western Michigan.

Mr. John Davidson was in Chicago on Wednesday. He left for his home on the night of that day. He remained in Denver two or three days after the bench show for the purpose of coursing and wolf hunting.

Mr. D. F. Pride, of Santa Ana, Cal., made this office several pleasant calls last week. Up to last September this city was his home. His visit to Chicago has demonstrated a fact which was well known—that his friends here are legion. Among the trap-shooters no one was more popular than the ever kind and genial "Fred," and at the traps few were more expert. Field sports with dog and gun were also his favorite recreation. Mr. Pride was formerly business manager of a paper here, but the change in business has been much to his gain and happiness and the paper's loss.

"Trials A."

If I desire to call the attention of owners and handlers to the trials of the United States Field Trials Club, which are to be run at Bicknell, Indiana. The Derby entries close on May 1. The value of this stake is \$1,800. It is unnecessary to enlarge, at this juncture, upon the benefits and profits which accrue to the doggy interests through the medium of field trials. No club is more earnest in the good work than is the U. S. F. T. C. It has hung up a total of nearly \$5,000 in its fall and winter trials. It is wide-awake, enterprising, thoroughly informed in all the details of field trial rules and management, and it deserves the most liberal support and encouragement. No sectional lines have any consideration in its competitions. It is all that its name implies. Dog owners and handlers, East, West, North and South, should see to it that this Derby starts with a liberal entry. It is the first time in the history of field trials that any one club has assumed so much responsibility. American sportsmen, to their credit be it said, always recognize enterprise and merit most generously. Of course, other clubs may be watching the success of this new movement in field trial management. Any lack of proper appreciation may not only deter the U. S. Club from giving two trials in one season again, but it may deter all other clubs from ever attempting a similar venture at all. The sportsmen of the North have always been most generous in their support of the trials in the South and the sportsmen of the South have been liberally appreciative of the Northern trials. This year ought to be a record breaker. Make your entries, gentlemen. Give the Gordon setter, the Irish setter, the pointer and the English setter a full chance.

I already have been informed, for my own personal information, of a sure winner in the field trials in which she runs. Mr. J. E. Isgrigg, one of Montgomery Ward & Co.'s expert and genial lieutenants, has the bitch, and he is my informant. She is not for sale. Her name is Hope's Queen, by Gath's Hope—Queen Noble. I am sure this is the earliest winner of the season. This faith in a dog's powers is a good sign. It is peculiar to all sportsmen. I like to see it. It is not alone a mild return for the faith, loyalty and affection which the dog bears his master, but it means good, well-contested field trials.

B. WATERS.

Flaps from the Beaver's Tail.

TORONTO, Can.—Dr. Armstrong, a well known medical man of this city, is starting a kennel of spaniels, and has bought from Mr. W. Barclay, the breeder of champions Falcation, I Say and I Guess, who has been successfully shown both here and in England, etc., three puppies, one dog and two bitches, by champion Falcation out of My Joe. Dr. Armstrong being a sportsman the dogs will be given a chance to try their abilities afield as well as their prowess on the bench.

One of the bull-terrier Principio's get, Duke of Wentworth, Dr. H. S. Griffin tells me, has been sent to Dr. McNulty, of Duluth. Both Edgewood Robin and Kathleen Mavourneen have recently been bred to Principio.

Mr. R. P. Ross, of Whitewater, Miss., during a visit to the East purchased several dogs as the nucleus of a kennel, including St. Bernards and collies, from Mr. P. Hart, and cocker spaniels from Mr. H. Parker Thomas, both of Belleville, Ontario.

It is always pleasant to record the popularity of dog own-

ers, especially of one so well liked as Mr. J. Lorne Campbell. Mr. Campbell has left Simcoe to reside in Toronto, and was tendered a banquet on the eve of his departure by his town-folk. Mr. Campbell was permanent president of the Norfolk Agricultural Society, has been reeve of the town and for two years served as mayor. He has been connected with the Canadian Kennel Club since its inception, having been for years on the executive, and is a past president of the club. He for many years has been interested in Gordon setters, and showed extensively and successfully; the well known Becky Sharp being up to a recent date an inmate of his kennels.

Mr. Frank Stanton, well known to guests at the Queen's Hotel here, and who owns a St. Bernard or two, has been obliged to resign on account of ill health, and leaves for the Pacific coast to recuperate.

Quite an interest was created at a dog case tried in the Division Court here on Friday last, before Judge Morgan. Some years ago Mr. Thompson, of Woodstock, presented Rev. Father Murphy, of Ingersoll, with a St. Bernard puppy, which the latter named Barry and transferred to His Grace Archbishop Walsh. Barry, Father Murphy told me, was shown in Buffalo some four years ago and won in the puppy class. Presumably the same dog was exhibited here last fall and was given an h.c. card by Mr. Mortimer in the open class, but then under the name of Big Bob, and shown under the ownership of H. E. Jenkins. Not being present in court until near the conclusion of the case (which occupied nearly an entire day), I did not hear the first part of the evidence, but from a local paper I find that about two years ago the dog was lost and nothing seen of him until recently, when he was found in the possession of H. E. Jenkins, a commercial traveler, of 16 Bulwer street. The latter called the dog Bob, but it was identified as the missing Barry. By an order

MR. H. S. DEVAN, SOMERVILLE, TENN., AND ENGLISH SETTER WHYTE B. Winner All-Aged Stake, Southern Field Trials, 1893.

of the court the dog was replevined by the Archbishop, and the action yesterday was to determine his ownership. A large number of witnesses were examined, who swore that Bob was Barry, and a photograph of Barry was also used as evidence. On the other hand, Mr. Jenkins swore that he bought Big Bob, the name by which he calls the St. Bernard, in May, 1892, from one Jonas Foster, who is now in the States. He produced a receipt for \$5 and a watch, the consideration alleged to have been paid. He also produced Bob's pedigree, which showed him to be orange and white in color and entered in the Canadian Kennel Club's stud book. He was whelped March 4, 1889, at Coatesville, Pa. His sire was Celtic Refman, and his dam Maggie of Pinegrove, the genealogical line of grandfathers and granddams on both sides. The judge decided that Barry was Bob and Bob was Barry, and ordered that he be returned to the Archbishop.

Big Bob, however, though shown in Toronto with the letters C. K. C. attached to his name in the catalogue, is not registered, or even listed, and the secretary has written Mr. Jenkins to substantiate his claim to registration and produce the pedigree.

The premium lists of the Toronto Kennel Club are now ready and will be mailed to any one applying to the secretary, Mr. Fraser, 82 King street, East, Toronto. Ninety-two classes are provided, exclusive of puppy classes, which will be made where asked for and covering all breeds. Specials of \$5 each are offered for best dog in the sporting and non-sporting divisions, and a good list of cups, etc., is now under way and will be issued later.

Mr. C. E. Ireson, Toronto, has sold the imported greyhound bitch Lady Bernard II., by Jack MacPherson (MacPherson—Stargazing II.) out of Lizzie Agnes (Pathfinder—Echo). She is a fawn, whelped in 1888 and was bred by Mr. F. Lay, Barnard Castle, Durham, England. Dr. W. Schall, of Moline, Mich., is the buyer.

H. B. DONOVAN.

Crisp—Attraction.

Editor Forest and Stream:

In your most excellent report of the late Indianapolis show you say, "Special for the best bull-terrier in show, Crisp." Upon reference to the printed catalogue I find the same thing.

I wish to state that I did not award a special to the best bull-terrier in the show, but to the best dog of that variety. Therefore I did not put Crisp under Attraction. Just how this special was originally worded I do not know. After I was through judging the classes as they were in my book I asked for the special list, but was told that it was in the hands of the printer. Late in the afternoon I was told they had the list in the office. An officer of the club called off the specials while I wrote them on a slip. Right here I suppose is where the mistake occurred. My slip read for the "best bull-terrier dog."

Without saying anything as to the relative merits of Crisp and Attraction, I deeply regret that the mistake occurred.

F. C. WHEELER.

Coursing at Huron, S. D.

(Special Report.)

THE dates set for the initial meeting of the Huron Coursing Club were April 11 to 13, but a combination of the elements prevented running off the entire programme on those days, and the meeting continued from the 11th to the 15th. Tuesday, April 11, opened up cloudy and stormy, but notwithstanding the inclemency of the weather, two courses were run off, but before the third pair were slipped it commenced to storm so badly that further coursing for that day was out of the question. The next day it snowed all day and everybody stayed indoors, impatient to get out and view the exciting sport that was sure to follow. Thursday the weather moderated a little and six courses were run, although the weather was still severe. On Friday good fair weather came up to the scratch and the first round was finished and the second run off. On Saturday the entire programme was completed.

It is to be regretted that the management made the dates so early, for if it had been placed a week or so later just as good sport would have been had and good weather would have been guaranteed. It is but seldom that South Dakota has really bad weather, but wintry winds will blow and snow is liable to fall up to the 15th of April in an exceptional season.

Everything seemed to conspire against the successful and smooth running of this meeting from the weather down to the management.

The work of Arthur Massey, who acted as judge, was not well done. He rode altogether too slow, many times letting the dogs get out of sight when he could have easily ridden up in full view of them. In three or four cases the judging was exceptionally bad, it being in flagrant opposition to the true condition of the courses.

The slipper, C. A. Huntley, seemed to be too much interested in some of the dogs to give all a fair show and his work was anything but satisfactory. In some instances the dogs were slipped right on top of the jacks, thus giving no show for a "run up," the prettiest part of a course. His shouting out in favor of one of the dogs during a course was in bad taste.

There was one good feature of the meeting, a feature which is true of all coursing meetings in this State, and that is there was a superabundance of good jacks. They literally swarmed on every hand and it was no trouble at all to raise them. During the first afternoon fifteen jacks were sighted in the initial run. The ground was in the finest possible condition. Coursing sportsmen from all over the State were on hand and the Huron populace seemed to take great interest in the meeting, from three to four hundred of them going out to view the sport.

There were twenty-eight entries made. Mr. H. G. Nichols, of Mitchell, made four entries, Denver Duke, that ran at Mitchell last fall; Mullie's Babe, a 13mos. old puppy, very speedy and showing very clever work; Tyro, an 11mos. puppy, which surely this fall will be a grand dog; also Roetzel's Fanny, another dog showing clever work, but not fully in condition for the meet.

Messrs. McNickle and Emerson nominated Fanny B. This dog is not very speedy, although she worked very close to a slow jack.

Mr. Coyne, of Huron, made four entries, Romona, Flying Fancy, Loomassie and Reno. Flying Fancy showed herself to be a very clever little hound, speedy and a close worker. Romona, although winner, was not speedy, and it is something remarkable how she went through the stake.

Melrose & Durbin, from Alcester, S. D., were on hand with Yellow Carter and Sweep. The first mentioned dog went into the slips in bad shape, as he had an injured foot; the last was in moderately good form.

Mr. Payne of Hecla, S. D., entered Guess and Roy's Canary. Canary is, to do some punning, literally a "canary," as the bitch did some very clever work and was put out in the third round in a very peculiar manner. She is speedy while the other dog, Guess, is only fair.

Mr. J. H. Rev, of Mitchell, entered Fleet, DeSarte and Sir Hugo; a trio of splendid dogs. DeSarte showed herself to be one of the speediest in the stake, beating her opponent nearly pointlessly, but the decision was against her; another one of those peculiar decisions. Sir Hugo ran in good form. He got a gruelling in the second round and was well put out by Flying Fancy in the third. Fleet was a little off feed and was in poor condition when placed in the slips.

Mr. Ward, of Huron, entered his Mike, a big staghound; he was, in fact, too large to be of any use whatever as a courser.

Mr. C. H. Vinton, of Redfield, entered Cyclone; Cyclone is a good dog, large and powerful, and did some good chasing. Mr. J. M. Curtin, of Redfield, entered Skip, a good young dog, but not fitted for the stake. Mr. Melvaine entered Carter C. and Brindle Duke, both dogs being in the pink of condition. Mr. McNickle entered Laplander; he was speedy for a turn or two, but could not last. Mr. Richter, of Woonsocket, entered Silver and Mr. McWhorter, of the same place, entered Kitto. These two dogs were in good condition, Kitto winning third. Mr. Parke, of Alcester, entered Silver and Lead; Lead was in good form and ran a game dog, winning fourth money. Considerable betting was done the first round between Lead and Brindle Duke, champion of the State.

SUMMARY.

Huron Coursing Club, champion stake for 32 greyhounds owned in South Dakota. Entrance \$5, \$135 added by the club.

First Round.

Nichols's Denver Duke (pedigree unknown).	beat	McNickle & Emerson's Fanny B. (General Jack—Gyp).
Coyne's Romona (Lord Never-settle—Partera).	beat	Nichols's Mullie's Babe (Denver Duke—Lady Bly).
Rew's Fleet (Master Rich—Black Bess).	beat	Payne's Guess (Robert—Bet-tie).
Coyne's Little Nell (Carter H.—Nell).	beat	Melrose & Durbin's Yellow Carter (Carter H.—Nell).
Rew's Sir Hugo (Lord Never-settle—White Lips).	beat	Ward's Mike (Unknown).
Vinton's Cyclone (Brindle Duke—Queen).	beat	Nichols's Tyro (imp. Prince—Sport).
Parke's Silver (Unknown).	beat	Rew's DeSarte (Lord Never-settle—Prima Donna).
Coyne's Flying Fancy (Norwegian—Buenafitro).	beat	Familton's Flip (Unknown).
McWhorter's Kitto (Unknown).	beat	Coyne's Loomassie (Trales—Dick's Darling).
Richter's Silver (Unknown).	beat	Melrose & Durbin's Sweep (Unknown).
Payne's Roy's Canary (Major Glendine—Humming Bird).	beat	McNickle's Laplander (Trales—Dick's Darling).
Nichols's Roetzel's Fanny (Keno—Jennie).	beat	Melvaine's Carter C. (Carter H.—Nell).
Coyne's Reno (Prince Gen.—Reno Belle).	beat	Curtin's Skip (Brindle Duke—Queen).
Parke's Read (Unknown).	beat	Brindle Duke (Unknown).

Second Round.

Romona beat Denver Duke.	Kitto beat Silver.
Little Nell beat Fleet.	Roy's Canary beat Roetzel's Fanny.
Sir Hugo beat Cyclone.	Lead beat Reno.
Flying Fancy beat Silver.	

Third Round.

Romona beat Little Nell.	Kitto beat Roy's Canary.
Flying Fancy beat Sir Hugo.	Lead a bye.

Fourth Round.

Romona beat Kitto.	Flying Fancy beat Lead.
--------------------	-------------------------

Final.

Romona beat Flying Fancy.	
---------------------------	--

SOUTH DAKOTA.

DOG CHAT.

World's Fair Dog Show.

The bulldog classes at the World's Fair show will be one of the chief sights of the show, and Mr. Thayer's peace of mind, if he judges, to use a phrase of the fancy, will be "well broken up" before he gets to the end of his task. With such dogs as Leonidas, King Lud, the new ones Bedgubury Lion and His Lordship and those that Messrs. Pybus-Sellon and D. Woodiwiss are expected to bring over, in the ring, to say nothing of the fair contingent Saleni, Duchess of Parma, White Venn, etc., the bulldog men will have a royal sight to feast their eyes upon. By the way, we hear nothing of any revised premium list. Perhaps it would be just as well to stick to the one published in the general live stock list of July, 1892. It has the charm of simplicity anyhow. But unless there is some different regulation as to entry fee the catalogue will assume mammoth proportions and the benches will be filled with yawning gaps. A prominent bull-terrier breeder has just been here who admits that he will enter every dog he owns just to get the free advertising and probably send six of the twenty-five entries he will make. The other nineteen entry fees will, under the present regulation, be returned to him, and the management be so much out of pocket for nineteen stalls provided. The entries close May 20, and all entries must have been the property of the exhibitor on or before May 1, 1893. One of the rules in the premium list to which we may draw attention reads: "In the event of death of any animal entered for competition, or of such injury as to disqualify the same for exhibition, the chief of the department of live stock may authorize the substitution of another animal, provided that such substitute was in all respects eligible at the date of filing of the original application." It is about time the judge's list was given out, so that exhibitors can make their entries accordingly.

A New Influence.

We are told in the *Recorder* that all St. Petersburg has gone wild over something new, a dog which goes off into hypnotic trances. This remarkable animal belongs to M. Durov, who was awarded a gold medal by the Paris Academy of Sciences for his original investigation and discoveries in the science of hypnotism as applied to animals and its effects upon them. Several tests have been made of the animal in the presence of no less a person than Dr. Afanasley, of the War Department. One of the tests consisted in placing several articles, as a pencil, cigar case, handkerchief, cuff buttons, etc., on the floor. Then the dog, having been thrown into a hypnotic trance by him, M. Durov requested one of the audience, which consisted also of several other physicians of renown and some newspaper men, to think about something and what the dog was to do with it, then to write it out on a piece of paper and show it to the rest of the audience, excepting, of course, himself. This was done, and the dog having been brought in, what was the astonishment of the whole assemblage to see the animal go up to the cigar case, pick it up and bring it to the one who had been indicated in the wish. Another test consisted in laying several cubes with figures on them in a certain order in a closed box. At the same time several pieces of paper were put upon the floor bearing like numbers on each. The dog was then called in and required to place the pieces of paper in the same order as the cubes were laid in the closed and sealed box. This he did, to the astonishment of all assembled. The strangeness of the whole procedure is increased when it is remembered that M. Durov knows no more about what is being done or wished than does the dog, and is, therefore, entirely unable to in any way prompt him.

Pet Dog Club Show.

Although the show which the Pet Dog Club intend giving May 30 is primarily an excuse to get together a representative lot of pet dogs, such as the fair sex is supposed to delight in—pugs, toy spaniels, Italian greyhounds and so on—they do not intend to be selfish, and will open the door for most of the smaller breeds. At a meeting of the executive committee at the president's residence on Wednesday, April 19, the name of Mr. German Hopkins was added to the list of judges. The following varieties were decided on for the premium list: Cocker spaniels, poodles (corded and other than corded, and provision was also made for different colors), bulldogs, all weights; bull-terriers, all weights; basset hounds, dachshunds, beagles (the entire National Beagle Club's classification), fox-terriers (rough and smooth), Irish terriers, black and tan terriers, white English terriers, Dandie Dinmont, Scotch, Skye, Bedlington, Clydesdale, Welsh, Boston, Yorkshire and toy terriers, pugs, King Charles, Blenheim, Prince Charles, ruby and Japanese spaniels, Italian greyhounds, schipperkes, Mexican hairless, Pomeranians, Maltese terriers and miscellaneous under 25 lbs. The date for closing of entries was fixed for May 22. After May 1 the headquarters of the bench show committee will be at Lenox Lyceum, Thirty-fourth street, New York, where application for premium lists may be addressed.

Sale of Beau Brummell.

The Glenmore Kennels, owned by Mr. E. C. Bishop, of Coffeyville, Kan., have disposed of the well known Irish setter Beau Brummell, one of the numerous aspirants for champion honors now in the challenge class, to Mr. C. E. Hughes, Portland, Oregon. Beau is so well known that a recapitulation of his bench record seems hardly necessary; however, in 1891 first prizes were awarded him at New York, Baltimore, Pittsburg and Washington. Under the Glenmore Kennel ownership, he has since been benched but once, in which instance champion Tim carried off first honors. Mr. Hughes has a truly good field and stock dog in Beau and it is questionable if his equal has as yet crossed the Rocky Mountains. Western fanciers will be sure to patronize him liberally. The consideration received was large. We regret to hear that Mr. Bishop is selling off his dogs. Some great bargains are sure to be picked up in the dispersal of such a kennel, that contains dogs like Coleraine, Finglas, Elcho's Maid, Ruby Glenmore, etc.

Ossining Lost.

Mr. W. H. Hyland is in trouble now. His well-known pointer Ossining strayed away from his place at North Tarrytown last Saturday. He is supposed to have been picked up by some one. The dog is white and liver; liver marking on each side of head and ears, small white blaze up face, muzzle white, liver spot at root of tail, body white and liver-ticked. Any one finding such a dog and who will communicate the fact to Mr. Hyland will do a sportsmanlike action. As a means of identifying the dog, Mr. Hyland will forward a photograph of Ossining to any one who may be fortunate enough to come across him.

Valuable Collie Importations.

When we stated some weeks since that the Cragstone Kennels, owned by Mr. Pierpont Morgan, would soon have some new importations we expected news of a startling purchase every day. We are not disappointed. At the Collie Club show Mr. Powers, acting for Mr. Panmure Gordon, who in turn acted for Mr. Morgan, purchased Sefton Hero, who had just won the challenge cup, for \$2,500. This was not enough, so Lady Christopher and Carlton Phylis were added at \$2,500 more. This is without doubt one of the most valuable lot of collies imported to this country, and they represent a

clear cash purchase. Sefton Hero is counted by many judges about the best on the other side at present, Great Gun and Ruford Ormonde being his rivals. There is some little squabble between the Collie Club and the late owners of these dogs as to commission on sales, a rule obtaining at most English shows that sales effected at the shows or through the secretary's office are subject to a commission of 10 per cent.

Brown Poodles.

We notice that Mr. Hunnewell, Jr., is placing his brown poodle Pooh-Bah at stud in our columns. The brown poodle is a rarity in this country, and in fact—so we are told—there are not many to be had anywhere. In the opinion of many, a rich brown-colored poodle is even handsomer than the black, and very much more so than the white. The poodle seems to be coming more into notice in this country as a show dog, and with increased competition there is every likelihood of their numbers being increased by the best specimens that can be procured. Owing to the trouble and care required to properly show and keep, the corded poodles do not seem to be in such favor as their more sprightly and "crisper" looking cousins, the Caniches.

Field Trial Dates.

Our attention has been called to the fact that the two bound trials, those of the Brunswick Fur Club and the National Beagle Club, if the dates now proposed by the latter club stand, will be run the same week, beginning Oct. 23. There are several foxhound men who intend taking in the beagle trials this year, and as the Brunswick Fur Club have already claimed Oct. 23 for their trials, it would perhaps be wise for the N. B. C. to choose the week after. By that time the leaves will be falling, and it will be easier for the judges to see the dogs.

English Field Trials.

The English Kennel Club field trials were held on the estate of Capt. Prettyman, Orwell Park, Ipswich, April 11. The dry weather made the scent bad, but the trials are said to have been a great success. Dr. Salter and Rev. R. O'Cal-

— READY FOR PRIZES OR FUN.

Harry L. Goodman and Great Danes Ch. Melac and Major McKinley.

laghan were the judges. In the Pointer Derby, eight entries, Messrs. Lowe and E. Puissant's Drake of Merles won, Mr. Lander's South Durham Ruth second, Mr. W. Arkwright's Kissing Crust third, and Mr. J. T. Hink's Doxy Friar fourth. The winners of the Setter Derby were Mr. P. Baron's Master Frederick first; second, Mr. W. H. Cooper's Isinglass; third and fourth, Mr. F. Warde's Aldon Trip and Aldon Tam. In the All-Age Stake Mr. W. Arkwright's pointer Tap was the winner after some interesting work, Mr. C. Austin's Irish setter Tim Sullivan second, Mr. Arkwright's pointer Blanche of Bromfield third, and Messrs. Lowe and Puissant's pointer Drake of Merles fourth. It will, therefore, be seen that the pointers and Irish setter got a fair share of the spoils.

Toronto K. C. Show.

The entries for the Toronto K. C. local show close May 9 with Mr. W. P. Fraser, 82 King street. The entry fee for members is 25 cents and non-members 50 cents. Special prizes of \$5 each will be given for the best sporting and non-sporting dogs in the show. The three best trick dogs will receive valuable collars and there will also be a selling class for dogs marked \$20.

Fanciers are realizing the more than ordinary advantages the *FOREST AND STREAM* offers as an advertising medium. Our list of stud dogs has been increased this week by W. Hawkins's well known Westminster Drake. The Hill Hurst Kennels place their poodle Pooh Bah, and Mr. H. A. Harris sets forth the merits of his bull-terrier White Wonder, one of the best in the country. The others for sale are: Glenmore Kennels' noted Irish setters; Kildare Kennels, well bred Irish setter; Geo. W. Lovell, broken pointers; E. H. Perry, well bred Irish setter pups; J. J. Scanlan, prize-winning Irish setters; S. Darbey, prize-winning black curly-coated retrievers; E. A. Carrier, broken blue belton English setter; W. H. Hyland, well bred pointer pups; Box 85, Lewellyn setter; C. B. trained Chesapeake Bay dog; C. F. Dolan, fox-terrier pups; C. D. Roberts, pointers; Rev. R. MacKnight, St. Bernard dog.

A meeting has been called by lovers of the dog in Portland, Ore., with a view to organizing a kennel club in that city. If the club is formed it is likely that a small show will be held and advantage taken of Mr. Raper's presence on the coast to secure him as judge.

The Duke of Newcastle, who with the Duchess owns so many fine Russian wolfhounds, arrived in New York on the Trave and is stopping at the Brunswick. Mr. Gambier Bolton, the well known animal photographer, accompanied him. The Duchess will join the party at Chicago.

According to *Stock-Keeper*, Spratts Patent has recently shipped the Scottish terrier Busy to Mr. Little, of Baltimore, Md.

The Scottish terrier is making new friends every day. Now we are told that Mr. Frederick Ames is going in for the little

die-hards. A reporter in the *Field* (Eng.) having said Scottish terriers should not be "perfectly straight in front," has led to quite an outcry from several breeders, who maintain that the little terrier should be without reproach in this respect. In the *Stock-Keeper* there is also a discussion going on regarding the correct size of these terriers. Several of the winners of the day, champion Kildee for instance, are several pounds over the 20 lb. standard, and the cry is that they are too big. It seems, however, unlike the pointer, that it is easier to breed the bigger dogs good than the little ones better.

These names were added to the fake list, protest up to noon on Friday at the Denver show: I. N. Porter, G. W. Whitmore, L. F. Bartels, E. C. Hamilton, Kellie Cookson, Dr. J. M. Norman (president Continental Kennel Club), J. C. De Blinn, M. D. Milward Hewett, Chas. H. Faxon, Chas. F. Frenzer, G. H. Moore and Dr. S. Bock. They are all exhibitors or well known dog men.

We draw the attention of handlers and others interested in field trials to the new rule adopted by the Eastern Field Trial Club, to the effect that all handlers at their trials must secure a license from the Board of Governors. This license will be issued free of charge and will remain in force during the meeting of this year. The selection of such well-known and able field trial handlers as Messrs. Titus, Bradley and Stoddard for judges marks a democratic era that is as acceptable as it is politic; and we fully expect, with new grounds and more progressive management, that the old club will regain and hold much of the interest which should attach to one of the oldest and strongest field trial organizations in the country.

Mr. Arthur Trickett, so well known in connection with Mr. Moore's kennels at Melrose, Mass., has severed his connection with the kennels and is now in New York ready for a new engagement. Mr. Trickett cannot count on a very long vacation.

Dr. Perry writes us that the syndicate which has purchased a controlling interest in the Philadelphia Journal includes Messrs. Chas. H. Mason, Henry Jarrett and himself, and that while he may have been largely instrumental in securing the same, his interest is no greater than that of all the other gentlemen concerned with him.

We take pleasure in publishing this week a picture of Mr. H. S. Bevan and his setter Whyte B. Both are well known to field trial men and sportsmen generally as honest and good workers in the field. Mr. Bevan has made an enviable record as a handler since he came to this country and has gradually surrounded himself with a high class of dogs, and his success at the Southern trials was begrudged by no one.

The greyhound Tasmania that ran so well in the Waterloo Cup was bought in at auction recently for \$1,900.

The Rhode Island State Fair Association, which, as stated in *FOREST AND STREAM* last week, intends giving a large show this fall, is already making its arrangements. Though the management scarcely expect to give such a show as New York or Boston, still it is to be the largest yet given in connection with any agricultural association. The building erected for the purpose is to be a permanent one. Mr. Walter J. Comstock, the well known Irish terrier exhibitor, has been chosen by the executive committee, superintendent of Department D, which includes the dog show. His personal duties will be those of chairman of bench show committee and a competent superintendent will be engaged for the dog show. The prize list will be a liberal one and the best judges in the country will be secured.

The New England Field Trial Club would do well to secure some Mongolian pheasants and turn them down on their grounds. These birds are hardy, and Mr. Wallace, of Farmington, Conn., has successfully proved that they will stand a New England winter and thrive on it. Birds and eggs could be secured now and the best plan would be to hatch the eggs under hens and then turn the pheasants down a few days before the trials. This would be a good move on the part of the club.

For the information of several "nibblers" over here, we may say that Mr. H. Lacy's Rhodes Oban, the black and tan terrier, has been purchased by Lieut.-Gen. Dean, of Birkenhead, England. It is a peculiar fact in this connection that Prince Eric, Gen. Dean's dog that was placed over Rhodes Oban at Sheffield, which act caused Rhodes Oban's temporary retirement, is now advertised at stud with Rhodes Oban, and the latter is quoted as "acknowledged by all judges to be the best black and tan terrier before the public." How circumstances alter cases sometimes.

According to a Denver paper the Russian wolfhounds from Mr. Hacke's kennels were judged on their benches, being deemed too savage to allow of their being judged in the ring. As this paper had it, "They were judged in their stalls for fear they would tear each other to pieces if taken into the ring." Such is the irony of fame.

The dog show at Seattle, Wash., promises to create no little interest. The affair takes place May 17 to 19, and Mr. George Raper, who is now luxuriating in the novel, to him, atmosphere of southern California will adjudicate upon the classes. The show is under A. K. C. rules, and the entry fee is \$2. The prizes are to be \$4 and \$2.

We received "An open letter to Mr. Davidson" from the owner of the foxhound Elite, but owing to the demands on our space it was crowded out, and as it has already appeared in another paper, its publication now will serve no good purpose. We may remark, however, that Elite, as we stated in our report, was hardly treated at Boston. One critic accuses him of having a pointer head and is pleased at his setback, although acknowledging that he has not seen the dog off the bench, and, therefore, does not know how good he is in legs, body, etc. If some of the snipy, weedy-looking articles put down as American hounds had a little more of the "pointer head," there would be an improvement and a little more similarity of type.

To-day one of the most thoroughgoing sportsmen in this country celebrates his silver wedding. Col. J. R. Purcell was married April 27, 1878. This sportsman has run his dogs at field trials, shown them on the bench, and in spite of luck that would dishearten almost any enthusiast, the colonel still comes up smiling and relieves his feelings with some quaint, poetical flight of fancy. We are sure that all our readers who know Mr. Purcell will wish him and his wife every happiness and a godspeed toward their golden wedding.

Mr. Morris informs us that the Gordon setter puppy Fairmont received first at Boston. We took the awards from the judge's book, and this stated "first, withheld"—at that time.

We are indebted to the Swiss Mountain Kennels for a very pretty and well arranged catalogue of the kennel. It is adorned by several excellent half-tones of the celebrities of this well known kennel, some of which have already adorned the pages of *FOREST AND STREAM*. The success of this kennel only proves that there is yet another avocation which may be successfully followed by women, and to a lover of

dogs may be made a most fascinating and healthy pursuit. Handled in the common sense, businesslike manner in which the fair owner of the Swiss Mountain Kennels runs her dogs, a kennel of well selected dogs may be made a source of considerable profit.

We are pleased to have such indorsement of our views, expressed in our report of beagles at Boston, from so well-known a breeder as Mr. Reed. Mr. Reed is on the right track and has the right breeding type, and his may be improved with more substance and bone. We do not wish to instruct our ancestors how to extract the marrow from the fruit of the hen, but an outsider, it is said, sees most of the game, and that is why we would rather depend on an all-round judge's opinion of a dog than upon the opinion of specialists who are so, necessarily, imbued with the type of their own stock.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Woe Louie. By W. A. Wheatley, Memphis, Tenn., for brown Chesapeake Bay bitch, whelped Jan. 24, 1893, by Bunco out of Sallie Sale.

Young Bunco. By J. A. Austin, for dark brown, with white tips, Chesapeake Bay dog, whelped Jan. 24, 1893, by Bunco out of Sallie Sale.

Guido. By R. T. Cooper, for brown Chesapeake Bay dog, whelped Jan. 24, 1893, by Bunco out of Sallie Sale.

Woodland King and Wood Nymph. By Jas. Black, Sheepshead Bay, L. I., for white and black greyhound dog and black bitch, whelped March 7, 1892, by Prince Albert (Macpherson—Brighton Lady) out of Dolly Dollar (Pinkerton—Mrs. Goldfield).

Nell of Avondale. By T. W. Clelland, McAlester, I. T., for black, white and tan English setter bitch, whelped April 8, 1892, by Grover Foreman (Warwick Albert—champion Daisy Foreman) out of Nellie Miller (Druid's Grub—Lady Fiddlet).

Avondale Kennels. By T. W. Clelland, McAlester, I. T., for his kennels of pointers and setters.

BRED.

Prepared Blanks sent free on application.

Lady Alma—Happy Toby. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch, whelped Jan. 24, 1893, by Cashier—Mabel E. to their Happy Toby (Spokane—Topsy K.), March 31.

Queen—Jack of Trumps. H. Smith's (Monroe, N. C.) English setter bitch Queen to T. W. Clelland's Jack of Trumps (Gath's Hope—Queen Noble), Jan. 14.

Fan C—Count Vernon. T. W. Clelland's (McAlester, I. T.) pointer bitch Fan C. (Pomery Sec—Larock Elso) to G. Stephenson's Count Vernon (Duke of Vernon—Luna T.), Feb. 16.

Dudley Juno—Earl Douglass. Belle Isle Kennels' (Detroit, Mich.) St. Bernard bitch Dudley Juno (Mount St. Elias—Bohemian Girl) to their Earl Douglass (Lord Bute—Ellen Terry), March 16.

Princess Nina—Earl Douglass. Belle Isle Kennels' (Detroit, Mich.) St. Bernard bitch Princess Nina (Major H.—Swiss) to their Earl Douglass (Lord Bute—Ellen Terry), March 10.

Maggie Bee—Lucy Bee. T. W. Eddy's (Detroit, Mich.) English setter bitch Maggie Bee (Kink—Lucy Bee) to J. W. Murnan's Vanguard (Gladstone's Boy—Flame M.), March 8.

Betsy Spaulger—Starden's King. John Moorhead, Jr.'s fox-terrier bitch Betsy Spaulger to Hillside Kennels' Starden's King, March 24.

WHEELS.

Prepared Blanks sent free on application.

Dolly Dollar. Jas. Black's (Sheepshead Bay, L. I.) greyhound bitch Dolly Dollar (Pinkerton—Mrs. Goldfield), Dec. 30, eight (five dogs), by his Flash (Huic Hallos—Phebe Mayflower).

Grace Briant. Jas. Black's (Sheepshead Bay, L. I.) greyhound bitch Grace Briant (Aberbriant—Grace Bidley), Dec. 28, nine (four dogs), by his Flash (Huic Hallos—Phebe Mayflower).

Fanny V. Croseth. A. E. Hamilton's (Pensacola, Fla.) pointer bitch Fanny V. Croseth (Devonshire Kent—Rooney Croseth), March 27, eight (four dogs), by T. T. Ashford's Kent Elgin (King of Kent—Vera Bang).

Fernwood Urania. Belle Isle Kennels' (Detroit, Mich.) St. Bernard bitch Fernwood Urania (champion Victor Joseph—Fernwood Inez), by their Earl Douglass (Lord Bute—Ellen Terry).

Queen. H. Smith's (Monroe, N. C.) English setter bitch Queen, March 11, six bitches, by T. W. Clelland's Jack of Trumps.

Mabel E. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mabel E. (champion Kash—Lady Thurman), March 29, three (one dog), by their Patsy Bolivar (Eberhart's Cashier—Flossie II.).

SALES.

Prepared Blanks sent free on application.

Dudley Lilla. Orange and white St. Bernard bitch, whelped March 2, 1892, by Earl Douglass out of Berna II., by Belle Isle Kennels, Detroit, Mich., to J. M. Farrell, same place.

Launcelet—Judith whelp. Liver and white pointer dog, whelped Sept. 20, 1892, by T. T. W. Clelland, McAlester, I. T., to Chas. I. Miles, Coalgate, I. T.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

H. E. R., Charleston, W. Va.—Dashaway, by Frank out of Nellie O'More, by Rory O'More out of Gay, by Elcho out of Fire Fly; Frank by Ted out of Kate Moore; Ted by Milo II. out of Lizetta; Milo II. by Milo out of (imp.) Mamie; Rory O'More by Rufus out of Friend, Rufus by Shot out of Linda; Friend by Flash out of Stella.

W. G. S., Maryland, Md.—I have a neighbor who has a very valuable farm dog which has internal canker. It is a very bad case; will you please prescribe. Ans. Try the following, if it is not successful write again:

Liq. plumbi sub. acet. 3 iv
Aq. ad. A little to be poured into the ear twice a day.

A. M., Philadelphia, Pa.—My setter pup has a constant twitching of the right front leg, the result of distemper. Will you kindly advise me, what I can give him to relieve him of this trouble. Ans.:

Syr. hypophosph. co. 3 iii
Tq. arsenicalis. 3 i
Aq. ad. 3 vi

Mix. Give one tablespoonful three times a day. Continue for three or four weeks.

W. H. J., Salt Lake City, Utah.—The smallest of the hound family bred in this country is the beagle. In height they do not exceed 15 in., classes being made at shows and field trials for those under 15 and 16 in. As trailers they are unexcelled, Dachshunds, or German badger hounds, are also used for trailing and are very good for the purpose. Owing to the crooked formation of leg and longer body they are not so fast as the beagle, and the lower on the leg they can be got the more they are prized. See our advertising columns for breeders.

A. A. B., Grand Rapids, Mich.—I have a valuable Gordon setter dog, not quite two years old. About two months ago he was taken with coughing, which was accompanied with gagging. These attacks disappeared after a time, and he became lame in his right fore foot; ameness appeared to be in lower joint. This lameness is giving way to one across the hips or back, as he seems to be losing control of his hind legs. While lying down he frequently whines as if in pain; he rises with difficulty. Appetite fairly good. During all this time there has been a slight discharge from the eyes. At times he will run and play and appear to be in his old form, but soon gives evidence of all the above symptoms. Ans. Try the following mixture:

Ferri phosph. 3 iss
Tq. Nuclei vom. 3 i
Liq. arsenicalis. 3 i
Mix. Give one tablespoonful three times a day. Also give dessert-spoonful of cod liver oil twice a day.

"A Forest and Stream Sportsman."

OTTAWA, Kan., Editor Forest and Stream: I was talking with a friend a short time ago, and the subject of the game laws and game protection was brought up. Speaking of this I never used to believe as you do about these things, but I have been taking the FOREST AND STREAM three weeks now, and I am thoroughly converted to its doctrine. I believe it is right in everything and I am going to be a FOREST AND STREAM sportsman. F. B.

Yachting.

The new Navaho is now practically completed and in the charge of Capt. Charles Barr and her crew, sailing nearly every day about Narragansett Bay with Mr. Carroll on board. Her centerboard has not yet been shipped, and she is still none too stiff. "She will be docked very soon at Providence and some changes will be made in her ballast, lead being transferred to the outside of the keel.

It is but natural that the smaller yacht clubs about Boston, with a large and mixed fleet of old and new boats, should have met with various difficulties in the matter of measurement; at the same time there is no evidence that these difficulties are due to any one rule in particular, especially to the length and sail area rule, rather than to a combination of circumstances largely independent of measurement. Several of the clubs have labored with the measurement question during the winter, and we publish elsewhere the report on which one club has based the adoption of a waterline length. While we believe that members of the committee have acted deliberately and carefully, we fail to see any argument which they have advanced against the length and sail area rule, or in favor of a simple length rule. They certainly have failed to prove the proposition advanced by some of the opponents of the length and sail area rule, that it favors a boat of exceptionally low power; or in other words, that the high-power boats of last year were beaten by the rule and not on their merits. Another proposition advanced in the same way is also entirely unsupported by fact or argument, namely, that the designer is unduly restricted by the length and sail area rule.

The Barr Brothers as Citizens.

On Friday, April 7, Capt. John and Charles Barr, the racing yacht skippers, presented themselves before Justice Putnam of the United States Court to take out their final citizenship papers. The famous skippers got their first papers two years ago, and then it was understood that it was only necessary for them, in order to get final papers, to wait two years, which period expired on the 6th ultimo.

The Barrs were accompanied by Mr. P. T. Jackson, treasurer of the Eastern Y. C., and Mr. A. G. McVay. These gentlemen were witnesses as to the character and residence of the applicants, and they were present when the Barrs took out their first papers.

Justice Putnam called both captains to the bench and began to question them as to occupation, time of residence here and also regarding their families.

"What vessels have you sailed on since living in this country?" was one of the questions his Honor put to Capt. John Barr.

"The Clara, the Cinderella and the Gloriana."

"Is the Clara a British or an American built vessel?"

"British yacht, though she was owned by an American and carried the American flag."

"You were dizen of a British bottom, then, during the time of your residence here, and I do not see how I can accept you."

After Capt. Charles Barr of the Navaho had told that he had sailed on the Minerva, Justice Putnam said that he did not see how he could accept him either.

Justice Putnam then sent for a copy of the United States revised statutes and read to the Barrs section 2,174, which is as follows:

"Every seaman, being a foreigner, who declares his intention of becoming a citizen of the United States, in any competent court, and shall have served three years on board of a merchant vessel of the United States subsequent to the date of such declaration, may, on his application of any competent court, and the production of his certificate of discharge and good conduct during that time, together with the certificate of his declaration of intention to become a citizen, be admitted a citizen of the United States; and every seaman, being a foreigner, shall, after his declaration of intention to become a citizen of the United States, and after he shall have served such three years, be deemed a citizen of the United States for the purpose of manning and serving on board any merchant vessel of the United States, anything to the contrary in any act of Congress notwithstanding; but such seaman shall, for all purposes of protection as an American citizen be deemed such after his declaration of intention to become such citizen."

Justice Putnam then said: "I will not give a final decision now. There are several points of law involved, and I will hear you further through your counsel."

So far as can be ascertained in the clerk's office of the United States Court, it is the first time that such conditions have arisen regarding the taking out of papers. Capt. John Barr has, with his family, resided in Marblehead for over three years. Two years ago he built the house in which he now lives. His children attend the public schools there.

Capt. Charles Barr has lived in this country for over six years, and, like his brother, owns real estate. He has served about three years on different American vessels, including a trip to the West Indies in the schooner Glina, quartermaster of the Galveston steamer Seneca and captain of the American 46-footers Owenee and Wasp.

The Minerva was built on the Clyde for Mr. C. H. Tweed, of New York, son-in-law of ex-United States Senator Evans, and carried the American flag. Her last owner when Capt. Charles Barr was in charge was Mr. John Lee Carroll, brother of Royal Phelps Carroll, the owner of the Navaho.

A most remarkable thing about the matter is that the Barrs, John and Charles, are now in the employ, respectively, of Gen. Charles J. Payne and Mr. Royal Phelps Carroll, both of these gentlemen being descendants of signers of the Declaration of Independence.

Another fact is that, although the Barrs did sail on the Clara and the Minerva since arriving in this country, they have always been in them in American waters, cruising from port to port.

The Barrs have secured Mr. F. M. Stone as counsel, and they will appear before Judge Putnam on Wednesday next at 2 P. M., when the final hearing will take place. Certainly the Barrs have the sympathy of the entire yachting public.—Boston Herald.

Measurement About Boston.

In common with other local clubs, the Savin Hill Y. C. has experienced more or less difficulty over the measurement question, and a committee was recently appointed, on whose recommendation the old Atlantic Y. C. rule of length at two per cent above the l.w.l. was abandoned and a simple waterline rule adopted in its place. We are indebted to a member of the committee for the following report of a committee "to investigate the question of changing rules for racing measurement for boats in the Savin Hill Yacht Club."

Mr. Commodore Stone's committee have carefully considered the subject matter to be embodied in their report, as understood by them, and beg leave to submit the following:

The result of their investigation of the racing measurement rules of the prominent yacht clubs in this vicinity are that the "waterline and sail area rule" of the racing season of 1892 is to be very generally adopted for out of season racing of 1893.

In view of this fact, and as we consider it in the province of the committee as understood by the vote creating the committee, we would recommend the adoption of a rule to supersede the present rule for racing measurement for boats in this club.

Our reasons for a change are that the present rule, although no doubt well intended, has in its application failed to accomplish beneficial results, and is also unwieldy and unsatisfactory, very difficult to obtain, requiring perfect conditions of wind and sea, is not in harmony with the racing measurement of the prominent clubs in the vicinity, and does not give that perfect freedom to the designer that would encourage the development of the best and most progressive ideas in naval and yachting architecture.

In consideration of the foregoing facts the committee would recommend the adoption of "load waterline length" as the racing measurement for boats in this club, believing this rule to be the simplest and best, and to give the most complete freedom to the designer, and that the ultimate results would be to secure the most perfect type of naval and yachting architecture, and waiving all personal prejudices and preferences believe its adoption at the present time to be in line with, if not in advance of the leading clubs in this vicinity and to be in the interest of the future prosperity of this club in particular, and the yachting world in general. Respectfully submitted,

LORING SEARS, Chairman,
W. B. BIRD,
A. A. SWALLOW,
A. L. KIDD,
Committee.

LOAD WATERLINE MEASUREMENT ADOPTED BY THE SAVIN HILL Y. C.

L.W.L. measurement shall be taken from the point of immersion forward to the point of immersion aft, providing that if any part of the keel or deadwood extends beyond these points, such extensions shall be added to the l.w.l. as taken from the point of immersion forward to the point of immersion aft, above the water shall be taken from the l.w.l. The crew need not be aboard, but if aboard must be stationed amidships.

YACHT NEWS NOTES.

The Rogers cutter is now well advanced at the Herreshoff shops, the plating completed ready for painting, the decks laid and the joiners at work below. Navaho is nearly completed and will soon leave the yard. Miss Sutton's one-rater Morvewa was launched and tried last week, and will soon be shipped. The Austrian one-rater is completed, and the Southampton 2½-rater is well along.

The yacht building by Lelofs for Com. Faxon, of the Quincy Y. C., is 21ft. 6in. over all, 18ft. 1.1. 8ft. 5in. beam. She is built for racing, with 9-16in. planking, no scag, and a 150-pound metal plate. Her mast is 29ft. 6in. heel to truck, boom 25ft. and gaff 16ft. 6in.

The launch of the Lais, the new 40-rater designed by Will Fife, Jr., and built by Hansen & Son, of Cowes, for Mr. John Gretton, was set for Monday of this week.

Messrs. Laphorne & Ratsey have lately patented a new method of cutting sails, somewhat similar to that by which the "angulated" or cross-seam is cut, but the "web" of the cloth runs parallel to the foot and leach; or in other words, the seams and bights being at right angles to the foot and leach of the sails, the two sets of cloths meeting on a middle line. In this way the stretch along the foot and leach is minimized.

According to current report, the Chicago Y. C. has been the recipient of a very curious gift; nothing less than the immense Krupp gun now on exhibition at the Fair. What possible use a Krupp gun can be to a yacht club we are at a loss to understand.

Alpha, the Herreshoff 21-footer, was loaded on a car and housed in, and left Boston on April 22 for Lake Minnetonka, where her new owner, E. T. Phipps, will race her. Wilson & Silsbee are making a new set of sails for her, though the old suit went with her.

On April 17, as the steam yacht Gretchen was on her way down the Potomac from Washington to Fortress Monroe, she caught fire and would have suffered serious damage but for the aid tendered by the lighthouse tender Holly.

Esperito, sloop, has been chartered through Parslow's Agency to E. R. Thomas, of the Yale Cor. Y. C.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

Tavie Canoe-Yawl.

The canoe-yawl Tavie, owned by Dr. John D. Hayward, of Liverpool, is one of the smaller class of ballasted canoe-yawls, being 17ft. 6in.

over all, 4ft. 7in. beam, 1ft. 9in. from rabbet to deck, with an iron centerboard and 56wt. of lead ballast. Her cruising rig is a main and mizen, both lugs, of 121sq. ft. In her Dr. Hayward has done a great deal of cruising about the Mersey and the adjoining coast.

A Canoeing Episode.

CHAMBERS ISLAND lies a few miles southeast from Cedar Keys. I had been camped there several days fishing and hunting. Having exhausted the resources of the place in that line, I struck camp one fine morning for a run south. It did not take long to stow the canoe, and I was soon lying along before a fresh breeze from the north.

The canoe danced merrily along; now and then a porpoise showed his black nose, sometimes a flock of gulls circled overhead, anon a flock of pelicans were to be seen standing on some little reef just at the surface of the water, and looking as sedate as a company of horse guards.

I was making fair speed and soon reached St. Martin's Reef. Clouds began to gather, the skies grew black, the wind changed from a steady breeze to little fitful puffs from all points of the compass; by and by came rain, little spatters at first, but gathering way it soon came down in a genuine Florida shower.

I made myself as comfortable as possible, stowed sail as the wind was all done, and paddled along, looking and hoping for camp. But I was in a perfect little wilderness of islets, low and covered with mangroves. No land could I find that would be suitable for a camp.

I found a passage through, and after picking my way through several more tortuous passages I found a lee under a small island, with good water clear to the shore, which was of shells.

Pulling the canoe up, I started to explore a bit. The rain had long ceased, but the bushes were still wet, and as I was as wet as I could be, that did not matter. I soon found enough clear, level space for my

purpose, and before many minutes a fire was burning, and very bright and cheery it looked, too; for I was wet, cold and hungry.

It did not take me long to pitch the tent or change my wet clothes for dry ones. Supper was prepared, and sitting down to hot biscuits, good butter, chipped beef and smoking tea, I forgot all my late troubles, the drenching rain and the discourteous answer of the boatman, and I was once more happy. After supper of course the pipe, my old, faithful friend; with that lighted, my back to a tree, my feet to a roaring fire, I envied no man.

The morning came all the brighter for the rain of the day before, and when daylight fairly came I was able to look about me; I had struck a veritable bonanza of a camp ground. The island was small, perhaps 50yds. long by 20yds. wide, and nearly a perfect oval; the sides were quite steep and covered with bushes, while the top was flat, very level and composed entirely of pure white sand.

Growing on this plateau were three immense cedar trees, which completely sheltered the whole space.

At the water's edge was a fringe of reeds and just inside of the reeds a row of cabbage palmettos, running entirely around the island. It was a pretty spot, and while I was preparing and eating my breakfast I admired it greatly, wondering if any one in the land had as fine a dining-room as I. While stowing the canoe I heard the puffing of porpoises; looking up I saw them were nosing along a narrow channel of deep water which ran half around the island and past where I was at work.

It was but a moment's work to get out the big navy revolver, and as they broke water scarce 6ft. away from me a lucky shot planted the ball between the eyes of the foremost. There was a circus. Crazy with pain, the big brute tore around, throwing mud and water in every direction. He soon ran himself high and dry on a large flat short distance away. I caught the hatchet and wading across prepared to give the finishing touch. I did it, too, but just as I hit him he commenced his ground and lofty tumbling. I got one crack that made me see stars, then another, and another—and porpoise, hatchet, mud and canoeist were all mixed up. I found that the circus I had been looking at was but a side show to the circus I was engaged in. But he was done for all the same, and so was I, and instead of going along to the southward as I had proposed I had to stay in camp another day.

Washing my muddy clothing and drying out that which was wet by the rain employed me all day. But nothing was lost, for when night came I had dry clothing, an abundance of camp wood, some fat birds to broil and lots of porpoise. The next morning I got away and ran to Bay Point, but that will do for another story. S. D. KENDALL.

Mahn-a-Wauk C. C.

UNUSUAL activity prevails at the Mahn-a-Wauk C. C. house on the lake shore, and the preparations indicate lively times during the summer and fall. A large delegation of Milwaukee men at the W. C. meet at Ballast Island in July. The regatta committee has prepared a series of sailing and paddling races that will be inaugurated May 13 and continue weekly during the season, Saturday being the day selected. For July 4 and Decoration Day an extra programme will be arranged. Handicaps for both the paddlers and sailers are being figured now, and each event will bring out the entire membership of the club, as both cruisers and racers will be placed on an equal basis by giving time allowances. The new canoe Electra, built for A. W. Friese, has arrived and looks like a flyer. She carries an immense cloud of canvas. The Ford Jones canoe, purchased by Huntington, is expected every day, and the Avis, Emil Hansen's fin-keel, the winner of the 1892 W. C. A. trophy, will be here the latter part of the month. Commodore Mathes has a Class C canoe ordered and will be right in the swim this year. The Mahn-a-Wauk have a large fleet of canoes and expect to win a share of the honors at Ballast Island in July. Among those who will attend the W. C. A. meet are Ed Holmes, F. B. Huntington, A. W. Friese, H. F. Bosworth, Emil and Hugo Hansen, Richard Merrill and George Nash. The club will leave July 14 for Detroit, where Mr. E. A. Davis, president of the Davis Boat and Oar Co., will meet the boys and convey them to Ballast Island on his steam yacht Catharine.

A strong effort is made this year by the Milwaukee canoeists to induce the Western Canoe Association to nullify the rule barring the standing rig, which is preferred by A. C. A. men to all others on account of lightness, ease in stepping, and reliability. The standing rig suits better than any other and is unquestionably faster. An idea has prevailed that it is unsafe to use, but that feeling has been dispelled here, and the boys wish to have the prize of using rigs that are accepted as being the best in other organizations.

Among the visiting canoeists who have been at the Mahn-a-Wauk's house this week were E. G. Rutty, of Yonkers, N. Y., and Nat Cook, of Dayton, O. BADGER.

Western Canoe Association.

The following applications for membership in the W. C. A. have been received by Secretary Huntington: H. F. Johnson, W. J. Reynolds, A. A. Guilbert, Racine, Wis.; R. B. Pratt, S. C. Radford, G. A. Buckstaff, Oshkosh, Wis.; A. R. McLenehan, Chas. Thompson, W. H. Graw, George R. Nash, H. F. Bosworth, Milwaukee, Wis.; Thos. P. Eckert, Cincinnati, O.; W. P. Jewett, St. Paul, Minn.

Secretary Huntington expects to have the W. C. A. Year Book completed by May 1. Illustrations of Commodore Manger, Emil Hansen, giving his fin-keel avis and a view of the 1892 camp at Oshkosh will embellish the work.

Magalloway River.

Will you tell me through your paper, or any of your readers, where I can get information in regard to a boating trip up the Magalloway River or the Connecticut lakes. Where to start from, and where I can engage a boat suitable for a party of three or four with what luggage, tent, etc., we should need. And how far we can follow the river or lakes with or without a carry? A. H. R.

A. C. A. Membership.

CENTRAL DIVISION: Edward Quintard, Poughkeepsie, N. Y.; Geo. M. Shoemaker, Wilkes Barre, Pa.; A. D. Stearns, Detroit, Mich.

CANOE NEWS NOTES.

The Field of April 15 contains a very interesting article by W. Baden-Powell on rigs for canoe-yawls.

Mr. George Manley, of the Orange C. C., has designed and built a 15.10:30 racing canoe, with a plate board.

Some members of the various canoe clubs along the Connecticut River, are organizing an association for the purpose of encouraging cruising on the river, and of furnishing information to cruisers.

The latest volume of the "All England Series," published by Geo. Bell & Sons, London, is by Dr. John D. Hayward, of Liverpool, late vice-commodore of the British Canoe Association, and is entitled "Canoeing with Sail and Paddle." It will be found a very interesting and comprehensive description of modern canoes and canoeing, all details of the sport being treated of. Dr. Hayward is now a canoe-yawl man, and the canoe-yawl comes in for a share of the honors. Though dealing specially with canoeing in Great Britain, the book cannot fail to interest American canoeists.

Rifle Range and Gallery.

Ireland vs. Scotland.

THE first annual match between the Irish Twenty Club and the Caledonian Rifle Club of the Manchester district was shot at the Astley range on Easter Monday. Queen's first stage conditions, seven shots each at 200, 500 and 600 yds.

Irish Twenty Club.		Caledonian Rifle Club.

The International Rifle Match.

The captain of the English Twenty Club has announced that the annual match for the National Challenge trophy between selected "twenties" of bona fide volunteers of England, Ireland, Scotland and Wales, will be held at the Darnley Range, Glasgow, on June 17, and not at Bisley, in the month following. The match was established in 1864, and since that time Scotland has been victorious on 15 occasions and England 14. Ireland has furnished teams for 19 years and Wales five years.

On Nov. 2, 1892, the American Yacht Club applied to the Commissioners of the Land Office for a grant of 31.83 acres of land under the waters of Long Island Sound in the town of Bay. At a meeting of the Commissioners held Dec. 29, an appraisal of the land at \$7,958 was made. At a subsequent meeting, on Jan. 5, 1893, the application was denied on the belief that it was made, not for the purpose of improving the land, but merely to exclude therefrom the citizens of the vicinity who desire to cross the waters under which the land lies. At a subsequent meeting, on Jan. 26, the denial was reconsidered and a new appraisal ordered. The committee examining into the matter reported at the recent meeting of the Commissioners that there are no navigable channels which can be interfered with if the grant were made. Upon the recommendation of this committee it was ordered that the grant be made upon the payment of \$3,992.75, and that the patent issued contain the same conditions as inserted in the grant to the Red Spring Land Company. These are as follows: "Excepting and reserving to all and every one of the said people the full and free right, liberty and privilege of entering upon and using all and every part of the above-described premises in as ample manner as they might have done had this grant not been made, except to so much thereof as may be actually appropriated or occupied by the applicant or its grantees by docks, wharves, jetties, or other structures erected thereon."

The South Amboy (N. J.) Y. C. has elected the following officers: Com., H. C. Perrine, Sr.; Vice-Com., Leonard Furman; Sec., Samuel Locker; Treas., Joe A. Sexton; Meas., Thos. Baker; House Committee, C. B. Mundy, Peter Coyne and Collin Voorhees; Regatta Committee, E. Degray, Wilfred Sprague, D. C. Chase, M. N. Koll, G. A. Lahue; Membership Committee, J. P. Conover, Edwin Furman, H. C. Perrine, Jr.

A despatch from Rockport, Me., on April 16 states that two men were taken from a wrecked yacht off Loblolly Cove by the Life Saving crew, while another yacht had dragged ashore at the same place.

In the severe storm of April 30 the house of the Bayonne Y. C. on a low island in New York Bay at the foot of Thirty-fifth street, Bayonne, was entirely washed away. Nothing but pieces were found along the beach, two catboats and a lot of spars, gear, etc., showing the fate of the house. The club was formed last spring and the house built. It is probable that a new house will be erected, as the club has proved very successful.

Vesta, the Gielow steamed yacht building at Wintingham's for H. A. Laughlin, is now planked, decked and caulked, and her cabin house is in place. Capt. Wm. E. Fish, for five years mate of the Electra, will command her.

Shadow, sloop, Dr. John Bryant, has been replanked and generally rebuilt. The lines of the Shadow were published in the FOREST AND STREAM of July 23, 1887.

The Larchmont Y. C. will formally open its club house on May 20.

The Brooklyn Y. C. is considering a plan for a town house in Brooklyn similar to the New York and Seavanhaka clubs, with a station on Long Island Sound in addition to the present anchorage in Gravesend Bay.

"Ropes: Their Knots and Splices," is the title of a very complete little manual of marliners seamanship just published by the Forest and Stream Publishing Co. The book is thorough and practical, dealing with the nature and qualities of ropes of fiber and wire, and with the various operations by which they are employed about a vessel. The first chapter, on rigging, gives in a simple and elementary form a great deal of information that is indispensable to the novice in sailing, such as the names and uses of the various members of the rigging. The greater part of the book was originally prepared by the late Mr. C. P. Kunhardt as part of a work on boats, but as the book was never completed, the portions relating to rigging has been reproduced in the present volume. The book is very neatly made, and is bound in a plain but attractive cover.

A meeting of the Fox Lake (Ill.) Y. C. was held in Chicago on April 19, at which the following officers were elected: Com., Oliver Sollitt; Vice-Com., J. Albert Mason; Sec., Byron Boyden; Treas., C. J. Pater-son; Chaplain, Jenkin Lloyd Jones; Fleet Surgeon, Dr. Karl Sandberg; Meas., Leonard Holmboe; Ass't Meas., Robert Tooker. The following regatta committee was appointed: G. Martin, C. M. Boyden, J. A. Pater-son, F. E. Russell, F. J. Magin, J. J. Gardner, J. B. Delbridge, D. S. Daly, B. F. Smith, J. H. Adams, S. Sollitt, M. P. Borden, W. Ramaker, G. Catlin. It was decided to give six regattas during the year on the following dates: June 17, July 1, July 4, July 15, July 23, Aug. 12. A reception will be held at the club house after each regatta.

The annual meeting of the San Francisco Y. C. was held on April 11. The following officers were elected: Com., I. Gutte; Vice-Com., E. Engelberg; Sec'y, G. W. Reed; Financial Sec'y, C. H. Morrell; Treas., C. L. Barrett; Meas., Capt. M. Turner. Directors, J. W. McCarthy, J. W. Sperry, Chas. Chittenden, C. W. Kellogg and Ben Stickney.

Gitana, schr., George W. Weld, has been for some time cruising about the West Indies, those on board being George W. Weld, Boston, Mr. and Mrs. W. Maxwell Greave, Providence; Dr. Z. B. Adams Framingham; D. R. Dalton, J. H. DeWolf, Providence, and W. H. Hammond, Boston; Capt. Taylor, the sailing master and a crew of ten. While bound from Havana to Fernandez the yacht was driven out of her course by a heavy gale, and at 7 P. M. on April 19 she grounded on Egg Island shoal in Doboy Sound. She lay aground all night, pounding heavily, but in the morning a tug from Darien, Ga., came to the rescue and took off all hands. Wreckers have since been at work to save the yacht, and has been hauled off and taken to Savannah.

The White Bear Yachting Association, of White Bear Lake, Minn., has elected the following officers: Com., Jas. P. Elmer; Vice-Com., C. M. Griggs; Capt., Carl Taylor; Treas., J. W. Taylor; Sec., A. A. McKechnie. The club sailed a very successful series of races last year, the winning boat being the Osito in the sloop class, with Wapsie second. In the cat class Nushka made the best average, with Secret second.

Nancy, Henry Taggart's "knockabout" boat, has been sold by Stewart & Binney to Robert Saltonstall. Mr. Taggart will build a new boat from Stewart & Binney's designs.

Break, fin-keel, John B. Paine, has been sold by Stewart & Binney to Alex. Cochran, whose sons will race her in the 21ft. class.

Messrs. Waterhouse & Chesebrough have designed two "knockabout" boats for the Eastern Y. C. to be 27ft. over all, 20ft. l.w.l., 7ft. beam and 4ft. draft, with 4,000lbs. of iron on the keel and a sail area of 450sq. ft., the jib tacked to stemhead. There will be a cuddy forward with a watertight cockpit 8ft. long. The boats are now building by E. G. Emmons, of Swampscott, and will be used about Marblehead.

The non-arrival of steel has caused a delay in finishing the plating of the Pine boat at Lawrence's. Mayflower has been hauled out, her lead keel cut up for re-melting, and her interior work removed, as the whole interior will be remodeled. The Waterhouse, 46 footer Carmita has been shored up and her fin has been put in place, but the lead bulb is not yet run. The spar-makers are at work on the hollow spars for the Pine boat, and the spars for the Stewart & Binney boat Pilgrim will be made later on. Waterhouse & Chesebrough have placed three orders with Lawleys, a 42ft. yawl, a 20ft. cutter, and a 12ft. fin-keel racer.

The Queen City Y. C. of Toronto, has elected the following officers: Com., J. W. Schofield (re-elected); Vice-Com., J. J. Quinn (re-elected); Capt., J. S. Thompson; Sec'y-Treas., W. D. Thomas (re-elected); Meas., R. Gardner (re-elected); Sailing Committee, W. Ward, R. A. Langlois, J. Gardner; Auditors, J. Brown, F. Cornish, A. E. Thorne.

The centerboard schooner building at Ferguson's yard, Grotton, Conn., for Richard Mansfield, will be named His Highness. She is a cruising boat 66ft. over all, 52ft. l.w.l., 17ft. beam and 7ft. hold.

Fortuna, schr., Mr. Henry E. Hovey, of the Eastern Y. C., will visit Chicago by way of the St. Lawrence, leaving Boston in June. Owing to her draft it will be necessary to portage her through the canals.

Since the failure of Mr. William Rockefeller to purchase the Atalanta from the Gould estate, various rumors have been current of a new yacht of large size, the latest being that the yacht will be designed and built by the Cramps, and will be second in size to the new Vanderbilt yacht, with a guaranteed speed of 20 knots.

Vamoose, steam yacht, W. E. Hearst, has been altered during the winter below deck, a saloon and staterooms being built aft, in the space formerly occupied by the forecabin, the crew's quarters being moved into the bow. Chief Heilbron is still in command.

Tourist, slip, A. P. Graham, has been rebuilt and fitted with a new outfit of spars and sails at Pryor's yard, and will soon be in commission. Her old single jib has been replaced by the double head rig.

Com. Grover, of the Newark Y. C., has appointed as regatta committee for the coming season Chas. H. Mayhew, F. Bullock and W. H. Vreeland. They have arranged for the following events: May 30, ladies' day; June 3, club regatta; Aug. 19, open regatta, open to yachts enrolled in the N. Y. Y. R. only; Sept. 30, fall regatta, open to all. In addition the club will take part in the cruise of the N. Y. Y. R. A. on July 23-30 and in the Labor Day regatta of the association. A big sweepstakes with a handsome cash prize added open to all jib and mainsail boats will also be arranged for. The club house at Bayonne is now open.

Sachem, schr., has been sold through Hughes's Agency to F. T. Adams and J. G. Moore, of New York.

Olympia, steam yacht, E. C. Benedict, returned to New York on April 22.

Atlantic, schr., Messrs. Marshall and Seeley, reached Bridgeport on April 23, after a cruise to Cuba and the West Indies.

Team Match.

The Friday Night Rifle Club, of Hoboken, met the team of the 69th Regiment, N. Y. N. G., known as the Union Rifle Clubs team, on the Armory range on Friday night. The Jersey men won by 35 points. A return match will be shot on the range of the Friday Night Club this week. The scores are appended:

Zettler Bi-Monthly Shoot.

CYPRESS HILL PARK, New York, April 23.—The bi-monthly shoot of the Zettler Rifle Club took place in this park this morning. A tricky southwest wind caused some of the shooters to get unaccountable shots, but on the whole the weather conditions were fairly good, as the appended scores will show. R. Harmann came to the front again to-day with a score of 232. Several of the other members distinguished themselves by putting up first-class scores. The scores of the members in the competition are given below, ten shots, two scores to count.

R. Harmann.....	18	24	20	25	20	22	23	22	230

Hudson Rifle Club.

MARION, N. J., April 24.—The closing score of the year ending this date resulted as per the appended scores. The averages and class winners will appear in next issue. A 10-men team match between the Hudson and Greenville clubs is now being arranged to be shot on Decoration day, May 30, distance 200yds., each man firing 10 shots. Mr. Chas. E. Bird has been re-elected to the secretaryship of the club, and it is the desire of all the members that his term of office will long be filled, as he is second to none in filling such a position, which is also official scorer for all matches, prize-shoots, etc.

First Team.									
J. Rebhan.....	25	25	25	25	24	24	21	23	243

Revolver Shooting in England.

The weekly revolver competition of the North London Rifle Club took place at Ilford, April 5. The moving target not being quite ready only the stationary, 20yds., 2in. bullseye was shot at. A gusty head wind, but there being an iron shelter at this range it did not greatly interfere with the scores:

Walter Winans (S. & W.).....	6	7	7	7	6	7	41
Varley (Webley).....	5	7	7	7	6	4	31
Cowan.....	5	5	4	7	2	6	30
Richardson.....	5	3	6	4	7	28	
Carter.....	4	7	6	4	3	26	
Terris.....	2	3	4	5	4	25	

Top scores for the championship: Walter Winans 41, C. F. Lowe 31, Varley 32, Cowan 32, Richardson 28, Terris 26, Carter 26, Treadwell 25.

Hudson vs. Greenville.

The third and last match between the Hudson rifle team, of Marion, N. J., and the Greenville rifle team, of Greenville, N. J., was shot off on the range of the Excelsior Club, in Jersey City, on Wednesday night, the 19th inst. Each team had previously won a race from the other on the home ranges and the third match was shot to decide which should have the honor of winning the series. The Greenville team was short of three of its best men and was obliged to supply their places with men without previous experience in revolver shooting, and the match proved to be a Waterloo for the Greenville team. The scores are appended:

Hudson team—John Rebhan 237, H. Hanson 238, A. Malz 234, C. Huteh 245, A. Brown 239, C. Bird 227, G. W. Graf 237, H. Mehlbrock 234, F. Sessman 224, A. Steuber 232, total 2,335.
 Greenville team—C. E. Bird 231, Geo. Purkes 229, G. Plaisted 227, W. C. Collins 227, Joseph Kaiser 231, J. Boag 223, George Treeland 216, C. H. Chevaut 239, C. Scheline 241, A. Lembeck 203; total 2,339.

Convention of Riflemen.

The meeting of delegates representing the different shooting societies in and about New York, which took place in the hall of the German-American Society on Friday night, brought together a large number of representative riflemen.

All of the principal shooting clubs and societies were there in the person of their delegates. The following societies being represented: N. Y. Schützen Corps, N. Y. Central Corps, Harlem Independent Corps, Heidenreich Rifle Corps, N. Y. Schützen Gilde, N. Y. Schützen Bund No. 1, N. Y. Plattdeutsche Schützen Corps, Independent Germania Corps, Manhattan Schützen Bund, Harlem Schützen Corps, Miller Rifle Club, Zettler Rifle Club, Newark Shooting Society, Williamsburgh Schützen Corps, German-American Schützen Society, German-American Schützen Bund, Harlem Rifle Team and Columbus Rifle Club.

Several other societies forwarded letters of regret that circumstances would not permit them to be represented.

The object of the meeting, as has already been stated in these columns, was for the purpose of organization of the different societies into a Schützen Bund, or United Association of Riflemen.

The German-American riflemen of New York have had in contemplation for some time the holding of a grand international shooting festival. It was the intention to have had such a festival in New York in 1893, provided the Columbian Fair had come to this city. But when it was decided that Chicago was to have the honor, the matter was dropped. When the Chicago Schützen Verein sent forth its prospectus last season for a festival to be held in Chicago this year, the matter again became a subject for discussion among the New York fraternity. Meetings were called for the purpose of getting the shooters together to see whether the New York people would take part in the proposed festival or not. The upshot of the whole matter was that the proposed plan of the Chicago people was not satisfactory to the Eastern societies, and the matter was again allowed to lapse. In the meantime some of the leaders among the New York rifle shooters conceived the idea of having a festival in New York in 1894, and this meeting was the outcome. A vote of the delegates was taken for a united organization of all the societies and the holding of a festival in 1894.

The following committee was appointed for the nomination of permanent officers: B. Walther, Otto Uehlein, A. Richter, H. Offermann,

C. Rehm, C. Fatznacht, C. M. Dreste, Wm. V. Weber and R. Henke. The following gentlemen were appointed as a committee on constitution and by-laws: L. Zeller, Chas. Lowe, Geo. Krauss, Wm. Hayes, Fred Baumann, Chas. G. Zettler, B. Walther, C. F. Roedel, H. Offermann and Edw. Hotz. These committees were instructed to nominate a board of officers and compile a constitution and by-laws, and submit the same to the next meeting, which takes place on May 12.

Capt. August Zimmerman.

THE subject of this notice was born in Baden, Germany, some thirty-nine years ago. When in his teens he shook the dust of the Fatherland from his feet and hid himself to America. With no capital but such as nature had endowed him with, a healthy constitution, pluck and perseverance, he has succeeded in accumulating a fair competence in worldly goods, a large fund of experience and an extensive circle of friends.

His love for outdoor sport early led him in the direction of rifle shooting, and it is in this line of sport that he is to-day acknowledged to be at the head of all experts. His victory over Fred W. Hofele, in a quick-firing match along in the 80's, when he won the first prize (\$1,000) grand piano, at the German Hospital Fair, and in a subse-

quent match with Hofele, which grew out of the above match, first brought Capt. Zimmerman prominently before the public as a marksman. The result of the Hospital Fair tournament caused such a feeling of dissatisfaction to Mr. Hofele that he challenged Zimmerman to shoot a match at 200yds. for most points, or in other words, the man who could get the most shots into the bullseye in a limited time was to be declared the winner. Thos. J. Dolan, was selected as referee, and the time limit restricted to three hours. The result of the match was as follows, 12in. bullseye:

	Shots fired.	Bullseyes.	Misses.
Zimmerman.....	846	601	245
Hofele.....	646	325	321

Capt. Zimmerman won the Tiffany cup at Creedmoor in 1888, and again in 1890, on the highest score ever made for the cup. When in Berlin at the Great Bundes Fest in 1890, in the competition for the Kaiser William trophy, through an accident to Zimmerman's target he lost 3½ minutes, and at the close of the contest he was only 30 seconds behind the winner. During Zimmerman's tour through the German States in 1890 he won sixty trophies.

Early in the fall of 1892 Zimmerman again returned to Europe, and during his visit to Germany he met and defeated several of the best shots in that country. Among them was Carl Bartels, gunsmith to the Royal Family of Germany. In a 100 shot quick-firing match with Bartels, Zimmerman won by 4½ minutes, at Frankfurt-on-the-Main. In a match with Mr. H. Horn, the director of the shooting grounds, 100 shots, 200yds., open sights, Zimmerman won by 4 points. An accident in the early part of the match partially disabled one of Zimmerman's hands, otherwise his lead would have been much larger. Later he shot a match with F. Gleichauf, another noted shot. In 50 shots Zimmerman won by 65 points.

As captain of the Lützow Co. No. 13 of the German-American Shooting Society, he has with his team been in the lead in the most of the Society tournaments. He was for a number of years captain of the old Bull's Head Club. He is also an active member in the Independent New York Corps, the New York Central Corps and the famous Zettler Rifle Club.

New York Central Corps.

The New York Central Corps, under the leadership of Capt. A. Richter, assisted by Washington Park on Thursday afternoon for regular monthly practice. The weather proved most disagreeable. Heavy downpouring rain, driven by a strong northeast gale, made the shooting house very uncomfortable for the shooters. The targets at times were completely obscured by the driving storm, so that high scores were out of the question. Fred Schmidt won the champion medal for the most red flags, R. Flierd won the first class medal, John Eisenhardt the second class, F. Leriis the third class, and Emil Berckmann the fourth class medal.

Man Target—First prize, Fred Schmidt, 57; second, W. Seppelfeldt, 56; third, J. Doux, 54; fourth, J. Eisenhardt, 52; fifth, R. Flierd, 51; sixth, F. Baumann 51; seventh, Emil Berckmann, 50; eighth, Fred Schraeder, 48; ninth, J. Radke, 43.

Ring Target, possible 150—First prize, F. Schraeder, 140; second, R. Flierd, 132; third, H. Holsten, 123; fourth, F. Baumann, 117; fifth, M. Fieken, 118; sixth, J. Doux, 112; seventh, H. D. Muller, 110; eighth, W. Teschmacher, 107; ninth, J. Lowe, 101; tenth, C. F. Gennerich, 100; eleventh, A. Richter, 81; twelfth, A. Luck, 49.

Cincinnati Rifle Association.

CINCINNATI, April 23.—Regular practice shoot at the range to-day, Gindles, 200yds., off-hand, at the standard target:

Gindles.....	81	80	74	Hayne.....	81	80	74
Weinheimer.....	77	71	71	Brumback.....	64	72	67
Wellinger.....	36	82	80	Randall.....	73	74	73
Simon.....	80	75	69	McClurg.....	48	43	36
				Joe.....	54	50	50

German-American Club.

The prize shoot of the German-American Rifle Club came off at Home's Range, Brooklyn, E. D. The programme called for thirteen prizes, ranging from \$15 to \$2, three shots for ticket, two best tickets to count for first five prizes. The scores are appended: A. Albrecht, 73, 74; William Rosenbaum, 73, 73; F. Ross, 72, 73; B. Walther, 71, 73; C. Homey, 72, 72; F. Hoffman, 73; M. Vogel, 71; J. Bodenstein, 71; J. Hutch, 71; M. Senc, 70; M. Richter, 70; J. Greenville, 70; G. Worn, 70; M. Pfautsch, 70.

Miller Club Shoot.

The weekly gallery practice of the Miller Club for the Fisher Medal, was held on the club range on Wednesday night, the 10th inst. F. Kloepping made the highest score in the medal competition. The scores are appended: E. E. Fisher 345, A. Kloepping 242, D. Miller 240, Kruse 239, Meyers 239, Caragher 238, Schl 234, Pflug 233, Dewey 230, Leill 230, Hoelster 229, Murphy 219, Kammel 200.

Lutzow Co. No. 12.

This company of the German-American Society, held a prize shoot at the society headquarters, No. 12 St. Marks place, on the 23d inst. Gus Zimmerman is captain of the company; the other officers are Theo. Walters, First Lieutenant; Leo. F. Zitzman, Second Lieutenant; F. Odendahl, Secretary; Leo. Zitzman, Treasurer; Louis Heimbach, Sergeant at Arms. The scores for the prize shoot are appended, 3 shots, possible 75: Gus Zimmerman 72, Gus Ringler 70, B. Zettler 68, Chas. Litschig 68, Chas. Rein 68, Otto Uehlein 67, F. Odendahl 66, H. B. Kalin 65, F. Gamlin 65, F. Neuberger 63, Leo Zitzman 62, Leo F. Zitzman 61, M. Dillman 60, Louis Heimbach 60.

Bisley Competitions for Pistols.

BESIDES the competitions already mentioned in FOREST AND STREAM there will be a military revolver aggregate for the highest scores made in the three revolver competitions (one at 50 and two at 20yds.), a similar aggregate for target revolvers, besides the grand aggregate cup for both styles of revolvers, and a prize for double-barreled pistols at 20yds. stationary target, restricted to pistols of Lancaster make.

This brings the pistol and revolver competitions up to thirteen different series.

Zettler Rifle Club.

THE season gallery shoot of the Zettler Rifle Club for 1892-3 is drawing to a close. One more meeting, on April 25, winds up the series, when all those who have finished the required number of scores will come in for their *pro rata* share of the \$150 in cash prizes put up by the club. The scores of the members who were present on Tuesday night, the 18th inst., are appended:

Henry Holges 247, C. G. Zettler 245, M. Dorrier 245, R. Busse 244, M. B. Engel 243, B. Zettler 241, Gus. Nowak 240, Geo. Krauss 240, J. Heintz 239.

Turtle Bay Rifle Club.

THE regular Thursday night gallery shoot of the Turtle Bay Club took place at its headquarters in Forty-second street on the 20th inst. The active members in the club still continue to keep up their average. The scores are as follows, club handicap rules:

J. Ochs, Jr.....	246	246	244	J. Krampert.....	241	235	235	711
H. Walther.....	243	240	244	J. Oberle.....	234	230	230	694

RIFLE NOTES.

Mr. J. P. Delhanty, of Pittston, Pa., an oldtime rifleman, well known to the New York shooters, in the early days of Creedmoor, was in the city last week. His genial countenance and sturdy frame still retain their old characteristics.

The manufacturers and dealers are expending a good deal of energy and much money in the effort to boom up the shotgun and its ammunition. Alight it not be to the advantage of the interests of the manufacturers to let loose a little of this outflow in the direction of the rifle shooting fraternity.

In looking over the old scrap books, covering the past fifteen years, one wonders at the low ebb which the tide of rifle shooting has reached. About the only satisfaction there is in coming over these old records is in the belief that those of us who are still in the swim with the rifles have progressed in the matter of averages in our scores. Those of the present day in off-hand shooting with the breechloader are much ahead of the average of fifteen or twenty years ago, in the days of the muzzleloader. And still one will now and then meet with one of the old boys who clings to his ancient love.

At one of our practice shoots not long ago one of the old timers, whose locks are bleached with time, and whose nerve is not as it used to be, stepped up to firing point and discharged his rifle. After waiting some time for the marker to exhibit his shot, he expressed the belief that he had forgotten to insert the bullet in the rifle, and turned away to reload his arm; as he did so the marker came up with the red flag for a center shot. When the shooter's attention was called to the waving flag, he remarked that he had no recollection of ever having made a bulls-eye before without a bullet in his side.

The Greenville Rifle Club elected a full board of officers under its new charter on Friday, the 21st, the full list will be found appended: H. Gotthardt, President; Ed. Barr, Vice-President; Geo. Plaisted, Cor. Secretary; W. C. Collins, Fin. Secretary; Jas. Dodd, Treasurer; J. J. Hill, Sergt.-at-Arms; Wm. H. Robidoux, Captain; C. Boag, Asst. Captain; Trustees: H. Chavaut, Geo. Purkes, J. Boag, J. Hovendon, J. Kaiser; Finance Committee: J. J. Hill, Ed. Barr and C. Boag.

Trap-Shooting.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

- May 2-3.—Independence (Ind.) Gun Club tournament. Added money.
- May 2-4.—Williamsport (Pa.) Gun Club annual tournament.
- May 3-4.—Valley Falls (Kansas) Gun Club tournament.
- May 8.—West Shore Gun Club tournament, at Syracuse, N. Y.
- May 8-12.—Texas State Sportsmen's Association tournament, at Hempstead, Texas.
- May 9-11.—Ohio Trap-Shooters' League tournament, Columbus, O.
- May 10-11.—Interstate Manufacturers' and Dealers' Association target tournament, at Passaic, N. J.
- May 9-1

DRIVERS AND TWISTERS.

The East End and Cleveland Gun Clubs of Cleveland, Ohio, are about to consolidate. "It is what should have been done some time ago," said a member of the East End club who has always taken the greatest interest in that organization. "The way the clubs are being operated at the present time obliges us to pay about twice what we should for the kind of service that we get. If consolidation were effected there would be no necessity to increase the dues, but at the same time with the increased membership there would be more money to devote to the purpose for which the clubs are organized. I think the present method is really a serious handicap to both organizations. If a person desires to take an afternoon to shoot he will find it impossible with the present conveniences to shoot much more than 30 targets and it will take him all the afternoon to do that. It is impossible to keep a shooter at the traps all the afternoon to have 30 chances to break targets. The club needs new and improved traps and the best way to secure them is by consolidation." If the plan goes through there will be live birds kept at the traps in addition to blue rock targets. There will also be a place for the members to keep their dogs, and the purpose will be to provide a range that is thoroughly up with the times. The location will be as handy to a street car line as it is possible to secure it and under the new arrangement that will doubtless be provided for adjusting the traps, it will be as easy to shoot at 100 targets as it now is to shoot at 50.

"WEST MEDFORD, Mass., April 19.—A meeting of about twenty sportsmen of this vicinity was held on April 17, at which it was voted to reorganize the West Medford Shooting Club, which was originally organized March 20, 1875. The purposes of the club are the assistance in the protection and preservation of game, and the promotion of all interests pertaining to trap sportsmanship. The following officers were elected: Officers: S. W. Gifford, president; C. H. Sawyer, vice-president; A. A. Whittemore, treasurer; A. L. Finney, secretary; C. H. Parker, A. A. Whittemore and P. W. Gifford, executive committee. The club starts out with a membership of about twenty-five, and will hold friendly shoots, which will be made occasions of general enjoyment—not a hustle for dollars—and to this end the following resolution was unanimously adopted: 'No sweepstakes or prizes shall be allowed at the time of the shoot. This will eliminate the objectionable feature of professionalists, so disastrous to the good-fellowship of many clubs.' A. L. FINNEY, Secretary."

ROCHESTER, N. Y., April 22.—I have noticed in the trap columns of your paper, each week, that it is to be hoped we will have a live-bird contest on each day of the tournament, but I am afraid the shooters will be disappointed in this, as we have not had any thought of shooting any pigeons except in the Dean Richmond Trophy race. It is a hard matter to run live bird events and inanimate target events on the same shooting ground and at the same time, as the latter attracts the other live-bird contests usually getting the best of it. As we intend offering very large guarantee purses we do not wish to have any counter-attraction, or have anything on the grounds that will in any way interfere with the target events, although I will admit your suggestion is a good one if it could be carried out. I know there are a great many old shooters in the State, who stand and look on at the target breaking and say to themselves, "Oh, if they only had feathers on."

If we are enabled to secure the pigeons we will possibly offer an attraction in pigeon events on the last day of the week. The committee on rules, that was appointed at last year's convention, have gotten up a new set of rules entirely, for live bird shooting, to govern the Dean Richmond Trophy race and other live bird shooting, but the inanimate target rules are simply the American Association rules, with the exception that 10 and 12-bore guns stand at the 10yd. mark, 13-bore guns being allowed 14yd. of shot, and the shooting will be done from the latter part of May. The new rules are rapid and simple, this system it will enable us to run off three events a day instead of two, and of course compels us to guarantee money for the extra event. From the present outlook we expect to put up not less than \$5,000 in cash and merchandise prizes, and with favorable weather we trust to have a successful shoot.

H. M. STEWART, Cor. Sec'y.

The Forest City Gun Club, of Savannah, Ga., at its annual meeting elected the following officers for the ensuing year: President, E. J. Kieffer; Vice-President, F. G. Jangstetter; Secretary, C. A. Lamotte; Treasurer, D. E. Danner; Officers: John H. Kieffer, Executive Committee: John Heideman, C. B. Westcott and E. W. O'Connor. Several new members were elected. The reports of the secretary and treasurer showed the club to be in a flourishing condition. It will begin practice for the season of 1893 Thursday at the club grounds on Esplanade avenue. A committee was appointed to arrange for the tournament during May week. After the meeting President Kieffer entertained the members at supper, prepared by Geo. Schwartz.

Some time ago we were told by Mr. A. L. Heritage of Jersey City, that he proposed to hold a 3-day tournament on his grounds during the latter part of May. Mr. Heritage proposed making the programme comprise two days at targets and one at live birds. He also said that if the May shoot of the New Jersey Trap-Shooters' League should fall to the lot of the Endeavor Gun Club he would make one of the above target days the "League Day," and suggested as the probable dates, May 30 and 31, and June 1. As the Endeavors have drawn the May shoot we may presume that the above programme will be carried out.

We are advised by Geo. S. Atwater that the Glen Echo Gun Club, of Washington, D. C., will hold a target tournament on Friday and Saturday, May 19 and 20, the events to be open to all. This club has elegantly appointed grounds in a picturesque location and its members will exert themselves to make the affair a pleasant one. Shooters who propose attending the Knoxville shoot could not do better than to leave home in time to attend the Glen Echo Club's tournament, take in the sights of Washington and vicinity on Sunday, and leave for Knoxville on Sunday night or Monday morning.

The Rich Hill Gun Club, of Doylestown, Pa., held its regular monthly shoot on April 19 for the club's badge. Edward Dillon was the fortunate man and now displays the trophy upon his bosom. The scores: A. Keller 10, Ed. Dillon 10, C. Pfeiffer 9, C. Headman 8, H. Headman 8, J. S. Hessler 7, Wm. Staib 7, H. Fellman 7, H. Nace 6, F. S. Ahlun 6, W. S. Lewis 4, H. Z. Striker 3. Messrs. Keller and Dillon being tied, they shot three rounds again, which resulted in a victory for Dillon by one point.

A target shoot was held on the North Pinegrove Sporting Club's grounds, at Pottsville, Pa., on April 15, the result being as follows: Thomas Dubbs, of Pinegrove, 24 out of 25; F. E. Danner, of Steelton, 29 out of 40; G. Gamber, of Reiner City, 27 out of 40; F. West, of Reiner City, 25 out of 40; Alexander Dubbs, of Pinegrove, 24 out of 40; David Leininger, of Tremont, 8 out of 15; Chas. Achenbach, of Cressona, 27 out of 40. Referees, Lewis Hutzinger and Adam Boutz.

The regular monthly shoot of the Erie Gun Club took place on April 19 at Woodlawn Park. There were seventeen members present. The score: Class A, 28yds.—C. Plate 7, H. Dohmann 5, John Plate 6, John Schaff 6, C. Mohrman 5, John Schmucke 5. Class B, 25yds.—M. Ellsasser 5, Fred Gure 5, J. C. Schumaker 5, J. C. Schumaker 5, E. Maryarty 7, H. Victor 6, Wm. Lator 6, Class C, 23yds.—Capt. D. Lynch 5, C. H. Lührsen 5, G. Shufelt 3, H. Plate 0.

The Interstate Manufacturers' and Dealers' Association will hold their second target tournament of the season on the grounds of the Altoona Rod and Gun Club, at Wapsonock Park, Altoona, Pa., on June 21 and 22. At that season of the year the Allegheny Mountains show to the best advantage, the summer hotel at "Wopsy" will be open and everybody can be assured of a pleasant time.

The Parker Gun Club, of Meriden, Conn., who were obliged to vacate their old grounds in the city, have leased grounds north of Hanover Lake, on the line of the South Meriden railroad. The grounds will be fitted up with all modern appliances and a comfortable club house will be built. The club intends to make this the best shooting ground in the State.

The Wanuke Chemical Company, of Watertown, N. Y., has been organized for the purpose of manufacturing a novel compound from African oils and gums, the formula for which was discovered by Professor Krantz, an eminent German chemist, on his recent tour in Africa, where he found it used by the natives for alluring fish.—Adv.

The weekly shoot of the Standard Gun Club was held at Acton's Park, Baltimore, April 18. The following scores were made out of a possible 50: Bonday 43, Hunt 41, Storr 40, Lupton 38, Ducker 35, Dank-ever 35, Franklin 34, Hawkins 34, King 30, Dr. Smith 31, Dr. Frey 29, Harrison 28, Chase 28, Williams 27, Buckbee 37, Hunter 33.

The Altoona Rod and Gun Club, of Altoona, Pa., has settled down to the season's work and announces regular club shoots on the following dates: May 6, 17, 30; June 14; July 1, 13, 29; Aug. 9, Sept. 6, 23, and Oct. 4. The shoot on May 30 will be an all day affair.

In a match between teams of 8 men each from the Wilmington and Kiamensi gun clubs at Wilmington on April 15, the Kiamensi broke 162 to the Wilmingtons 148. Each man shot at 25 targets, and the wind was blowing a gale.

At Linton Falls, N. J., on April 17, Frank Worrell, of Mattawan and Eugene Magee, of Linton Falls, shot a 15 bird match for \$50 a side and tied on 10 kills each. On the shoot off at 5 birds each Magee guessed to 3 and Worrell 3.

Trap-shooters will have an opportunity to enjoy shooting at live birds or artificial targets at the Williamsport (Pa.) tournament next week. The target events will begin at 9 A. M. and the live bird events at 10 A. M. each day.

There is some prospect for a fall tournament under the auspices of

the New Jersey State Sportsmen's Association for the Protection of Fish and Game. President Heritage will soon issue a call for a meeting.

The Pastime Gun Club was recently organized in San Diego, Cal. The club has trap grounds near Recreation Park and will shoot every week. J. B. Badgley is president and Frank Stevens secretary.

The Ticonic Gun Club of Waterville, Me., held their first shoot on April 19, each man shooting at 20 targets. The scores were: Preble 19, Green 19, Day 10, Jordan 15, Booker 15 and Barry 14.

Chas. Snyder has been elected captain of the Hillside Gun Club, of Philadelphia, Pa. The club offers a prize to the member breaking the most targets out of 300 shot at during the year.

The Interstate Manufacturers' and Dealers' Association tournament to be held at Passaic, N. J., on May 10 and 11 is exciting considerable interest among Jersey shooters.

Programmes for the State shoot will soon be forthcoming. There will be an immense list of valuable prizes in the State events.

It is understood that the Newark Gun Club is soon to re-organize and adopt some systematic method of practice shooting.

In a recent team match between the West Newburgh (N. Y.) and Marlborough gun clubs the latter won by 5 targets.

Saratoga will catch a big crowd of both experts and amateurs. The \$100 given for average prizes is quite an attraction.

The Coatesville (Pa.) Gun Club has reorganized for the season with 27 members. W. T. Gordon is president.

Harvey McMurchy and M. F. Lindsey have left the Pacific coast and started on their return eastward.

The Knoxville shoot promises to be "the event" of 1893 and every shooter should be on hand.

C. H. TOWNSEND.

New Jersey State League.

The third monthly team shoot of the New Jersey Trap-Shooters' League took place on the grounds of the Independent Gun Club at Plainfield, on Thursday, April 20, and a bleak and dismal day it was. From early morn until late at night the rain fell in torrents, the wind blew more than half a gale, the air was chill and piercing, and taken all in all it was a good day for remaining at home. But Jerseymen, and especially Jersey trap enthusiasts, are not as a rule frightened by "a bit of weather," and on this particular day five teams of five men each reported for the State championship race. Each man shot at 25 artificial targets, which same were wholly at the mercy of the breezes, flitting hither and thither in most erratic fashion and rendering good scores an impossibility. In fact twenty was high out of the twenty-five scores shot in this race, while in the sweepstakes only one clean score was made, this being a straight ten in event No. 1 by Fred Quimby.

Below are the team scores in full, the Endeavors of Jersey City and the Maplewoods of Maplewood tying for first place on 76 breaks each:

South Side Gun Club, Newark.	
Breintail	110110110100110101011-16
Geoffroy	1011001010101011101000-12

Change of Date.

PRITTSBURG, Pa.—Editor Forest and Stream: At a meeting of the tournament committee of the Interstate Manufacturers' and Dealers' Association, held April 19, it was decided to change the dates of the Passaic, N. J., tournament from May 10 and 11 to May 19 and 20. The previous dates would conflict with the tournament at Saratoga, and we deem that shooting does not gain by a conflict of dates when it can be avoided.

The new dates I hope will give general satisfaction. Let me announce also that the Interstate Manufacturers' and Dealers' Association has decided to hold the third tournament of their series at Altoona, Pa., June 21 and 22. Full details will be furnished in a few days.

ELMER E. SNARE,

Manager Interstate Manufacturers' and Dealers' Association.

Shooting at Wapsonock Park.

THE Altoona (Pa.) Rod and Gun Club held the first of its regular series of shoots at Wapsonock Shooting Park on April 19, the weather being damp and chill. There were seventeen shooters on hand, a fine turnout for a club shoot. The events were at ten targets each and the scores were fair despite the fact of the targets being hard breakers. The scores:

No. 1.

The Powder Test Challenge.

Editor Forest and Stream:

In your issue of Feb. 2 you published a letter from Mr. M. F. Lindsley, which was written in reply to a proposition I had made to Mr. Elliott to have the comparative practical merits of Schultze and American wood powder fairly tested at live pigeons. Several expert shots were each to use both powders at an equal number of birds, at no time knowing which powder they had in their guns. Mr. Lindsley's letter was worded in a manner to impress those who do not follow a controversy carefully or who do not go into the merits of a powder closely, and who can be caught with bluff, bluster and humbug. Lindsley began his letter by saying that my "proposition was simply ridiculous," but was very careful not to attempt to say why, and wound up with a counter-challenge to test the two powders scientifically "for pressure, velocity, pattern and stringing of shot." He added: "To make this test interesting I will bet Mr. Von Lengerke \$500 to \$250 that the American wood powder beats Schultze in the above test, and I would further provide that the loser pay all expenses of same."

It so happened that I had deposited \$250 with the FOREST AND STREAM when making my proposition to Mr. Elliott. I immediately accepted Mr. Lindsley's challenge as made without reserve, which acceptance was published in your next issue, Feb. 9, and I requested FOREST AND STREAM to apply my check for \$250 as deposited in full for Mr. Lindsley's challenge. I offered to meet Mr. Lindsley at his own office or any other place he might prefer to complete arrangements. I accepted all of Mr. Lindsley's somewhat peculiar conditions, such as using only American-made guns for the test, etc., and even expressed my willingness to have the tests made at his own factory.

It is now over two months since my acceptance was published and my money deposited at your office, and in the meantime both FOREST AND STREAM and I have done what was in our power to make Mr. Lindsley come to the scratch.

Mr. Lindsley's attempt to let moss grow over the affair by profound silence speaks for itself. He has too much at stake to have the public learn the true nature of the so-called American wood powder, which he makes and sells, and thereby remove the peculiar conditions which have made it possible for Mr. Lindsley to keep such an unstable, impure and often directly dangerous mixture on the market so long. To invite and carry out a comparative and scientific test of American wood powder as against Schultze powder, would simply be suicidal, and since Mr. Lindsley's bluff did not work with me, he has been wise enough to crawl into his little hole and pull the hole in after him to be out of my way and the public's gaze.

The many sportsmen who have honestly thought that American wood powder was a reliable and stable article from apparently satisfactory results and the work done with it by the many subsidized experts throughout the country, can now draw their own conclusions and admire the sincerity, honesty and courage of their leader, who can be a good fellow and who was liked and befriended by me for a long time after he misrepresented and defiled me personally.

Mr. Lindsley cannot separate business from friendship. His utterances are not born of honest convictions, he is not able to successfully carry on a defense of his powder and not broad-minded enough to be fair.

However, I hope that in spite of Mr. Lindsley's refusal the proposed powder trials will be made. I shall also see to it that all those who would like to see a more detailed answer on my part which FOREST AND STREAM could not give in full, will be able to do so, as I shall compile the controversy in circular form. JUSTUS VON Lengerke.

NEW YORK, April 18.—Editor Forest and Stream: Mr. Lindsley is and for some time has been in the far West. He is probably in California now or on his way there. We expect his return shortly, and after conference with him shall undoubtedly support him in his position. We have no reason to do otherwise, though we wish the matter had been made one of pure science and not a betting match. AMERICAN WOOD POWDER CO., ELLIOTT SMITH, President.

The Trap at Watson's Park.

BURNSIDE, ILL., April 17.—Scores made here to-day for the Chicago Shooting Club badge, at live birds, under new Illinois State rules, first miss out; \$2 sweep added:

Ed Bingham.....122220 J M Hutchinson.....0
Geo Kleinman.....0 B Rock.....222220
R B Wadsworth.....122222 B Barto.....0
Rolla Heikes.....220 D Deadeye.....0
April 18.—Audubon Club, for club badge, at 15 live birds each, new Illinois State rules, handicap on birds, number of dead birds added to each man's score opposite his name:
P B Dissel.....1212112211—15 Wadsworth.....22212201112221 +0—14
C S Wilcox.....0111111222000—12—12 J E Price.....208111210100W.

L Hamline.....2221220222220—1—14 A Torkington102121222111100—12
Hamline and Price tied for badge last shoot and to-day's shoot decided the tie in favor of Hamline. RAYLEIGH.

P. F. McKeon vs. F. A. Kerker.

The triangular match at live birds, which was billed to come off at Pelhamville on Friday between P. F. McKeon, P. A. Kerker, and J. J. Lewis, was only partially carried out. Mr. Loomis forwarded his regrets and requested a postponement, which Mr. McKeon kindly consented to. In the matter of that part of the programme, as applied to the match of McKeon vs Kerker, both parties being on the grounds, and the birds having been specially ordered for the match, it was decided to go on and shoot. The conditions were as follows: \$50 a side,

Kerker 90yds., McKeon 28, 5 unknown traps, 80yds. boundary, 25 birds each man, modified Hurlingham rules. W. J. Greenville was selected as referee, and the match started with Kerker at the trap. The scores are as follows:

Kerker.....	21112201120002211000—12
McKeon.....	212222220121210010011002—18
The birds were an unusually good lot with the luck in favor of McKeon.	
After the close of the above match the following miss and out sweeps were shot off, \$1 entry:

Tacoma Boys Win.

SOME excellent scores were made yesterday over the traps of the Tacoma Rifle, Rod and Gun Club, the event being a contest between A. G. Courtney of New York, representing the Lefever gun, and W. L. Colville, of the Hunter Arms Company of Batavia, N. Y., two experts from the East, and the members of the home club. The scores go to show that the Tacoma boys are at home even in hot company, Mr. Courtney being one of the best inanimate trap shots in America, having won championship after championship in the Eastern States. Messrs. Eberly and Denham shot as a team against Colville and Courtney, and, as can be seen by the scores below, the Tacoma cracks won by one score. Mr. Ellis made the highest individual score, having broken 47 out of a possible 50 clay pigeons, which is a credit to any professional. The scores:

Dr Smith.....	1110110111110101111111000111111111111110101—41

Shooting Match at Coney Island.

R. F. CLAYTON, OF TAMAUCA, PA., WINS THE STAKES.

A party of about twenty-five Philadelphia sports visited Coney Island last Monday and had a fine afternoon sport with the Atlantic Rod and Gun Club members at their grounds. A triangular match was arranged between C. E. Morris of the home club; R. F. Clayton, of Tamauca, Pa., and J. J. McGlone, of Philadelphia. Clayton shot a good race, winning easily, Morris being second. The whole party were handsomely entertained by the Atlantics, and their visit was extended for three days to see the sights. Owing to the scarcity of birds the originally arranged match did not come off. The scores:

C E Morris.....	21022222000121121222221—18
R F Clayton.....	211222212121212010102120—20—38

Sweepstake, ten birds, \$5, one money—C. E. Morris, 10; R. Newton, 8; C. Snedecker, 8.	

Unknown Gun Club.

FIFTEEN members of the Unknown Gun Club competed for the club championship medal and extra prizes at Dexter Park on Thursday. J. Bohling was the winner with a straight score of seven. The sweepstake shoot at three birds, then miss and out, was very lively between Capt. Ice Hyde and W. Boyd, the former winning on the thirteenth round. The scores:

G Marlborough.....	4	Capt Hyde.....	5	C Ring.....	1
R Sweeney.....	1	J Sampson.....	5	H Lohman.....	3
J Flynn.....	6	E Vroome.....	6	H Boerman.....	3

J Bohling.....	7	H Hall.....	6	Dr Little.....	6

Crescent Gun Club.

ONLY ten members of the Crescent Gun Club were present at the regular monthly shoot of Friday at the Dexter Park grounds. Birds were very scarce, but the majority were fast flyers. Five tied for the medal and first prize, and all ties were decided in the sweepstakes which followed. The scores:

P Jones.....	5	J Vagts.....	5	C Mohrman.....	7
G Ellerhorst.....	7	O Hull.....	7	W Gilman.....	7
O Hilton.....	6	J Rathjen.....	6	J Passmore.....	5
L Hopkins.....	7				

Emerald Gun Club.

TWENTY members of the Emerald Gun Club were present on Tuesday at Dexter Park and held the first shoot of the new season for the gold medals. Several ties in Class A were made which will be decided at the next shoot, the birds being scarce. The scores:

T P McKenna.....	6	C Maesel.....	2	W E Hogan.....	4
J Warfel.....	5	L D Schultze.....	5	P F Russell.....	7

MOHEGAN.

Answers to Correspondents.

No notice taken of anonymous communications.

C. A. H., Parker's Glen, Pa.—I wish to know if Schultze powder is safe to use in my 12-gauge hammerless, \$50 grade, Wilkes Barre gun. I have been told that three drams Schultze powder would strain and spoil the gun. Ans. You can use three drams of Schultze powder (measure) in your Wilkes Barre gun with safety.

W. P. M., Velasco, Tex.—Please let me know where I can procure seed of wild rice and celery, also when should I plant so as to grow available for ducks next winter. Ans. We believe that all the dealers we generally recommend have sold out their supplies of these seeds, and if such were not the case we would not advise your planting at this time of year, when the seeds have in great measure lost their vitality. See answer to P. R. C.

L. A. T., Jr., Kendallville, Ind.—I send you to-day by mail the head of some eagle or hawk, which I should like to know the name of. Several of these birds have been seen around our lakes for the last two years. This one was shot to-day. It measures 5ft. from tip to tip. The back and upper part of wings is dark brown. The lower parts of the body are white. The feet are grayish blue, claws black. Several people who have seen it call it a bald eagle. Ans. Osprey or fishhawk (*Pandion haliaetus*). These birds should not be shot, but protected.

E. L. B., Belvidere, Ill.—Can you tell me how to tell the male from the female in Canada geese? Have shot several this spring and have two alive. They look alike, except one is somewhat larger than the other, and would like to know if I have a male and female. Ans. There is very little difference in appearance or size between the male and female of the Canada goose. Possibly one of your birds is a Hutchins goose. If so, it should differ from the Canada goose in size and also in the number of tail feathers. The Canada goose averages about 36in. in length and has 18 tail feathers, while the Hutchins goose only measures from 25 to 30in. and has but 16 tail feathers. They are found associated together.

P. R. C., New York.—Will you please inform me through the columns of your paper of the following concerning wild rice: 1. How late in the season would it be advisable to plant it in Maine, and when would be the best time? 2. In what sort of place and in what way should it be sown? 3. In feeding do the ducks dive for it? Ans. FOREST AND STREAM contained an illustrated article on wild rice Aug. 25, 1892, which it would pay you to read. 1. The best time to plant wild rice is in the fall just as soon as the seed can be obtained. 2. It should be planted on a mud bottom where there is little or no current, and if possible where there is no other vegetation. It will grow in water 6ft. deep, but does best in shallow water. The seeds should be soaked in water an hour or two before planting, as they will then sink at once and not be carried away by wind or current from the place selected. 3. Yes.

FOREST, Boston, Mass.—If I know how many grains of powder in a rifle shell and how many grains of lead in front of it, is there any way that I can tell just how far that bullet ought to travel and do it accurately, or does it lay entirely with the make of rifle I am using; or again, if I pick up my Winchester single-shot .38-90-217 express and want to know just how far it will do accurate shooting, how can I tell of course we take into consideration that I load my shells with the best material or buy them already loaded? Ans. The distance a certain bullet will go when driven by a certain powder charge is a matter for experiment rather than mathematical reasoning. Wind and atmospheric conditions, shape and temper of the bullet, strength of powder, weight and manipulation of the rifle, etc., all have an influence on the trajectory that are very difficult to compute. Theoretically, and without taking these troublesome conditions into account, a bullet fired from a rifle, the axis of whose bore is parallel to the surface of still water, will continue in air the same length of time that a second bullet simultaneously let drop from the height of the bore will continue in air. Gravity acts on both bullets with exactly the same force, and the distance the bullet will go depends, therefore, on its velocity. It has a fixed period of travel, viz., the fraction of time that the bullet let fall occupies in reaching the earth, and according as it has greater or less speed will go a greater or less distance. Taking into consideration the resistance of the air and having determined the muzzle velocity of the bullet, it is not a difficult matter to compute its range. The greatest range is attained when the gun is fired pointing upward at an angle of forty-five degrees. But, as we said before, the most satisfactory way is by actual experiment. Shoot across a body of still water and have some one observe the distance attained by a number of bullets and then measure the distance, preferably by means of a theodolite.

FOR SALE.

The thoroughbred entire horse "Rigadoon." Stands 16 hands. Bright bay, very compact, powerful, sound and quiet. Good stock getter. Weight 1,075 pounds. This horse was sold as yearling for 2,800 guineas, and recently his sire, Master Kildare, was sold (age 17) for 800 guineas. Rigadoon was the winner of numerous valuable stakes on the English Turf, including Liverpool new welter, carrying, at 3yrs. old, 9st. 13lb.; also Passley Silver Bell Handicap, 14 miles. We, the undersigned, publishers of the English Stud Book, hereby certify that the bay horse Rigadoon was foaled in 1889, got by Master Kildare his dam Highland Fling, by Scottish Chief out of Masquerade, by Lambourne out of Burlesque, by Touchstone, and was sold in 1890 to Col. Fawcett to go to Newfoundland, J. E. & J. P. Weatherby, 6 Old Burlington St., London, W., Dec 4, 1890. For price, etc., apply to COLONEL FAWCETT, Fort Townshend, Newfoundland.

For Prospectus and Advertising Rates see Page VII.

On and after May 1 the Western office of Forest and Stream Pub. Co. will be permanently located at 909 Security Building, cor. Fifth avenue and Madison street, Chicago.

WE call the special attention of our advertisers to the line in our prospectus in regard to the time for receipt of advertisements, which reads, "Advertisements should be sent in by Saturday previous to the issue in which they are to be inserted." Knowing that we sometimes accept copy later than this date, many of our advertisers have gotten into the habit of sending us matter designed for insertion in some special issue, Monday, Tuesday and even Wednesday before the day of publication. This week there were no less than eighteen advertisements received at this office during the twenty-four hours after noon Tuesday. Many of them were important, and the majority requested insertion in, or related to, the issue of this week. None of these advertisements could be attended to, and no doubt the gentlemen who sent them will call us to account for their non-appearance. For their benefit we will state that it is not possible to handle advertising copy after Tuesday morning, and that advertisements sent in Saturday always receive the best attention, and are guaranteed insertion in the following Thursday's issue of FOREST AND STREAM.

THE CONNECTICUT BASS LAW.

A DECIDED backward step is now threatened in Connecticut by a change proposed to be made in the law for the protection of the black bass.

Heretofore there has been a close season for that fish from May 1 to June 10, but as observation has shown that in some of the colder waters of the State the bass are still guarding their spawning beds on the 20th of June, an effort was made to extend the close season over the whole of that month. A further reason for such extension may be found in the fact that, even after the eggs are hatched, the parent fish remain for some time with the school of fry, protecting them from enemies and generally looking after their welfare. This protection before and after hatching is essential to the safety of the annual bass crop.

A bill providing for a close season during May and June was carefully drawn and presented in the House, referred to a committee, approved by that body, and favorably reported. No hostility to the bill has been met with up to this time, and it was thought by its friends that the measure would pass the House without trouble. When it came up, however, it met with violent opposition. Efforts were made to tack on it a number of amendments, and the bill was finally so changed that the close season only covers the month of May. Thus, if the bill should become a law, ten days will have been lost to protection when twenty days should have been gained.

Such shortening of the close season would seriously injure if it did not altogether ruin the bass fishing in Connecticut, which in the past has been very good. There are in that State many waters which have been stocked by private means at considerable expense of time, trouble and money, and which are now open to the public, and give good fishing to all. It is a short-sighted selfishness that would undo all the effort that has been expended in replenishing Connecticut waters, by making it legal to destroy the bass at the season of the year when they most

need protection. It is certainly to be hoped that no such unfortunate change as the one proposed will be made. Instead of this, further legislation extending the close time to the first of July should be had before the present session of the Connecticut Legislature comes to an end.

LIVE GAME FOR STOCKING.

OUR issue of April 20 contained a note from a Chattanooga correspondent alluding to the netting of quail for exportation from Tennessee, to stock exhausted game fields in other States. Elsewhere in the South quail netting is conducted on an extensive scale, notably in West Virginia; and tens of thousands of the birds annually are sent North for stocking purposes. For the most part this industry is prosecuted in direct and more or less open violation of law, for the export of live quail is specifically forbidden.

Last week a Wyoming correspondent wrote of the capture of big game alive for shipment to Eastern game preserves. It will be recalled that a year or two ago an outcry was raised by certain Maine club men on the occasion of the capture of live deer in the snow for Mr. Austin Corbin's game park in New Hampshire. The big game industry too is in violation of law.

How well founded may be the complaints that this exportation of small and large game alive affects the native supply to an injurious or appreciable extent, we do not undertake to say. In the Maine deer case it appeared hardly probable that the capture of a few deer would have any measurable effect one way or the other upon the superabounding stock in those woods. Certainly the purpose of the capture is a commendable one; and since that purpose is not the destruction of the birds and the deer, but their increase, some provision might be incorporated in the law by which the business of transporting game from one section of country to another should be conducted to a reasonable extent legitimately and openly and above board.

Under existing conditions, a sportsmen's club in the North, which orders live birds from West Virginia, for stocking, is virtually inciting, aiding and abetting a violation of the West Virginia quail law. The end sought, it is true, is a good one, and of all violations of the game laws, this is perhaps the one which might be winked at. It is a case concerning which, as the good old Knight of the "Spectator" would say, "much might be said on both sides." And yet the position is one in which the average sportsman would hardly care to place himself.

As the preserve system shall grow—and it is developing with giant strides—the traffic in live game will increase in a proportionate ratio. Foreign species will in a degree supplement the American birds, and if quail netting could be restricted to capture for stocking purposes only, there would be slight ground for apprehension that the traffic would seriously impair the native stock.

SNAP SHOTS.

A CLIPPING from a Texas paper announces that an official of one of the Panhandle counties of that State has made a contract with a Kansas City firm to deliver 30,000 dozen prairie chickens within the next five months. These birds, it is said, are to be sent to Chicago to fill a contract made with parties in that city, so that Chicago may have a supply of these birds during the whole time of the World's Fair. It is hard to imagine that 360,000 prairie chickens could be delivered by any one contractor, but it is certainly worth the while of the authorities of Texas to investigate this matter and to endeavor to protect the birds that still exist in the Lone Star State. The game of Texas, like that of other plains States, has been ruthlessly slaughtered, and to-day there is little of it left in comparison with what there used to be. This little should be preserved by every legitimate means. The destruction of the prairie chicken over so large a portion of the territory where it was once enormously abundant is still fresh in the public mind. This is one of the birds whose extermination over a vast territory has been complete, and unless measures for its preservation are soon taken in sections where it still exists, it seems likely that in the course of a few years it will stand in the same position now occupied by its relative the heath hen of Naushon; that is, may exist only in little colonies which are always growing fewer in numbers and are speedily to die out.

The most praiseworthy quality possessed by the originator of newspaper fakes is ingenuity, and when to this ingenuity is added a knowledge of the subject about

which he is writing, the fakir often succeeds in giving a very realistic air to his inventions. The average gunner will hardly give credit for success in this respect to the originator of the yarn recently published about the Connecticut blind man who, though totally blind, is a most enthusiastic and successful gunner. It is said that he has been blind for many years, but his love of shooting was so great that he would not allow his infirmity to keep him out of the woods, so he went abroad with gun and dog, shooting at the sound when the birds got up. At first he was unsuccessful, but after a while he learned to locate the bird from the sound, and he has now become so expert that nearly every shot tells. Those of our readers who are familiar with the eccentric and buzzing flight of Connecticut ruffed grouse, quail and woodcock, and so know how difficult it is to stop them, even when one is in possession of all his senses, will hardly need to be assured that this tale is one of the many inventions of the fakir. There is no such blind man; if there were he does not go shooting, and if he did go shooting he does not kill his birds.

No great surprise will be felt, we suppose, at the general satisfaction expressed by our readers on the reappearance in FOREST AND STREAM of the "Danvis Folks." In "Uncle Lisha's Shop" Mr. Robinson first introduced us to these living characters of a century ago, and in "Sam Lovel's Camps" their sayings and doings were still further chronicled. So it is that to our older readers Uncle Lisha, Sam Lovel, Gran'ther Hill and the inimitable Antwine are old friends. It is good to see them once more and to feel that their quaint humor and their simple joys and sorrows will bring to us again, as in years gone by they have brought, laughter and tears. So we welcome once more these people, who by their very simplicity and naturalness are so remarkable, and the more we see them the stronger grows our affection for them. To every man, woman and child who has lived along the border between New England and Canada, these characters appeal with a strength that can hardly be measured in words, and many of those who were once familiar with such characters, and then moved far away and lost sight of them, feel in reading Mr. Robinson's sketches as if they had been carried back to the days and the associations of their youth. It is perhaps natural that already we should begin to compare "Danvis Folks" with the two volumes from Mr. Robinson's pen which preceded this series, but it is not time to do that yet. No intelligent comparison can be made until the present series has been completed; but we believe that most of those who have read the three will regard the one now appearing as equal to, if not surpassing in interest and charm, either "Uncle Lisha's Shop" or "Sam Lovel's Camps."

By the recent change in the New Brunswick game law the non-resident license fee provision has been expunged from the statute books of that Province. New Brunswick game is now as free to outsiders as to the residents of the Province, and the neighborly spirit thus displayed will no doubt be appreciated by all Americans.

ARTHUR WOOD.

It is with sadness that we record the death of our correspondent, Arthur Wood, of Grand Rapids, Michigan.

Although Mr. Wood's health had been poor for years, no great anxiety was felt about him, and his death was entirely unexpected. He had gone to his office on the morning of April 24, and after complaining of weariness lay down on the lounge and in a few moments breathed his last. Mr. Wood was born in England in May, 1832. His parents came to this country when he was yet a child, and settled in Massachusetts. At the age of 20 he went to Grand Rapids. He served in the war with high credit, and at its conclusion embarked in the business of carriage making at Grand Rapids. This business he carried on successfully up to the time of his death. Mr. Wood was an enthusiastic angler and was long a contributor to FOREST AND STREAM. Many of our readers will have read with interest the quaintly humorous, short sketches under the title "My Chance Acquaintance," at present being printed. Mr. Wood suffered from deafness contracted during the war, and it was perhaps in part this infirmity which made him so fond of angling. The Grand Rapids Democrat says of him:

"Mr. Wood, of all things, was a fisherman. Shut off from the ordinary intercourse of society, he took his rod and in his boat communed with nature alone. He never lost a certain charming warmth of manner which made him friends with young men, and at sixty his greatest pleasure was to sit around and tell a good story—fishing story—which would pass the laugh along. His business career was made successful by honor and industry. In private life he was a clean man; a true friend, a good husband and father."

Mr. Wood's private letters to this office showed him to be a man of most genial, kindly nature, as well as of clear, logical mind. His personal qualities greatly endeared him to all those with whom he was brought in contact, and in the city which for many years he made his home, his death leaves a real gap which will not easily be filled.

The Sportsman Tourist.

MY CHANCE ACQUAINTANCE.—IV.

My aged friend and myself had been fishing a little, but skirmishing around a great deal in a careless, indolent sort of a manner. Along toward noon we sought the friendly shade of an old sawmill as a good place to cool off, rest and eat our lunch. What was now a dilapidated tumble-down ruin showed plainly that it had once been a well-built, substantial structure, and erected at an early day, as the huge timbers showed the marks of the scoring and broadax.

"Rather an aged concern, but built for business," I remarked, after taking a quiet look around.

The old man said, "It was one of the oldest mills on the lake, built by a man by the name of —; he lived down the lake shore quite a piece. Ever know him?"

"Not acquainted with him, but I have heard him preach," I replied.

"Yes, he was a preacher, Indian missionary, banker, lumberman and a lot of things where there was any money in sight. He was a stirring, pushing old feller, as full of business as an egg is of meat. He was a born schemer, could see more holes in a skimmer than the man what made it, always ready to operate at a wedding, a funeral, land sale or a horse trade; could tell how many feet she'd cut to the acre as well as the best of 'em; count and take in money easy and quicker 'n a flash of greased lightning, but when it come to paying it out he was slower than January molasses.

"I logged for him one winter up the river here. He furnished the supplies and just money enough to keep the men going till the job was done in the spring. I ain't good at figgers and book-keeping, and as I said, the old feller lived nigh on to forty mile from here. We didn't git mail very often then. I was busy on my clearing. He fiddled faddled about one thing or another, put off the settlement on one excuse then another, till fall; then I took a big logging job and went into the woods and didn't come out till the next spring. Then I made up my mind I'd go down to his place and have it out with him. Well, I went down and the first thing I done arter I got thar was the very thing I hadn't oughter a done. I got full. Then I tried to get the old chap down on the dock; if I had I'd a thrown him in the river sure, but he wouldn't go with me, but I cornered him in his office, cussed him, abused him, and called him all the hard names I could think of, and I was well up in that line them days. The old chap took it all good-naturedly and kept cool, while I were red hot; but I soon burned out, left him and come home feeling terrible wicked. I was a talking about it one time up in the village, fer I was that mad I couldn't keep my mouth shet, when a timber hunter axed me where I logged. 'Why,' says I, 'on section —.' 'Are you sure it was on that section?' 'Yes, I am dead sure on't.' 'Then,' says he, 'you were cutting Uncle Sam's timber, for I happen to know that 'ere section has never been entered.'

"I found out that the man was right. Then, thinks I, here is a go, and I'll fetch the old man up with a round turn. I reckon the old feller heard something about it, for in a few days one of his clerks came to my place and told me that the old man was very much put out at the way I talked to him, and didn't feel much like hurrying along the settlement. The chap talked sweet and nice, said I abused the old man shamefully, that after I'd gone he said he never would settle till the tail end of an execution, said he'd never been abused so in his life before, but when told I'd been drinking, cooled off and said he would try and forget it. The clerk said the old man was disposed to do what was right and fair about it, but that I must make out another statement, as the other had got lost or mislaid; if I would do that he would see it were fixed up right away.

"Well, as I said, I ain't 'pert at figgers, and it took me some time, fer it were quite a job, but I got it done and sent it down. Then I waited a good while and didn't hear from it. I was just about thinking I'd write about it, when I got a letter asking why I didn't send that 'ere statement, they had been looking for it for some time. I wrote to 'em I had sent it just as I agreed to. They wrote back I must have sent it wrong, as they never got it and asked me try it again and to send it in the directed wrapper, which they inclosed.

"Arter a while I started another statement and put it in their wrapper. This they got, for in about two weeks I got a letter from 'em saying so, also that I'd better go over the whole business with some one carefully, because they were sure I'd made some mistakes, as I had given 'em credit for more money than they'd ever sent me. Well, I thought that looked kind o' square and honest like, but it were some time before I could get a good figgerer to go over it with. At last our Supervisor did it. We didn't change it much of any, but it was a more ship shape looking affair. Betwixt the dilly-dallying of one kind or another, it was getting along toward winter agin, when I got a letter from 'em saying they knowed I'd made a mistake somewhere, but as they were very busy and short-handed and didn't have the time to look it up, they'd settle according to my statement as soon as ever they could git their tally book, which was in the hands of their tally clerk, who had gone over to Canada to his mother's funeral. Jest as soon as he got back they'd send me a check for the whole amount I claimed.

"Well, sir, I reckoned I were well out of that scrape; that air trouble was over and done for. So I got my traps together, and arter telling the Squire up in the village what to do with the check, painted fer the woods agin, to stay all winter. When I come out the next spring, I were badly disappointed when the Squire told me he had not got any check for me from old —. So I got the Squire to write him a sharp, short letter, asking him why he hadn't sent it as agreed; but I got a shorter one in answer in about two weeks. It said, 'Aint going to send you a check, aint going to pay you a cent, because I don't owe you anything!'

"A neighbor fetched me the letter. I read it, jumped on a horse, and never quit cussing until the old Squire told me ef I didn't shut up he'd have me gagged. Arter a while I got cooled off so as I could talk English, then I told the Squire I wanted to make a complaint agin old — for cutting timber on Uncle Sam's land.

"When did you log for him?" says the Squire.

"Two years ago last winter," says I.

"Too late," says the Squire. 'Time is up and more, too; must make complaint inside of two years. No good now.'

"By the great general jumping jeeswax, didn't I get roaring, redhot mad, boiled over, got black in the face, choked up, fell down in a fit. Squire sent for a doctor. Felt as ef I'd been under a hay press when I come to, but mad as ever.

"The doctor kept me in the house a hull week, but it weren't all lost time. I'd calulated jest what I'd do as soon as I got out agin. I knowed where there was a lot of the logs in the lake, and as soon as ever I were able I floated 'em over on to my side and pulled 'em out on to my land. Thare I let 'em lay a while till they got dry. Old — and his son were a-running this mill then in company, and I sold them logs to the son for two hundred dollars more than the old man owed me, and I kept the money."

GRAND RAPIDS, Mich.

A. W.

DANVIS FOLKS.—IV.

Among Old Friends.

AN abashed titter broke the brief interval of silence and then Mrs. Purington entered, panting with the exertion of climbing the steep steps, with Sis, in the bashfulness of overgrown awkwardness, following close behind.

"Ef I hev got to come over here every tew three days fer the hull endurin' days o' my life," she gasped in tones whose reproachfulness was emphasized by her labored breathing, "it does seem as ef someb'dy might stick some planks er slabs er suthin' int' the fences to make it easier a-gettin' over. An' these 'ere back steps, it's julluk climbin' a ladder. I should think, Samwill, 'at you might kinder slant 'em someways. It does seem as ef my limbs an' my breath was a-gettin' shorter eve'y day, an' it does seem as 'outh I couldn't stan' it a-trapsin' over here much longer."

"Ef you'd holler er blow a horn when you was a-startin' I might go an' le' daown the fences for ye," Sam suggested cheerily, while he revolved plans for making the fences more impassable.

His mother-in-law acknowledged the suggestion by a sigh expressive of submission to continued injury, and having somewhat recovered breath, waddled over to the newly-arrived guests, whom she saluted with funeral solemnity.

"Haow du you du, Aunt Jerushy, an' haow du you du, Uncle Lisher? You haint well be ye, naow? You du look so wore aout an' tuckered, an' I p'sume tu say you're comin' daown w' that aire Western fever 'at so many dies on. You'd ort to go right to bed, an' take suthin', some boneset tea er pennyroyle er suthin'. I du wish 't I'd fetched over suthin', an' I would 'f I'd knowed you was a-lookin' so. But I do know 's I could ha' stood it tu ha' fetched anythin' but myself. Jest as soon 's I felt able arter I hearn you'd come, I tol' him I mus' come an' give ye a welcome an' make you feel tu hum, 'cause I knowed ye couldn't help feelin' 't you was craowdin' in, an' I p'sume tu say it will unconvenience Huld'y an' Samwill consid'able."

"Taint no sech a thing," cried Huldah, sharply, indignant and mortified. "They're jest as welcome as they c'n be, an' it's them 'at's duin' us a favor. An' they look jest as well as they did when they went away, an' we're so glad tu hev 'em back, mother, you're allers an' forever a tewin'."

"But then," continued Mrs. Purington, serenely unmindful of this interruption, "it haint probable 'at at your age, you'll be spared much longer in this vale o' tears." With the air of having administered consolation to all concerned, she heaved a sigh of relief as she seated herself at the window and lapsed for a little while into silence, sadly regarding the old people who sat burning in speechless discomfort till Aunt Jerusha ventured to say, "The can't nob'dy say 'at we come w'out bein' ast. But," she added with a tremor of fervor in her voice, "the' don't nob'dy know but them 'at's tried it, haow we did wanter come. Ef they did, they would n't blame us."

"An' they don't," said Huldah, flashing an angry glance at her mother, and then shutting her lips tightly together to keep back angrier words, she retreated into the pantry. "Not nob'dy 'at 's got any business tu," Sam supplemented in his quiet drawl.

His father made a show of mending the fire and went out on tiptoe for an armful of wood, having through long experience learned to employ the better part of valor, when a war of women's words impended.

Mrs. Purington put her apron to her eyes and rocked herself from side to side in silent endurance of the injuries that she felt were being heaped upon her.

"I wanter know if this 'ere is Sis Pur'n'n?" Aunt Jerusha asked, lifting her spectacles and looking intently at the girl, who was now shielding her bashfulness behind her sister, coming to the stove with a pumpkin pie. "Wal, it does beat all haow she's growed. Clean up tu yer shoulder, Huld'y, an' favors you an' her father. I'm glad o' thet." Mrs. Purington cut short a grievous snuffle with a sniff of contempt.

"So she does," Uncle Lisha assented after a critical inspection through the round-eyed glasses which he had put on for this especial service, "but Huld'y's chunkeder built."

"Yis, but Sis haint got her shape yit. I tell ye she's feat'ed and complected like the Pur'n'tns and not a mite like the Bordense's." Mrs. Purington sniffed again, and removing the apron from her eyes gazed through the window upon the outer world as if it alone interested her.

"Wal, Sis," said Uncle Lisha, "hev ye ever went an' got lost agin? What a carrummux you did make, tu be sure, a gittin' lost. But it was a mighty good job you did w'out you're knowin' 't was the best you ever done," and he beamed a kindly smile upon Sam and Huldah and the little girl, whose finding had brought them together.

Presently Mrs. Purington's vacant stare became focussed on some object outside and she exclaimed in a tone expressive of awakened interest in present affairs:

"Samwill Lovel, why, fer land's sake don't ye cuddaown that aire lalock, er trim it up, er suthin', so 's 't folks c'n see the pass? Wal, goodness hev massy, if that aire Antwine Frenchman haint a comin'. I was jest a goin' tu ast Uncle Lisher and Aunt Jerushy all about Westconstant an' all the folks there, an' naow there won't be a chance tu put in a word aidgeways w' his pleeggid French gab. Sis, we might 's well be a goin'."

Antoine Bissette entered without ceremony, bearing such important news to Sam that for a moment he noted the presence of no one else.

"Hey, Sam, gat you gawn, wha' you dawg?" Dey black fox jes go on Bahlett hwood not more as two hour 'go. Mah boy he'll seen." Then his astonished eyes became aware of his old friends. "Oh-h-h! Onc' Lasha, Aunt Jerusha. Was you be ghos'er was you be somebode, er was Ah 'il be dream? Oh, bah gosh. Ah 'il never see so, 'for 'stoneesh."

"Good airth an' seas! Take a holt o' my han' Ann Twine an' find aout whether I'm flesh an' blood," cried the old cobbler, and his vise-like grasp and familiar roar left no cause for doubt of his actual presence in the flesh.

"Wal, seh, Onc' Lasha," said Antoine, settling himself together on a chair after the rough encounter of greeting, "You was felt pooty 'live anyway, an' you'll ant gat great many hol' in de wes' bosc of it. No, seh, Aunt Jerusha an' you ant look no more hol' you was t'ree yea 'go. Bah gosh, Ah 'il glad of it."

"Same tu you Ann Twine, an' we're glad tu git back an' hev all aour frien's glad tu see us—thet is, most on 'em" he added, recollecting that Mrs. Purington might wish to be excepted and casting a sidewise glance at her. "You need n't think 'at I begretch ye a welcome, Lisher Peggs, ef I be begretched it in my own darter's haouse?" she said in a grievous voice, while she puckered the hem of her orange and blue calico apron between her fingers.

"Wal, wal," said he, "Ef folks didn't talk they wouldn't say nothin', an' I don't take no pride in what you said," and then turned the conversation again into the pleasanter channel whence he had maladroitly diverted it.

"Wal, Ann Twine, haow's yer folks an' all the child'n? Family growin', I s'pose?"

"Wal, Ah do know, Onc' Lasha, Ah guess dey ant be more as two or t'ree of it more, sin' you'll go 'way. But mah holst gal he'll gat marree, an' he'll gat bebbie, an' Ah'll gat for her grrran'poupa." He rolled the "r" of this new prefix to his well accustomed title as if its flavor was pleasant to his tongue, and he straightened himself proudly in his seat.

"You a grampa," Uncle Lisha said. "Good airth an' seas, man, you'll hafter let yer baird grow tu tell yerself f'm yer gran'child."

"Ah 'il can tol' it bah de nowse," Antoine laughed. "He'll ant spik Angleesh yit, an' probly he'll ant neyer spik it lak Ah 'il was," he added with a sigh that had something of satisfaction in it. "It's hopesin' he won't," said Uncle Lisha, but if Antoine understood this disparaging remark he did not heed it, but went on: "An' Ah 'il fregit for tol' you mah family been grow on 'tudder en' of it. Mah fadder an' mudder come for levee 'long to me."

"What, you ben gettin' on ye a father? Was he borned, tew, sen' I went away? You didn't uster hev none, an' I didn't s'pose you ever hed one in the nat'ral way, but they kinder faound ye in a kittle o' pea soup."

"Oh, Onc' Lasha, Ah 'il 'fraid you'll ant growed gooder no more as you'll grow holler. Ah 'il 'fraid you'll ant go to meetin' in de Wes'. Probly dey 'il ant gat some dere yet, hein? No, sah, Onc' Lasha, Sam fin' mah fader an' mudder daown to de lake w'en we was go feeshin', an' it was sup-prise of all of it. An' den, bombye, Ah 'il have it hol' man's an' hol' hwoman's come levee long to me an' Ursule an' Ah 'il was glad for be hable ta' care of it, me."

"Thef's right, Ann Twine," said Uncle Lisha heartily. "an' don't ye never gig back on yer ol' folks." A shade of sadness flitted across the old man's kindly face and his wife breathed a suppressed sigh.

"Ah 'il goin' brought hol' man over for see you pooty soon," Antoine went on, as he whittled a charge of home-grown tobacco from a twist and ground it in his palm. "An' gat you for mek it some boot, so he can beegin for be Yankee. An' Ah 'il can mek you laughed for hear Sam talk French at it. Bah gosh, he 'il holler at it so you can hear it in de Forge w'en he goin'. An' he 'tink 'f he can holler laoud 'nough hol' mans can 'help for on'stan, probly."

"Antwine," said Sam, threatening the Canadian with the empty cider tumbler, and then filling it for him, "don't ye poke no fun at my French. It's the geniwine article, an' thet's the reason you Canucks don't onderstan' it. Ef you was tu go tu France, you'd hear 'em a-speakin' on't jest as I du."

"If dey spik it jes' sem as you was," said Antoine, briefly disposing of the cider, "Ah can go daown on de shore of de nocean an' heard it. Wal, you'll goin' after dat black fox to-day, probly?"

"Who seen it?" Sam demanded.

"Joe Hill tol' me he'll seen it an' he tol' me come toll you but mah 'pinion, he was lie jes' for sup-prise me of Onc' Lasha. Wal, Ah 'il be go, naow." And having fired his pipe with a coal, he went his way, leaving a long, odorous wake of rank tobacco smoke trailing far behind him.

"An' we must be goin' tu, Sis," said Mrs. Purington, "I haint hed a chance tu say a word, but I must go."

"Why no, mother," Huldah protested, "You an' Sis must stay tu dinner."

"No, no, I got tu git back an' git his dinner an' it's a gittin' late. I on'y come over tu chirk ye up, as I hope I hev at last, an' ask ye all tu come over tu Thanksgivin' tomorrow tu aour haouse. We haint goin' tu hev no gret, jest a turkey an' some high bush cranb'ry sass an' punkin pie an' sech, but sech as 'tis we want ye tu jine us, all on ye."

"We wa'n't callatin' tu go home this year nor no-where's," Huldah began faintly objecting.

"Wal, you got tu come. He's clean sot on it an' you must come. Aunt Jerushy an' Uncle Lisher, we want the privilege o' fillin' ye up tu start on w' sech as we've got. An' you must come tew, Timothy."

There was general assent, and so having made hospitable amends for the discomfort she had created, she departed. Panting as she gathered headway in her course across lots, she reminded Uncle Lisha vividly of the fussy little steamer that towed him to the last port of his recent voyage.

ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

The Hotel Dukinfield.

WE have learned with regret of the burning of Dr. W. R. Capehart's large and comfortable Hotel Dukinfield at Avoca, N. C. Many Northern sportsmen who had visited this place and enjoyed the surroundings and the pleasant people to be met there will feel a sincere sorrow to learn of the misfortune. It is to be hoped that the hotel will be rebuilt, for it was very favorably located and remarkably well kept.

Natural History.

YELLOW-BREAST CHAT.

In the month of June, 1886, one morning while rambling through the woods bordering on Frankford Creek, with my friend Frank J. Hoffman, we noticed a male yellow-breast chat, hopping from branch to branch in a huge oak tree. We stood for a few moments watching the maneuvers of this bird. Every few moments he would alight on a clump of blackberry bushes, and would peer down through the foliage and send forth a plaintive cry, resembling that of a catbird. As we approached the thicket, and began to investigate the attraction, we espied a nest with four callow young birds all dead. They had been drowned by the terrific rainstorm the day before. We were unable to find the female, though we watched and waited for nearly two hours to see if she would return to her dead offspring. I secured the male bird, and I have him and the four young birds mounted, and placed among my collection.

The yellow-breast chat is a very curious bird, in its song

trying to keep concealed from the eye of man, occasionally giving a sound like *chuck, chuck*. The food of the chat consists chiefly of coleopterous insects, but I have often found berries of different sorts in their stomachs, and their favorite food seems to be the fruit of the mulberry. I have never known one of these minstrels to live in captivity more than a few days. GEORGE BOWDWIN.

PHILADELPHIA.

FROM FURTHEST SOUTH.

A Sportsman's Pets.

I RECEIVED a note by a recent mail that is almost good enough for "That Reminds Me." At any rate, it seems too good to keep to myself and so I will transcribe it for the benefit of "Podgers," *et al*.

O. K. Chobee, Esq., Biscayne Bay, Fla. :

DEAR SIR—I read your piece on crocodiles and would like to know if you can get me some active young fellow to collect about one hundred (100) for me. I would want them blown in the side with one hole about the size of this (O). I will furnish blow-pipe.

Which moves me to remark that crocodiles unblown as well as blown are rapidly disappearing from these waters. They are being shot for their hides, for their skulls, their

ber of the *Sirenia*, a Florida manatee or sea cow (*Trichechus latirostris*), 10ft. long, 59in. waist measure, and of an estimated weight of 1,100lbs. "Lord Alfred" was captured about a month ago in Bear Cut, where a school of five made their home, by Ed. Pent and Fletcher Albury, the two best guides to the various fish and game haunts of this vicinity. They struck at him with a pair of grains, which, burying themselves in his flat, muscular tail held him fast without inflicting a serious wound. As the grains held the boys were enabled to tow the great beast slowly but surely across the bay, some eight miles, and bring their prize home alive.

Procuring him from them I placed him in a large, spring-fed stream of fresh water that flows at the foot of my lawn, and there he has dwelt in peace if not in contentment ever since. I was absolutely ignorant concerning manatees, save that their meat made capital eating, before the advent of "Lord Alfred," nor have I yet learned a tithe of what I wish to know about him. What I have discovered is that though possessed of a tail shaped something like that of a beaver and as powerful as that of a whale, he is the most harmless and gentle of animals. He is a herbivorous animal, and the strictest of vegetar-

MANATEES FEEDING AND SWIMMING.

as well as its actions, and differs greatly from most other birds with which I am acquainted. It arrives in Pennsylvania about the second week in May, and returns to the South again about the last of August. When he has once found a site for his residence, he is ever on the alert, shifting from one tree to another, watching for a mate to return from the South, as the males always arrive a few days before the females. As soon as he has found a mate he at once commences to select a favorite spot for building his nest. This is generally placed in a thicket of blackberry bushes, or among dense vines, not more than 3 to 4ft. from the ground. Mr. Frank J. Hoffman and I have often amused ourselves for hours at a time, listening to the ventriloquist as he may be called, on account of the power which he seems to have at throwing his voice to a distance.

The chats begin to build about the middle of May. Their nest is composed of dry leaves on the exterior, and these are lined with narrow strips of grapevine bark, fibrous roots of plants and dry grass. The female lays four eggs, flesh-colored, and speckled with spots of brown. The young are hatched in 12 or 13 days. While the female is sitting the cries of her mate are more loud and incessant. When once aware that you have seen him he will mount up into the air 20 or 30ft., his legs hanging down, raising his wings perpendicularly by repeated jerks, and his dancing maneuvers when in the air are very pleasing to the beholder's eye. On approaching her nest she will dart from it like an arrow from a bow, and hop from branch to branch beneath the dense foliage, always

teeth, and from pure cussedness their eggs are being dug up and destroyed wherever found, and unless speedily given some legal protection these interesting reptiles, like their cousins the alligators, will soon disappear from American waters. My pet crocodile, that I had raised from the egg, was destroyed last summer during my absence by some boys who claimed they thought "he wasn't no good."

Speaking of pets, I wish to claim for my collection a uniqueness not surpassed by those who waste their affections upon pet bears, buffalo, moose or elk. I began with baby coons, young alligators and a cage of chameleons. Then came "Crockett" the crocodile, brought to life in my own front yard through the incubating kindness of a sun-heated sandbank. He was quickly followed by "Bright" and "Early," two baby eagles of the bald-headed variety, brought to me from the nest when one week old. They were merely animated balls of down, unable to stand, but with beak and talons of adult size and voices of emphasis. From the first of January until the first of July did I fish daily, and almost nightly, in a vain struggle to satisfy the outrageous appetites of these young beggars. They learned to fly, to soar high among the clouds, to fight, to wake me at daylight by coming up on the piazza and screaming at the front door, "Fish! Fish! We want fish!" But never until I deserted them and went far away did they learn, nor show the least inclination to learn, how to feed themselves.

Most interesting of all, however, because the rarest of all, is my present pet "Lord Alfred," a full-grown mem-

ians, eating all sorts of roots and grasses, but preferring those that grow in salt water, and especially relishing the flat seaweeds known as "manatee grass." He is most active at night when he does most of his feeding.

Although he is keen of hearing his ears are invisible, while his eyes are so small as to give him a porcine expression. The most prominent feature of his head are the nostrils situated on top of, and near the end of, his nose. When under water they are closed by the most perfect of sea valves. These open the moment the extremity of the nose is lifted above the surface, and the creature slowly inhales long draughts of air. When active he exposes his open nostrils to the air about twice a minute, but when sluggish or sleeping I have seen him remain for fifteen minutes beneath the water without breathing.

While feeding he does not swim nor use his splendid tail-propeller in any way, but drags himself slowly along the bottom by means of his flippers, which, shaped like those of a turtle, are located well forward like a seal's. He has no fins or limbs besides these. His hide resembles that of an elephant in color and texture, and is dotted with an occasional hair. About his muzzle these grow more thickly, though even there they are bristly and far between.

Lord Alfred is as fat as butter; so fat that his skin near the tail and arms is ridged and folded with fat. At the same time he eats so little that I fear he is pining away, and am seriously thinking of setting him free to rejoin his sister sirens across the bay.

O. K. CHOBEE.

COCCANUT GROVE, FLA., April 17.

CUCKOO OR RAINCROW.

ARILENE, Tex., March 24.—I have read two articles lately in *FOREST AND STREAM* on the cuckoo in Maine and Canada. Is this the same as *Cacullus emorus* of Europe or a near relative of his? It had been my understanding that we had not that bird in America, or anything like him, and I was surprised to read the articles. If he be the same, came he here as a chance wanderer or was he brought over and naturalized among us? If so he would be, I believe, with the exception of the English sparrow, the only foreign wild bird that has become an American resident. I am very curious to learn more of this bird.

One who writes of him from Bethel in Maine says he appears there about the last of May. He is then a bird of passage, at least as to that boreal quarter. But from what region comes he up to Maine? I never heard of him in the South, though it is possible I may know him by another name. What manner of note makes he? *Cacullus canorus* sings *cuckoo! cuckoo!* as plainly as the human voice can sing it. I never heard it, but am so told by Europeans who were familiar with him in their native country.

But I suspect that the bird addressed as the cuckoo by your correspondents, is the same whom we call the rain crow in the South; a solitary, unsocial, mysterious bird who appears among us when the forest trees are in full foliage, hiding in the thickest coverts of the leaves, rarely seen, but making his presence known by a singular croaking now and then. He is called raincrow in the South, because they say his notes announce a coming shower, and I believe he does croak mostly about such times; not that he takes any interest in the shower, but that the spreading clouds shutting out the light of the sun, are more congenial with his secretive nature, making him a little bolder and causing his thoughts to turn to love. So his croaking is merely his love call to his female companion, more shy and secretive even than he, so well hid in the shades that her lord cannot find her unless she will reveal herself.

I speak of this bird as shy, but he is not much wild. It is easy to get within a few feet of him; but the trouble is he hides so well among the leaves that you can rarely get a glimpse of him except as he flits from one shady covert to another. Notwithstanding, I have sometimes managed to secure a real good look at him at close quarters for a few moments, and was amused at the expression of his large, beautiful black eyes, denoting more wonder than alarm as it seemed to me. I suspect that this bird, like the owl, cannot see very keenly in the full light of day, but he is not at all nocturnal. I have never seen their nests and never found a man who had. As I am practically without books on natural history now, I will ask *FOREST AND STREAM* to give me the name by which this mysterious bird is known to the scientific guild. Is he a member of the cuckoo family?

We have in this country another strange bird who performs the cuckoo song with such perfection that he would readily deceive *Cucullus canorus* himself. I heard it the first time at Marienfeld on the Staked Plain about ten years ago, which place had just been founded by a colony of Germans lately come from Europe. I asked one of them to tell me what the bird was. "Dot ish der cuckoo," said he. "No," said I, "we have no such bird in America. The cuckoo is unknown to American ornithology. Besides, I have been acquainted with the Staked Plain many years and never heard that note before." "So?" said he, "Vell, I tell you it ish der cuckoo, all der same, for I know him vell in der old coudry. Ven dere was no mens and vimmens here, den dere was no use for der cuckoo, and he come not den. But now dot dere be plender mens and vimmens here der cuckoo he comes natural. See?" He could not be persuaded that it was not the true cuckoo.

I now hear this bird almost every evening about dark, but have not been able to get a sight of him. Evidently it is an owl of some sort, but what one I cannot yet say.

N. A. T.

[Raincrow and cuckoo are two names for the same bird or rather for two very similar birds to which the names are applied without distinction. They are cuckoos, that is they belong to the family *Cuculidae*, but belong to the sub-family *Coccygine*, true cuckoos. *Coccyzus erythrophthalmus* is the black-billed and *C. americanus* the yellow-billed cuckoo. The latter is very likely the species referred to in the above letter. There is a third species, *C. minor*, the mangrove cuckoo in Florida and the West Indies.]

Bewildered Migrants.

MANCHESTER, Iowa, April 28.—*Editor Forest and Stream:* I cannot resist the temptation to tell you of a wonderful influx of birds during a snow blizzard which struck us April 19, and continued with varying severity till the afternoon of the 23d.

Robins by the thousands filled our streets and yards, and snowbirds of several varieties were here in huge flocks. With the above was a sprinkling of sparrows, warblers and other small birds unknown to sight in this vicinity. Fox-colored sparrows, white-throated sparrows, yellow-rumped and palm warblers, joined the robins in the intervals of storm, in a choir of song bewildering to one who had never heard their voices before.

Some of the warblers died from chill and exhaustion and must have been caught in the waves of the storm and been driven here.

On the 23d they began to disappear, and on the 24th there were left us no more than our usual number of robins, though the snowbirds and sparrows linger yet. In the country unusual flocks of snipe and other game birds were seen. Reports from the surrounding towns say that nothing of the kind was seen, and the probable theory of explanation is that we were the favored locality of refuge.

MRS. MARY L. RAME.

The Linnæan Society of New York.

A REGULAR meeting of the society will be held at 8 P. M., at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on May 17. The paper for the evening will be: "Remarks on a Recent Trip to Trinidad, B. W. I.," by Mr. Frank M. Chapman.

Bobolinks Have Come.

CORTLAND, N. Y., April 30.—*Editor Forest and Stream:* The bobolinks, sprightly and powerful as of old, have arrived.

Mr. A. P. Rowley has for the past few years noted the

annual arrival of these birds, and here are the dates of their coming: 1883, May 4; 1884, April 23; 1885, May 4; 1886, May 8, 1888, May 27; 1889, May 7; 1890, April 29; 1892, May 2; 1893, April 29.

The ushering in of warm weather is quite generally associated with the arrival of these gay-coated warblers, in central New York at least, and as a starter to-day has been bright and warm—an ideal spring day, with an atmosphere freighted with the melody of birds and the perfume of flowers.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

A DUCK HUNT ON THE SMOKY.

I HAD been hunting around the ranch in Sherman county, Kansas, for four days, shooting jack-rabbits that we had had served in every possible way by the cook. We had jack for breakfast, jack for dinner and jack for supper until we longed for something else, so on the fifth day we arose bright and early, hitched the team to the buckboard and started for the Smoky River to make war upon the ducks. There were three of us, Mort Price, Oscar Farmer and I, all enthusiastic sportsmen. The day was beautiful, and although it was but March 24 it seemed as if the sun would bake us.

We reached the river in fair time, at a point where it had doubled back on itself for three-quarters of a mile. Here Mort and I left the buckboard, and while he took one side of the bend, I took the other. Mort was the first to sight a flock and stalked to within easy range. As they rose from the water he fired both barrels and dropped one drake on the other side of the river, which at this point is only 3 rods wide.

I had dropped in the grass, and the flock, about 16 in number, passed to the right of me. But to the boom of my double-barrel three of their number fell and were left behind. I picked them up and went over to where Mort was stripping to cross the river for the drake he had shot. Although the day was warm the water was cold, and at every step he took he sank a foot in the mud. He got across, however, and went for the bunch of grass where Mr. Drake had fallen, wounded, but not dead, for when Mort was within 10 ft. of the bird it stretched its wings and flew away. My gun was on the ground beside Mort's, and by the time I had recovered from my surprise he was out of range. There was one pretty mad sportsman to be seen crossing the North Smoky about two minutes later.

We were soon on the *qui vive* again and it was my fortune to raise the next bunch of seven fine mallards. They were hidden in the grass and I did not see them until they rose within twenty feet of me. As I threw the gun up I pressed the right trigger and sent one charge into the water. With my left barrel I missed clean and have not yet forgiven myself, for that was the best shot I had that day. We spent two hours in the bend and bagged seventeen ducks and two jack rabbits.

We then drove five miles up the river, lariatied our team, ate our lunch, and while two of us hunted west along the river the other beat back among the bluffs for johnnies, the local name for cottontails. We tramped about three miles but did not see a duck, although they had been flying up the river all the morning. We were all pretty tired when we reached the team again and Oscar was the only one who had bagged anything. He had one jack and three johnnies. After half an hour's rest we hitched up again and drove back to our first place, but found nothing there. Then while Oscar drove east down the river for a mile, Mort and I beat in and out the bend. When near the team we started a flock of an even dozen. Mort fired first, dropped two and turned the rest over to where Oscar was sitting in the buckboard, and one dropped to his gun. A hundred yards further on I raised two redheads, fired right and left and got both. We were now very well satisfied with our day's sport, but it still lacked an hour of sunset, so we left the team and hunted down the river and back over the prairie for a mile. It was nearly dark when we reached the team again, the buckboard was loaded with ducks and rabbits, the three sportsmen were tired and hungry, with a drive of ten miles before them; but we were all cheerful and voted the day well spent, for our total bag amounted to twenty-seven ducks, four jack rabbits and five johnnies.

The nights are quite cool in this country, and when we reached the ranch we were all pretty cold and stiff. But we found a splendid supper awaiting us, with plenty of good strong and fragrant coffee, to which we did ample justice. By 10 o'clock we were all rolled in our blankets and until 8 o'clock the next morning I slept like a log.

GOODLANDS, KANSAS.

ROBERT W. KING.

NORTH DAKOTA GAME.

Editor Forest and Stream:

I wish to add to the list of game birds of this county, which was published in *FOREST AND STREAM* No. 9, Vol. XXXVI., March 19, 1891, with a few notes on same.

To the other varieties of wild geese I would add the blue snow goose, of which I have a fine skin. They are a rare migrant, flying usually with the flocks of snow geese. To the list of ducks I find in my notes that I can add several species that I failed to get in '91, although they were probably here. These are the green-wing teal—a duck that has not been so common as formerly, according to local authorities, owing, I think, to a lack of water, large bodies of which dried up during the years of '89, '90 and '91—lesser scaup, which are not uncommon in the spring; buffle-head, not common. Besides, there is the famed canvasback, which is shot now and then, though they are not as commonly killed as in the years prior to 1888, though I think there are more killed that are classed as red-heads, which I am told are killed in some numbers near Devil's Lake. Whooping cranes and trumpeter swans are not uncommon during the migrations, though they seldom stop on these upland prairies.

Of the smaller birds we have the Carolina rail, which breeds in some numbers in favorable localities; golden plover pass through here in small flocks, stopping to feed on burnt prairie and stubble fields, and also on fields where grain has been sown. Least sandpipers are common. Night herons breed to some extent, though they are hardly

to be classed as a game bird in this country of ducks and geese, and for that matter, neither are any of the rail, sandpipers and plovers, with the single exception of the Bartramian sandpiper, which are called plover and shot in numbers, and they are fine eating.

The fall of 1891 there was an unusually large flight of sharp-tail grouse that struck this county in the early part of November and were quite common until after the blizzards in December. There was a great deal of wheat left unthreshed standing in shocks and stacks, which the grouse took advantage of, as did the jack rabbits, which were very plentiful all the fall and winter. It is a favorite pastime during the nights of the full moon for gunners to go out around granaries and the elevators to shoot these hares when they come up to feed. They get very fat on their diet of wheat, and they are excellent eating in the early part of the season—but they commence to get rather strong during January. On Dec. 9, 1891, I saw a mallard duck flying over and around the town quite early in the morning. What it could have been after would be hard to tell, as all water had been frozen up since the latter part of October, and we had just experienced a severe blizzard for several days. It did not stay long, however, for shortly after I first saw it it was seen flying southeast as fast as wings could carry it.

There have been a great many antelope around the settlements in this county and as far east as Michigan City, on the Great Northern Railroad. Around this town there were three different bunches of them within from two to five miles. One bunch that was feeding within two miles of town were finally driven off about the middle of December and did not come back; another bunch of from fifty to seventy-five were seen for about a week some five miles west, but they left, and did not come back; another bunch that has varied in numbers fed on a flax field from November to February some three or four miles north. They were chased and shot at a number of times and some of them killed, but they seemed to have such a liking for the flax that they could not be driven off. The flax was cut and left in shocks in long winrows, and the antelope would strike one of these rows, which was completely buried under the snow, and follow it from end to end, pawing off the snow and feeding on the heads of the straw only. They fed up to within forty rods of a house, and often passed by much closer. They also fed around stacks of wheat and hay. This herd had a regular runway that they took when disturbed and ran back on to a big prairie, where it was impossible to get on to them.

At Bisbee, a few miles north of here, a party of men surrounded a herd of antelope and captured several alive, which I heard have become quite tame. At Rolla I heard of one that was killed with a pitchfork; it was feeding around a barn there. I also heard of two moose that were killed by half-breeds in Turtle Mountains, near what is called the Inner Mission.

ELMER T. JUDD.

CANDO, N. D.

California vs. Oregon.

Now, Mr. "Podgers," I want to talk to you privately a moment. Why do you's down there in California persist in trying to pick a fuss with we's up here in Oregon? We's wants to be friendly but you's are always slurring we's or twitting us about our misfortunes. What's the use of your insinuations about our "tropical climate;" or our "mid-winter oranges;" or our "perennial flower gardens" and all that. Of course we have lots of flowers but everybody knows that we have no oranges and are short on tarantulas, centipedes, rattlesnakes and scorpions. Everybody knows that all these require a nice warm climate and that a country where the thermometer can indicate 170deg. in the sun ought to be more productive in this line than one with a mean temperature of about 55. However, that old story about the soldier that died down in the southeast corner of California, went to Hades and had to come back after his blanket, is rather gauzy.

What's the use of you's telling strangers that it rains up here thirteen months of the year when you know that we's are so much further north than you's, that we have only twelve months in our year. Of course the pure-bred Oregonian never goes thirsty; but ours is "straight goods," while you fellows have to "irrigate" as it were. I'll bet that you haven't got a woman in your whole State that wears a No. 10 boot or knows how to make genuine Oregon slide butter. Suppose our girls have webs between their toes, they make good wives and good butter.

We's don't care for your oranges. Come up here next fall and I will show you a hundred billion acres of huckleberries and bears. Then too, what's the matter with our Columbia River Chinook salmon and the ringneck pheasant. You's can't make we's mad and we propose to go right on treating you kindly no matter what you say or do. If anybody asks us about your earthquakes we will never intimate that the ague of the San Joaquin and Sacramento valleys have anything to do with these exhibitions of seismic force. If anybody says anything about your Mojave Desert and Death Valley, we will surely call their attention to the fact that they are 300ft. below the level of the sea and therefore easily irrigated. By all means let us be friendly.

S. H. GREENE.

Eastern Maine Notes.

BANGOR, ME.—*Editor Forest and Stream:* Like Biele's comet, the flocks of wild geese are going all to pieces this spring. For the past two weeks detached flocks of from three to six have been "honking" about the fields, pulling near clover and flying aimlessly toward every point of the compass, and returning again to be shot at and trapped by the boys. I used to believe that the idea of every flock having a "leader" was a superstition. Now I begin to think it is true. Unless a flock with a "leader" comes along I presume these fragments of flocks will stay around all summer, provided they are not all killed. I shall keep watch and try to find out.

Ruffed grouse came through the terribly cold winter in good shape. Of course they are not plenty, and have not been so for ten years; but I have seen more this spring than for the past two years. It is not cold winters, but drenching rain storms during the breeding season that kill partridges. The female bird is very careless about selecting a site for her nest. So long as it is out of sight, and in a place where she can see out, the conditions are all filled. A heavy rain comes, the eggs are flooded and cooled off, and no chicks hatch. If we have dry weather the latter part of May and early June, there will be plenty of birds each fall. If it is wet the "seed" birds will have to struggle through another winter.

TOM FORD.

A FIVE DAYS' HUNT IN MEXICO.

TIA JUANA is the frontier town of Old Mexico, at the extreme northwest corner. One passes from the fertile, well-kept ranches of California, with their white houses, green barley fields, and orchards of fig, apricot and orange, with one step across the line, into the land of dirty idleness, adobe huts one story high with rush roof and no windows, fields uncultivated, and the inhabitants slothful and indifferent. The change is extreme.

We arrived by the little railroad, having left the Hotel del Coronado on Sunday morning at 4 A. M. An engine and one car took our host, E. S. Babcock, the president of the Coronado Beach Co.; our guide, Will Denton; A. S. Secor, of Toledo, a charming camp fellow and good shot, and myself, to the Tia Juana River. The gray mist of a semi-tropical morning was still hanging like a diaphanous veil over field and stream, the air was cool, and the sombre range of the Sierra Madre formed a dusky background to our first view of Mexico. We crossed the river on a narrow foot bridge and found the wagon waiting. Our destination was the Valley of Neji (pronounced na-hee), fifty-seven miles from the line and up 4,000ft.

The first ten miles of our route lay through the Valley of the Tia Juana. The Customs officers were asleep, and after conscientiously trying in vain to rouse them, we passed on. 'Dobe plain alternated with sage brush cover, and we continued to ascend to the foothills beyond. A rain of the night had made the 'dobe so sticky that the wheels of our vehicle looked like an engine's drivers and progress was slow. The "meadowlark's sweet whistle from the grass" sounded constantly in our ears, the active gopher and squirrel skipped nimbly from our path with tail in air, and eyed us with suspicion as we creaked along. The sun began to tip the snow-capped peaks ahead, and day broke. Many birds strange to the eye of the Eastern sportsman darted up from the road or slipped away like smoke into the chapparal. These were the road runners, shore larks or round swallows, butcher birds, Mexican yellow hammers and hawks galore, particularly the sparrow hawk and Western red-tailed.

As we ascended the road became rougher and in many places we had to relieve the mares by walking. At Gonzales we had to descend a steep pitch into a stream, broad but shallow. This it was necessary to ford. We lightened the load as soon as we found ourselves in difficulties, but the bright shining sand was soft and yielding, and after much urging the off horse lay down in mid stream. Babcock and I hurried to a ranch, a quarter mile away, and found the good-natured proprietor sitting beneath a giant live oak lazily smoking a corn-cob pipe. On the way we sprung a bunch of the bright-colored cinnamon teal from the tules at the stream side and two of them concluded to go with us. By most intelligent gesticulations Babcock held the following sign talk with the Mexican: "We are mired down below. Mr. Denton, with whom you are acquainted, is stuck in the sand, his horse is down, and we would be greatly obliged if you would bring that raw-boned pony of yours over and pull us out." Gonzales "caught on" at once. At any rate he brought the little nag down and we un hitched the gray mare and changed harness, and in fifteen minutes we were eating our cold lunch, sandwiches, figs, prunes, raisins and jam, washed down with Coronado water, diluted with some poisonous aguardiente, which Babcock had thoughtlessly put in the kit.

With the ardor of a sportsman and dilettante naturalist in a new land, I started off before the others along the road or trail which skirted the stream. Killdeer plover skimmed up under my feet, and with plaintive cry dropped lightly again on the sandbar. Three more cinnamon teal came to bag, and I flushed a nice bevy of quail, perhaps thirty, and as they lay in the sage brush started and killed a half dozen. Secor joined me and we began to have some good shooting, when the wagon drove over and its occupants informed us that we had wandered from the trail, and to get in and behave ourselves on Sunday. Valley succeeded valley, some fertile, others arid and bare. The ascent was steady, and we could note the change in temperature. We passed an Indian rancharia, a group of adobe huts occupied by the descendants of the famous Digger Indians. They were picturesque but filthy. We flushed many quail, shot a few for supper, and, like the excelsior boy, kept getting higher, until at sundown we began to see patches of snow about us. Just before dark we saw three mountain quail ahead, and secured two of these beautiful and toothsome birds, one of which, in skin, lies before me. Before it was completely dark we frightened a large flock of pigeons from a live oak close to the trail. Bill called them rock pigeons and said that they had a white ring about the neck—they are larger than our passenger or wild pigeon. We were now at the top of our ascent, on a comparatively level plateau, and the team bowled along at a lively gait in the dark. It seemed like tempting Providence, but the sure-footed beasts went over and through the sage brush, red shank and manzanita as though it were a boulevard lit by electric lights.

Wrapped in ulsters, shivering but happy, we trusted to our guide, who said he could see the wagon tracks of Dave Adams, who had gone up the day before with tent equipment and supplies. We completed our fifty-seven miles by 1 o'clock, having been en route since 4 A. M. We found Dave there, the tents up, and a camp-fire of live oak wood crackling and spluttering.

It took but a few moments to have some rabbit, quail and ducks cooked, some coffee made, and after fixing our blankets and bedding we turned in. Our bag en route this day consisted of ten quail, five ducks and two rabbits—shot from the wagon.

We were awakened at 5 o'clock by the summons to breakfast. The breaking day was clear and unclouded. It was cold, too—a quick transition from the semi-tropic to the frigid zone—and I felt this very strongly as I broke the ice in the pail to get some water. Breakfast over, Babcock started for the upper laguna with Denton, while Secor and I walked down through the marsh to the lower lake. Not 40yds. from our camp we started a fine flock of cinnamon teal, and secured four, and before the reverber-

ations from the hillside had ceased the orchestra of nature was in full play and the air resounded with the melody of a hundred birds. Near by the English snipe in twos and threes kept zigzagging up from the dry tules and marsh, and their musical *scap! scap!* filled the air. The soft, plaintive cry of the teal and the welcome *quack!* of the ponderous mallard gave us a thrill of ecstasy.

A tramp of 100yds. through the mire of these fields dissipated all idea of cold and put us in a happy perspiration. A large flock of mallards rise from the marsh below us and, led by a dozen greenheads, slowly winnow their flight up the field toward us. We crouch in the tules and wait. Nearer they come and are now over us, their chatter ceases as we raise our guns. How they climb the air! The sheen of their plumage and the yellow outstretched legs gleam in the sunlight. The old hammerless speaks right and left, so does the gun of my comrade. Three fat birds bulge our game pockets and make us sink deeper into the mud as we "slosh" along to our destination. We cross through a fringe of willows into the next and last snipe cover. I have seen snipe fairly abundant in the East, but the sight and sound of the hundreds of birds we flushed from this meadow "rattled" me.

I had six or eight down before retrieving, and at last I put my gun at "safe" and refused to shoot until I had bagged my birds. Before we reached the lower end we had run out of shells and had thirty-six birds. Bill was there with the team and our ammunition, and we were there with eight ducks and thirty-six snipe, one hour from the camp. We found that Babcock had shot half a dozen ducks while Bill was fixing his decoys and blind, and there they lay in the bottom of the wagon, among them three fine canvasbacks and a pair of mallards.

It was but a quarter mile to the upper laguna. This lake or pond covers an area of some 30 acres. Patches of tules or reeds, yellow and dead, were scattered all over

GROUSE SHOOTING IN MICHIGAN.

Equal Fifth Prize, Forest and Stream Amateur Photography Competition.

Photo by Mr. J. C. Thompson, Bay City, Michigan.

the surface. The water was nowhere over eighteen inches deep, and the open spaces were dotted with ducks. I could recognize, as they sat lightly on the water, the noble mallard and canvasback, the latter exclusive and alone, the former mingling with the beautifully painted shoveler and the graceful pintail and widgion.

Secor and I waded out and took positions about gun shot apart in two bunches of tules. The first roar of the gun started the groups in aerial evolution; some of our dead birds are set up for decoys, and the ducks whirl over us twice or three times, and then set their wings and fall like shooting stars toward our blinds.

By 1 o'clock the ducks had ceased flying, or gone off, and we gave them up, cached our birds in the sage brush, and started back to the snipe cover. We found the birds plenty, but not so much so as during the morning. They were wilder and when flushed would often go up to the sloping side hills in groups of from three to six and drop down in the dry ground among the vivid green redshank. We went up and killed a number of birds. It reminded me much of shooting fall woodcock in cedar cover in the East. Later in the afternoon we returned to the laguna and shot a few more ducks until Dave came down to pick us up. On our return to camp, we found Babcock before us with a fine pile of ducks, including mallards, canvasbacks, gadwall or gray ducks, widgion, shovellers, tufted, ruddy, cinnamon, green and blue-winged teal. The total bag for the day amounted to 140 ducks, 110 English or jacksnipe and 6 rabbits—total head of game 256. The ducks feed on a delicate water cress and also on a succulent root called celery, and for gastronomic purposes are unsurpassed.

That night a storm arose, a mighty storm of rain, hail, snow and wind. We were aroused at midnight by the conflict of the elements and the swaying of the tent, which threatened the next moment to enfold us in an icy shroud. What should we do? During this wild raging of the elements we tenderfeet were paralyzed, but the clarion voice of our imperturbable host rang out from beneath his blankets and gave us the countersign, "Call Bill." Secor and I scrambled for the tent flaps and called Bill, who triced up our shaky ridge-pole and made all secure.

The next morning Babcock and Secor decided to go for quail, and Bill and I thought we would make a record on

snipe. But it was another case of "*L'homme propose mais Dieu dispose*," and the thousands of snipe reported from the upper valley dwindled to a paltry 50 or so, and after two hours' heavy tramping we had secured but 26 and a few ducks, and determined to try the birds again at the lower laguna. I took my stand and Bill kept the birds of the neighboring ponds and marshes moving, and I made some remarkable kills, and became quite satisfied with myself. This day I shot my wife's little featherweight gun, 5½lbs., with a light load, 2½drs. E. C. and 1oz. No. 8 shot. I had not intended shooting ducks at all this day. But the gun was a little witch, and under these adverse circumstances, as regards light gun, light loads and small shot, I curled them up at ridiculous distances. At one time I had 8 down, stone dead, floating on the muddy waters.

About 3 o'clock P. M., when we were about to go up into the quail cover, the wagon came down and picked us up. Our bag consisted at the time of twenty-six English snipe and forty-six ducks. The others had met with bad luck and hair-breadth 'scapes in rocky cañons during the morning. They had secured thirty quail and proposed to go a half mile below for more. We joined them, and on our return to camp our bag aggregated seventy-eight quail, forty-six ducks, twenty-six snipe and five rabbits.

The following morning at 5 we broke camp and left Neji for Cariso, a valley twenty miles below, and on our homeward track. We were now to bend our energies to quail and quail only. The ride down was broken by a stop now and then when we came across a covey, and when we arrived at Cariso at 4 P. M. we found our lungs full of mountain ozone and our bag full of quail—thirty-six quail and six rabbits. We had driven all day through the region of the deer and the coyote, but saw none. We did see the grand mountains towering above us, the sapphire sky, the eternal rocks, weather worn and of fantastic shape. We put up at a Mexican's named Duarte, and added ourselves to his already numerous family. His dwelling was an oblong adobe casa, one story high—daughters, dogs and dirt on all sides.

We were given a large, square room or hole—dark as Erebus, not a window, only the rickety door. A step over the threshold put one from sunshine and gladness into a dungeon of darkness and gopher holes. The floor was what munificent nature had provided. A rough oblong table and two banca or benches were brought in, to enable us to sit at the table. The light was furnished by two candles and a lantern. The old woman and man had been made happy and good-natured by Dave, who had gone down ahead of us, and with malice prepense, had plied them with mescal, the fire-water of the land. In their way they did what they could to make us comfortable. Clotilda was the Senorita of the family, and not a bad looking product of the soil. A rather luxuriant moustache did not detract from her masculine beauty. She seemed to have a soft spot in her heart for blonde and handsome Bill.

That night we unrolled our blankets and spread them on the adobe floor. My pillow was too low, so I got some tent pegs from the wagon and built up a foundation for my coats. I was sorry afterwards, for the gophers and rats played tag among them all night.

Up at daybreak and into the quail country and shooting at 6. Dave drove us, and we had the Mexican's youngest son on a horse to ride about and locate quail. The shooting of quail here is quite different from our pursuit of Bob White at home. Here one starts a covey, in size anywhere from thirty to five hundred or more. After firing once or twice the birds lie well and are walked up. The dog stays at heel, and is only used for retrieving. The valley quail is a beautiful species and can discount Bob White in rapidity of flight and quickness in twisting.

We shot all day long with a short interval for luncheon, and moved probably fifteen or twenty coveys. Almost all shots are open ones. The sage cover is only 18in. high, and it is only when the birds get into the manzanita and red shank or among the rocks on a mountain side that one is obliged to take snap shots.

When we turned our horses' heads toward the ranch that evening, the wagon was full of game. Our bag consisted of 304 quail and 33 rabbits. Bill had to sit up until nearly midnight "drawing" them. This cleaning is always done here immediately on the return from a day's hunt. The birds, be they ducks, quail or snipe, are then tied together in bunches and groups and strung on a rope during the night and put between blankets at daybreak. In this way an even temperature is maintained during the twenty-four hours.

On Friday we started for Tia Juana and home. We found but few quail en route. In fact we did not hunt them, for we wished to catch the little engine and car at 1 o'clock, but we failed. We reached the hotel at 3:30 P. M., having driven the whole distance. We secured thirty-four quail and six rabbits on the way. Total head of game for the hunt, 847. INCOG.

Club Election.

BELLEVILLE, April 29.—The annual meeting of our Forest and Stream Club, which was held on Thursday night, was well attended. The officers elected were: President, H. Corby, M. P.; First Vice-President, W. H. Biggar, M. P.; Second Vice-President, Jas. H. Mills; Secretary, Jas. D. Clarke; Treasurer, Chas. Sulman; Directors, W. Clarke, Chairman; R. S. Bell, H. K. Smith, Jas. D. Clarke, W. Ormond, John Haslett and Chas. Hudson; Auditors, J. E. Walmsley and J. S. Bonar.

A resolution was passed declaring against any change in the close season for deer, which will be forwarded to W. H. Biggar, M. P., with the request that he act accordingly in the Legislature, and also ask Messrs. Wood and Hudson to take a similar course.

The club then adjourned. The work of the organization has been well attended to during the past year; the membership is large—about 150—and will be added to considerably; the financial condition is sound, and the prize list will be more liberal than ever before for trap-shooting, rifle-shooting and angling. The wild geese have left us for their breeding grounds. PORT TACK.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Out of Tune.

CHICAGO, Ill., April 29.—There are more dukes, dudes and dagoes in this neck of the woods just now than there are jacksnipe, by a good many. The former have to be here May 1, and the latter don't. The weather is hard on all alike, but the birds, having wings, are having a shade the best of it, for they can get away, and have no Columbian sentiment to restrain them from doing so. Any biped that is able to get out of this climate and does not do so, is possessed of more sentiment than horse sense. Your jacksnipe has plenty of horse sense, and he has left the World's Fair behind him, to open or not as it may see fit, he meanwhile flitting to Alaska or Siberia, or some place where the climate is milder than it is here.

The man who makes the weather is getting himself disliked, and this not only by the World's Fair tourists, but also by the hardy sportsmen who still feel the need of an occasional leg-stretching tramp, in spite of the allurements of the graveled ways of the White City. The continued and truly abominable rain, cold and windiness of the recent Chicago weather, have knocked our sweet bells out of tune. They have delayed the work at the Fair, promise to mar the pleasure of next Monday's festivities, and worse than that, have ruined the snipe shooting. It is this latter fact which constitutes the basis for the greatest national kick. I suppose we may as well make up our minds to it. The cold rains have flooded the snipe bogs, chilled the budding aspirations of the tender worm, and therefore have scattered the longbills far and wide. The grass is now high and green and the marshes full of water. When the first warm days come the jacks will collect and go on north, but will tarry here no longer. A few grass plover and golden plover will then be all that is left to go a-gunning after.

Ten days ago the big Leesburg marsh, six miles north of Warsaw, Ind., was in fine shape for shooting, and the birds were there in such numbers that bags of fifty and sixty to the single gun were not unusual. Then came the cold storms and made this marsh, hard bottomed and pleasant as it usually is for walking, more like a fish pond than anything else. This week the lightest bag of the Warsaw men was 109 birds to one party, of these only 55 being jacks, the rest plover and rail.

As mentioned earlier, it has been the greatest season for jacksnipe we have had for many years. The flight of ducks was also good. The run of bass in the Illinois rivers has not been so heavy for ten years. The streams are now all very high and roily; which is a good thing, as it protects the bass when they ought not to be caught.

Local Timidity.

At Mokena, on the Kankakee, hundreds of bass have been taken. The residents raised a great cry about illegal fishing and insisted that the Kankakee Association was not doing its "duty." The Association paid a warden \$40 to go down and relieve the strain at Mokena, but the warden this week says the violations are not amounting to much. The main offense is that of spearing, and although he saw some spearing, he did not see a bass or other game fish speared. The worst spearing is done through the ice, and on the early run, when the water is high and roily. At that time the bass run close in shore, and there is no doubt that many are then killed with the spear. Next spring it would be well for the Mokena men to summon up some local funds and some local nerve, for it is not likely that the Kankakee Association will do so much by them. The Association has spent over \$100 at that point. Mokena has contributed less than \$40 in all, and did not help the warden at all this time, as I understand. The usual local fear of "being known" in a prosecution exists there to the usual damaging extent.

About the Grayling.

Mr. J. B. Battelle, of Toledo, O., very well known to the angling readers of FOREST AND STREAM, is in Chicago for a few days. Mr. Battelle is very fond of grayling fishing, and tells me that that lovely fish, though not nearly so plentiful as it once was, is by no means yet extinct. The Au Sable, once famous and long thought depleted, is much protected by its inaccessibility, but still has some grayling. It is a rapid, large stream, and can be worked only by floating down in a boat. No stopping places are at hand on the best water, and the angler must camp out. He can keep on going down stream, but he never can come back up again. This sort of trip is hazardous and hard, and the summer tourist can't stand it. Hence the grayling are much protected by nature.

Mr. Battelle also tells me that he thinks the South Peninsula is going to have fine trout fishing in many of the old logged-out streams which of late every one has left unfished. After the logging drives ceased the streams again ran wild very rapidly, and restocking aided the wild fish, so that the supply is now good.

Elk in Michigan.

Prof. Adolphe B. Covert, taxidermist to the University of Michigan Museum, at Ann Arbor, is in Chicago in charge of the magnificent exhibition of mounted animals, his own work, in the Michigan Building at the World's Fair. Prof. Covert, who by the way is a long-time FOREST AND STREAM friend, blundered into the exhibit now comfortably installed in the space occupied by the paper in the Anglers' Pavilion, and was later so good as to wash the faces and comb the hair of some of the FOREST AND STREAM mounted heads which appeared a trifle the worse for travel. We fell to talking, and I learned something which I suppose will be news to a great many. Prof. Covert says that there are still a few elk left in Michigan.

"I am confined in the showing of specimens to those animals actually found in the State. Not only were elk once abundant in Michigan, but there are still some left. Another supposition is that there are no sharp-tailed grouse in Michigan, yet that bird is to be found in certain parts of the North Peninsula at certain seasons of the year. In my work I often hear of things of interest to shooters which I hardly feel at liberty to tell, and of course I should not wish you to name the localities in this case."

Certainly I should not care to publish the localities mentioned, but there is no reason in the world to doubt the entire accuracy of Prof. Covert's statements, and I fancy the facts will be news to many interested in the fauna of the middle West.

Cross-bred Buffalo Die.

A special to the Omaha Bee from Laramie, Wyo., has the following:

"J. H. Hudson, who started a buffalo ranch on the plains forty miles from here last fall, has been forced to abandon the project of exhibiting a cross-bred bunch of bison at the World's Fair. His breeding stock was a thoroughbred buffalo bull and eight specially selected Durham cows. The calves died soon after birth and in each case the mothers followed within ten days."

The above is contrary to the experience in the C. J. Jones herd. The Polled Angus was the domestic breed most used there.

Not a Pleasant Sight.

The papers are making comment on a remarkable garment sent to the World's Fair as part of the Dakota women's exhibit. It is a cloak, made entirely of the feathers of the prairie chicken. It is thus described: "The cloak is a curious piece of workmanship and was made by a Dakota woman, who spent ten years in getting the material. Some idea can be gained of the number of birds it took to furnish the material from the fact that all the feathers are of a lovely and peculiar hue and only three or four found on each bird. Each feather is held in place by no less than eight stitches. The value placed on this garment by the woman who made it is \$1,000."

I should think that cloak would be rather a sad sight.

No Lodge Poles.

Just at this writing the most anxious man in Chicago is "Billy" Hofer, of the Hunter's Cabin at the Fair. Mr. Hofer has got down to where he finds red tape in large chunks on his claim, and it frets his practical Western soul to see how long it takes to do nothing at the Fair. Not long ago, not over a month, at least, he ordered a set of lodge poles from a Bulgarian artist in wood. After many days they came. They were, as he had specified, about 3 in. in diameter at the end, but unfortunately it was at the wrong end. At the big end they were about a foot across. Billy tried to explain that he didn't want to build that sort of a lodge, but the Bulgarian resented this, and as a result Billy has no poles at all. I advised him to go down to Whiting, toward the sand hill country, and cut a wagon load of poles for himself, but he will probably get arrested if he tries to do that, and will then meet some more red tape. Meantime the cabin is complete, and all its surroundings will be in perfect harmony, especially if Billy gets his poles without getting into jail.

Sights at the Fisheries.

Mysterious things are doing in the U. S. exhibit in the east annex of the Fisheries, and what these may be the curious can only guess, for the gates are barred as yet. In the main Fisheries the work is far along, and the air hums with the intense energy of the work of preparation. Norway is now installed, and able indeed is the hand that guided her exhibit in its place. The marine paintings by the artist Lauritz Haaland grow on one more the more one studies them.

The Netherlands exhibit is an odd one. It shows the herring fisheries of Holland in miniature. A herring boat, manned by red-capped sailors, is shown upon a rolling sea. The waves of the sea are realistic, but they do not move. Apparently the sea is made of green onyx, though it may be Castile soap. Anyhow, it has waves and the boat sits in them, full rigged, and over her gunwale the sailors are pulling a net, and in the net are little shiny herrings, about as long as your little finger nail. Moreover, piled up in a corner of the space are divers kegs of herring, the labels on which make you hungry.

France has not yet made her installation, nor has Great Britain anything in place except the Irish model of the Baltimore School of Fisheries, of County Cork. Australia has her work nearly done. Among the many things of interest here is a great photographic view of Woolloomooloo fish market, Sydney, New South Wales. Pictures, brilliant shells and odd beasts and birds meet one at all hands in this reflex of the antipodes.

Canada has a large space, and has filled it admirably. The angler will linger long and lovingly before the Canadian cases. The fishes are elegantly mounted, and one can feast his eyes upon the bass, the hunge, the painted trout, and lastly the *beau saumon* in all his silver glory. Few things in the Fisheries will lead Canada, and the installation is artistically placed.

Eastern men will view with interest and pride the showing made by old Gloucester port, up Massachusetts way. The product and the record of that salt sea city are displayed in good, hearty fashion.

The private exhibits will also be of much interest. Substantial barrels and cases littered the floor of A. Booth's space when last I saw it, but one may expect a great showing from this great Chicago house. John R. Neal & Co., of Boston, Mass., have a really comprehensive, elegant and tastefully gotten up display. They have models showing the East coast fisheries in all stages, and there are two full-numbered sets of paintings, one showing the haddock and another the cod fisheries, which are not only instructive but interesting from their life and action.

In the Anglers' Pavilion.

The house of the anglers is backward, but in shape for rapid completion in its interior arrangements. Col. Gay, of Pennsylvania, has his glass houses all done, and his fountains cocked and primed. The Osgood Boat Co. has a number of its tidy craft in place, and the Acme people are close by with theirs. Mr. Constock shows a Protean tent in the Osgood space. The Horton Mfg. Co. have a grand case showing their steel rods, and *dos a dos* to them are A. G. Spalding & Bros., with a case of lovely Kosmic rods, whose value runs into the thousands of dollars. Near by the Ohio State exhibit folks are screwing up some mighty life-like looking fish, and others whose houses are not yet ready, are rapidly bringing system out of a riot of raw material. The Waltonian Mfg. Co. were to have had their fly-tiers in place to-day. The Natchaug Silk Co. will put in some of their braiding machines, showing the process of making their silk casting lines.

The "Forest and Stream" Exhibit.

The very first exhibit in the Pavilion is that of FOREST AND STREAM. You will see the rustic letters and the big moose head of the sign royal of the greatest sporting paper of America, the first thing to the right as you step into the building. Before you (unless the edicts of red tapedom decree otherwise, as is now rumored) you will

see against the wall the vast case containing the largest tarpon ever caught on earth, or in the sea. The authorities may technically object to FOREST AND STREAM having the biggest fish on earth, but they can't technically help FOREST AND STREAM from being the biggest shooting paper on earth, and if the tarpon comes down, something else goes up. To the left of the big fish is a case showing bound files of the FOREST AND STREAM from its birth up to the present year. They are bound in red leather, and it is worth the price of admission to look at their backs, they are so pretty. There are also to be seen many other books, all from FOREST AND STREAM Pub. Co.'s book house. These are not all bound in red leather, but are good if not spectacular. There are dog books, shooting books, boating books, angling books, natural history books, camping-out books, all sorts of books. It would have been a great scheme to bind them all in red leather, but we can't have the earth.

The live decoration for the top of the FOREST AND STREAM space is of mounted heads, the mountain sheep, buffalo, white goat, antelope, Virginia deer and caribou being shown, the two latter dominated by a set of elk antlers. The background color is Pompeian red. Other exhibitors have copied the FOREST AND STREAM idea and used this same color, but the FOREST AND STREAM was the first to select this color and show it in the pavilion. It forms a fine background for the white-framed pictures which form so valuable a part of the exhibit. These pictures cover the walls completely from the line of the mounted heads down to within reach of the hand. They are unique, beautiful, admirable. The pictures are all bromide enlargements from actual photographs submitted in the FOREST AND STREAM amateur photograph tournament. They show many striking scenes in the life of out of doors. Beneath the caribou head are two pictures of caribou, one of a herd just crossing a river and one of three little individuals in a little forest glade. The latter, in balance, composition, light and shade, could not be surpassed by a painter after years of study. How the photograph was made remains a mystery.

Under the antelope head is a photo of a band of antelope, wild, bunched up and ready to run. The foot hills country is all there, and you know you have seen the actual thing.

On the left are grouped the upland pictures, on the right the marsh pictures, and on each side of the center are the first and second prize pictures of the amateur tournament. Horicon Marsh of Wisconsin, the sea coast of Texas, the groves of Indiana, the blue waters of the Atlantic, the woods of the North—all are laid under contribution. Many have asked me, "What has a newspaper to exhibit?" Much. There is no exhibition on earth that equals that of the patience, the tirelessness, the enterprise and the energy shown by the newspapers of America. The result of these things for itself FOREST AND STREAM can show. These things do not always mean success, but FOREST AND STREAM can show this most desirable result of all—success.

The "Forest and Stream" Western Office.

Friends and correspondents of FOREST AND STREAM in the West or elsewhere should note the fact that the Western office of FOREST AND STREAM Publishing Company is now located permanently at 909 Security Building, Chicago. This is diagonally across the block from the former place at 175 Monroe street. The Security Building is the latest of Chicago's model office buildings. It is situated at the corner of Madison street and Fifth avenue, hence in the most desirable part of the city for the purpose of a newspaper office. The building is tall, light, quiet, marble lined throughout, with speedy elevators, equipped perfectly, and indeed faultless for the purposes intended. The increasing business of FOREST AND STREAM in the West called for better facilities for its handling. The bright little quarters now secured will serve admirably as a home for this part of the work, and it is hoped that all who knew 175 Monroe street, and also a great many more, will come to know 909 Security Building. They will all be very welcome. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Texas Jottings.

Give a creole a chicken and a handful of rice, and he will do wonders.

The Chief is of the opinion that good gumbo is the result of a combination of mustard plaster, tobacco sauce and cantharides.

Doubtless all travelers have noticed that in the South the chimneys are built on the outside of the houses. This is very generally the case from Cairo south. Did the Northerner ever think of the reason for this? There are reasons for all such general types in the buildings of any locality. The Southerner will explain that in his country there is more room outside of a house than inside, and he puts the chimney outside to make more room inside. Also, it is much cooler in the house with the hot chimney on the outside, it not being very often desirable to utilize all the heat possible, as in the North. After hearing these really valid reasons, the supercilious Northerner usually has to admit that he "hadn't thought of that."

The terms "red fish" and "red snapper" are used indiscriminately in New Orleans restaurants, but I am not posted enough to say that this is correct. The red snapper is caught on banks out in the gulf. Galveston has a red snapper fisheries company. The "red fish" runs in schools in bayous, and takes the minnow well, fighting strongly. This latter was told me by "Bud" Stephenson, of Stephenson's Lake, Texas.

It is one thing to be able to spell the Southern names, and another to be able to pronounce them. Thus I heard some mention of deer hunting in the "Chafalah" or "Chafaly" (accent on last syllable) swamps, and was for a long time ignorant that the river in question was the Atchafalaya of our school boy days. You never hear anybody down in Louisiana speak of any such river as the Atchafalaya. That is a Northern river purely. An other instance of similar nature befel us at Opelousas. A gentleman who was introduced to us, and who was very kind to us, getting up a shooting party for us, sending his horse and buggy over to us, and in short treating us as if he had known us long and favorably, this gentleman everybody called Mr. Wyo. Yet, if I am not again mistaken, his name was really Mr. Wallior. It's a funny

country, where a man calls Atchafalaya Chafalah, and can't even pronounce his own name!

The sea marsh proper, not to mention the long bayous and swamps that project back into the country for long distances, is from three to six miles wide, and runs practically from Galveston east across the whole of Louisiana. This is the winter home of the main flight of the fowl, the snipe, etc. One can see there such sights as he never saw elsewhere. At our station, twenty-five miles from Galveston, we daily passed the feeding ground of a vast body of snow geese, whose gabbling as they circled about could be heard at a distance of three or four miles. I presume this body of fowl was about a mile by a mile and a half in extent. Beyond them the Canada geese were using, and though I did not go so far as that, the local shooters told me that the Canadas were there in numbers nearly as great. Ducks of all sorts were in the air so constantly and in such numbers that in a short time one ceased to pay any attention to them. The market-shooters would not pay any attention to the "puddle ducks" (marsh ducks), but one morning Billy Griggs and I went out shooting and photographing for a short time and killed fifteen. I think Griggs is the best duck shot I ever saw. In short, he did not miss, and he killed ducks further than I would dream of shooting at them. He used a 10-gauge Parker which looked as if it had seen better days, indeed, all the men around Stephenson's Lake use Parkers. Once two ducks came in, and Griggs assigned me one and assumed the other himself. I missed mine with both barrels. He killed his with one barrel, and then turned around and killed mine with the other. I thought that was a mean and unfriendly thing for a man to do.

Another time John Scales and I went out together, a little wind in the morning giving promise of a decent duck day, which we had not had for a week. We pushed away up into the marsh, and after shooting a few snipe on the way, got into our blind about 2 o'clock. The ducks decoyed beautifully, and we soon got 33 into the boat. John is a good duck shot, as all the men at Stephenson's are, but on one occasion his right hand forgot its cunning. In fact, a flock of teal came in to us, and we fired four barrels and didn't get a teal. I shall never forget the huge disgust John felt over that. "Good God A'mighty! gold darn! We never got nary one of 'em!" said he, and his concern over it seemed so sincere that I laughed hard and sat down on the bottom of the boat, where it was wet.

John and I would have had some more shooting that afternoon had not a fog come up from the Gulf—a heavy, blinding, blanket-like fog which shrouded the marsh in a few moments so that you could not see a man 30yds. All sense of direction was soon lost, and the only way I could have gotten anywhere near home would have been by keeping the wind on my left cheek—which would have been bad had the wind changed. John, however, took us home without a halt, following all the windings of the waterways. Hunters seem to gain a sort of instinct of direction from long experience, such as that possessed by animals. That was a wonderful night, the time John and I came down the marsh in the fog. The wildfowl seemed confused and were flying every way. At every step we put them out (we had to drag the boat much of the way), and the air was full of such a babel of wild sounds as I expect never to hear elsewhere again. The geese of all sorts, the brant, cranes and curlews kept up pretty well, uttering their distinctive calls as they flew. On the wet bends of the marsh the mallards, sprigs, widgeons, spoon-bills, teal and other sorts of ducks kept on flying up, calling, quacking, whistling and cackling until the ear was assailed with a delirium of sound. It was the sweetest discord ever was, and no man will ever hear the like unless he is on the sea marsh in a fog at early evening.

At Stephenson's there were "Bud" Stephenson, Billy Griggs and John Scales, who shot in partnership for the market. They control the Stephenson's Lake marsh, Bud having been raised at the old homestead where we stopped. Naturally they would not like the public to bother them, and at first I do not think Mr. Stephenson liked to have me come to do any shooting, because he wished to treat all alike, and refuse all. I am certain that no stranger could go there and shoot, and I could not send my best friend there to shoot. Billy Griggs got me in, and after we all understood each other we had as pleasant a time as anybody ever had, and I had the best shooting I ever had in my life. It being too mild for the canvasbacks to work, we went to shooting jacksnipe, and the four of us, though usually only three guns were at work, and part of the time only two, killed during the week between two and three barrels of jacksnipe. I gave the others my birds, and only shot for three days, or half days, as we never went out until 11 o'clock, and in a little time could shoot away 50 to 100 shells. At night we would come home with the horses nearly hidden under strings of jacksnipe. One evening Bud and I went on and left Billy Griggs behind, shooting on a little bit of grass ground, not so good in our opinion as the ground where Bud and Billy killed about 150 the day before. Bud and I each bagged 43 and intended to have the laugh on Billy, who never showed up all the evening. Unfortunately, however, Billy killed 60 birds by himself, right on the ground where we had left him, and had good walking to boot. This made us tired than the walking had.

Billy Griggs is probably the best duck shot now shooting, and on snipe he is also good, though I think handicapped by using a 10-gauge. He works very slowly on snipe, just potters around and goes as quietly as he can. In a day he will pick a lot of snipe, and he has the endurance to keep on doing it day after day. He and I shot together two days on snipe and I never was out with a pleasanter or more truly courteous companion.

How many snipe were killed in all I cannot say, but I saw two barrels packed, and in one of them were put 41 doz. snipe. The manner of taking care of the birds is interesting. When the birds were shot they were never carried very long in the game pockets, but were suspended in the air, tied by the neck in small bunches. At night they were carried home tied behind the saddles of the tough little ponies. All night long the birds were left hung up out in the air. In the morning they were packed on long flat slabs of ice, as closely and neatly as sardines in a box. After a layer of snipe had been put down a thin slab of ice was placed over them and another tier laid on that, then more ice. Only two layers of ice were

used, to avoid crushing the birds. The birds were frozen stiff in this way. The ice was brought out from Galveston in the Stephenson schooner and both ice and birds were covered deep under cloths and hay. In packing for shipment a long stick of ice, about 6in. or more square, and as long as the barrel, was wrapped in sacking and stood up in the middle of the barrel. The snipe, each with the head neatly doubled under, were then carefully packed with their tails toward the middle. Additional pieces of ice, also wrapped up to prevent melting, were put about the circumference of the barrel. No snipe was so packed that it did not touch ice. The birds themselves, frozen hard, acted as a non-conductor of heat for the ice in the middle of the barrel. "I could ship these birds to Europe this way," said Griggs. "That chunk of ice in the middle will not be all melted when this barrel gets to Chicago." After the barrel was packed it was rolled on a sledge and by a rope hitched to the pommel of a saddle was skated down to the shore of the bay. There it went into a big flat boat and was lightered out to where the schooner lay at anchor. Thence it went according to the vagaries of wind and tide, across the bay to Galveston and thence by steam to the great market where all snipe are going fast. You may have eaten some of our snipe and have noticed that they were better than the ordinary bird of commerce. Indeed, in my brief experience as a market-shooter, I gained conceit enough to think that we packed birds better than anybody else. From this I reaped no financial gain, but I am not sorry to have seen the systematic and businesslike way in which the best of market-shooters carry on their trade. Griggs told me that they had not lost a bird in shipment.

Most people hang up ducks by the neck. In warm weather, so I learned from my market-shooters' the right way is just the other way, by the feet. Thus the entrails do not crowd down to the tenderest and thinnest part of the body, and the birds will keep a third longer without tainting.

Five years ago they did a foolish thing at Houston. They chose up sides and went out for that abomination—a "side hunt." There were 30 men on a side, and they brought in 7,000 snipe in that one day. One man killed 270. This was on the old Sam Houston battlefield. There have never been so many snipe in that section since. Some of the birds were eaten at the game supper that followed, and some were given away, but the greater portion spoiled and were thrown away. "This," said Billy Griggs, who told me of it, "was 'sport,' I suppose."

Wimberly, west of Houston, is a great country for snipe. The Trinity River, southwest of Houston, is magnificent for ducks, especially for the mallards which swarm there after acorns. Bear, turkey and quails are also in the Trinity River country, but the best place for the big game is in what they call the Big Thicket, northeast of Houston, along the Sabine River, and near Carter Station.

E. HOUGH.

Oregon Pheasants and Quail.

PORTLAND, Ore., April 20.—In FOREST AND STREAM of April 13 "Podgers" asks me to state whether I have had any experience as to the assertion that wherever quail about the pheasant is exterminated or driven away. I have never heard a suggestion of the kind before, and cannot understand upon what theory such an idea could be founded. If my friend "Podgers" has particular reference to the ring-neck or Mongolian pheasant, I believe that he is eminently correct in the declaration that the proposition is a "perfect absurdity." I have known the Mongolian pheasant quite intimately ever since its first introduction into Oregon; and while our local sportsmen are about unanimous in the opinion that where he gets a start the aboriginal pheasant and grouse "must go," as it were, I have never heard of the Mongolian and quail interfering with each other's vested rights, and would be very much surprised to learn that such is the case. The belligerent disposition of the ring-neck is a matter of common notoriety here. It is a well-known fact that the cocks will come out of the brush any time to lick the barnyard rooster that crows a little too much or too arrogantly. He is a very hardy, pugnacious bird; and those who know him best will back him against anything that wears feathers on this coast in a fight to a finish, contest for points, or on the general proposition of "the survival of the fittest." If the common hen hawk cannot molest the family of Mr. Ring-neck while the old man is at home (see FOREST AND STREAM, March 3, 1893), why should the pheasant show the white feather for the impudent but harmless little granivorous quail?

S. H. GREENE.

The Defeated California Law.

DUNSMOIR, Siskiyou County, Cal., April 24.—*Editor Forest and Stream:* In your issue of March 23 "Podgers" has much to say about an effort made in the last Legislature to pass a new game law. His statement is misleading, to say the least, and he does not mention the clause in this proposed law which should be objectionable to every fair-minded man, and which killed the bill. Had it passed it would have made the State a shooting preserve for the wealthy clubs and their friends, and barred out any one not rich enough or fortunate enough to belong to one of these clubs, from enjoying a day's sport with gun and dog. This clause made it a misdemeanor for any person to hunt in any county in the State, except the county in which he resided, without first taking out a license in each county in which he proposed to hunt, paying \$25 per annum for each license, provided that if he owned land or leased land in any county no license was required in such county. A "little joker" in favor of the rich clubs provided that if a man had an invitation "in writing" from some person owning or leasing land in another county it was lawful for him to hunt without taking out a license. This would have enabled the aristocratic shooting clubs to invite their friends to their preserves without putting these friends to any expense. As there is no game in San Francisco county, and sportsmen from that county hunt in five or six different counties during the open season, you can readily see that this license business would have shut off most of the hunting.

Stack was not a member of the Legislature, but he is president of the State Sportsmen's Protective Association, an organization which did much to defeat this measure, and which numbers among its members just as true gentlemen and sportsmen as the clubs. We have a good trespass law, but the clubs wanted one

that would protect their leased, unclosed marsh land, much of which is tide land cut up by navigable sloughs. They did not get this either. Hence these tears. In your editorial "Tags are Un-American" you voice the true American sentiment, but the California clubs proposed to go even further than Maine and Michigan and to tax the State's own citizens every time they went into a county to hunt in which they did not own or lease land. The leading papers in the State all opposed this measure, and the *Examiner* and *Chronicle*, the leading San Francisco dailies, did much toward defeating it, and were tendered a vote of thanks by the S. S. P. A. for this service. This association is steadily increasing in membership and will in the near future be represented in every county in the State, and should any of the members of the last Legislature who supported the county license clause come up for re-election there will be a surprise in store for them at the polls.

It may amuse the readers of the FOREST AND STREAM to learn how one of the members of one of the smallest clubs of California catches trout on the McCloud River. A week or so before he wants to fish he hires Indians to dump large quantities of salmon spawn into certain favorite pools. This causes the trout to congregate in large numbers in these pools, and when the sportsman (?) arrives he has no trouble in catching plenty of trout. He uses the same kind of bait and yanks the fish out by main strength.

FAIR PLAY.

Game Notes from Aroostook.

Editor Forest and Stream:

Owing to lack of snow this season big game will "spring out" in safety. I have heard of a few deer being run down by dogs, but don't know of a single moose being killed. But it is only the question of a few weeks when they must yield their hides to the backwoods butcher. Early in June moose are in the water, where it is easy to kill him, and much the easiest and safest way to get them out by canoe. Game wardens don't fancy going into far back waters in fly time and the poacher knows he is safe. It is seldom that a game warden has courage and disposition to "pull in" these skin-butchers at any season. Game Warden E. O. Collins, of Caribou, Me., has started in for a record by bringing to book one of the worst of his class for crusting two moose a year ago, and the culprit is doing time in jail in lieu of the fine. It is rumored Collins will take his man at the expiration of sentence for snaring three moose last fall. Not that the snaring was illegal. Ah, no! for the game law does not forbid snaring of anything except grouse; but for killing two more moose than the law allows; and right here let me say that it looks like a "straining at a gnat and swallowing a camel" as the law is now. In all the tinkering of our game laws no attention has been directed to this barbarous method of exterminating big game. The snare, steel trap and set-gun, so much in vogue in back settlements—and availed of even by some posing as sportsmen—are unworthy of a civilized age and should be made to go. On the headwaters of the St. John this season is cold and dry, and winter still holds in its grip the streams and lakes.

The water is very low and but little snow. But very few men as yet have come in for stream driving and I don't remember the time when the lumberman's prospects were so poor. I apprehend that summer sportsmen will find much trouble by hung-drives.

PINE TREE.

Bears in the Peach Brakes.

VELASCO, Texas, April 29.—*Editor Forest and Stream:* Bear hunting in the wild peach brakes of this, Brazoria county, is such hard work that few sportsmen care to indulge in it, and bruin's family would be much larger if two enthusiasts, John Weems, of Velasco, and Ed Sweeney, of Columbia, would keep off the warpath. These two chums have for years made it a rule to kill twelve bears every winter and capture a few cubs every spring. This season they bagged thirteen and made eleven captures.

Negroes living on the San Bernard and Cedar Creeks often catch cubs for sale, the price up to twenty months ago averaging two dollars a head. Recently a number of European ships have come to the new port of Velasco, whose captains and crews bought so liberally for export that a cunning little black cub now brings \$10. The brown ones are not in such demand, being ugly and ill-natured.

TEX.

N. W. Iowa Game Notes.

THE fates seem to be against the game in this section this year. After passing through a winter of unusual severity the birds have alternately been snowed under, drowned, and frozen since April 10, until the prospects for next fall's shooting are very poor. Ducks and geese have all been gone for two weeks or over. The best duck shooting was during the last week of March. But very few jack or whistling snipe have arrived yet, although past time. Prairie pigeons or plover will be here about May 15.

P. C. B.

"Danvis Folks."

AUBURN, Cal., April 19.—*Editor Forest and Stream:* I want to express my great pleasure at once more renewing acquaintance with the "Danvis Folks." I had feared, from the reported loss of eyesight by Mr. Robinson, that his pen was laid aside. I am delighted that it was not so, and trust that his physical eyes are again as clear as his mental ones, and hope that they may long continue so.

My youth was spent close to the borders of old Vermont, and, although on the Canada side, chiefly among Vermont people. Therefore, the old shoemaker and his friends remind me of my friends of nearly fifty years ago. For this reason Mr. Robinson's writings appeal to my heart, separated as I have been for nearly thirty years from the old, familiar friends and associations of childhood.

AREFAR,

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a value for \$5. This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work Bird Portraits for the Young" (the price of which \$3).

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

ON THE NORTH SHORE.—II.

The Return Trip.—II.

(Continued from page 355.)

THE trip to the Sisters was made in brief time, and camp soon formed. Mr. Schiling, the agent whom we had invited to supper, came to the island with one of his sons, in his birch bark, shortly after we had arrived. We had quite an interesting talk with him about the Hudson Bay Company relative to trapping, etc. He informed us during the conversation that the prices in skins had rapidly advanced. Fifteen years ago otter brought \$4, now \$15; beaver \$2, now \$10 and \$12; bear \$18, now \$25; black fox \$20, now \$55; mink \$2, now 75 cents, a reduction, and muskrat also much lower. He further stated, a surprise to me, that there are nearly as many furs obtained in his territory as formerly. The agencies of the Hudson Bay Company for the purchase of furs, are stationed as follows: Agawa, Michipicoteu, Big Pic, Red Rock, and Nipigon House, on Lake Nipigon, five in all. The salaries of agents are from \$400 to \$600, including rations. Mr. Schiling has been in the employ of the company for fourteen years, and but recently had made a contract for three years more. When at Otter Head a week ago he ascertained that the tug Annie Clark had taken up so far this season fully fifty anglers; in fact, from all accounts, and authentic, there have been more parties fishing on the North Shore this year than ever before. I figured it out after returning to the "Soo," that fully 150 rods had been on the Great Lake thrashing its waters for the trout of radiant dyes. This does not include the anglerworm party who for the last five years have visited the Agawa for their sport.

Two of this company last year made a trip to a small lake some nine miles from the mouth of the Agawa and caught 80 lbs. of brook trout in a single hour, the average weight being 1½ lbs., and could, they stated, have caught an unlimited number. It was simply slaughter, and worms did the red-handed murder. The tramp was a toilsome one over some very declivitous mountains, through dense brush and by fallen timber. They brought this year a Collingwood boat and a small canoe, the latter especially for river use. So fond of the sport are those gentlemen that we should think they would make an advance in the gentle art and try the alluring fly, for we are confident their pleasures would be doubly enhanced thereby. One may as well stand on the artistic plane in the piscatorial, which is so closely allied to all that is beautiful in nature, as to take rank with the blundering pot-hunter, whose methods in capturing the quarry are simply those looking to abundance. "The ethical import of angling is to the true Waltonian its most commendable feature. Surely the heart of that man who is possessed of a lurking passion for immersing himself amid the glories of the primeval wilderness, a transient companion of the loons and whippoorwills, contains no guile. The daylight hymn of forest birds, the silent, pine-shadowed lake, steeped in a dream of moonlight, and the harmonious rustling of wind through river flags are symbols that tend but to inspire and purify the soul."

When the boatmen commenced preparing supper, I heard them chatting away quite lively in French, and in a state of undue excitement. I was satisfied something had gone wrong, so concluded to stop over and ascertain what was the matter. On inquiry they informed me that the two long-handled frying-pans had been left behind at our last camp. Here was a calamity indeed, for without these essentials our meals would be shorn of much that was toothsome. This all came about by neglecting one of our absolute rules, viz., a search through the abandoned quarters after the boat had been loaded and was ready for departure. Mr. Schiling, however, bridged over the difficulty by stating that he would send us one of his frying-pans, if the boatmen would come for it that evening, and furthermore would send two of his boys to Jackson's Cove, for the missing pans, in the morning. This made everything serene, and would permit of keeping the menu up to the high standard of excellence. Peter was delighted with the idea of making the trip to the agent's house, for it would give him ample opportunity to pay court to the handsome half-breeds.

We made a fine spread at supper for the father and son, who enjoyed the abundant meal amazingly, and also gave them some of our choicest dessert delicacies to take to the three graces on their return.

After supper, I took my rod and went to the rocks on the east side of the island, in hopes of arousing and hanging a goodly trout. Mr. Schiling and his son accompanied me, wishing to see the sport if any presented. Reaching the spot desired—a high rock some 15 ft. above the lake—I began the work of enticement. My flies, a hackle and a Henshall, which had not yet been soiled by the water, were sent to the surface which was then in ideal ripples of sapphire shade, just right to a dot for luring. I made a dozen casts or more, with all the skill I was master of, but no response greeted my earnest work, and it really began to look as if the crystal realms were without the coveted fish. Schiling and his son undoubtedly thought so, for they turned and started for the camp, leaving me to realize, if possible, my expectant hopes. Changing position I cast again, and no sooner had my flies touched the waters, than a silvery gleam and a vicious splash came so suddenly as to almost unnerve me. I struck, however, at the proper time, as I thought, and missed, and then my heart beat a tattoo for just a moment, while a shade of disappointment fell upon me. Plainly I saw his scarlet hood and his spotted tail, and that was all the satisfaction I then got out of that tigerish trout. Recovering my nerve as quickly as I had lost it, I once more lifted the flies from the shadowy lake, and then sending them out again, they fell like flakes of snow upon the surface within a fraction of the place where the wolfish trout had snapped at the fly, and much to my delight another flash and dash came, but this time he was caught in the toils and bravely broke for freedom. As I was in need of a netter, I gave a shout, and the twain, who had not yet reached camp came racing back. The young half-breed

taking in the situation at a glance, picked up the landing-net, and climbing down to the water's edge over some broken rocks, took position to lift out the stricken victim as soon as it was killed.

It is needless to minutely detail the fight; suffice it to say that more than once the infuriated trout sprang from the rippling surface and indulged in some lofty tumbling, which to me was both pleasure and excitement. I handled him with excessive care, as I was not desirous of having a defeat before the tawny spectators, who seemed to have their whole heart in the battle as well as myself. I wanted no tale of blundering carried to the home of the captivating trio and therefore strove with all the skill I possessed to make that fighting warrior strike his colors in due time. He had battled too viciously and recklessly to last long, and when his speeding and plunging finally ended, came to the surface quite exhausted, and then the line was recovered, and as he was brought within reach of that bright-eyed boy, whose expressive face was an artistic study, and who stood alert as an athlete, he netted him as soon as I gave the word with marvelous adroitness. Up he came, running o'er the rock, and laid the vanquished at my feet, that I might feast my eyes upon an asymmetrical and beautifully mottled *Salvelinus fontinalis* as ever swam in icy lake or wandering brook.

As my heaven of delight ended with his capture I gave the erubescens fish, which weighed over 3 lbs., to the young half-breed, with instructions to present it to his charming sisters with my kind regards, all of which I learned he gracefully did—and so ends the tale of a trout.

After supper the boatmen went to Agawa with Mr. Schiling and his son to get the proffered frying-pan. As I expected, they did not return till about midnight, and the presumption is the charms of the forest beauties held them entranced till that witching hour.

The next morning the dark clouds were pouring in loose masses, scattering scud-like as they broke, with every indication of falling weather, something we had not had for the past ten days. We had planned to go to the main shore but concluded to wait a further development of the elements. In a few minutes the rain came and soon passed away, and then the sun stole out and beautified the clouds and turned the water to prisms of silver. This was our opportunity, and we embraced it by going direct to the rocks opposite the camp. It was certainly a lovely morning for sport, and the very first cast I made received a response which induced me to vibrate the rod with a suddenness that made the iridescent investigator hunt for another locality in the "vasty deep." He struggled hard for release but the rapacious manipulator at the end of that little seven-ounce split-bamboo held him with a wizard hand till he lay prone on the surface, with his gay colors rivaling the crimson of the drifting clouds above, another victim to the recreation contemplative.

The boat moved gently along, and had gone but twenty feet before I aroused another princeling of the spotted garter, who leaped at the lure with the swiftness of an arrow from a cross-bow, and which velocity, fortunately for him, saved his jaws from the cold steel. He was a stalwart and no amount of coaxing would induce him to another attack, as he had doubtless arrived at that perception wherein he could distinguish a bunch of feathers from a beetle. It beat me, and again we steal o'er the waters, offering as we glide the beautiful poems in feathers, imitations which have been made with an eye to perfection by the daintiest fingers of the gentler sex. Fortune seemed to favor me, for another proud beauty, in a spangled jacket, so greedily admired my dropping flies as to spring for one with a view to a feast, and was soon made aware of the deceit when he found his reddened jaw closing on the arched and tempered wire. He sang the lay of the reel with about the same frenzied effect as all his warlike tribe when they battle with the crafty angler. It was his last lay, however, and like the last dying notes of the swan, his sweetest, as the cruel critic of the spool put it, when he gazed upon its ruby tints as it breathed its life away in the bottom of the boat.

Ned was getting envious, yet still was hopeful that he would soon rival the record of the morn, if not surpass it, but was kept in arrears until I had caught another. He now began to think that his newly-made flies, which he had put on that morning, were not so attractive after all. I insisted that he try one of mine, which he did, and then his bad luck disappeared, for it was not long before he had a rise and a trout. I gave him some common-sense talk about fly-tying and fly artifice, and he must confess that in all the trouting we had had together my ideas on the subject were correct, for I had always roused two to his one with my lures, which were from the best makers in the country. He could tie an ordinary fly, but was away off in his selection of colors, being too much given to a superabundance of one hue in some of his creations; and again, when it was necessary for the reverse, these failed by ample additions. Some anglers take great pride in their creative genius, which is highly commendable, but I much prefer to patronize those who make it a commercial as well as a decidedly artistic business.

After Ned had made his initial catch of the morning, we returned, going over the same ground till we reached what is called the "big rock," about two hundred feet from the shore, and where the coast ran at right angles. Here we commenced and enacted a tragedy in the waters, for it was red-handed slaughter for quite a while. I made one double catch, and Ned picked up a couple of magnificent three-pounders. Reaching a retreating part of the cliff, we came across some small trout which annoyed us considerably on account of our flies being particularly selected for big *fontinalis*. As it was, we hung several of them and spitefully lifted them from the water, and as spitefully tossed them into the boat. It was big fish or nothing with us. I at last got a good-sized one here, and Ned another, and then concluded it high time to discontinue the carnage. The trout ran from 1½ to 3 lbs., and were of the most varied colors, from deep scarlet to bright crimson; from golden orange to peach blush; from rose-colored to deep claret; from mantling ruby to delicate violet—in fact, all the hues from the pink of the shell to the red of the sunset, and so on to the end of that which brightens and fades in the rainbow. He is without a peer in his coat of radiant beauty, and stands alone as the symmetrical athlete of this great lake.

During the day we lost quite a number of the dapper dandies that we thought securely hooked, and also missed a few vigorous rises. I told Ned it was a symptom of advancing years, a gentle inclination to the "slipped pantaloon."

Emery, the astronomer, said the smokehouse would

again have to be brought into requisition, as we had too many of the rosbud beauties for immediate use, and the probability was that the trout, which were now rising finely, would be in great abundance, and it might be as well to limit ourselves in catches, as we did not want wicked waste. The suggestion was entirely unnecessary, as we never indulged in mere despoliation; but having been given in sincerity we so received it.

We were quite weary when we returned from the sport that day, but a good supper, with plenty crowned, soon drove away the fatigue. Taking chairs after the meal, we sought our quarters, about 100 yds. from the dining place, overlooking the lake, and there had a big talk over the battles of the day. Ned, as well as I, regretted parting with several magnificent trout that we were quite sure of securing, not so much a desire for possession as to obviate the unskillful reflection it left with us. "I think," said the veteran, "that I hurried one a trifle too much, and I was positive that I had in one or two instances. How clearly our mistakes of the day came to us, but as we then and there resolved to make ample amends on the next outing, and endeavor to demonstrate the 'gentle art' to a nicety, the regrets soon vanished in wreaths of nicotine incense that ascended from our *regalias* as we watched the twilight gray drawing around us. A young moon at this delightful hour was just peeping out overhead, with power enough to drop a little trickling of silver into the lake, while the stars shone brightly with a very abundant showering of light along the milky way.

"It was an evening bright and still
As ever blushed on wave or bower,
Smiling from heaven, as if thought ill
Could happen in so sweet an hour."

ALEX. STARBUCK.

[TO BE CONTINUED.]

ICE-BOUND MAINE WATERS.

THE unusual lateness of the season is the topic of discussion with the trout and salmon fishermen at the present time. The ice still clings in the lakes in the north woods, and on the upper waters of the Maine rivers large bodies of snow are mentioned. Recent letters from Rangeley suggested that the ice cannot possibly get out of the Rangeley Lake waters before May 23, and some of the guides suggest, in writing to their patrons, that the lakes will not be clear before the 25th. Such are present indications; the season, especially in the northern part of Maine, being from 12 to 16 days late.

Doubtless some part of this backwardness of the season will be made up. I, for one, shall be greatly surprised if the Rangeley and Moosehead waters are not clear of ice by May 15. Still the last accounts say that the ice in Moosehead is strong enough to permit of the hauling of wood and lumber over it. Even Lake Winnepesaukee, in New Hampshire, was covered with ice at the date of this writing; ten or twelve days later than last year. Sebago Lake, in Maine, but a few miles from the ocean, is at present—May 1—full of ice. This lake cleared last year on April 5, according to the account of a gentleman who owns a camp on its borders, and goes there every year for landlocked salmon. This gentleman remarked on Saturday that there was then no signs of the ice breaking up.

Newfound Lake, in New Hampshire, is at present locked in solid ice. A year ago, on the last of April the lake was open and several of the big trout or togue, for which the lake has recently become celebrated, had been taken. On Wednesday April 27, last year, Fish Commissioner Henry O. Stanley, of Maine, with his friend, Col. Hazeltine, took 9 of the beautiful trout, for which the lake has become noted within a few years, from Swan Lake, near Belfast, Me. One of these trout, weighing over 4 lbs., was shown in Dame, Stoddard & Kendall's window, in this city, on April 29. This year the lake was locked in ice of great thickness on the same date.

Fishing in the streams has amounted to nothing in Maine yet. Many of the streams are scarcely clear of ice, and the whole of them have been choked with roil and snow water. Salmon fishing at Bangor has been very poor up to date, only the few already reported in the FOREST AND STREAM having been taken. The river has been running with debris and snow water. A good run of salmon is expected as soon as the water falls a little and becomes reasonably clear. Trout fishing is extremely dull in the streams in northern and western Massachusetts and southern New Hampshire, and the fishermen talk rather discouragingly. They believe that some warm weather is needed to lower the streams and reduce the amount of ice and chill in the water. SPECIAL.

Alaskan Herring Season.

The Indians of south-eastern Alaska gather large quantities of herring spawn, which they consume in its fresh state, and also dry for winter use.

The inland waters near Sitka, and southward among the Prince of Wales Archipelago, swarm with these valuable food fishes, and the Indians, besides catching large quantities of the fish, gather the eggs for food in a very simple and ingenious manner.

The spawning of the herring occurs in the spring while the bushes are yet without leaves. Large quantities of brush are cut down and stuck into the sand below low water mark in about two feet of water. At high tide the fish run along shore in vast numbers, and deposit their eggs on the clean branches of the bushes, every part of the brush being thickly coated by the deposit in two or three tides. These bushes are then taken up, and the eggs stripped off into a basket by the squaws, and the bushes replaced to gather another crop of eggs.

No one can comprehend what immense numbers of fish frequent these waters, who has not seen them. They are taken by the natives in traps, and with an implement peculiar to the people of this and adjoining coasts alone. It is fashioned as follows: A narrow board ten feet long by three inches wide cut down to a thin edge on one side in this thin edge are inserted sharp sticks or nails every three inches, the top end left free for the hands.

With this implement in hand the Indian seats himself in the bow of the canoe, and draws it through the water with a quick motion parallel with the canoe and raises it over the canoe behind, turns the machine over and drops the impaled fish into the boat.

The action is very like paddling except the motion to drop the fish. This operation is repeated until the fisherman has gotten all the hawks.

Great numbers of eulachon are taken in this way also.

E. P. H.

IN NORTHERN STREAMS.

REDDING, Cal., April 22.—*Editor Forest and Stream:* California is a paradise for the lover of rod and gun, and as they say, "it's a cold day" when some measure of success does not reward the energetic sportsman. "Podgers" boasted that not a trout would be caught on opening day, April 1. Had his prediction been published a little earlier my trip would doubtless have been given up, for I have come to look on his statements as fisherman's gospel, but in ignorance I went and found that he did not speak for the whole State. The waters were raging; the little brook (creek here) that I had selected was a madly rushing river, with a roar that confined all conversation to the sign language. My companion, a budding angler of fifteen, had an inordinate hankering for many packages and complete preliminaries. His alphabetical list of requisites for this one day's sport staggered me considerably when it was first submitted for my inspection. My observation and experience lead me to think that a sportsman's bags and parcels are inversely as the crumples on a cow's horn.

The day was a perfect one, and knowing how and where, we soon began to get "samples," and when counting-up time came I had 124, and my partner ("Podgers's" small boy) 83. All under 6in. were put back when caught, and all over 10in.—well, they are in the creek yet, so far as we are informed. We are not trout hogs; ten families had trout on the bill of fare the next day. I never sold a fish or bird in my life.

Two weeks later, with a fisherman old in experience, not in years, I went to another and a larger stream. I found the water higher than ever. We quit with five dozen that day. Four of these were about 15in. in length, the rest smaller. The mountain streams in northern California are all full of trout. The waters of Shasta and Siskiyou are all easily reached, and some of the most pleasant summer resorts in the State are just on the line that separates these two counties. The only drawback that I think worthy of mention is this, that in California you cannot sit on the hotel piazzas and catch trout.

K. E.

BLACK BASS WATERS.

Editor Forest and Stream:

I have read in issue of April 20, the note of Ira F. Harris on "Bass of Lake Winnipisogee" and also the remarks of "E. J. Tucker, M.D.," "In Quest of Bass." Those were four very fine bass of Mr. Harris's, and I imagine the sport afforded in killing them on an 8oz. rod was such as to make the angler's blood fairly boil. I have had the pleasure of a sail on beautiful Winnipisogee, and a view of the surrounding country from Mt. Washington, but I have never had the pleasure of enjoying bass fishing there.

For the benefit of Dr. Tucker, who was disgusted with his experience with the bass fishing at Lake Hopatcong, I will give the record of a few hours' catch at Prentiss Bay, Lake Huron, in September, 1889. Should the Doctor go to the Muskoka country again, he might continue on to the "Soo" or to St. Ignace, and make a trip through the Les Cheneaux Islands. Prentiss Bay is east of the Les Cheneaux group and near Round Island, which as I remember, is the easternmost of this group of islands, just off the south shore of the Northern Peninsula. It could be reached from the "Soo" by "Mackinaw" boat, or, as we went from St. Ignace, by steamer to the lumber camp at Prentiss Bay. If from the latter, a most delightful stop could be made at Mackinac Island, from whence a steamer also runs to the Les Cheneaux, where there are hotels, and the trip could be continued by sail boat from Marquette Island, the largest of the Les Cheneaux group (or by the St. Ignace steamer which stops at Marquette, if the Prentiss Bay lumber camp is still in existence. I understood that they would finish up the lumber then on hand in another year and remove the plant elsewhere. If this has been done, the steamer has probably been discontinued between Marquette and Prentiss Bay), and camp established on Round Island (Spider Island as we dubbed it, as next to the bass the spiders were there in large numbers) where the bass were, and I have no doubt still are, as the place is off the beaten lines of travel and consequently not fished out; in fact, the people at Marquette Island did not know of there being bass at Prentiss Bay. We had made a trouting trip to the neighborhood of Albany Island near Pt. Detour, and discovered the bass en route, noted the spot, and stopped on our way back. That is a most delightful country, and the trip should repay one for the health-giving qualities of the delightful ozone-laden atmosphere.

Below is the record of the catch alluded to, not all the bass we caught, for we made a second trip from Marquette Island for the benefit of the ladies, and spent a week in camp fishing a part of each day, with enough bass to supply the camp, including guides:

3½, 3, 2½, 2½, 3, 2½, 2½, 3½, 3½, 3, 3, 3½, 2½, 4, 2½, 2½, 2½, 4, 2½, 4, 2½—37 bass, weighing 80½lbs.; average weight about 8lbs.

Enough for one day for any man, or two men. Mr. W. B. Beebe of Cleveland, Ohio, who shared with me in this grand catch, and who I believe, also took a record of the weights, will bear me out as to the correctness of the above.

We were loath to leave this grand sport, for the bass were taking the minnow or spoon with a vim, but my friend had been separated from his darling for a week, and the writer, who was a lone bachelor then, as now, was compelled with many regrets to give in. But we vowed to return again, and did so the following week, and of course my friend had to take his better half along.

The second trip yielded fifty-seven bass, if I remember (we did not preserve a record of the weights on this trip), many of which weighed over 5lbs.

We found the best fishing from about 7 to 11:30 A. M.; in fact, we caught none in the afternoon. They seemed to come in from the lake to feed on the shoals, in the morning only, and we could see them in schools on the bottom, as the water there is perfectly clear and pure. We used minnows for bait, which were furnished in abundance by the Indian boys from their camp hard by.

On the whole, give me a rapid-running stream for bass fishing, and I believe the sport afforded by a 2lb. bass in such a stream, with a Henshall 8oz. minnow casting rod will far surpass all of your trolling, still-fishing, skittering, etc., in still water, even with the bass running 4, 5 and 6lbs. A 2lb. bass or a lb. or 1½lb. bass, taken at some of the points on our Susquehanna River, with his bassship

fighting you in a swirl among hidden rocks in some of the madly rushing stretches of this river is, to my thinking, the very acme of sport with *Micropterus dolomieu*. I have fished in the bays of Huron and Ontario, and have taken the large and the small mouth from Greenwood Lake, but they do not afford the same sport as our river bass, and I shall be better satisfied to take fewer and gamier bass, even if smaller, than a larger catch of large bass taken in a sluggish lake, such as Greenwood, and I suppose Hopatcong, though I have never fished there.

There is no need of the Doctor going to the North Pole or Hudson Bay, when we have such grand waters as the Upper Delaware, Susquehanna, Potomac and Cheat rivers, within a few hours' ride of New York, all good bass rivers, as the pages of our FOREST AND STREAM have recorded from time to time.

I might add that we had splendid trout fishing at Albany Island the latter part of August, 1889. We supplied camp for several days with 1½lb. and 2lb. trout, and were able to preserve some in moss, which kept them for a week nearly.

W. W. BLAKE.

BALTIMORE, April 27.

THE LAMPREYS.

A SINGULAR class of animals is that including the hog fishes and the lampreys. These are distinguished by their cartilaginous skeleton, imperfect skull continuous with the back bone, the absence of jaws, limbs, ribs and other elements found in true fishes. They have a suctorial mouth, a single nostril and six or more gills on each side. The body is naked and eel-shaped.

The lampreys or lamper eels have numerous small eggs and ascend streams for the purpose of spawning. The young pass through a long period of larval existence, during which they are without teeth and have rudimentary

MOUTH OF AUSTRALIAN LAMPREY.

eyes and a contracted mouth, with the lower lip forming a distinct lobe.

The great sea lamprey runs up into fresh water in the spring to deposit its eggs, traveling chiefly at night. It builds up large piles of stones, in which the eggs are concealed. The young are said to return to the ocean in the fall and the adults are supposed to die after spawning, but this needs confirmation.

More than a half dozen kinds of lampreys are known in the United States, principally in fresh waters. The larval

THE AUSTRALIAN LAMPREY.

young are obtained by fishermen in muddy sand bars near the mouths of small streams and form a very good bait for bass, rockfish and other game fishes. Their food consists chiefly of animal substances; they are parasites and burrow into the flesh of shad, sturgeon and other large fish.

Although the lamprey is common in the Mediterranean and was well known to the ancients, the origin of the name is involved in obscurity. It is supposed to have been corrupted from the modern Latin *lampetra*, which, again, is thought to have come from *Lambendo petras*. The name refers to its habit of clinging to stones by suction.

A remarkable relative of our American lampreys is found in Australia, where it is especially known in the Murray River. This creature has the power of living in soft mud during dry seasons, a faculty which enables it to endure the protracted droughts for which the basin of the Murray is noted. According to a writer in *Longman's Magazine*, "As the stream recedes the animal fills its pouch and disappears into the soft mud below, there to remain until the drought has passed away, subsisting on the moisture which it has learned to store in a specialized receptacle at the side of the head."

There is doubt as to the nature of this so-called pouch in the Australian lamprey, but the fact of the animal's ability to exist in a torpid condition in moist mud is well established. In South America occurs a still more curious relative of the lampreys in which a large pouch is one of the leading anatomical peculiarities. The size of the Australian lamprey exceeds that of our well-known sea lamprey.

A MAINE PAPER ANSWERED.

DIXFIELD, April 32.—*Editor Forest and Stream:* Since I have been on the Fish and Game Commission I have made it a rule not to criticize or answer any communication in regard to fish and game matters in Maine that I read in the newspapers. Neither do I propose to get into any controversy or answer any article that may appear hereafter. In your last issue of FOREST AND STREAM I find an article entitled "Preserve System in Maine," which strikes me as being very misleading, and I cannot help saying a word to straighten it out.

The writer says in regard to the clubs in Maine buying up private preserves: "Meantime the men of means, who will have hunting and fishing at any cost, are gradually taking up all the good ponds and streams and forest lands and making them into private preserves. * * * Hereafter no citizens of Maine can go on to that sacred territory without first getting a permit from the owners, who live out of the State." This writer evidently don't know, "or is not posted" on the laws of Maine.

The facts are that there is no law on our statute books to prevent any citizen of Maine (or outsider) hunting and fishing in any forest or water in Maine, except in ponds of less than ten acres, whether owned by clubs or individuals. As proof of what I say I refer you to a case tried in Piscataqua county in 1882. The decision was concurred in by all the judges. The case was printed in our report at that time, a copy of which I have mailed to you.

The critic also finds a great deal of fault at the way the laws are enforced, and says, "Take any twenty-five wardens in Maine and it is doubtful if they average to make one arrest a year." Here he is again off the track. I can put my finger on one alone who has arrested that number.

The fines imposed on poachers, instead of being hundreds of dollars, run up into the thousands, of which I can give ample proof.

We don't advertise these cases, but had we been asked would have given the information. That there is too much poaching done in Maine I admit. There are a large number of resident sportsmen as well as outsiders who come here; but taken as a whole the percentage of poachers is small.

The slender means we have had at our command, we have used as our best judgment dictated for the best interests of the State, whether successfully or not we leave the public to judge. Maine is now acknowledged to be the banner state for fish and game. If such a rotten state of things exists in Maine in regard to her gamelaws why is she so regarded?

The salmon fishing at the Bangor Pool opened this week; seven were taken in one day with fly.

HENRY O. STANLEY.

Merrimack River Salmon.

THAT there are salmon in the Merrimack this year was demonstrated yesterday when a 30-pound beauty was caught at North Chelmsford under very peculiar circumstances. As the Ayer & Salem freight was passing along that place the engineer, Charles Talbot, saw a big commo-

tion in the water near the shore. He stopped his train, and all hands rushed to the spot. Here they found a large salmon struggling as best he could to free himself from a line about him that had become entangled in the bushes, holding him fast. Mr. Talbot succeeded in getting the fish ashore with a little assistance, and bore it off in triumph. When weighed it was found to be just about 30lbs.—*Lowell Courier, April 21.*

"NESSMUK."

O BARD! like shining Pleiad of radiant days,
Midst constellations of spheres in starry night,
Thy golden words flash like meteors in their flight,
Revealing winsome lore of "Woodcraft" ways.
Thy magic, echoing words the woodlands praise,
In witching anthems awakening the weird wood-sprite,
Mid whispering pines 'round the camp at twilight;
O thy gracious welcome to the camp-fires blaze.
Thy entrancing words shine like a glistening gem
In thy lovely "Forest Runes." What a graceful token!
Writ in Nature's enchanting wooing Muse. O, Poet-wise!
Thy cultured lyrics—these should wear a golden diadem;
And now comes sadness that thy lyre is broken,
With uplifted eyes we think of thee in Paradise.

HARTFORD, Conn., March 30.

ABBOTT CLARENCE COLLINS.

THE real flying fish inhabits the warmer seas and derives its name from the wonderful length of time it can sustain itself in the air. It is not claimed that it flaps its fins, or wings, if you please, like a bird, or that it can change its course.

Forest and Stream's

* Fishing Postals.

"DROP US A LINE" ON A POSTAL CARD.

Fishing News, Place to Catch Fish, Fish Caught,
Fishing Incidents.

CORTLAND, N. Y., April 30.—Trout anglers are beginning to wear a cheerful smile and show a disposition to beat some other fellow telling the most glowing fish yarn.

Jno. Doyle caught 17 trout last Wednesday, the combined weight of which was 8lbs. A few other small catches are reported. The sharp and effective work of the game protectors have irritated a good many farmers, I am told, to such an extent that they are posting their land very conspicuously. However, I am of the opinion that the enterprising trout angler will continue to do business.

A friend of mine living near Oneida Lake writes me that pike are to be found in that lovely sheet of water in great numbers this spring. "Not in a very long time," he says, "have they been so numerous." Protector Hawyn, assisted by E. D. Crosley, last week captured 110 fish law violators and 20 nets on that lake. Verily, the illegal fisherman is getting his fingers burned almost daily.

M. C. H.

LIVINGSTON MANOR, N. Y., April 24.—Last Monday a gentleman caught in our river several nice trout, and I saw one in his basket that weighed two pounds. It was a cold windy day and the stream high. I think trout fishing will be fine with us soon as the weather warms up a little. Ice all thawed out and no jams or gorges this season.

Wm. P. ROSE.

BLOOMINGBURG, N. Y., April 30.—Yesterday was the first fishing this season about here. Will Shearer, of this place, caught 50 fine trout. Frank Redfield, also of this place, caught about 30 fine trout, one that weighed 1½ lbs. The weather is getting warmer with a few warm showers, and this coming week will probably be a fine time to fish for trout.

DELL CASE.

SWIFTWATER, Pa., April 29.—Our stream has been stocked this year as usual and the fishing promises to be good, if we may judge from early returns notwithstanding the cold and inclement weather during the past week. Two Philadelphia anglers took over two hundred fine trout during their four days' visit here. We are keeping a tally of the fish taken, etc., for our own information.

MRS. ARTHUR MACINNIS.

LIBERTY FALLS, N. Y., April 29.—Trout fishing has been good the past three days, and if it is a little warmer and showery next week, it will be the best of the season, as it has been too cold weather till now. One boy caught twenty-eight, that averaged 10in., in three hours in the middle branch of the Mongaup near the old Kilbourne mill.

EDSON A. GREGORY.

LIBERTY, N. Y., April 22.—Weather is too cold for good fishing yet, as we have snowbanks, and on the 20th a snow and hail storm, still Frank Huber brought in four pounds of trout, but it was pretty tough fishing, as it froze all day. Very little fishing has been done yet.

GEORGE COOPER.

NEOSHO, Mo., April 20.—Black bass (both large and small mouth), jack salmon and channel catfish are now biting well in Elk river, 20 miles south of here. Highly satisfactory strings are being caught near Lanagan, in McDonald county, Mo. Our black and rock bass in U. S. F. C. ponds are all nesting at present.

W. F. P.

ANGLING NOTES.

The Parmachenee-Belle

FEW American fishermen but know the Parmachenee-belle, a fly invented by Mr. Henry P. Wells, author of "Fly Rods and Fly Tackle," "The American Salmon Fisherman," etc., and named after Parmachenee Lake in Maine, where that prince of guides and camp keepers, John Danforth, presided over Camp Caribou until the camp passed into the possession of a private club. The Parmachenee-belle is a new fly comparatively, and with one bound, so to speak, it sprang into public favor, not only as a trout fly, for which it was designed, but as a black bass fly as well, and a knowledge of it has spread up and down and across the United States and Canada. All this I was prepared for, but I was not prepared to find that its fame had reached the far-away South Pacific, as a letter in the *Otago Witness*, New Zealand, bears witness. The writer says: "I am to have some samples of the celebrated Parmachenee-belle fly sent to me for trial on the streams in New Zealand. I shall send two or three to each of the angling associations as soon as I get them, so that they will get a thorough trial. This fly is a great favorite in America, and experts say that large trout, from Labrador to Alaska, take it greedily, and at all seasons. Mr. Bainbridge has already made an enormous quantity for English and American anglers. I expect to have them in plenty of time for the beginning of the season, and shall send them round to as many as possible." Mr. Wells will undoubtedly feel a glow of pleasure that the fly of his creation has strayed so far away from home and been received so hospitably by the fly-fishers of New Zealand, and he may be surprised that Mr. Bainbridge has sent an enormous quantity of the flies to America, for Mr. Bainbridge is a fly tyer in Eton, England.

Mr. Wells designed the Parmachenee-belle while on a fishing trip to the home of the big trout in Maine with John Danforth as guide, and he says, "That the large trout looked upon the artificial fly not as an insect, but as some form of live bait, we agreed was probably the fact. Upon this theory that combination should be the most successful which most closely reproduced the colors of some favorite trout food. Why, I cannot now recollect, but the belly fin of the trout itself was selected as the type." Before the Parmachenee-belle was created another fly was designed for stream fishing for smaller trout than are fished for in the Rangeley Lakes region, also with the

idea of representing the belly fin of a trout. This fly is called the fin-fly, and is made with body of red silk, wings white, hackle chicken red, with the roots of the fibres black (a furnace hackle), whisk of same hackle for tail, and gold tag. This I have often proved to be an excellent fly in stream fishing, but it has little resemblance to the Parmachenee-belle.

The Parmachenee-Belle at Home.

I was starting early one morning from Camp Caribou to fish in the Upper Magalloway River, and Mr. Wells and John Danforth were starting from camp at the same time for an exploring trip in another direction. As I got into the boat John said to me, "There is a five-pound trout in Cleveland's Eddy, for I saw him jump out of the water, and I hope you will get him." It would be as improper to talk Hebrew to a Digger Indian, as it would to fish Parmachenee waters with anything but a Parmachenee-belle. When I reached Cleveland's Eddy and began to cast I raised and killed a trout of 1½ lbs., and a few minutes after I killed one of 2½ lbs., and according to this progression I should have been prepared at the next cast for the five-pound fish which John had told me about, but I was totally unprepared, and yet I believe I raised the fish. I was in the bow of the boat and Marshall Linnell, my guide, in the stern with a paddle, and as I made the cast I discovered that I had cast over and across a sunken tree trunk, the top of which stuck out of the water just below me. I could see the stick, perhaps two feet under water, directly in front, and it had some pieces of the limbs sticking out in various directions, and at the instant that I discovered the situation into which the boat had drifted us while killing the previous trout I saw a big trout rise to my fly. He was in no particular hurry for a trout and I checked my fly the moment I caught the gleam of his sides coming from the depths. Marshall was rapidly and silently pushing the boat up stream, and my fly slowly settled in the water, and not a foot away the trout settled with it, every fin moving and gently fanning the water. We could see the trout as plainly as though he had been in the boat, and were both sure that it was John's trout. When the boat was far enough up stream to make the stick dive in the water, I started the fly, and the very instant that I did, the trout took it and I struck, and with the same motion and before he could turn I pulled him over the stub and then gave him his head. He went at once to the bottom and began to execute a wardance that threatened disaster. After a moment I began to reel the fish to the surface, but before I reeled him 5ft. he gave a slight shake of his head, which I felt through the taut line and rod, and then he was gone, and I never saw him again. The great pull that I gave to get the fish over the sunken stub probably tore the mouth so that it was an easy matter to shake the hook out.

Maine Fish Laws.

As I write of fishing in Maine I am reminded of a letter written not long ago by an English angler who gave in the *Fishing Gazette* an account of his visit to the Maine lakes for landlocked salmon and trout. He reached Rangeley Lake while it was still ice-bound and was obliged to wait for a break-up. He says when the ice is gone at first the salmon and trout will not rise to the fly: "The method of catching them then is to troll with a little fish called a minnow." * * * According to the laws of the State no artificial minnow is allowed and no triangles, or hooks back to back, nothing but single hooks in fact; and to their credit be it said, so far as I saw or heard of, the fishers obeyed this law." I mention this because of its tribute to the honesty of the Maine fishermen, but he is in error regarding the use of artificial minnows, for they are not mentioned in the law. An artificial minnow with a single hook would not be unlawful, as I read the law. But as the writer is accustomed to seeing artificial minnows armed with an array of hooks he naturally assumes that they are illegal.

A. N. CHENEY.

A Curious Reel.

POST MILLS, Vt., April 19.—*Editor Forest and Stream:* I send you in separate package a reel which you may so admire as to style and workmanship that you would like to show it at the World's Fair in the FOREST AND STREAM exhibit. This reel, for bait-casting Henshall style, would not perhaps be a success, but for "slinging a hunk of pork" might be "good enough for the Joneses, who were not used to the best of things anyway." Of the early history of this reel I know but little. It was sent to Thos. H. Chubb some ten or a dozen years ago, and as keeper of the "hall of curios" in the Chubb factory, it came into my keeping. It was in the factory at the time of the fire two years ago, but as usual at fires, every one carried out such common goods as fishing rods or machinery, and this valuable reel disappeared in the "devouring flames." In removing and clearing away rubbish preparatory to building the new factory, underneath the remains of a cheap one thousand dollar machine, which was destroyed almost beyond recognition, was found, to the great joy of all, this reel safe and sound, and I believe a little better than before, for the heat had sort of tightened up the joints.

You may know something of its early history, for I believe it was shown to several before it came here, and there was something about it in FOREST AND STREAM. I can only remember now of those who were connected with it, the name of old Bill Hess.

If it is not suitable for a place in your exhibit to the World's Fair, after showing it to the boys of FOREST AND STREAM, please return it to me, as I am thinking some of going into the reel business and would like to keep this for a pattern.

E. W. RAYMOND.

[The reel is certainly worth exhibiting, and the curious reader can see it at the World's Fair in FOREST AND STREAM's exhibit in the Angling Pavilion. We cannot learn that it has any special history, and it is probably one of the many home-made productions, manufactured in early days by blacksmiths and other metal workers. The peculiar point about this one is that the reel plate is at the side instead of beneath the spool and so is opposite to the crank or handle. Judging from appearances the reel plate was lashed to the rod with a line.]

Bangor Salmon.

BANGOR, Me.—The salmon caught in the pool, a mile above the city, are the largest on record this year. The river opened April 5. No salmon were taken with fly until April 21, when Mr. Libbey, an employe of a Bangor

shoe factory, landed one that weighed 20½ lbs. Since then Dr. Baxter has caught one that weighed 28½ lbs., and P. M. Ayer and several others have taken fish of 20 lbs. or more. The water is still cold and the fish do not bite well. I have been up two afternoons and all I caught was a bad cold. The fish are running big, however, this year; and if the men a mile or two below the dam were compelled to take up their nets there would be fine sport at the pool.

TOM FORD.

Connecticut Trout Season.

MANCHESTER, Conn., April 27.—Some one introduced a bill in our Legislature this winter making the open season on trout the 15th of March. I do not understand what this individual sought to gain by the bill. Of course it was not passed. Two years since some of the ponds east of here were frozen over on the first day of April, and this year April fishing is very poor. Our season should open the 1st of May and close the 1st of September. Then with honest endeavor and proper legislation the streams can once more be made productive. The trouble with us is a few want to own all the waters in the State.

JONATHAN.

N. W. Iowa Fish Notes.

FISHING has not commenced here as yet. Trout season opened April 1, but creeks and rivers were swollen and full of ice. I have heard of no fish being taken. The weather all the spring has been such as to practically prevent seining and spearing in this section, although they have been at it in other places, as a letter from Fish Commissioner Griggs will show. He says he has made over one hundred prosecutions already. Open season on bass and pickerel begins May 15. Good fishing is expected. Some three carloads of Iowa fish have been sent to the World's Fair. They are prize-winners. Look for them.

P. C. B.

Salmon Fishing in New Brunswick.

THE salmon fishing privileges on the Nepisiquit River, advertised in our columns for sale by auction at St. John, N. B., on April 26, were duly offered. The attendance was small, there being only two competitors. The two lots, each a one-fourth share in the Nepisiquit Angling Club's properties, sold for \$5,000 and \$5,025; the third lot, representing Mr. J. De Wolfe Spurr's fishing rights at the Grand Falls of the Nepisiquit, offered at the upset price of \$4,500, was withdrawn.

MR. A. N. LOCKE, of Salem, Mass., who has been a subscriber to FOREST AND STREAM for fifteen years, offers in our advertising columns this week part of his hunting and fishing outfit for sale. Inexorable time has laid his hand on the old sportsman, and he fears that he will never again wander among the woods and lakes and lonely trout streams that, as he expresses it, he has "loved almost to infatuation."—*Adv.*

THE BEST LINE TO CALIFORNIA from either Chicago or St. Louis is the Burlington route. Takes you via Denver, Colorado Springs, Leadville, Salt Lake and Ogden. Daily vestibuled trains, with Pullman sleepers, chair cars (seats free) and Burlington route dining cars.—*Adv.*

The Kennel.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

May 30 to June 2.—American Pet Dog Club, Lexox Lyceum, New York. Marion E. Bannister, Sec'y.
June 18 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 15.—American Field Trial Club trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Great Dane Judging.

Editor Forest and Stream:

The article in your issue of April 27, headed "Great Dane Judging," ought to have been properly named "Great Slurring on the Judge;" and if it was not necessary to refute a couple of Mr. Maenner's remarks, I would not reply, thinking it beneath myself to notice such scandalous attacks.

Any man has a right to his own opinion, and I demand this as well, as I expect it of anybody else. I have never spoken more than a dozen words in my life with Mr. Maenner, and all he is alluding to must have occurred in his inventive brain. I never went ten steps with the man to look at his bitch or any others, and all the words I have ever spoken to him, outside of customary phrases, when Mr. Heppner introduced him, was after the judging, saying: "I am sorry I could not do better for you," or so, what any man might say. What an imagination has this man got, when he repeats whole conversations, which never have taken place, at least not with me. Such absolute fabrications and false insinuations ought not to appear in your paper, if you really meant what you have said in your indorsement of Mr. Krender's letter. You know yourself very well, Mr. Editor, that the Westminster Kennel Club is not in the habit of accepting such offered services as judge, as Mr. Maenner insinuates. I had done, and it is the strongest bit of doubtful practice I have lately noticed, inventing such hallucinations to suit his end.

G. MUSS-ARNOLT.

Which is the Best Spaniel for Work?

Editor Forest and Stream:

In the last number of FOREST AND STREAM, Mr. Cecil Cox describes what is evidently a very useful spaniel. At the same time I should like to know whether the measurements which he gives are considered as anything extraordinary in a fully matured and well developed field spaniel? For the sake of comparison I should very much like to know the corresponding measurements of a typical dog like Newton Abbot Beau. The discussion at present going on in FOREST AND STREAM in regard to the merits of the cocker as a field dog, is a profitable one, as it recalls to the minds of most breeders the fact that the cocker is not a toy, but a workman.

G. RUTLEDGE PRESTON, JR.

CAZENOVIA, Madison County, N. Y., April 20.

Coursing Near Denver.

The following interesting and spirited description of rabbit coursing and wolf chasing was received from the veteran sportsman by our Western office. It is especially interesting as showing what the greyhound will do as a destroyer of wolves, and the desperate gameness and destructive fighting powers they possess. He writes:

According to promise, I let you know how our day's coursing turned out. I regret you could not have stayed a day or two over at Denver. Of course, a suitable horse was the first thing to be obtained. And after a long and varied search among the stables, and seeing all sizes and classes of animals, from the diminutive burro to the coach horse, I found nothing suitable, from lack of condition or other causes. I had nearly concluded to go in a buggy, when Mr. Chas. Barron helped me out of the difficulty by offering me what proved to be an excellent mount, whose mettle had been tried on the race track, and whose performance in this instance left nothing to be desired.

Our arrangements all being completed the previous evening, by seven o'clock the following morning we were about fifteen miles from Denver in an open country without any habitations in sight. Boomerang, of the St. Patrick Kennels, and C. W. Philip's Modjeska, a nice looking brindle bitch, were at once put into the slips. After a long, tedious walk, and nothing being started, they were taken out of the slips and secured. A number of others were then turned loose.

Things were getting dull when the eagle eye of Mr. L. Bartels discovered a coyote sneaking over an adjoining hill. As this was surely a real, not an imaginary coyote, of which we had seen so many, excitement ran high—much too high, in fact, for instead of quietly getting as close to the creature as possible and allowing the dogs a fair start, those nearest to it yelled like Indians and raced after it in a body, frightening it terribly, and giving it a start of at least 400yds. before the St. Patrick dogs became sighted, and giving Mr. Philip's dogs, which were some yards closer, a commanding lead.

Level as a floor for the first half mile, it was a beautiful race, the three white ghosts of the St. Patrick's passing one after another the dark contingent, and rushing on to the terribly frightened coyote like fate. Adonis was slightly in the lead, with Miss McGinty close up, and Irish Lass fast gaining, she being away off to one side and behind at the start. Into a large bunch of cattle he was heading, and just as he reached the outside of the bunch Adonis caught him and threw him around, but he got in among some cattle and the dogs became unsighted and did not become sighted again until he was some hundred yards away over a hill. He finally reached a gully in safety. He saved his brush by bad management on the part of the men at the start. He could not have made his escape had he been approached cautiously. May he live to afford another good race.

Boomerang and Modjeska were again put into the slips, and after another long tramp a regular old white-tail jack rabbit—a hummer—got up within 40yds. on beautiful grounds for a race. Modjeska acted mean in the slips, and to prevent their becoming entangled, Porter gave them a short slip. Modjeska lunged in the slips and lost twenty lengths in an instant. Boomerang went with a fire and determination that I never saw excelled, and terrific speed, turned, wrenched twice, placed Modjeska only for a second, as he rushed past her, turning again, and again placing the bitch, only to be given another go by, where upon other actors joined in the scrimmage, as two blue dogs had dragged the man holding them over the back of the buggy, and Irish Lass and Miss McGinty, the latter with a chain dragging, had broken the side out of Mr. Bartels's buggy in their efforts to get loose. Poor puss had taken the advantage of the knocking against each other and was making a break for liberty, when Irish Lass made a rush like a demon and turned him again into their jaws, she on the outside being the first to get her mouth on him. I was sorry to see such a termination of the course; but he could never have escaped from Boomerang, who is not only very fast, but exceedingly sharp at getting round and stays right on his hare.

Boomerang was then taken up and we were rather cheerlessly headed toward town, scarcely expecting to see anything more, with all the greyhounds following (nine in all), when the searching eyes of Mr. L. Bartels again descried another real coyote. Our previous failure made us more careful this time, and T. F. Bartels assumed command and ordered a circuitous route so as to head him off, he having disappeared over some rising ground into a hollow beyond. After a careful survey he could not be seen, and we despairingly spread out some distance apart, I being on the extreme outside. A yell from L. Bartels caused me to turn in the saddle, and half a mile away, going directly from me, was the coyote, and Adonis and Miss McGinty within a hundred yards of him and rapidly gaining. Irish Lass had been tossed out of another buggy, and was rapidly closing in, as the former two had given him a sharp turn and headed him from his original course. The time lost in nipping and delaying him had also let the dark ones up. As it was beautiful galloping ground and my horse needed no urging, I was cleverly in at the death. When he was knocked over Miss McGinty had him by the left ear close to his head. Irish Lass had him by the neck. Neither of them ever broke their hold until after the coyote was dead.

No bull-terriers ever showed more gameness. Adonis and three of the others had hold of his body, all worrying and dragging at him at once. He was an immense big fellow, and I am having his hide preserved and a watch charm made out of one of his tusks.

So you see, aside from bench show-dogs, the St. Patrick Kennels possess greyhounds that with beauty of conformation have all the qualities for coursing hares and the courage to kill coyotes. It may be a long time before they have again a Monk's Bishop, Pearl of Pekin, Irish Lass, Flying Dutchman and Adonis in one litter. I believe that was the sixteenth coyote killed by the St. Patrick Kennels this season.

JOHN DAVIDSON.

Monroe, Mich., April 21.

Last Sunday was a red letter day for Mr. James B. Blossom. His Irish setter bitch Lady Alice whelped twelve pups, nine dogs, to his Bedford. This might not, to the casual observer, be worthy of a special mark, but when it is remembered that Bedford won first in the Irish setter field trials at Lexington, N. C., December, 1892, in All-Age Stake (twenty starters, the largest ever run, beating Finglass, Coleraine, Elcho's Maid and several other winners at previous trials here and in England), and Lady Alice divided equal third prize at same trials, this litter is especially valuable in these early days of Irish setter field trials, if there be any virtue in selection of parents, both of which are handsome and very dark red.

LOS ANGELES DOG SHOW.

(Special Report.)

THE fifth annual show of the Southern California Kennel Club opened at Los Angeles at 10 o'clock last Wednesday morning. In point of numbers it was nearly the equal of any of its predecessors, but in quality of most of the breeds it was far superior. The building in which it was held was spacious and well ventilated, the benches well arranged and the management all that could be desired. Most of the classes were fairly well represented, some of them with animals of real good quality. The most numerous were the fox-terriers and pointers, both of which contained some very good specimens. The greyhounds were fairly good in number and quality. The St. Bernards were fully up to average in quality, but few in number. The English setter classes contained only ten all told, and each one represented almost a different type. The other classes only contained a half dozen or so each.

Mr. Geo. Raper, of England, judged all classes and gave quite general satisfaction, except among the fox-terrier men, who each seemed to think that every dog he showed should have had a blue ribbon.

MASTIFFS.—In the class for dogs, first went to Bishop, a dog of right type, but lacking in size and massiveness. He was good in head, shoulders and feet, but a bit cow-hocked. Woolfin, second, fair in type but small, light in bone and lacked much in substance. Maro A., third, has a weak face and bad ears, and cannot be considered more than a moderate specimen. In bitches, Phyllis won easily over Lomita Hilda, beating her in body, head and substance. In dog puppies first went to Lomita Caution, a very good puppy, seven months old, beating his brothers in bone and skull. Lomita Prince, second, not so good in size as the winner, is still a very good specimen of his age. Lomita Wotan, vhc.,

The Flying Dutchman. Monk Bishop. Irish Lass. L. F. Bartels.
"ROUGH ON COYOTES."

while good in type is very bad in legs, the result of bad raising in all probability. In bitches there was but one to face the judge. Lomita Minting, a rare good young bitch of the same litter as the dogs, she has splendid eyes and barring the fact that she is a little light in muzzle, it might be said that she is good all over.

ST. BERNARDS.—California Bernardo, a good sound all-round dog only sixteen months old, won first. He is as yet a little small for the open class, has a head of the right type, good legs and feet, good loin, proper markings and splendid action. Second went to California Alton, who at first sight looked an easy winner; he is rather too massive in head, seems weak in loin and hindquarters; while he has an abundance of bone, his forelegs are not properly formed. Reglov, a well grown puppy of eleven months, took third. He has good bone, well formed legs and is strong in loin, and if not weak in head when developed he will prove a hard one to beat. The reserve, Judge, Jr., lacks substance and needs more bone and size, but otherwise is a very well made dog. In bitches, Tomah was much the best, being a good all-round bitch, but light in skull and long in face. Lady Delight, second, was better in head, but lost to the winner in body and action. Lady Gladys, third, is rather hollow backed and lacks expression. It was a close race between these last two for second place. Riglov, the only one shown in the dog puppy class, is a fine young dog, winning third in the open class. Zaidee, the only bitch, is good in size and coat but rather heavy in ears, she was given the blue ribbon.

NEWFOUNDLANDS.—Strap, the winner of first, was the only fair specimen. He is a big, upstanding dog, a little off in head, with good coat. The others all showed outcrosses and were poor representatives of the breed.

GREAT DANES.—In this class the dogs and bitches were classed together. Titan, winner of first, was lately imported from Paris. He is of the right type, with fine head, body, and feet. Second went to Marjel, much the same type as first but not so good in head. Third to Ritaud, a bitch of lighter type all round. Nora, c., is thick in head, indicating a mastiff cross. In puppies Victor was given a second—fully as much as he deserved.

GREYHOUNDS.—There was one dog in the challenge class. He is a good specimen of the right type but is beginning to go heavy with age. In open dogs the blue ribbon went to Donard, a light red, wanting a little in substance and not just right in head, excellent legs and shoulders, but not so good in hips. Falcon, second, is fairly good in form, better in ribs than the winner, but a little bad in his action behind. Leo, Jr., third, is very stylish and rather good in quality, but his feet are badly out-turned. In bitches Lady H. Glendyne, first, is a fine specimen and full of style, but a trifle straight in hocks. Prouts, second, was too thin to show to advantage. The balance of the greyhounds were very indifferent lot.

POINTERS.—There was but one in the challenge class, Kan Koo, given first; has very much of the right pointer type, but is too thick in shoulders and neck and rather straight behind. In profile he has a good type of head, but short and thick in skull and rather coarse. In open dogs, over 55lbs., Jap got the blue. He is a lemon and white of nice quality, much improved since last year, and well shown. He is

rather round in skull, with good back and loin, fair ribs, well-set shoulders, but a little too thick. Commodore, second, has a good head of the right type, but bad expression; good bone, but short in quarters. Third went to Ben, a young dog that will show better in time. He is fairly good all over, but a little snipy in muzzle. The reserve was given to Ko-Ko, a very coarse dog all over, with bad head. The others were quite indifferent. In heavy-weight bitches, Amaryllis is a good bitch of the right type, beating Bess, second, in head and shoulders. In light-weight dogs, Ben Hur won easily. He is a grand dog, with good head, front and shoulders, but faulty in body and thighs. Commodore, second, is a very showy dog, but thick in shoulders and straight in hocks. Honest John, third, is plain in head and rather throaty. He has good shoulders and loin, and nice style in the ring. In light-weight bitches, Kioto took first over Tippetta, second, who would undoubtedly have beaten her if she had behaved well in the ring. Kioto is too short, and straight in shoulders. Third went to Pepper, a black and white, with good body, but very light in head and muzzle, and badly cow-hocked. In dog puppies, Bob took first, a very good puppy, but straight in stifles. Grover, second, is rather backward, but shows good form, and should make a good dog in time. In bitches, Chic M. won easily. She was better all round than Fanny H., second, who showed badly.

ENGLISH SETTERS.—In the dog class each dog represented a different type, neither of which was proper. Cash, the winner, is an upstanding orange belton, light in limb and ragged in hips. He has a fairly good skull, light in muzzle and bad in expression, has good shoulders, well formed but light in bone, good feet. Mercury, second, is small and rather too heavy. His head approaches the right type, but too coarse. He would have looked better if shown in less flesh. Starlight W., third, is too cobby and too short in head, ears set on too high and neck too short; shoulders upright and body short, feet and legs good. Stamboul, the reserve, has a better head, but is quite flat in ribs and very long in loin. Sam K. Gladstone, who got the three letters, has a nice head, rather coarse otherwise and bad in action; would have done better if shown in better condition. In bitches, Countess Noble, who got the blue ribbon, was an easy winner, of a grand type that fills the eye at once; head good, but might be a little cleaner below the eyes and squarer in muzzle; good neck, fine outline and body; good legs and feet, stifles and hocks strong and well let down. Estrella and Betsy Mack, second and third, are of the true English setter type, but too light all over, and lacking in substance.

IRISH SETTERS.—In dogs Glenmore Hoodlum won easily. He is a good type, good in coat and color, but rather loosely put together, being young he will likely improve with age. Mac B., second, is too large and was shown too fat. In bitches Maid of Glenmore was the only entry; she is a fairly good bitch, but not so good as the winner in the dog class. In puppies, Glenmore Hoodlum, described above, was the only entry.

GORDON SETTERS.—These were a poor lot, Lady Clara Jane being the nearest to the proper type of this breed, the others were simply black and tan dogs.

IRISH WATER SPANIELS.—There was one dog and one bitch, the dog being a fair one, but short in head.

SPANIELS.—In the over 28lbs. lot there was a fair Sussex and moderate Clumber, given first and second. In cockers, open dogs, two faced the judge, Bronte, a good all round dog, but a little coarse, beat Dan Slater, who is not the right type. In bitches Gypsy Jane won. She has a nice body, but weak in face and lacks bone. Denver Dell, second, is too long in body and also weak in face.

RETRIEVERS.—There was but one, a curly coat of indifferent type; he was given a first.

COLLIES.—First went to Fordham Bravo, a fairly good dog of good coat. In bitches Strathmore Hazel Dell, carrying her tail in the air, was given vhc., fully as much as she deserved.

FOX-TERRIERS.—The challenge class brought out but one, Blemton Volunteer, shown entirely too fat, too heavy in shoulders, but otherwise a very good type. In open dogs Le Logos, first, is an evenly-balanced dog of good type, long-headed, good in neck and front, a little long in body, hocks well let down and a good mover. Blemton Reefer, second, is also a high quality dog, stylish in appearance, beautiful neck and outline, fine coat, but hocks a little straight, ears well placed, but carried badly. This defect, combined with light thighs, lost him the blue ribbon. Hampton Tip, third, is a long-headed puppy, short of coat and has a listless carriage. In bitches Bonnie Bess, first, is better in size and nearer the proper type in shape and finish, short back, well-placed shoulders and fairly good legs and feet. Dauntless Suzette, second, is a trifle full in skull and inclined to be chunky, coat short and soft, but quite gay in carriage. Lomita Winfreda is a size too large and none too good in action, skull too thick at base and broad chest. Lomita Patch and Lomita Beck Brummel, both belonging to the same owner, took first and second, Patch having a little better type and better forelegs. Captain, third, and Tough, reserve, were fairly good and rightly placed. The bitch puppies were all ordinary. Pomona was given second and the others not mentioned.

The wire-haired division contained but two, both fair specimens, Todge taking first and Jack second.

Skye terriers were very ordinary, Sally getting the blue ribbon and the other no mention. Toy spaniels had one good Japanese and pugs one very fair dog, Punch, which was given first.

In Spitz, Jack and Bob White took first and second; they were only fair.

LOS ANGELES, Cal., April 23.

LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, M. S. Severance's Bishop; 2d, Miss Blakewell's Woolfin; 3d, E. Templar Allen's Maro A. Bitches: 1st, M. E. Bragdon's Phyllis; 2d, J. W. Mitchell's Lomita Hilda. Puppies: 1st and 2d, J. W. Mitchell's Lomita Caution and Lomita Prince. Very high com., Jacob Muller's Lomita Wotan. Bitches: 1st, J. W. Mitchell's Lomita Minting.

ST. BERNARDS.—Dogs: 1st, J. G. Barker's California Bernardo; 2d, F. H. Allen's California Alton; 3d, Dr. A. T. Regensberger's Reglov. Very high com., E. P. Schell's Judge, Jr. High com., Capt. Wm. Poole's Gilott. Com., A. S. Auchincloss's Monk of Snowden. Bitches: 1st, Frank H. Allen's Tomah; 2d and 3d, E. P. Schell's Lady Delight and Lady Gladys. Puppies: 1st, Dr. A. Regensberger's Reglov. Bitches: 1st, Geo. Fugard's Zaidee.

NEWFOUNDLANDS.—1st, J. B. Banning's Strap; 2d, M. J. Doolin's Prince; 3d, Jack Marletich's Turk.

GREAT DANES.—1st and 3d, John G. Borghum's Titan and Ritaud; 2d, Mrs. J. G. Borghum's Marjel. Very high com., John F. Wohler's Nora.

GREYHOUNDS.—CHALLENGE.—1st, G. Gordon's Leo. OPEN.—Dogs: 1st, Hugh McCracken's Donard; 2d, S. Tyler's Falcon; 3d, K. C. Klokke's Leo Junior. Very high com., J. Tannemacher's Wallace Go

Our special report of the English Setter Club field trials held in Devonshire, is crowded out by more important home news.

DOG CHAT.

Irish Terriers.

Through the courtesy of one of its members, in fact the only American member, Mr. Walter F. Comstock, we are enabled to look through the prettily and appropriately gotten up report of the Irish Terrier Club for the past year. Dr. Carey in the course of his report as to the progress made by the club and its present healthy status says: "There can be no doubt that the Irish terrier has become almost the most fashionable breed of terrier, at least if numbers seen on the benches at all the principal shows during the year are any criterion; the quality has also much improved and the classes now present a much more even appearance, and a greater similarity in type, than was the case a few years back. Coat seems to me to be the point now requiring most attention, many of the dogs seen during the past year are wanting in density and hardness of jacket. Ears are improved, as is color. Size is another point I should like to direct breeders' attention to; it is time now that more dogs under 24lbs. should be produced, and I think that the attention of judges having been specially directed to the club standard weights, will probably have a good effect in the direction of lessening size during the coming years." Among other things we learn that the sixty-guinea challenge cup was offered six times, and on every occasion won by Mr. E. A. Wiener's champion Brickbat. Dr. Carey is happy to say that the Kennel Club has made the cropping regulation into a rule of the club which goes into effect after July 1, and this prohibits the exhibition of any Irish terrier, born since Dec. 31, 1889, if cropped, at any show held under Kennel Club rules. In our remarks on this subject recently we should perhaps have made our meaning a little clearer if we had written "even better." We do not in the slightest degree wish to cast any slur on the excellent lot of "daredevils" our countrymen have shown recently. We believe that the good lot of dogs of this breed such as Dummurphy, Boxer IV., Jack Briggs, Jackanapes, Candour, Merle Gandy, etc., are only the forerunners of strong classes at future shows, and we throw out the hint suggested by this new cropping rule, which will necessarily have a retroactive effect on many kennels which have good dogs that have been "under the scissors" since 1889. It was a hint that we thought some of our terrier men might take advantage of, as such a rule does not obtain over here.

Later we hear that Brickbat has won the cup outright and that the club is now calling for subscriptions to pay for another challenge cup. Brickbat has won twelve successive victories.

The Columbian Dog Show.

We are continually hearing of the inability of intending exhibitors at the World's Fair dog show to secure a premium list, although repeatedly written for. The way things are going it looks as if a muddle is in sight. No authentic list of judges is as yet forthcoming, and the promised revised premium list has not yet made its appearance. According to the date given out in the early premium list the entries close May 20, and that is little more than a fortnight ahead, and then there is no mention of entries having been received yet. A great effort should have been made to secure foreign entries so that native exhibits could have been compared and our strength or weakness ascertained. English exhibitors depend greatly on the list of judges, and with the present uncertainty as to who will really officiate, there is little likelihood of our cousins across the water making any special effort. We should know, too, by this time what the specialty clubs are going to do in the way of specials. In fact the whole arrangements seem to be as incomplete as the World's Fair generally, when President Cleveland pressed the button last Monday. There is another fact which has cropped up and been brought to our notice. Through the rules of the English Kennel Club, dogs are registered which would not have been considered eligible for registration in the A. K. C. S. B. Take for instance the Irish terrier Merle Grady, owned by Mr. W. J. Comstock, of Providence, R. I., which is registered in the English book, but cannot be registered here on account of his grandsire, Bellman's, the well-known prize winner, sire being unknown, still Bellman is registered in the English book, and were Merle Grady owned in England he could be shown at the World's Fair show; as it is he is debarred. Owned by an American he must produce that great grandsire or stay at home, because the A. K. C. will not give him one of those gilt-edged certificates. No doubt there are other well-known dogs that will find themselves in the same box. An inferior animal, however, that can boast of three generations back of names no one knows anything of, nor cares to, is allowed to occupy a bench that might well be filled by a worthier animal. He has the magic number, however, and has the further privilege of paying fifty cents extra into the already loaded coffers of the A. K. C. for something he had already paid for. Americans have great advantages and—disadvantages. Hurry up the judges and premium lists.

Pet Dogs at Shows.

We regret to hear that Dr. W. E. Oliver's noted Yorkshire, Dick York has met with such a sudden death. One of Mr. Hacke's wolfhounds at Denver show nipped him and he was squeezed into the canine paradise that is reserved for all good prize winners. Handlers of these wolfhounds should be more careful of their charges; some of these hounds seem to take a fancy now and then to make a sudden dart at some harmless little dog in a crowded ring. One of the beagles at Pittsburgh, for instance, was nearly killed by a bound from these same kennels. This leads us to think that show committees should by all means provide a small inclosure where toy dogs alone could exercise. Some of these little pets have been delicately nurtured and are altogether too delicate and refined in their natures to be subjected to the careless romping of a lot of big dogs. To see their fear and trembling when set down in such a ring shows what a purgatory it is to such animals. Too distracted to attend to the wants of nature, when put back in their stalls, they suffer untold agony, and disease in some shape is a result if continually subjected to such treatment.

The United States F. T. Club.

Mr. P. T. Madison writes us, too late for last issue, that at the request of many patrons of the U. S. F. T. Club the closing of the entries to the Bicknell Derby has been extended to June 1. Field trial men should appreciate the progressive efforts of the U. S. F. T. Club in giving two trials in one season. Given good weather conditions—in the trials of 1891 the ground was too dry—there is no better game country than that around Bicknell, Ind. The trials are visited by larger crowds of sportsmen than any we have yet attended and the villagers taking an interest in the trials conduces to a good feeling all around.

Sale of Duke of Kildare.

Mr. J. Myrick, Jr., of Portland, Ore., has bought Mr. W. L. Washington's Irish setter dog Duke of Kildare, the winner of first prizes in both open and novice classes at the last New York bench show and in the open class at Baltimore and Elmira. Duke of Kildare is of the same litter as Queen Vic, now in the challenge class, and of the prize winning bitches Belle of Kildare and Queen of Kildare, being sired by champion Kildare out of Red Rose, the dam of Kildare. These four Irish setters are a striking example of the benefit

of judicious inbreeding. Mr. Myrick also brought out a young bitch from W. Washington's kennels named Kildare Flo, by champion Dick Swiveler out of Bessie Zapp, which is said to be a bitch with a future. She shows great bench form and acts very much like the making of a first-class field trial dog. Duke of Kildare is well known as a high class practical shooting dog, and has had three full seasons on game in a district where quail are very plentiful, and has had many hundreds shot over him. Mr. Myrick has lost the Irish setter Ormonde, which he bought last winter, from an attack of pneumonia. Oregon seems to be a great country for Irish setters, and the sportsmen out there have brought out some of our best dogs. The winning dogs at New York in 1891 and 1893 are both now owned in the same town in Oregon.

This Speaks for Itself.

Mr. Huse, secretary of the Boston Terrier Club, sent the following too late for publication last week: "Mr. G. H. Huse, Sec'y, 95 Blackstone street, Boston, Mass.—Dear Sir: I have your letter of April 17, and by way of reply have to advise you that a class for Boston terriers has been added in kennel exhibit with same premiums and conditions as other terriers. Very respectfully, W. I. Buchanan, Chief Department of Agriculture." There is no denying the energy displayed by this club, and we bow gracefully to that energy. Their terriers will have a class at the Pet Dog Club show May 30, and they are at last in a fair way to arrive at some unanimity of type by carrying out the suggestion we made at Boston show, that they discard their specialist judges for awhile and let an all-round judge familiar with terriers decide upon their terriers in the future. This has been done in the case of the Pet Dog Club show. At a meeting of B. T. C. held April 21, it was resolved that Mr. Mason should be asked to judge these classes. Further, it was announced, and this is also commendable in this day of carelessness in such matters, that all the medals offered at late shows had been delivered to the lucky owners of the winners.

Ohio Field Trial Club.

At a meeting of the Ohio Field Trial Club, held April 21, the following officers were elected: President, Henry E. Weber, Canton, O.; Vice-President, John Bolus, Wooster, O.; 2d Vice-President, J. A. De Normandie, New Castle, Pa.; Secretary-Treas, G. V. L. Mullenger, Canton, O. The club is a member of the A. K. C., has a charter and is incorporated under the laws of Ohio, and will be known as the Ohio Field Trial Club Co. The club hold trials annually on its preserve on the Line of the Inter-Suburban R. R., midway between Canton and Massillon, Ohio. Three stakes will be run, an All-Age Stake for pointers and setters, with prizes of \$250 to first, \$150 to second and \$100 to third. Derby, for pointers and setters whelped on and after Jan. 1, 1892, each breed to run separately; first \$125, second \$65, third \$50. The trials will commence Nov. 15. For entry blanks and further particulars address the secretary-treasurer, Mr. G. V. D. Mullenger, Canton, O., or Mr. John Bolus, Wooster, O.

Yonkers Dog Show.

Some time since we spoke of the formation of the Yonkers Fanciers' Club. The club has not lost much time in getting down to business and the well-arranged premium list that lies before us is an example of their energy. In connection with a poultry show, a dog show will be held May 25 to 27. The prizes are represented by glory in the shape of club badges, in color—blue, red and yellow. In addition, providing there are three or more entries in a breed, the club will donate a bronze medal for the best in each breed. A member of the club also offers \$5 for the most tastefully arranged stall in the show. This is all the cash in sight at present, but further specials will, no doubt, be forthcoming and be published later in the catalogue. Mr. C. H. Mason is the judge. The entry fee is \$1 and the entries close May 13. The show is not under A. K. C. rules, but that should make no difference and we trust that a good little show may be the result of the club's efforts. Mr. Emil Garnjost, a fox-terrier breeder, is the secretary and the owner of the Bronx Valley Kennels, James H. Young is the president.

Death of Refuge II.

For a comparatively young fancier in St. Bernards, Mr. Reick, owner of the New York St. Bernard Kennels, has had his share of the troubles and penalties that beset an owner of a valuable breeding kennel. On Sunday last the noted St. Bernard Refuge II. joined the ever-increasing majority. His death was due to a sudden attack of colic. Refuge II. was bred by Mr. Norris-Elye, and whelped April 3, 1886. His sire was the great Plinlimmon and dam champion Recluse, the dam of Lord and Lady Melrose. He was imported by Mr. Reick about eighteen months since, and although his show career on this side has been somewhat overshadowed by the other celebrated inmates of this kennel, his value as a stud dog was never questioned. Possessed of great bone, a splendid head and many other attributes of a good St. Bernard, his place on the prize lists would have been much higher had his forelegs been as they should have been. At the Agricultural Hall, London, in 1891, he won the stud dog medal. Besides this, he won in England over forty prizes and cups. He was a good dog, and his death is a distinct loss to the breed in this country. Mr. Reick will have the sympathy of his fellow breeders.

Death of Mr. Astor Carey.

The kennel world has no doubt lost in the sudden death of young Mr. H. R. Astor Carey a budding fancier that we could ill afford to lose. Mr. Carey died suddenly from heart disease at the Everett House last Friday night, having come on from Newport to see the naval review. This well known society man had only just become known to the kennel world as the plucky buyer of the bulldogs His Lordship and White Venn. He had just bought Mr. James R. Keene's stables at Newport and a large farm near by, and that he intended to go in for dogs to some extent is proved by his intention of building some fine kennels at the above-mentioned stable. We suppose that His Lordship and White Venn will be disposed of now, but who will be wise enough to purchase is an open question as yet.

Los Angeles Show.

The Los Angeles dog show seems to have attracted considerable attention on the Pacific slope. The entries numbered 167, and the attendance is said to have been unusually good. Among the dogs which created an interest was the terrier Owney, whose record as a traveler on most of our mail trains is well known. He wore a collar marked "Owney, Post-office, Albany, N. Y.," and attached to the collar were tags and medals indicating the many large cities this canine tramp had visited. As there were no regular prizes, merely club diplomas or ribbons at this show, it speaks well for the fanciers' instinct which had so many owners of good dogs to strive for the empty honors regardless of the expenses they incurred. A number of San Francisco dogs were in evidence, and it is to be hoped that this good feeling will be reciprocated at the show which takes place at the latter city this week.

Toronto K. C. Show.

We have received the premium list of the Toronto Kennel Club's show to be held in the Granite Rink, May 12 and 13.

We have already given all necessary particulars, but may again remind our many readers in Ontario that entries close May 9, at 5 P. M. with Mr. W. P. Fraser, 82 King St., East, Toronto.

St. Augustine Coming.

It may surprise our readers, those interested in the St. Bernard, that the crack smooth dog, St. Augustine, will soon be over here. The owner does not wish his name known yet, but suffice to say that he is known in St. Bernard circles and lives in the West. St. Augustine won the 100 guinea challenge cup at the last Crystal Palace show, and is considered by many the best, rough or smooth, dog in England. He is by Apollo out of Dinorah. The West is already strong in St. Bernards, and the importation of such a dog will still further improve the breed. The purchaser has had, naturally, to pay a long figure for him. He was owned by J. F. Smith, of Sheffield, and was whelped Feb. 19, 1890; in color he is orange and white. He was known formerly as Tarash and was then owned by Mr. A. J. Gosling.

Death of Lord Sheffield.

We regret to hear that Capt. Phelps's bulldog Lord Sheffield, the last link that connected poor Mr. Porter with the present kennel world, is dead. The dog did not do well on the circuit, would not eat, and was generally out of sorts.

Setter Bitch Bessamond.

WARSAW, Ind., April 22.—In this week's FOREST AND STREAM you name E. Haymond as the owner of my bitch Bessamond. Please correct the mistake, which doubtless occurred by reason of my name being LEIGH H. HAYMOND. P. S.—I think the engraving very good.—H.

Beagle Club Meeting.

An executive committee meeting of the National Beagle Club of America will be held at the A. K. C. rooms, No. 44 Broadway, New York city, on Monday, May 8, at 3 P. M. Members of the committee are earnestly requested to attend, as the arrangements for the coming field trials will be discussed.

The Charlottesville F. T. Kennels have sold the field pointers Consort and Exile, brothers of Rip Rap, to Mr. J. Otto Donner, of New York, for \$750.

We have received quite an extensive catalogue of the Fordhook Collie Kennels. It is well gotten up, adorned with pictures of their collies, and has a good deal of interesting reading on collies in general.

Dr. Foote has sold the following black and tan terriers: Monarch, first Omaha, Brooklyn, New York and Philadelphia, and Rochelle Carmencita, winner of several prizes, to Max J. Baehr, St. Louis, Mo. The wire-haired fox-terrier bitch Miss Brittle, by Brittle out of Vic Broom, he has disposed of to F. S. Kinney, New York.

The members of the City of the Straits Kennel Club are making an effort to secure outside grounds, so as to have a place where the members can train and work their dogs. Mr. Howie Muir, the owner of the deerhounds champion Olga, etc., is said to be at the head of the movement.

The Mascoutah Kennel Club was to hold their annual meeting last Monday evening, at which eight directors were to be elected, afterwards a meeting of the new directory would be held.

At a sale of horses at Tattersall's the other night, Mr. William Easton purchased six couple of foxhounds, draft from the Belvoir pack, for \$75, a cheap lot. They will be sent as a present to Gen. W. H. Jackson, owner of the Belle Meade stock farm, at Nashville, Tenn.

We are indebted to Mr. G. E. Osborn, the well-known owner of the Roscroft Kennels, for a very pretty paper-weight which he is getting out. Under a heavy concave glass is a capital sort of silver print of his English setter Sheldon in the field. There are interesting possibilities in this respect for fanciers generally, and such pictures are a pleasant change from the impossible landscapes and marine subjects generally depicted in this way. The Metal and Glass Ornamental Co., of New Haven, Conn., is getting them up.

We notice that Mr. T. G. Davey this week spreads a treat before the pointer and setter men in our business columns. Such pointers as Miss Rumor, Josie Brackett, in challenge class; Brighton Leda, etc., should not go a-begging. His two prize-winning retrievers, imported from England, are also in the list, as well as some good setter stock.

There seems to be a good market for St. Bernards in Kansas City, Mo. We see that some of the Lawrence Garza (Alton—Judith), out of Ashland Bessie stock, have found many purchasers.

There was a Boston terrier at the Los Angeles show. Its circle of recognition is, indeed, on the increase.

Mr. John H. Mathews is in a likely way to show some more bulldogs of his own breeding. His bitch Grit lately whelped nine by his dog Bahros; about half of the litter are still alive and growing up with the country.

Referring to our business columns we find that yet another sportsman, Mr. L. K. Devendorf, is deploring the loss of his setter dog, which was stolen from his place of business in Washington, D. C., March 2. He has every reason to believe the dog was sent out of town.

Flaps from the Beaver's Tail.

TORONTO, Can.—The list of entries given out of Canadian applications for exhibition at the World's Fair is not at all complete and there is little doubt but the full complement of 200 entries will be sent.

Intending exhibitors here are slow in entering until the list of judges—authenticated list—is given out and also the proper and final classification announced. No one seems to be in a position to give reliable information on these points, which are essential, as entries are supposed to close on May 20.

Several breeders in British Columbia intend showing in Seattle, May 17 to 20, to get Mr. Raper's decision on their dogs.

From Mr. John B. Carmichael, of Victoria, I learn that collies are having quite a boom in the Flawery Province, several recent importations having been made. Mr. Stewart, of the Belmont Ranch, who has just returned from England, brought with him a very nice dog by Wooly (by Metchley Wonder) out of Vic (by Rob Roy McGregor). A bitch by Edgbaston Excelsior, brought out at same time, has since unfortunately gone over to the majority. Mr. Chambers, of Victoria, another enthusiast, received on April 20, a bitch by Rob Roy McGregor out of Jennie Deans and is negotiating for a first class stud dog. Mr. Carmichael himself has bought the bitch Metchley Flurry, by Claremont

Garry (Christopher—Nuida) out of Roslyn Lena (Wellesbourne Charlie—Wellesbourne Flurry), with which he hopes to do great things.

Mr. Thos. Johnson, of Winnipeg, in writing me on matters relating to the World's Fair bench show, incloses the following clipping:

"The Northwestern Field Trials Club, acting in conjunction with the Canadian Kennel Club, have been appointed by the commissioner of the Dominion Government to make the selection of dogs for the World's Fair show, which opens with the live stock exhibit of dogs on June 12. The Canadian exhibit is limited to 200 entries, twelve specimens only being allowed from Manitoba and the Northwest Territories.

"The following extract from the rules regarding the kennel exhibit will prevent many excellent specimens owned in Manitoba and the Northwest Territories from being eligible: 'Exhibitors of dogs owned in the United States or Canada must furnish with each application for entry a certificate signed by the secretary of the American Kennel Club or the Canadian Kennel Club, showing that the dog has been registered in the stud book of one of these clubs.'

"The Dominion Government will pay all charges connected with the exhibit in Chicago, and also express charges on dogs from Manitoba and the Northwest to and from the show.

"Forms of entry, premium lists, registration blanks, and all particulars will be given intended exhibitors by applying to the secretary-treasurer of the Northwestern Field Trials Club at Winnipeg, Mr. Thos. Johnson, or the vice-president of the club, Mr. Thos. Stone, Calgary, Alberta."

Breeders have been so careless in registering or keeping a correct record of the breeding of their dogs that many in the Northwest now find themselves debarred from exhibiting. It does not appear to be plainly understood by many that "listed" dogs are not eligible for entry. Such, however, is the case and this has kept out many dogmen in the older Provinces, and including several imported animals, whose owners have neglected to procure in time, or who have been unable to get, particulars of the required three generations.

Mr. Irving L. Smith, Montreal, who has bred several very promising setters, has bought the foxhound dog Racer, by Bony (Ringwood—Gipsy) out of champion Vexation (imp. Genius—imp. Nancy) from Mr. B. Gibbs, of Guelph.

I did Mr. Bell an unintentional injustice last week. He is the breeder of champion Fascination, and not Mr. Barclay, as I inadvertently wrote. H. B. DONOVAN.

Where is the Cocker as a Working Dog?

Editor Forest and Stream:

It strikes me very forcibly that the effusion of "Cocker" in your last issue is weaker than before, and scarce worthy of notice. I have re-read and pondered as he suggested, but still think that I read his fairy tale right in the first instance. As to the bet of a 64-cent silver dollar, he so rashly offers to make, that "Solus" has a dog or dogs to sell, in cockers so in money is our friend "Cocker," and it looks to me as if the face value of his dollar is as false as the description he gave of the modern cocker. Leaving him anchored, let us turn to the letter of "Uncle Dick," who has at last found a champion for his peculiar type, and let me see if I cannot reason with my old friend and point out to him how very inconsistent he has been.

As I understand it from one who should know, there are fifty members in the American Spaniel Club, of whom some fifty-eight favor what is called the modern and two favor the "Uncle Dick" type of cocker, which we will call, for distinction, "The very ancient." Now I am one of those who strongly believe in the rights of the minority, but when in a club of sixty there is a majority of fifty-eight, is not the minority snowed under?

Some years ago, when "Uncle Dick" was in the full flush of his opposition to the majority, a club asked him to officiate as judge at their show. Philadelphia was the show, and he accepted the position. Consideration reigned in spaniel circles. "What enter their modern cockers and field spaniels to be judged by 'Uncle Dick,' etc., etc." But in spite of all this there were a few members of the club who wished to try the experiment of showing under him, and so when the day of judgment came there were a few select entries for him to adjudicate on. The classes were composed of some very ancient and some modern specimens, but strange to say, this good and wise judge after very careful consideration awarded the ribbons to the modern, and though for years he had been longing for the chance to show which type he favored, threw consistency to the winds and in each and every instance went back on his preaching. Evidently captured by the marked superiority in head, coat, bone, substance, etc., of the modern over the narrow chest, snipy muzzle, short, thick skull, long, thin legs, etc., of "the very ancient." This is known in dogdom as the quickest change of opinion on record, but showed those most interested that even a man who has been only able to breed the weeds of a breed is still sufficiently able, when put to the test, to tell the good from the bad even if it goes hard against himself, so long as he is a man like "Uncle Dick," who is undoubtedly a spaniel lover.

Staying at a friend's house a few years ago, I had the pleasure of seeing one pointer, one setter, three field spaniels and at least a dozen cockers, some nine of which were modern and the balance "very ancient," work through a briar swamp near by. The dogs were all well under control and were taken to this place, not to find game, but as a test for the spaniels. There was one piece of about half an acre, impassable to man, and which both pointer and setter would not face; without urging of any kind the spaniels worked through it, and I can assure both "Uncle Dick" and "Cocker" that had they been present they would now think as I think, i. e., that the modern is in no way inferior to the "very ancient" if given the same opportunities. When those spaniels were called in and I saw them one mass of pickles, burrs, etc., from nose to tail, I was convinced that the majority of the A. S. C. knew a little and that the minority did not know it all.

There was one small cocker, he did not weigh more than 19lbs., who was the life and soul of the crowd, and one long, low black field spaniel who seemed as if he could never have enough. Their owner assured me that all the spaniels were bench show winners with the exception of the "very ancient" two.

I was not the only spaniel man present, and there are those who no doubt will recall the instance if they read this. And now in conclusion I would ask what is the Spaniel Club to do? Yield to the ideas of the minority and go back to the ancient? Are men like Willey, Mason, Wilmerding, Kirk, Bell, Oldham, Laidlaw and many others to be classed as know-nothings? Entries talk, and when we see Mason at Detroit with twice as many entries as "Uncle Dick" at Elmira, both shows the same week, Elmira A. K. C., Detroit ahead in quality, etc., does it not seem as though cockerdom is on the right road, and that nothing would hurt the spaniel interests of the United States and Canada so much as a change back to the old type of spaniel? It is all very well to say they can hunt. So I claim can the modern, equally well if not better. But we also want something agreeable to the eye, and now that we can have it let us keep it, and still working quietly on, remedy the faults by judicious breeding, and, one of these days, have field trials for spaniels. When that day comes nothing will please me better than to show "Uncle Dick" and his champion that a modern cocker in the field, as on the bench, is ahead of anything they can show in the "very ancient" line.

SOLJ

"Will Let Some Other Man Try."

Editor Forest and Stream:

After reading Mr. La Rue's letter in your last issue I think it hits the case of so many dogmen that I think we should say no more or less than friend Smith did when called on to make a speech after his intimate friend Burns had concluded one after his own ideas. Mounting the platform and addressing the audience he exclaimed, "Ditto to brother Burns," and sat down. I think we can all say "Ditto" to friend La Rue's expression and sit down; but if we get an opportunity to vote for World's Fair judges let us vote for old John Davidson, early and often, and I'll wager he won't be near the bottom of the list when the votes are counted.

JAS. E. HAIR, V.S.

BRIDGEPORT, Conn., April 20.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. C. J. Albany, N. Y.—Please give extended pedigree of bull-terrier Surefoot. Ans. Surefoot (E. K. C. 32,238), by Jack out of Rose, by Huss out of Nell. Jack, by Gully the Great (25,469) out of Snowdy.

LAYRACK, Pawtucket, R. I.—Will you kindly give me your opinion in regard to my setter dog. He is 2 yrs. old and from some of the best hunting stock in this section, but shows no disposition to stand his birds; will hunt all day, but does not seem to know how to follow up and stand his birds, although very much excited when one flushes ahead of him. Can he be taught to stand? He would read up any small moving object and point when a puppy, but seems to have outgrown this. Can I get any information in regard to teaching him this from Hammond's book advertised in your columns? Ans. Your dog has not had experience and regular work enough to steady him properly. Aged dogs rarely employ the same methods which they favored in puppyhood. That he will not stand his birds is not at all remarkable. Few high-spirited dogs do so before being properly trained. From your description of the dog's peculiarities, we would advise you to send him to a competent professional trainer. He will require much work to steady him. Hammond's "Training vs. Breaking" will give you much information on the subject.

Dachting.

The nautical writer of *Town Topics* has been laboring for some time to convince his readers that the modern British yacht is but a copy of American craft; his latest effort being as follows:

"The marked feature of this year's international yacht racing will be that the contesting vessels are all American, although some of them are building on the other side of the water. This fact will deprive the races of some of their interest, as the contests will simply settle the question whether or not the English designers have accepted our evolution and improved on it. * * * Now, however, the conditions are changed, and the whole fleet of new racers on both sides of the water might well have come from the Herreshoff drawingboard. The new English boats, it is true, are in the way of overhauls, draft and spar plan rather more exaggerated than are ours, but the main features of both sets are so nearly alike that the results of their competition are likely to depend more on skill in handling than on type. However, be the results what they may, we can truly say that we have educated the Britisher."

In reading such nonsense as this, one is led to wonder whether the writer of it has seen either the American or British craft of the last five years; if he has, he should know that the rig of the American cutter has absolutely nothing suggestive of the old American sloop but is merely a modification of the British cutter rig. As to models, the father and originator of the latest racing type is undoubtedly Mr. Arthur E. Payne. The cutting away of deadwood and the hollowing of the midship section, the two marked characteristics of the modern

SAIL PLAN.

racing machine, were both begun by him some four or five years back, notably in such successful fin-keels as Lady Nan and Humming Bird. Herreshoff has gone a step further in the adoption of the bulb-fin, and in extending the ends above water, but it is Payne who has worked out the fin-keel type from the conventional full-bodied cutter. The truth is that both sides are working together in an amicable and profitable exchange of ideas.

On April 30 Navahoe was docked for a few hours at Providence, and her centerboard chain, which had broken in the trunk, was cleared, so that the board may soon be used. The New York Y. C. will send Mr. Carroll off with fitting honors, a dinner will be given prior to his sailing, and a tug will be chartered to escort the Navahoe down the bay.

According to the latest news in the *Field*, Genesta's present owner, Mr. Packer, has been challenged by Mr. Peter Donaldson, of the Clyde syndicate, to a match for the Brenton's Reef cup, which in all probability will go to the new boat, the Fife 85-footer. Mr. Carroll will hardly object to this, as there could be little glory in defeating an old craft like Genesta.

VALKYRIE, the second of the name, was launched at Henderson's yard, Partick-on-the-Clyde, on April 22, being christened by Mrs. Watson, mother of the designer. The yacht's tonnage is given as 220, with a waterline of 84ft.

The naval review of last week had the effect of putting many yachts, especially the steam craft, into commission earlier than usual, and a large number was under way in spite of rain and bad weather. The fashion just now is for white paint, and the old yachts are hardly recognizable in their new spring dress; one has to look two or three times at the Oneida or Electra before being certain of their identity.

The new Intrepid made her first appearance on this occasion, doing credit to her designer, Mr. J. Beavor Webb, who has turned out a handsome and attractive ship.

The Fife 85-footer for the Clyde syndicate was launched on May 1, being christened Colluna, the Latin name of a species of heather. Britannia will make a trial trip on Saturday and Valkyrie will be ready next week.

The report comes from Boston that J. Malcolm Forbes, owner of Puritan, has purchased Volunteer of Gen. Paine, and will convert her to the cutter rig for the trial races.

A French "One-Design" Class.

As a corrective of the evils of expensive construction and speedy out-building, a number of English clubs have for some years tried racing in boats of uniform design and construction, all the boats in the class being built from a standard design and usually by the same builder. In some cases the boats are the property of individual owners, in others of the club, being selected by lot or otherwise for each race; in either event the winning depends neither on model nor elaborate construction, but on the personal skill of the crew, and in practice it has been found that this sort of racing gives plenty of sport for season after season, the competition continuing keen. Of course if such a plan were applied to all yacht racing, improvements in design and construction would at once cease; but applied only in special cases, no harm follows, and the results on the whole have been very successful.

The accompanying design, for which we are indebted to the designer M. Mors, through the kindness of our contemporary *Le Yacht*, is for a similar class established by the Cercle de la Voile de Paris, and is intended for the especial benefit of the younger sailor men.

BODY PLAN.

The boat is of 4.20 metres l.w.l. (13ft. 9in.) and is furnished complete for the sum of \$150. In addition to its other good features, the design is specially adapted to the needs of the amateur builder, the form being such that the frames may be readily sawn, largely from straight stuff, while the planking will also be easy, owing to the long, fair diagonals. As better adapted to the possible requirements of our readers, we give a scale for a boat of 18ft. l.w.l., together with the dimensions of the original design. The sail shown is a standing lug, as used in England for the small racers. The sail plan would be small for this country, and in the 18ft. size the proportion of ballast would be considerably increased. We hope to hear that the class is successful in the coming season.

DIMENSIONS AND ELEMENTS.

	Original Scale.	18 ft. Boat.
Length, l.w.l.	13 ft. 9 in.	18 ft. — in.
Overhang bow	3 7/4	4 8 1/2

Waterlines	0.382	0.50

STANDARD DESIGN FOR RACING BOAT FOR CERCLE DE LA VOILE DE PARIS.

By M. Mors, 1893.

Launch of the Britannia.

On April 20 the Britannia, racing cutter, built by Messrs. Henderson, of Glasgow, for H. R. H. the Prince of Wales, was successfully launched at Parkville, Tenn. The Britannia is a 35ft. cutter, Valkyrie, building in the same yard, and has just been completed except as regards her internal fittings. She has a bow resembling that of Queen Mab. She has also an extraordinary length of counter of nearly 30ft., but otherwise she does not resemble American yachts. Britannia has a long and powerful bilge, and looks as if she would carry her canvas well. Her length over all, her beam and her draft are unknown. Her beam, however, looks to be about 24ft., and her draft about 15 or 16ft., which includes her lead keel of about 80 tons. She shows a powerful bow and a finer stern than the Valkyrie. Britannia looks like a cutter that will show to windward. Capt. John Carter, of Wivenhoe, is in charge with his east coast crew, and as soon as the yacht floated, the mast—an immense Oregon spar—was stepped. It looks some 35ft. from deck to sound, and 2ft. or some inches thick. The spider hook and steel work look exaggerated for strength. The mast head doubling looks exceptionally heavy. The shroud plates are also heavy and bowsprit and crane on top of stem is also extreme. The cutter from her great beam is very roomy inside, but the cabins are only planked up and a month will be required to get her in order. The flare of the bow makes a big forecastle, and the staterooms are numerous. The enormous counter has been utilized for big after cabins and the cutter will have the accommodation below of a 300-ton vessel. Under the cabin floor the bilge runs at once into the narrow floor below, but is not the mere dead wood of American yachts. The lead keel from about the mast sweeps in a curve to the sternpost, where it is deepest. Except for her Queen Mab bow the yacht is altogether a handsome vessel, with a comfortable bulwark. She will show a higher side by two or three inches than Valkyrie. Mrs. Henderson, wife of Mr. John Henderson, christened the cutter, and some hundred people were present to offer their best wishes for a successful career. —Field.

The Fife 40-Rater.

This launch took place on April 18, at Messrs. Hansen & Sons' West Cowes yard. The Lais is from designs of Mr. Wm. Fife, Jr. Dimensions are as follows: Length on L.W.L. about 60ft., length over all about 84ft., extreme breadth about 17ft., extreme draft about 12ft. It will be seen that the yacht has 24ft. overhang above the waterline, but the scull and quarter, being nicely carved and picked out in black and gold, give the two ends of the yacht a very handsome finish. The Lais is composite built, steel frames and American elm and oak planking. She will be sheathed with cold rolled copper. The deck is of Wane yellow pine, entirely free from knots; the center line deck work is of oak. The accommodation consists of ladies' cabin, owner's berth, wardrobe and other conveniences in stateroom, main cabin and cabin for officers and crew. The fittings are of Kaup pine, French polished, and the upholstery in old gold ribbed velvet. The lead keel—which is in one casting—weighs upward of 30 tons, and is about all the ballast the yacht will need. Her spars are of clean Oregon pine; her sails are by Ratsey & Laphorn.

There was a large attendance of spectators to witness the launch, and the greatest interest was evinced in the new yacht—doubtless because this is the first large class racer which has been launched at Cowes for some years. As the owner's engagements prevented him from being present, the christening ceremony was performed by Miss Clara Hansen, daughter of Mr. H. S. Hansen. The builders are to be congratulated on their smartness in building the yacht complete in about four months, and on the manner in which the work has been carried out. Immediately after the launch the mast was stepped, and Lais will be hauled up again to be coppered. —Field.

YACHT NEWS NOTES.

Jessie, steam yacht, C. H. Murray, built by Bayles, of Port Jefferson in 1890, is out at her builder's yard for a new bow.

Queen Mab, steam yacht, has been purchased by J. T. Lord, of New York.

Captain Hank Haft, who is to sail the Rogers yacht, Colonia, is laid up at his home at Islip with a severe attack of pneumonia.

Crocodile, sloop, has been sold by A. L. Thorne to W. A. Osborn through Manning's Agency.

Monaghan, sloop, has been sold by Edward M. Clark, of New Haven, to C. F. Johnson, of London. She was designed by Burgess in 1888, and is but 45 ft. L.W.L.

Meteor, sloop, has been sold by Col. George Duryea to Mr. Pierce.

The Newark Y. C. has prepared a handsome stand of yacht colors, which will be presented at the close of the season to the yacht winning the greatest number of races during the season.

On April 30 the house of the Shenandoah Y. C. on Green Island, near Troy, was destroyed by an incendiary fire, the damage being \$1,500, with \$1,300 insurance, not including a number of boats burned. Sybil, sloop, has been sold by J. B. King to Mr. Allen.

James D. Smith, chairman of the special committee of the New York Y. C. on the America's Cup races, has sent the following letter to Lord Dunsany:

"New York, April 24.—My Lord—It is my desire that early upon your arrival in America you should meet my associates upon the America's Cup Committee, and the officers of the New York Y. C., and, therefore, with sincere pleasure, I beg to extend to you an invitation to dine with me at such early date after your arrival here as may be convenient and agreeable, that I may present these gentlemen socially and in a friendly yachting spirit. Your obedient servant, To the Earl of Dunsany. JAMES D. SMITH.

While racing with another yacht on April 23 the sloop Ripple, of Stamford, was capsized in the Sound. On board were Com. Toms and Fleet Captain Fuller, of the Waterside Y. C., with two friends. They all clung to the until taken up by the tugboat. The boat was in an exhausted condition by a passing schooner, which landed them at Shippan Point. Com. Toms, being unable to swim, would have drowned but for the aid of his comrades in regaining the boat.

Manning's Yacht List is now nearly printed and will be ready in a short time. The book promises to be fully up to the high standard of last year.

The Seawanhaka C. Y. C. has just purchased through Parslow's agency the passenger propeller Donnerberg, 66ft. long and licensed to carry 85 passengers, for the service between the club wharf on Center Island and the railroad landing at Oyster Bay. The launch Corinthian, used last year, proved much too small for the service and the new boat will be a great improvement. The new class in "First Aid to the Injured" began last week at the town club house.

We have received from the author and publisher, Harvey C. Beeson, of Detroit, Mich., a copy of the fifth annual edition of *Beeson's Inland Marine Directory*. The book contains in addition to a complete list of steam and sailing vessels on the Lakes, and a list of marine engineers, a great deal of valuable information as to canals, distances, custom houses, pilot rules, revised statutes of the U. S., and other matter pertaining to the navigation of the Lakes. The book is a large octavo volume, handsomely printed, and the illustrations are numerous and very good, showing all types of Lake craft, from the yacht Alice Enright up to the largest steamers. Yachtsmen who propose to visit Chicago will find it an indispensable part of their outfit.

The annual meeting of the Royal Canadian Y. C. was held at the town club house, Toronto, on April 22, Com. Boswell presiding. The following officers were elected: Com. A. R. Boswell, re-elected by acclamation; vice-com. C. A. Brown, re-elected; N. B. Dick; hon. sec., S. Bruce Harman, re-elected by acclamation. Committee of management: G. D. Boulton, F. J. Campbell, H. D. Ellis, George E. Evans, Frank M. Gray, J. Jarvis, Robert Myles, W. H. Parsons, W. C. Thompson, M. de S. Wedd. One of the nominees for vice-com., Mr. A. E. Gooderham, withdrew, leaving the election between Messrs. Brown and Jarvis, the former receiving 51 votes and the latter 34. As Mr. Brown had the majority, though not enough to elect, Mr. Jarvis withdrew. The club's membership is as follows: Honorary life members, 3; life members, 39; resident members, 458; non-resident members, 108; junior members, 81; total, 689.

The wrecking of a dozen small yachts moored in an Illinois Central slip during the recent gale has made the yachtsmen more eager than ever for a yacht harbor where they can tie up their small craft. The plan of a harbor at the foot of Park row is now in the hands of the World's Fair Association, which expresses a willingness to build the proposed harbor, but they do not know where the money is to come from. The yachtsmen living on the North Side in hopes that the Lincoln Park Board will allow the harbor to be built at Fullerton avenue. This plan was brought forward by Commissioner Heuer, who with Commissioners Waller and Goudy formed the committee to consider this matter. —Chicago Tribune.

Arthur Dyer, of Deep Haven, Lake Minnetonka, is building several racing boats, among them one of 37ft. over all to meet the Alpha.

An adventurous voyager, Albert Quimby, of Island Heights, Tom's River, N. J., has started for Duluth, Minn., in the 25ft. sloop Wanda. The party consists of Mr. Quimby and two friends, with Capt. Edward Hires. They will follow the Hudson River and the canals.

The first race of the Atlantic City Corinthian Y. C. was sailed on April 26 in a strong N. E. wind, the weather being very cold. George

won, taking a second leg for the cup, to be won three times. There were two starters and the course was six miles. Alberta was second, though stove in by a collision near the end of the race.

The Buffalo Y. C. has announced the following events: May 27, opening cruise; June 3, pennant regatta, 40 and 35ft. classes; June 10, pennant regatta, 35, 25 and 20ft. classes; June 17, ladies' day; July 4, club regatta; July 29, annual cruise; Aug. 26, ladies' day; Sept. 9, cruising race, sweepstakes, all classes; Oct. 14, closing cruise.

Thrush, 21-footer, designed last year by A. G. McVey, will be raced this season with young John Barr as skipper and a crew selected from the employees of the *Boston Herald*, of which Mr. McVey is the yachting editor.

A new edition of Capt. Howard Patterson's Guide to the Canals has been published by Hughes' Yacht Agency.

The New York Y. C. has nearly completed a new station, to be known as No. 1, alongside the Sea Beach dock at Bay Ridge. A house will be built and a large float moored.

The Portland Y. C. celebrated its 24th birthday on April 26 with a smoker, at which a large number were present.

Floss, steam yacht, has been sold by Messrs. Westinghouse & Kerr to L. Wachsmuth, of Chicago, who has had guards built on her at City Island. She will spend the summer off Chicago.

William Bishop, the well known yacht plumber of New York, died last week at his home in Brooklyn. Mr. Bishop had been in business for many years, and was generally esteemed by yachtsmen.

Captain Charles Barr has received his papers as a citizen of the United States, but the case of his brother, Capt. John Barr, is not yet decided.

A yacht club has recently been organized at Flatlands, Long Island, by the name of the Bohemian Y. C. with the following officers: Com. H. D. Stielman, sloop, Pirate; Vice-Com., Ernest H. McEvoy; Sec'y and Treas., Harry R. Randall; Fleet Captain, Geo. N. McEvoy, sloop, Bohemian; Ship Carpenter, Norman Kellogg.

Henry Astor, of Newport, a member of the Morgan-Iselin syndicate, died very suddenly on April 30.

Orinda, cutter, has been sold by Dr. W. H. Winslow to F. C. Fletcher of the Rhode Island Y. C.

Matthew Cartwright, commodore of the Rochester Y. C., and one of the most popular yachtsmen on Lake Ontario, died last week at Rochester. Com. Cartwright was at one time a part owner of the Scotch cutter Madge.

Wm. Wood has opened a new wareroom for canoes and pleasure boats opposite his place of business, 25 West 125th street, New York. Those interested in boats would find it worth their while to call and examine his stock, which is very complete, and especially as regards St. Lawrence skiffs. He also has on exhibition a 35ft. electric launch. —Adv.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

The A. C. A. and B. C. A.

The following response has been received by Com. Cotton to his invitation sent to British canoeists.

DANIELLE, Lynn, April 15, 1893.
Lt.-Col. W. H. Cotton, Commodore A. C. A., Kingston, Ont.—DEAR SIR—On behalf of the British Canoe Association I beg to thank you for your very kind invitation to the meet of the A. C. A., which by the publication of your letter to M. G. F. Holmes in the *Model Yachtsman and Canoeist* will have been brought under the notice of our members. The meet of the B. C. A. will be held this year at Enniskillen (Ireland) in the early part of August, and any member of the A. C. A. who can attend will be most heartily welcome. Mr. Percy Nisbet, our late Hon. Sec., has undertaken the arrangements for the meet and will forward full particulars as early as possible. Yours very truly,
HENRY THORP, Hon. Sec. B. C. A.

South Boston C. C.

The South Boston C. C. held a very enjoyable smoker at its club house, foot of K. street, on April 25, the first one given by the club since the consolidation with the Massasoit C. C. Mr. Rich gave several songs and whistling solos; Mr. Wallace, recitation and song; Messrs. McVey and Walsh, legerdemain; Mr. Murphy, song; Messrs. Lyon and Hurd, fencing; Messrs. O'Brien and Malou, boxing; Mr. Talbot, song; Mr. O'Neill, song; violin solos by Mr. Fitzwilliam and Mr. Ellis, accompanied on piano by Mr. Murray, were enjoyed by all. Mr. Murray's efforts were much appreciated. During the evening a pipe of peace of a size that rather staggered him, was presented to the commodore; all hands took a few puffs. The club has a membership of 45 and it is proposed to make it one of the most successful clubs about Boston. The officers are: Com. G. E. W. Armstrong; Vice-Com. N. J. Fitzwilliam; Sec'y, J. W. Manley; Treas., D. O'Neill; Meas., E. F. Hodge.

A. C. A. Membership.

EASTERN DIVISION: Frederick H. Quintard, Robert A. McDonald,

South Norwalk, Conn.; Albert S. Howard, C. C. Coulter, Edward E. Alley, Clinton, Mass. Atlantic Division: James B. Tompkins, Harry H. Dinke, John Buttery, Wm. E. Buttery, Jack Reynolds, Peekskill, N. Y.

CANOE NEWS NOTES.

A correspondent writes to know whether it is practicable to make a trip down the Susquehanna River from Harrisburg to Havre de Grace in a 18ft. catboat of 12in. draft, and light enough to carry around dams.

Mr. S. R. Stoddard delivered his interesting lecture on the Adirondacks in New York on April 25. The lecture was illustrated by a large number of views taken by him in the Adirondacks and thence down the Hudson River to the sea.

In response to Commodore Cotton's invitation to attend the A. C. A. general meet in August a letter has been received from the secretary of the Royal Canoe Club, London, England, stating that his club will hold a meet in the Solent in August, and that any American canoeists who can attend will be given a hearty reception.

Rifle Range and Gallery.

Zettler Rifle Club Season Shoot.

The Zettler Rifle Club brought its winter gallery shoot for the season of 1892-3 to a close on Tuesday night, April 25. The programme called for fifteen cash prizes, from \$30 down to \$2, and a champion medal for the member making the highest score on the first entry each shooting night. The member winning the medal the most times during the season to wear it until the next season. There was also a special medal, presented by the Zettler brothers, for the member making the most points during the season. There were twenty-five days for shooting, and each member was entitled to four scores on each day, making 100 scores for the season. The target was the Zettler ring target, 3in. bull, 1/4in. center counting 25, distance 75ft. The cash prizes were divided as follows: The first to the fifth for the best fifty scores, the fifth to the tenth for the best thirty-five scores, the tenth to the fifteenth for the best twenty-five scores.

The programme was considered a very liberal one, and it was expected that the members would turn out in full force during the winter and patronize it. But from the start interest was at very low ebb, only fifteen of the members filling out their quota of scores to entitle them to prizes. Messrs. Dorrier and Holges at the beginning of the season began to draw away from the other members, and it was soon evident that the first and second places would lie between these two. The closeness of the average of the scores of the two competitors kept their interest at a white heat, and as each shooting day came around both men were on hand striving to outdo the other. Of the fifteen men in the competition, Messrs. Dorrier and Holges were the only two to shoot the 100 scores called for on the programme. Mr. Dorrier's nerve and holding ability gave him a lead in the early part of the season which made Mr. Holges' position in the race uphill work all the way through. When the last score had been shot and the totals footed up, it was found that Mr. Dorrier had a lead of 159 points over Mr. Holges for the most points for the Zettler medal. For the best 50 scores for the first cash prize Mr. Dorrier also had a lead of 49 points over Mr. Holges. The champion medal also went to Mr. Dorrier, he having won it the most times during the season. The total aggregate of the scores of each competitor will be found appended:

	Scores.	Total.	Average.
M Dorrier.....	50	12,353	247.0
H Holges.....	50	12,304	246.0
M B Engel.....	50	12,218	244.3
C G Zettler.....	50	12,198	243.9
B Zettler.....	50	12,127	242.5

The following scores were shot by the members present, 10 shots, possible 250, distance 75ft.: M. C. Engel 247, H. Holges 247, M. Dorrier 246, R. Busse 244, B. Zettler 246, C. G. Zettler 243, J. Heintz 239, M. Michelbacher 228.

North End Rifle Club.

EPHRAATA, Pa., April 20.—*Editor Forest and Stream:* The members of the North End Rifle Club, after a rest of several months, met on their range within Ephrata Borough limits, last Friday afternoon, for the purpose of reorganizing and the election of officers for the present year, and also to spend several hours at target shooting, either at rest or off-hand, just as the several members desired to do.

The organization for the year was formed by electing the following officers: J. M. Sheaffer, President; W. D. Winters, Vice-President; D. B. Lefever, Secretary; L. M. Wiest, Treasurer; J. A. Stober, Target Master. After deciding upon some minor points shooting was indulged in, the scores resulting as follows: distance 300yds., rest and off-hand, standard American target being used:

	Rest Shooting.
D B Lefever.....	9 8 8 8 9 5 10 7 8 10—82
W D Winters.....	9 9 8 10 9 9 9 10 10—92
J M Sheaffer.....	9 9 9 7 8 9 10 8 8—84
J M Sheaffer.....	8 6 8 10 10 7 8 10 8—87
L M Wiest.....	8 9 8 8 8 10 7 7 7—79
C S Wenger.....	8 10 9 4 6 10 10 7 8 10—82
C S Wenger.....	8 8 9 6 10 9 9 9 7—83
C S Wenger.....	9 10 10 9 9 8 10 9 8—92

	Off-Hand Shooting.
C S Wenger.....	6 10 10 9 7 0 10 7 7 6—69
L M Wiest.....	7 6 9 7 7 6 7 6 8 9—72
J M Sheaffer.....	6 5 0 6 5 7 6 4 9 0—54
J M Sheaffer.....	6 8 5 7 9 5 4 4 6—59
J M Sheaffer.....	5 6 4 9 5 8 0 8 4 7—56

The club decided to shoot for two medals this year, a gold and a silver, the best five off-hand scores and the best five rest scores being added together, the highest man to take the gold medal and the second highest the silver medal. The second Friday of each month will be devoted to off-hand shooting, and the fourth Friday of each month to rest shooting. The club at present numbers ten active members.

D. B. LEFEVER, Sec.

Turtle Bay Rifle Club.

The Turtle Bay Rifle Club held its first outdoor shoot at Woodsie Long Island, on the 23d ult. The members were divided into two teams, each contestant to shoot three 10-shot scores, distance 50yds., the losing team to pay the expense of the outing. The scores: O G Fuchs.....211 207 227—645
J Krampert.....205 227 201—633—1278
Geo E Jantzer.....214 220 228—662
H Walter.....199 210 210—619—1276
C H Plate.....204 207 207—618
H W Tamm.....218 192 153—563—1211

Miller Rifle Club.

The weekly competition of the Miller Club, for the Fisher medal, was held at its headquarters in Hoboken on the 24th inst. That veteran David Miller again outshot his competitors and captured the medal by the score of 245. The scores of the members in the competition are appended, 10 shots, possible 245, distance 75ft.: D. Miller 245, Geo. Schlicht 237, E. Fisher 237, Henchen 235, Krueger 231, Liell 234, Meyns 232, Simon 232, Sohl 230, Pfugh 230, Caragher 220, Van derheyden 210, Stadler 215.

RIFLE NOTES.

A NUMBER of marksmen from the Excelsior and Greenville clubs held an afternoon practice shoot in Armbruster's Park in Greenville on Thursday of last week. The many improvements that are being made in and about the shooting house for the benefit of the patrons of the park was noted by the riflemen present. Capt. L. P. Hanson was high in the afternoon's practice with a score of 217. C. Boag and H. Chevauch each made 215, C. Thomas 209 and C. J. Ward 203.

Sub-committees from the newly organized Schuetzen Bund are out looking for candidates for the board of officers; several prominent German-Americans are mentioned for the position of president of the Bund.

On the second and fourth Wednesday of the month there will be practice shooting at the Union Hill range, Union Hill, N. J. The targets will be open to all visitors.

During a visit to the Cypress Hills Park last week we noticed that mine host C. Wissel had a set of Zimmerman's ducking scenes framed in a neat and tasteful manner and hung in a prominent position in the park hotel. Mr. Wissel has a weakness for the shotgun and sneak-boats.

The movement that was started some days since to stop the Zettler Club and others from continuing their usual Sunday morning practice in the Cypress Hills Park, was thought by some of the shooters to contain a small sized "coon," in the form of conflicting business interests, but later developments seem to have cleared up the matter to the satisfaction of all interested.

The extremely brilliant shooting of Captain Gus. Zimmerman, at the meeting of the Independent Corps last week, brought him many hearty congratulations from the brother marksmen present at the time. To make 121 points out of a possible 125, on the German ring target, requires unusual steadiness on the part of the shooter, and an extremely close shooting rifle. On the point target with a .414 center, Zimmerman made 8 centers in 10 shots. He shoots a factory lubricated bullet and very seldom cleans his rifle, and it is often a matter of wonder to many old and expert shooters, how Gus can get such fine work out of the lubricated bullet. The most of our experts confine themselves to the use of the patched bullet, and the laborious system of cleaning after each shot. The marksmen of Europe are said to use the lubricated bullet exclusively, and with the best of result.

Ignatz Marten is credited with having a desire to shoot a 100-shot match with either B. Walther or Gus Zimmerman.

F. Fabarius and M. B. Engel, two of the Zettler Club's shooters, are said to be contemplating a match. If such is the case there is no doubt that they would let Marten into the arrangement on a ground floor basis.

The Columbia Rifle Club of Brooklyn, will hold a two-days' gallery prize shoot, at its headquarters, No. 203 Knickerbocker avenue, on May 6 and 7; \$75 in cash will be paid out to the 12 shooters making the highest scores.

Independent New York Corps.

The monthly shoot of the Independent Corps came off at Washington Park on Wednesday, the 28th ult. There was a good attendance of the marksmen of the society, and as the weather conditions were good there were some very fine scores put up. Gus Zimmerman, Hayes, Stein, Simon, Weber, Fisher and others kept the markers on the run the greater part of the afternoon. The rapid firing was very much like the rattle of an old time skirmish line. The undecided tie between Wm. Hayes, B. Walther and Geo. E. Jantzer, from the winter shoot, was shot off to-day on the ring target. The conditions were 5 shots per man, possible 125. Wm. Hayes made 100, Geo. E. Jantzer 94, B. Walther 80. The low score of Mr. Walther was due to the new barrel in his rifle not being in good working order.

On the ring target the following scores were made, 5 shots, possible 125: Gus Zimmerman 121, Ignatz Marten 113, B. Walther 112, William Hayes 111, E. Fisher 108, Geb. Krauss 108, Geo. E. Jantzer 107, Fred. Simon 107, M. Pittschler 100, H. Weber 89. Man target, 3 shots, possible 60: Gus Zimmerman 58, Fred. Simon 57, Wm. B. Walther 55, Alex. Stein 54, H. Weber 54, M. Pittschler 52, G. L. Hoffman 62, Geb. Krauss 52, Geo. E. Jantzer 51.

New York City Schuetzen Corps.

The New York City Corps, Capt. C. Rehm, held its monthly shoot in Washington Park on Friday, April 28. The organization of the new Schuetzen Bund is having its effect and an increased interest in shooting matters is shown by the attendance of some of the older members. On the ring target the following scores were made, 10 shots, possible 250, distance 200 yds.: G. W. Albright 202, Otto Uehlin 196, M. Munz 187, M. Uehlin 184, A. Keller 180, C. Radleff 178, A. Stolzenberger 174. Man target, 3 shots, possible 60: R. Busse 58, C. Radleff 58, C. G. Zettler 57, J. Facklam 56, A. Keller 51, C. Rehm 45. Most flags: R. Busse 9, C. G. Zettler 3, A. Keller 2, C. Radleff 2, J. Facklam 1, C. Rehm 1, Geo. Albright 1.

Winans Trophy Competition.

The postponed match between Messrs. Petty and Heintz for the Winans Trophy, will take place at the range, 13 St. Mark's Place, Thursday evening, June 3. All who are interested in revolver shooting are invited to be present, and a good exhibition may be expected. A copy of the revolver championship trophy has been on exhibition, together with a few others of Mr. Winans's statuettes, at the Sportsman's Exhibition at Sheffield, England, and Mr. Winans has been awarded a medal for artistic excellence by the management of the exhibition.

Greenville Rifle Club.

The weekly gallery shoot of the Greenville Club came off at the old headquarters in the rink on Friday, April 28. The next shoot will probably be held in the new club house on Calor avenue. The scores of the members in the Friday night competition are appended, 10 shots, possible 250, distance 200 ft.: G. W. Albright 212, Colin Boyd 209, W. C. Robidoux 209, H. Chevauch 209, C. Schelein 208, Geo. Purkess 208, W. C. Collins 203, J. Boag 225, J. Spahn 231, Henry Gotthardt 231, George Vreeland 223, J. Hill 221.

Empire Rifle Club.

The Empire Club, sometimes styled by its friends the "Zettler Jr.s" held its weekly gallery shoot at headquarters, No. 12 St. Mark's place, on Tuesday night the 25th ult. The scores are appended, 10 shots, possible 250, distance 200 ft.: Chas. Zettler Jr. 243, B. Zahn 237, W. Meisenholder 236, H. Zettler 235, A. Rosenstraus 235, F. Davis 230.

Excelsior Rifle Club.

The Excelsior Club finished up its season gallery shoot on Tuesday night, April 28. W. J. Hennessy was the first medalist, J. O. Boyce the second, and R. H. Duff the third. The following scores were shot by the members present, 10 shots, possible 250, distance 75 ft.: L. P. Hanson 245, W. J. Hennessy 239-4, 242, J. O. Boyce 237, C. Thomas 231-6, 237, Jas. Hughes 227, R. H. Duff 227, C. L. Pinney 218.

Revolver Shooting in England.

On April 19 at the usual weekly revolver competition at the North London Rifle Club, the following scores were made by the winners of spoons. Gustly wind:

Walter Winans (S. & W.)	6	7	7	7	7	41
C. F. Lowe (Colt)	6	7	6	5	5	36
Capt. Cowan	5	5	5	5	5	33
Carter	7	7	4	5	3	33
Capt. Richardson	4	4	4	4	4	20
Ridgway	2	2	2	2	2	10
Treadwell	0	0	0	0	0	0
The scores for the revolver championship of the club now stand:						
Walter Winans	41	41	41	41	41	205
C. F. Lowe	36	34	30	26	25	151
Capt. Cowan	34	33	27	23	23	140
Varley	35	32	27	20	20	134
Capt. Richardson	31	29	20			110

Beideman Rifle Club.

BEIDEMAN, N. J., April 29.—The following completes the weekly scores of the Beideman Rifle Club, week ending April 29. Conditions, 100 yds., strictly off-hand, standard American target.

A. J. Yerger	7	9	10	8	7	9	7	8	8-82
E. L. Wood	7	9	10	5	7	9	7	6	8-77
J. L. Wood	9	8	7	8	5	9	9	9	7-76
E. L. Gardiner	7	6	7	5	7	8	9	8	8-74
W. Gilbert	6	7	7	5	6	4	8	4	5-45

Twenty-five yards, 1/4 ring, 1/4 in. bull, possible 250: A. J. Yerger 242, J. L. Wood 241, E. L. Gardiner 241, W. Gilbert 237.

WALTER GILBERT, Secretary.

Full Score at Harlem Rifle Club.

THE Harlem Club held its Friday night practice in the gallery at 2,100 Third avenue, on April 28. An interesting feature of the evening was the shooting of Dr. Boyken and C. Hutch. The doctor's score of 250 points was of unusual excellence. The 10 shots could be entirely covered with a dime. The following appended scores were made by the members present, 10 shots, possible 250, distance 75 ft.: J. A. Boyken 250, C. Hutch 249, Val. Kraye 245, W. H. Cochran 236, W. Weeks 236, Mr. J. Ellis 236, E. W. Busby 231.

Pocket Revolver Shooting.

In practice at the range, No. 13 St. Mark's Place, New York, April 22 Roundsman W. E. Petty, the present holder of the Winans Trophy, made some highly creditable scores with a Smith & Wesson pocket

DR. BOYKEN'S TARGET.

revolver, 5 in. barrel. He shot 5 strings on the standard American 20 yd. revolver target at a distance of 20 yds., and made consecutive scores of 93, 87, '83. He used the new Smith & Wesson self-lubricating bullet and full charge, 13 grs. powder and 142 grs. lead. The 5 strings were shot without cleaning.

Messrs. A. G. Heintz, Chas. B. Stockman and Jas. F. Ball, who were present, witnessed the shooting.

Trap-Shooting.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

- October.—Manufacturers' Trap-Shooting Association tournament, at Baltimore, Md.

Captain Van Gilder of the Knoxville Gun Club says, that he has promises of entries for the championship team race from Jacksonville and Orlando, Fla.; Columbus, Atlanta, Macon, Griffin and Savannah, Ga.; Charlotte, Greensboro and Asheville, N. C.; Vicksburg and Natchez, Miss.; New Orleans; Montgomery, Ala.; Nashville, Chattanooga, Bristol and Johnston City, Tenn.; Winchester, Staunton and Lynchburg, Va.; Washington, D. C.; Wheeling, W. Va.; Cincinnati, Ohio, and from New Jersey.

OUR POSITION.

THERE is no longer any prospect that a World's Fair Shoot, as such, can be held in Chicago during the coming summer. As an appendage to the Illinois State Sportsmen's Association, a general shoot under this name will no doubt be carried through, and will be successful, so far as it goes.

We had hoped that in connection with the Fair, a shoot might be held at which large purses might be offered, prizes in fact which should be worthy the occasion. It appeared to us that if this could be done, shooters, gun manufacturers, target makers, and dealers in ammunition would all alike be benefitted, that such an occasion would be for the general good. Large prizes would attract and stimulate the shooters. The winning of a championship or of a prize in some special event at a shoot of this kind would have a real meaning, and the lovers of trap-shooting in America would watch with great interest the doings of the representatives of the sport, gathered from far and from near to take part in the shooting. The educational effect of such a tournament would be great. Thousands of visitors from all parts of the world would witness the contests, and the shoot would accomplish—only on a vastly larger scale—just what the two trap-shooting associations are spending money to do. Dealers in shooting supplies would sell great quantities of their goods, and besides would be extensively advertised without cost, and at a time and place which would greatly help their trade.

It was manifest from the start, however, that to inaugurate and carry out such a shoot on a scale fitting the time, the place and the circumstances, united action would be needed. All the forces that those interested in trap-shooting could command must be marshalled, and must march solidly onward, side by side, with an eye single to the attainment of the object in hand. If dissensions or petty jealousies crept in, if bickerings and discussions divided our forces, nothing could be accomplished; but united, great things might be done.

The FOREST AND STREAM labored faithfully to set on foot the plan of the World's Fair Shoot in the sincere faith that if this project were carried to a successful end, it would not only be a cause of great pleasure to many of its readers, but would also put many thousands of dollars in the pockets of individuals and firms interested in the gun and kindred trades. Another journal did not take this view of the matter, the project was bitterly attacked, and when an attack was made on it, success was no longer possible.

Those who will be least affected by this failure are our readers, each one of whom has only his own individual disappointment to bear. A more serious, because a material, loss is that suffered by each firm engaged in the gun and ammunition trade. To all the more important houses the reduction in sales will be large, and in actual profits considerable, and all this means a decrease in general business and a direct personal loss to each and every dealer who supplies any article used by the shooting public.

The FOREST AND STREAM cannot but regret that so good an opportunity should have been lost to its readers and its advertisers.

DRIVERS AND TWISTERS.

THE programme of the Knoxville Gun Club is without doubt the most attractive ever offered in this country, and if the shoot does not attract a horde of amateurs and experts it will not be the fault of the management, who offer them every inducement to attend. It is the first club in this or any other country to offer \$1,000 in added money for an artificial target shoot, and certainly merits a rich reward. The shooting will be a blow-off target, through a hole in a board, by means of an electric pull. The programme each day will be divided into two parts. On the first day there will be seven events at 20 singles, \$3 entry, with \$25 added in each. No. 8 will be the Chamberlain Cartridge and Target Co.'s 4-men team race, 25 targets per man, \$6 entry (including targets and 25 Chamberlain nitro shells), the club adding \$100. This race will be shot from known traps, unknown angles. On the second day there will be eight 20 target events, \$3 entry, \$30 added in each. On the third day eight 20 target events, \$3 entry, \$40 added in each. On each day there will be 14 merchandise prizes offered in event No. 5. Event No. 1 of part 2 each day will be a race for the club championship of the United States, five men to constitute a team, every member of a team to belong to one club and no man to shoot on more than one team. Each team shall shoot at 30 targets, 100 each day, \$25 in prize money per team, the prize to be divided into five moneys. The American Wood Powder Co. also offers a diamond scrap pin to the team winning first place, and the Knoxville Gun Club offers a hand-painted china game set to the second best club, these trophies to be shot off for by members of the winning clubs on their home grounds at 50 targets per man, at known traps, unknown angles, the report of each contest to be sent in full detail to FOREST AND STREAM and the American Field. Event No. 2 on part 2 each day will be for two-men teams, 15 singles per man, \$5 entry; No. 3 at 15 singles, \$3 entry, and No. 4 at 15 singles, \$1.50 entry. The average prizes each day will be in order, \$10, \$3, \$7, \$6 and \$4. For the best six averages for three days the prizes will be \$15, \$8, \$12, \$9 and \$6. All 55 per cent. men will be required to shoot from known traps, unknown angles in each event. Others will be regulated by the North handicap.

The Ohio State shoot, to be held on May 9, 10 and 11 at Columbus, will be held on the Sherman Gun Club grounds instead of at Franklin Park as proposed. A recent issue of the State Journal says: "The Sherman Club's executive board desire to announce that after consultation with thirty or more non-resident trap-shooters who are members of the League, they have decided to hold the State tournament on the club's grounds instead of temporarily occupying Franklin Park. During the State tournament of last year the weather was decidedly bad, being cloudy and cold, and under such unfavorable conditions the background appeared to be bad and there was some little objection to the grounds on this point. This year it was the desire of the management to have everything perfect in order that every one might be pleased, and arrangements were made to shoot on other grounds; but after further consideration and consultation with many who will attend the shoot, it has been decided that it will be most expedient to occupy the old grounds. Using the new grounds temporarily would be for two women teams, 15 singles per man, \$5 entry; No. 3 at 15 singles, \$3 entry, and No. 4 at 15 singles, \$1.50 entry. The average prizes each day will be in order, \$10, \$3, \$7, \$6 and \$4. For the best six averages for three days the prizes will be \$15, \$8, \$12, \$9 and \$6. All 55 per cent. men will be required to shoot from known traps, unknown angles in each event. Others will be regulated by the North handicap.

The following programme is announced for the Missouri State tournament, to be held at Independence, Mo., May 15 to 20, inclusive: 1. Ten birds, both barrels; ties, 3 barrels, entrance \$5. 2. Ten birds, both barrels; ties, 3 barrels, both barrels; entrance \$7.50. 3. Open to any number of teams of two, from club members of the State association; 10 birds, both barrels; ties, 3 birds each man, both barrels; entrance \$15 a team, including birds. 4. Special 15 birds, 30 yds., both barrels; entrance \$15, including birds; divided 40, 30, 20 and 10¢. 5. State association medal shoot, open only to one team of four from one club belonging to the State association; 15 birds each man, both barrels; ties, 3 birds each man, both barrels; entrance \$20 for team, birds extra;

\$100 to go to the club last holding the medal, the balance to be divided 40, 30, 20 and 10%. 6. Ten birds, both barrels; ties, 3 birds, both barrels; entrance \$10, including birds. 7. Individual championship shoot: special, open to members of the Missouri State Association only, 25 birds, both barrels; ties must be shot to finish, entrance \$6.25, including birds; first prize, an elegant gold watch, donated by the Independence Gun Club; other prizes of guns and ammunition by local sporting goods dealers are also offered in this event. 8. Ten single birds, both barrels; ties, 3 birds, both barrels; entrance \$7.50, including birds. 9. Ten birds, both barrels; ties, 3 birds, both barrels; entrance \$7.50, including birds. 10. Novelty shoot, triple rise to team; entrance \$7.50 for team, including birds. The committee has already secured 5,000 pigeons, so there is no chance of the supply running short.

The Charlotte Gun Club, of Charlotte, N. C., has selected May 18 and 19 for its annual target tournament. This is the Thursday and Friday preceding the Knoxville shoot, so that the shooters en route to that place can cover two shoots on the one trip. Archie E. Stokes, secretary of the Charlotte Gun Club, sends us a copy of the programme, which shows nearly \$900 in added money during the two days. The programme on the first day is 10 singles, known angles, \$1 entry, 15, \$2 entry, \$10 added; 20, \$2.50 entry, \$15 added; teams of five, 25 per cent known angles, \$1 entry, 15, \$2 entry, \$10 added; 15, \$2 entry, \$10 added; 20, \$2.50 entry, \$10 added; 30, \$2.50 entry, \$20 added; 40, \$2.50 entry, \$20 added. On the second day, 10 singles, \$1.50 entry; three at 15, \$2 entry, \$15 added; 15, \$2 entry, \$10 added; teams of five, \$12.50 entry, \$30 added, at 30 singles; 20, \$2.50 entry, \$20 added; 5 pairs, \$1.50 entry, \$10 added; 30, \$2.50 entry, \$25 added. All those winning first money will be obliged to shoot the next day and the 3-trap expert system; those winning second shoot as semi-experts. Those who win first as 3-trap experts will be advanced to 5-trap expert class. Charlotte is a city of close to 12,000 population, situated on the Richmond & Danville railroad, in a picturesque section of North Carolina, and the Club has one of the finest grounds in the state.

NEW HAVEN, Conn., April 27.—A letter received by the Yale Gun Club says that the Harvard Gun Club wishes if possible to arrange, instead of the match between Yale and Harvard, a four-cornered match between Yale, Princeton, the University of Pennsylvania and Harvard, to be shot under the usual conditions of the Yale-Harvard matches. The date proposed for the match is May 29, and the place the grounds of the Boston Shooting Association. The Yale Gun Club sent to the secretary of the Harvard Gun Club the following communication on April 27: "Joseph Sargent, Jr., secretary of Harvard Gun Club, Boston, Mass.: The Yale Gun Club thinks the idea of a four-cornered match between Harvard, Princeton, University of Pennsylvania and Yale a very good one, and would be very glad to accept, with the usual condition of the Yale-Harvard matches. Would it not be a good idea to shoot for a cup? With four teams entered we could get something rather nice at a very moderate expense for each team. This is simply a proposition which would like to have your views on. We hope the other teams will think the Yale-Harvard plan as we do, and sincerely hope you will have success in carrying it out. Yours truly, R. C. Anderson, Secretary Yale Shooting Club."

"ANACONDA, Mont., April 26.—Members of the gun club get inquiries every day from different sections of the State concerning the tournament to be held on May 19, 20 and 21. The club intends to give a live pigeon shoot, and is now corresponding with people in different States to see if it can get the required number of birds. The State Press Association members are being secured, as are every new shooter who is supposed to be able to shoot, though they generally confine their sport to the killing of men and other large game, it is more than likely that the sporting editors will bring their blunders with them and come prepared to stay for the tournament. It is sincerely hoped that the club will meet with enough encouragement from the business men of the city to make the event worthy of Anacoda, though the club has, so far, not solicited aid from persons outside the city. Nevertheless, the carrying out of a successful tournament is a heavy burden for the few members of the club to bear alone. It is hoped that the Montana champion pigeon shot, W. T. Sheard, of Livingston, will be present, as well as W. B. Benham, of Bozeman, who is also a noted crack shot, and many others who might be named. The Anacoda Club feels competent to shoot with the best."

The following averages were made by members of the Stock Yards Gun Club, of Knoxville, Tenn., for the year closing with May 1. T. J. Gilliam 77, W. West 73, George Keener 70, A. G. Nutter 70, C. B. Baldwin 67, W. H. Sawtelle 66, E. E. Peters 65, L. O. Nutter 65, C. I. Mills 53, R. J. Munroe 47, T. B. Bass 45, J. W. Olander 43, A. W. Gillett 40, M. Steele 40, J. S. Tough 30, B. F. Baldwin 20, F. Welner 150. The club was organized in May, 1892, and has twenty-five active members. The club has, as every new shooter who is supposed to be able to shoot, though they generally confine their sport to the killing of men and other large game, it is more than likely that the sporting editors will bring their blunders with them and come prepared to stay for the tournament. It is sincerely hoped that the club will meet with enough encouragement from the business men of the city to make the event worthy of Anacoda, though the club has, so far, not solicited aid from persons outside the city. Nevertheless, the carrying out of a successful tournament is a heavy burden for the few members of the club to bear alone. It is hoped that the Montana champion pigeon shot, W. T. Sheard, of Livingston, will be present, as well as W. B. Benham, of Bozeman, who is also a noted crack shot, and many others who might be named. The Anacoda Club feels competent to shoot with the best."

The Independent Gun Club of Savannah, Ga., will give an open-air tournament on May 8 and 9, in connection with the Merchants' May week festival. A feature of the shoot will be a team contest for a pennant emblematic of the championship of the South Atlantic States. The club will also add cash prizes for first, second, third and fourth best averages. The president of the club is J. H. Harris, Jr., secretary, C. B. Baldwin, and the club has a splendid grounds with a back ground that cannot be surpassed. The organization is strong, one of its leaders being the well known Harry Lemke, C. B. Westcott and John Ulmer. Those who attend the above shoot can expect a warm reception from the club boys. This club ran the opening shoot of the Manufacturers' Trap-Shooting Association, at which everything worked like clock work. Its officers are H. B. Lemke, President; J. H. Harris, Jr., Vice-President; E. W. O'Connor, Secretary and Treasurer; John Ulmer, Organizing Officer.

GLIOVERSVILLE, N. Y., April 25.—The Gloverville Gun Club held an interesting meeting last night at the barber shop of W. J. Adams. Several new members were admitted and officers elected as follows: Edward W. Judson, President; W. J. Harris, First Vice-President; H. Cowles, Second Vice-President; Dr. Shaw, Third Vice-President; F. H. Thrall, Treasurer; J. B. Tuckerman, Secretary. The officers were made executive committee. The field day season opens May 5 and closes Oct. 27. The president presented a handsome gold badge to be completed for during the season, to be the property of the member who makes the best record for the season—during the summer to be worn by the member making the best record at each regular field day.

The following was the result of the shoot of the Androsburg Gun Club, held at Leavitt, Me., on April 19: Class No. 1—E. Field 18, F. Cain 18, E. G. Gay 13, C. W. Curtis 14, J. B. Littlefield 9. Class No. 2—J. F. Moody 11, J. B. Daniels 17, E. Sabourin 9, A. A. Mower 8, W. H. Collins 9, G. Collins 16, T. R. Catland 13, A. L. Morrow 18, A. B. Wakefield 11, F. C. Mower 11, A. L. Morrow won the silver prize given by the Androsburg Gun Club. Class No. 3—G. E. Eastman 12, W. H. Gledhill 11, H. Stetson 8, H. E. Dote 11, C. Garcelon 3, W. Frost 5, G. E. Eastman won the silver prize in this class, given also by the club. Field and Cain shot off the tie and Field won the prize, a double action revolver.

Three new members were elected and two propositions were received at the meeting of the Hampden Gun Club, held April 20 at Rock's Hampden Hotel and Gunwood streets, Reading, Pa. The club decided to abandon the grounds in Alsace township and a committee was appointed to select a new site. Arrangements have been completed for a local tournament on Decoration Day at live birds, glass balls and targets, the prizes for which will be \$5, \$10 and \$5 respectively. The club is also desirous of meeting any other local shooting club for a purse after the first tournament in May.

CLEVELAND, O., April 23.—At the annual meeting of the Arlington Gun Club the following officers were elected for the ensuing year: President, Jackson Allen; Vice-President, Lieutenants, F. Packard and F. Packard; Directors, Wm. Bp. F. C. Feller, A. Lamont, C. Trunk and F. Packard. A handicap shoot for a Parker Gun will take place on the club grounds on May 6, at 30 bluecock targets per man, 5 traps, unknown angles. An all day tournament for merchandise prizes and sweepstakes will be held on May 30.—R. J. Bissett, Sec'y.

"LONDON, Eng., April 20.—It is understood that Ross Winans, the American sportsman, rather of Walter Winans, is to take advantage of a break in his lease next year, to give up all his shootings in Inner-shire and Ross-shire. He has not been north for several years. In the former shire alone his rentals exceeded \$5,000 per annum. The Scotchmen can now divide the land among themselves and leave off abusing Mr. Winans, who used to pay his men double the wages they will receive from their own people."

The Binghamton Gun Club held its initial shoot on the new grounds on April 21. The following officers for the coming season were elected: Directors, N. W. Waldron, C. F. McHenry and John Cutler. A large number participated in the shooting. N. W. Waldron won the club badge by a score of 18 out of a possible 20. The targets used were bluecock targets.

T. H. Keller left home on Sunday for a business trip during which he will visit Pittsburgh, and all towns between there and Lansing, Mich., where he will remain each in time to attend the combined shoots of the Michigan State League and the Manufacturers' Trap-Shooting

Association. From Lansing he will work South and arrive at Knoxville, in time to talk Climax and 23-shorts to the contestants at the big tournament.

The Wyandotte Gun Club, of Kansas City, held its semi-monthly shoot on the Chelsea Park grounds on April 18. The medal was won by A. Mount, killing 21 out of a possible 25. The scores were: Mount 21, Aronds 20, Kerr 18, Meyers 16, "Smoky" Smith 16, Smith 16, Estep 13, Grant 11, Smock 11, Reitz 10.

The Gate City Gun Club held its monthly meeting at Kansas City on April 20 in a gale of wind. Each man shot at ten live birds in the medal contest, the scores being: Bradley 10, Kearns 9, L. Scott 9, Richmers 9, Forjuzon 9, A. L. Bennett 9, G. Gordon 8, Nofsinger 7, W. Bennett 7, Elliott 7, Williams 6.

The Glenmore Rod and Gun Club held a "ladies' night," at its headquarters, corner Wyonatt street and Atlantic avenue, on April 26. A musical and literary programme and a banquet were the order. The rooms were handsomely decorated and everybody had an enjoyable time.

Jas. J. McElhone and Rene T. Clayton of Tamaqua, Pa., shot a race against Wm. Greenwood and John Landis of Germantown, on April 27, each team shooting at 50 live birds for \$200 a side. McElhone and Clayton won with 39 kills to their opponents' 35.

The following scores were made by members of the Standard Gun Club, of Baltimore, on April 25 at 50 targets each: Franklin 44, Smith 44, Hunt 43, Lupas 41, Bondy 41, Coe 40, Jory 39, Clements 37, Sly 35, Williams 28 and Edison 28.

The members of the Multnomah Rod and Gun Club, of Portland, Ore., say their new grounds are the finest on the Pacific coast. The Willamettes have also secured fine grounds in a spot from which a grand view is obtainable.

The May shoot of the Connecticut State League will be held at Moodus on the grounds of the Machinodous Gun Club. This league has proven very successful and thus for all its shoots have been well attended.

George Atwater says, Glen Echo affords the finest views within a good many miles of Washington, and that those who fail to stop there on their way to Knoxville will miss a rare treat.

At the shoot of the Winsted (Conn.) Gun Club on April 27, Peck broke 16, Hurlbut 13, Aldrich 12, Bidwell 10, Minor 10, Owens 10 and Phelps 10 out of 25 targets shot at by each.

The Princeton Gun Club is holding weekly shoots preparatory to their annual shoot for the intercollegiate championship. They will meet Yale during commencement week.

The Union Gun Club of Springfield, N. J., will be represented at Knoxville by E. D. Miller, Charles Smith, T. H. Keller, W. H. La Rue, Wm. Sigler and R. H. Bretnault.

The following clubs have recently joined the Ohio State League: New Lebanon, Pickaway, Springfield, Dayton, Buckeye, Arlington, Grassy Point and Urbana.

The Compton Hill (Mo.) Gun Club has elected W. E. Field as president, P. M. King vice-president, P. M. Denning treasurer and A. Schenck secretary.

Reading, Pa., has a new organization known as the Continental Gun Club, with twenty members. The club will soon hold a tournament.

The May week shoot of the Forest City Gun Club of Savannah, will be held on Thursday and Friday, May 11 and 12.

The Mohawk Rod and Gun Club, of Troy, N. Y., will have an outing in the Adirondacks during October.

Martinsville, Ind., has a new gun club, of which Dr. W. B. Craig is one of the leading members.

The Michigan Legislature has passed a bill legalizing the shooting of sparrows from the trap.

Don't forget Saratoga dates. They are May 9, 10, 11 and 12.

C. H. TOWNSEND.

THE CONNECTICUT STATE LEAGUE.

NEW LONDON, Conn., April.—Inclosed find scores made at the third annual tournament of the Connecticut State League held here yesterday.

Coney Island Athletic Club Tournament.

The fourth contest in the Coney Island Athletic Club's shooting tournament for the championship of the Kings county gun clubs was held on Tuesday at the Atlantic Rod and Gun Club's grounds, at West End, Coney Island. The eight teams originally entered were on hand to compete for the cup, with five men on each team, 15 birds for each man. Owing to the delay in getting the birds, the match did not get started until over one hour late in the midst of a driving rain storm. The Parkways started the shoot, followed by the North Side, Crescent, Glenmore, New Utrecht, Atlantic, Vernon and Coney Island clubs. The birds from the start were a good fast lot, but toward the close the rain seemed to cause them to hang to the traps, and as another unfortunate coincidence they were short of birds and the Parkways having completed their score it was decided to let the leading clubs shoot out; the Glenmores and the New Utrechts at the time were on a tie, both having to kill their last 5 birds; they did so and finished with 67 each, good scores considering the weather. The other teams will shoot out their scores at the next meeting, which will be held at Dexter Park on Tuesday, May 23. The scores:

Parkway R. and G. C.	North Side G. C.
J Bennett, 21020222222012-11	J Tiernan, 00011100122012-9

Referee, Mr. W. F. Sykes.

Long Island Sportsmen's Club.

FOURTEEN members of the Long Island Sportsmen's Club had a good afternoon's sport at Dexter Park on Monday, April 24. Good scores were made, the birds being rather slow. J. Link, C. Wissell and Mr. Schottler had a good race for the club medal, each killing ten. Wissell won on the shoot off. The scores:

J Link, 111212112-10	A Fluegel, 201002211-7
C Wissell, 212211121-10	D Bieher, 0010201102-6
M Schottler, 111212211-10	J Rausch, 1200110011-6
M Goetz, 120121211-9	C Hofer, 200012011-5
J Gunther, 112012212-8	L Kress, 122001001-5
P Kuntzweiler, 110211211-9	C Frese, 121000100-4
W Gendlinger, 021012211-8	B Guesche, 001010010-4

Down Town Gun Club.

TEW members of the Down Town Gun Club held a pleasant afternoon's outing at Dexter Park on Friday, April 23. The competition was for the club's gold medal at 10 birds each. H and T traps, old Long Island rules. Chris Wolf was the winner of the trophy for the third time and the medal was presented to him by the president of the club, Mr. Otto Goetz. The scores:

H Zahn, 0100101001-4	L Maisel, 1000100222-5
C Wolf, 1210112201-8	J Fajen, 0101001011-5
J Schweiger, 0101001011-6	F Huff, 1101020202-6
O Goetz, 0001102100-4	J Flack, 010010102-5
J Breistein, 121100100-5	H Lang, 0201011021-6

Union College Gun Club.

SCHENECTADY, N. Y., April 25.—Inclosed find scores made by members of the Union College Gun Club at their first spring shoot. The day was all that could be desired, and a goodly number gathered at the grounds in expectation of seeing a lively contest; but only four members were willing to enter the sweepstakes.

Sweepstake No. 1, 10 targets:	T V Anthony, 101101111-8
A J Roy, 0111111011-8	G H Miller, 001011110-6
D N Tallman, 111111110-9	
Sweepstake No. 2, 15 targets:	T V Anthony, 1111011010111-13
A J Roy, 101110011111-12	G H Miller, 1001101011011-10
D N Tallman, 111111110110-13	G. H. M.

The Eureka Gun Club.

A MORE dismal, uncomfortable, unfavorable afternoon than that of Saturday, April 29, could not be easily imagined. Yet a good attendance was present, and the shooting did not end till darkness closed in.

The wind, raw and damp, blew a half gale diagonally across the traps from the rear nearly all the afternoon. Sometimes it lulled for a moment, but only to come with a wild gust, which made most erratic flights and poor shooting. To add to the discomfort a cold rain set in, which lasted through two shoots. The traps worked wretchedly bad, and caused many annoying delays. The shooting was at unknown angles, but never were such a lot of unknown angles displayed. They covered all the space between a bird which would skim about 15ft. in a straight line to the ground, and one which towered high in air.

There were some noted visitors in attendance. The genial Mr. A. G. Courtney, of the Lefevre Arms Co.; Mr. W. J. Scott, a son of a member of the great English gun firm W. & C. Scott & Sons, and Mr. A. W. Adams. The shoot was simply a practice shoot. Following are the scores:

Shoot No. 1, 25 blue rocks: Heikes 23, Bingham 19, Courtney 16, Adams 17, O'Brien 10, Steck 20, Drake 9, Waters 7, Robbins 19, Scott 3, Maltby 3, Willard 18, Taylor 10, Patterson 15, Lamphere 16, Prid 20, Thomas 17, 1st, Heikes; 2d, Bingham and Robbins; 3d, Willard.	
Shoot No. 2, club shoot, 25 blue rocks: Heikes 23, Bingham 20, Adams 18, O'Brien 14, Steck 19, Waters 14, Maltby 8, Willard 15, Taylor 12, Patterson 19, Lamphere 13, Courtney 20, Drake 15, Robbins 18, Scott 5, Thomas 15. 1st, Heikes; 2d, Bingham and Courtney.	
Shoot No. 3, 25 blue rocks: Heikes 19, Bingham 23, Adams 15, O'Brien 14, Steck 18, Waters 11, Maltby 4, Willard 17, Taylor 9, Lamphere 11, Patterson 17, Courtney 17, Drake 14, Scott 9, Thomas 17, O'Neil 20. 1st, Bingham; 2d, O'Neil; 3d, Heikes.	
Shoot No. 4, 25 blue rocks: Heikes 22, Bingham 20, Adams 15, Waters 11, Maltby 4, Willard 18, Taylor 7, Courtney 16, Drake 12, Robbins 10, Scott 12, Thomas 19, O'Neil 16, Patterson 15, Lamphere 15, Adams 11. 1st, Heikes; 2d, Bingham; 3d, Thomas; 4th, Willard.	

Shoot No. 5 was started, but targets ran out and darkness intervened, ending the shoot.

B. WATERS.

Dexter Park Sweepstake Shoots.

THE heavy rain of Thursday prevented a great many Long Island wing shots from visiting Dexter Park for sweepstake shooting. Those present had some good sport when the rain cleared off. The scores:

1st, 5 live birds.	2d, same.	3d, same.
T McKenna, 10202-3	0021-2	0021-2
Dr Little, 21202-4	11012-4	10012-3
C Dethloff, 12022-4	00002-1	21122-5
Sweepstake shoots, 10 targets:		
Dr Little, 1 2 3 4 5	T McKenna, 1 2 3 4 5	
8 9 9 5 6	21202-4	1 4 . . .
C Dethloff, 6 . . . 9 5	F Marlborough, 10 6 . . .	
T Short, 5 9 7 9 5		

Glenmore Rod and Gun Club.

OWING to the previous day's team shoot and the Glenmore's tying with the New Utrechts for first place, the members did not turn out very strong for the regular monthly shoot for the Claus diamond badge. W. Levens and C. Hubbell tied for it with seven straight each, but on the shoot-off Hubbell won. E. A. Vroom, C. Hubbell and J. A. Eppig took the several moneys in the sweepstakes. The scores:

C Engelbrecht (24), 2021201-5	W Levens (28), 1211121-7
J A Eppig (30), 0111112-6	E A Vroom (30), 1121120-6
J Simpson (28), 1001101-4	J Gastriger (25), 1101111-6
Dr Boehm (28), 0112111-6	P Leiblinger (25), 110112-6
C Magee (25), 1010111-5	C Hubbell (28), 1111111-7
F Maier (25), 0111000-3	

Some time since we mentioned the fact of a fox-terrier being used in England to carry electric wires through a pipe. The *modus operandi* is explained in the *Graphic*: Strip's method of working is as follows: The workman lay down in the desired position a short length of the stout iron pipe which is to shelter a corresponding length of the copper wire, along which the electric current will ultimately pass. The iron pipe having been fixed, Strip is called, has the end of the copper wire fastened to her collar, and at the workman's sign goes in at one end of the pipe—"and comes out at the other end," says an intelligent but too hasty reader. Not so, however. The other end of the iron pipe has a bar across it, over which the copper wire must be strained to keep it taut. Strip, having entered the pipe with the wire fastened to her collar, presents herself at the other end to the workman awaiting her there, who thrusts his hand under the bar, unfastens Strip's collar and draws it and the wire out. Strip, when she feels her collar gone, turns round, retraces her steps, comes out again at the same end she went in at, and lies down on the workmen's coats until she is wanted again. During the recent bitter cold weather Strips sometimes longed to shirk, and showed a moment's hesitation when told to enter the dark, cold iron pipe; but the kindness the true English workman is ever ready to show to animals, used always to provide a bone or two to be kept handy for these moments of reluctance in Strip's working day. With one of these tempting morsels the gallant little worker was then encouraged and rewarded, and all went well.

Answers to Correspondents.

No notice taken of anonymous communications.

G. A. P. Whitneyville, Conn.—Will you please send me directions to make pitch for birch bark canoes. Ans. A preparation of tallow and rosin is, we believe, most often used.

SWAMPSEED, Portland.—Jeffries marine glue is largely used for deck seams. We do not know the preparation you mention, but there are several compositions put up for use on vessels in place of common putty.

J. G. Hamilton, Ont.—Your boat will probably carry 700lbs. in the fin and lead bulb. The fin is secured between two angle irons, which are bolted through strong floors inside the hull. The keel and both angles are then riveted together.

S. D. P. Scranton, Pa.—Does a non-resident of New York, who fishes in a public stream for trout in season not dare take them out of the State? Ans. A non-resident of New York State, fishing in New York legally, may take what trout he catches anywhere he pleases.

G. W. C., Pine Island, N. Y.—Has a non-resident a right to fish or hunt in the State of New Jersey? I understand by your edition of March 23 that they have, but residents say not. Please advise in your next issue. Ans. Your understanding is the correct one. The New Jersey non-resident law has been repealed.

W. L. S., Boston, Mass.—Where in Vermont, in the vicinity of Lake Champlain preferred, can I find good camping grounds with good bass fishing in the vicinity? Ans. We would advise you to go to some point on the Great Back Bay of Lake Champlain. In the neighborhood of Manum, or St. Albans, Vt., there is good bass fishing and camping ground.

M. W. W., Chatham, N. Y.—Will you kindly give me dimensions of the German 25-ring target? Ans. For 200yds. the German ring target has a bullseye 12in. in diameter. The whole target, including bullseye, is divided into circles 3/4in. apart, counting from 25 down; 250 is the highest possible for ten shots, and to achieve this score all the shots must touch the 25 circle, which is but 1 1/2in. in diameter.

H. C. T., Tassfield.—What rifle is used mostly in the West as a general all-round rifle. What caliber gives the best satisfaction? Ans. All the standard makes of rifles have their advocates in the West as in the East. Repeaters are more often to be found than single-shot rifles. The .45-70 cartridge is probably the easiest to buy in all parts of the West, and judging from this we should say that rifles of this caliber are the most popular.

F. M. C., Cleveland, O.—1. Where in the Southern peninsula of Michigan should I go for two or three days of grayling fishing? 2. What flies and what size should I use in the middle or latter part of June? 3. The Sturgeon River has trout and some grayling. The Little Manistee, near Kalkaska, has grayling still. The Au Sable is less accessible, but has better fishing for grayling. 2. Oak-fly is standard; gray-drake also good. Use flies not larger than No. 8.

ONJUTTA, Thompsonstown, Pa.—1. I would like to know the proper flies to use for trout at the opening of the Pennsylvania season, and for the different periods of the day? 2. Above what length only do you think brook trout should be retained? 3. How should a leader be attached to the line? Ans. 1. Special flies for April, black-gnat, (or minnow), claret-gnat, gray-gnat, olive-gnat, dark-fox, red-fox, black-back, etc. The gnats are morning flies and the fox evening. 2 Six inches. 3. The leader should have a loop and the line attached by a simple adaption of the flat knot.

T. P. L., Allentown, Pa.—Having been referred to you by W. L. Powell, one of Pennsylvania's State Fish Commissioners, for information, I beg leave to ask you a few questions in regard to the raising of bullfrogs. Can they be raised to an advantage if a good place can be had to do so? What is the proper food to feed them when they are kept in large numbers? What sort of a bed should the pond have? Ans. We know of no successful instances of raising bullfrogs in large numbers. The fact that frogs are cannibals, preying on the smaller individuals of their own species, would seem to preclude anything in the nature of farming—except perhaps under specially favored conditions. Marshes intersected with numerous water channels, in which were to be found abundant insect food, might possibly be turned to advantage for this purpose.

C. W. H., Elisabethtown, N. Y.—1. How can I prepare a hawk, owl, etc., for the taxidermist when at a distance from the city. 2. Also price of same set up by some good taxidermist. 3. Also can you recommend any particular places, and the fox evening. 2 Six inches. 3. The leader should have a loop and the line attached by a simple adaption of the flat knot.

A BLANK DAY.

BUT IT WAS NOT ON THE

ILLINOIS CENTRAL RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear
to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys
to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks
in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe
shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

A. H. HANSON,
Gen. Pass. Agent, Illinois Central R. R., Chicago.

Opening of the Chicoutimi Extension, 1st July, 1898. The new route to the far-famed Saguenay and the only rail route to the delightful summer resorts north of Quebec, through the
CANADIAN ADIRONDACKS.
Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate. Hotel Roberval, Lake St. John, has first-class accommodation for 300 guests, and is run in connection with the "Island House" at Grand Discharge of Lake St. John, in the center of the "Ouananiche" fishing grounds. By communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels. After 1st July trains will connect daily at Chicoutimi with Saguenay steamers for Quebec. Day-light trip. A beautifully illustrated guide book free on application. For information as to hotels, apply to hotel managers; for folders and guide books to ticket agents of all principal cities.

ALEX. HARDY, Gen. F. & P. Agt. Quebec, Canada.
J. G. SCOTT, Sec'y & Manager.

Rome, Watertown & Ogdensburg Railroad.

N. Y. C. & H. R. R. CO., Lessee.

The Rome, Watertown & Ogdensburg Railroad is the route to the best fishing grounds in New York State and Canada. Through cars are run from New York City, Chicago, Detroit, Buffalo, Niagara Falls, Suspension Bridge, Utica, Syracuse and Rochester, to Cape Vincent, Clayton, St. Lawrence River, Massena Springs, Ogdensburg, and all principal places on Lake Ontario, and to Norwood for all points in the White Mountains and Maritime Provinces.

This line reaches the best and most famous fishing grounds in America for salmon, ouananiche, muskellunge, black bass, brook trout, lake trout, white fish, pickerel, perch and other fish. Information in regard to the fishing grounds and how to reach them will be cheerfully furnished upon application to

MEMBERSHIP SHARES
IN THE
Triton Fish and Game Club,
CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 102,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 6lbs. (*Salmo fontinalis* only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals. The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references. As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment. Intending purchasers should carefully examine Sec. 4 of constitution, also pages 12 and 24 of by-laws about membership certificates, agents, membership cards, route and mode of payments.

TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address
DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

SUNAPEE LAKE, N. H., the ideal angling,

pleasure and health resort.
1,200 feet above the sea; dry climate; bracing air; no malarial influences; refreshing sleep in the ozones of hemlocks and balsams; exceptional opportunities for rest and recreation. Superb land-locked salmon, trout and black bass fishing. Safe boating for ladies and children. Refined society. Very accessible from New York and Boston. Lots for sale and to lease in Soo-Nipi-Side Park; 1 1/2 miles on lake shore; restricted for 50 years. For prospectus, etc., address **THEODORE R. SHEAR,** Attorney and Counsellor at Law, No. 29 Wall St., New York, or **HENRY C. WILSON,** 53 State St., Boston, Mass.

FOR SALE-CHEAP.
PARADISE FOR SPORTSMEN.
CEDAR ISLAND, Virginia.

Atlantic coast, just above Hog Island, where President Cleveland has been shooting. It is easy of access, and contains about 3,000 acres, high land. Waters abound in fish, oysters, clams, etc. Splendid sea and bay sailing. Four miles of ocean frontage. The best shooting ground for duck and wildfowl on that coast. For full particulars apply to **WM. FINDLAY BROWN,** Attorney at Law, 411 Walnut street, Philadelphia, Pa.

FOR SALE OR TO LET.

RIFLE LODGE, superbly located on Highland Lake, Bridgton, Me. Best of bass fishing. About 20 acres of woodland. A new cottage house of 11 rooms completely furnished for summer use. Open fire place; wood in abundance. Ice house filled. Place well adapted for a family or club. For full particulars address **C. H. LOOMIS,** Medford, Mass.

SALMON FISHING.—AN EXPERIENCED angler will take charge of two gangs for first-class salmon and trout fishing about 25th July on one of the best salmon rivers in Canada. Complete outfit provided. Address **ANGLER, P. O. Box 400, Fredericton, New Brunswick, Canada.**

ALBEMARLE AND PAMPLICO CRUISING AND Hunting Association.—Bear, Deer, Wild Turkeys, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing: Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 20. One more subscriber wanted. **H. A. Weeks,** 74 Murray St., N. Y.

FOR SALE.—SHARE IN ONE OF THE BEST wildfowl shooting and fishing clubs on the Atlantic coast. Plenty of game and every comfort and convenience. Parties meaning business address **Box 214, No. 37 East 17th street, New York.**

BEST TROUT FISHING AND SUMMER BOARDING on Pocono Mountains, four hours from city to Cresco Station. **ROBERT LOMAX,** Canadensis, Pa.

CAPercaillie for America.

We take pleasure in announcing what we believe to be the first importation of live capercaillie to America, a brace of these birds having arrived in New York from Christiansand, Sweden, on the steamer *Russia*, last Friday. They were consigned to the FOREST AND STREAM and were for the Hon. D. F. Stillman, of Westerly, R. I., to whom we have forwarded them.

In our issue of May 8, 1890, we printed a report of the State Department by the Hon. W. W. Thomas, Jr., Minister to Sweden, in which he recommended the introduction to American forests of the capercaillie (*Tetrao urogallus*) and the black game (*T. tetrix*). In this report Mr. Thomas showed that these splendid species of grouse would probably do well in any part of the United States where the ruffed grouse is to be found, and especially recommended the birds for the wooded districts of New England, New York, Pennsylvania and the wooded slopes of the Rocky Mountains, as well as other forest-clad mountains of the West. He showed also that capercaillie and black game had been shipped of late years from Sweden to various parts of Germany, Austria and Hungary, where both species were once abundant but had been exterminated, and also called attention to the well-known fact that the capercaillie had been re-introduced and become established in Scotland. At that time we urged that experiments should be made with both these grouse, which can be obtained in Sweden without much difficulty, and which seem to be sufficiently hardy to endure transportation without great loss.

Accompanying the bill of lading which reached us from Mr. Anderson, the shipper, is the following letter:

Editor Forest and Stream:

I send this day two cases of game birds as recommended by Mr. Thomas, of Stockholm, and Mr. C. O. Wibert, of Helsingborg, according to an article published in your paper of May 8, 1890. More game birds will be sent to America. I think the most convenient time to ship would be October and November. I have sent hundreds of them to Southern Europe, Vienna and other places, crated like those I sent to-day, and have only lost 2 or 3 per cent. by death. I have had a great deal of experience with feathered and horned game, and find that they stand transportation better on the water than by railroad, 2 to 1. A special person is looking after the consignment I ship to-day. I am very anxious to hear how they arrive.

The capercaillie is the largest of all the grouse family, the full grown male bird weighing from 10 to 14 lbs., while the female is somewhat smaller. It is a denizen of the pine and fir forests of northern climates, its food consisting largely of the buds and leaves of trees, the needles of pine and spruce, berries of all sorts, seed grain and insects. As our own dusky grouse is said to do in winter, the capercaillie often lives for days in the same pine tree, feeding upon the leaves and young cones. The female makes her nest upon the ground, and lays from six to a dozen eggs. It is said that after the young are hatched and old enough to fly a little, the birds always roost in the trees.

Lloyd in his "Field Sports of the North of Europe,"

tells us that the capercaillie is often domesticated in Sweden, and that he has known birds of this species to be kept for a long time in aviaries built for the purpose. They became perfectly tame and remained healthy, feeding on oats and the leaves of the Scotch fir, large branches of which were introduced into their cages once or more in the course of a week. They were also supplied with an abundance of native berries when these were procurable, and were amply provided at all times with water and coarse sand, both of which were frequently changed. He even says that they will sometimes breed in confinement, and tells us of a case where six were hatched in a cage. Unfortunately none of them survived.

The subject of the introduction of foreign game animals into our covers is one which is constantly attracting more and more attention, and as the preserve system extends, more and more money will be expended each year in the introduction of foreign birds. There can be no question that the hardy grouse of northern Europe would do well in many of the wilder portions of this country, and no doubt the capercaillie in Maine, in the Adirondacks, and in the Rocky Mountain region would live, thrive and increase. It might well be worth the while of our State Forestry Commission, which is in charge of the Adirondack and Catskill parks, to import a considerable number of these birds to be released in this wild region, where they would no doubt do well, and private clubs and associations, of which there are now so many in the country, might also make an effort in this same direction.

To the Hon. D. F. Stillman, however, must be given the credit of having made the first effort to introduce into America a most superb member of the grouse family.

DYNAMITE.

A TRULY heroic measure has been adopted in Missouri to get ahead of the dynamite fiend. This individual is the curse of Missouri fish waters, as of the waters of many another State, particularly in the South. Streams large and small, where fish were formerly abundant, in supply good for all time with reasonable use, have long since been made barren and worthless by the senseless and destructive raids of the dynamiter.

The Missouri Legislature was appealed to in the last session, in a petition extensively signed, to provide a remedy for the dynamite cartridge; and the measure enacted appears to be quite ample in scope. It prescribes stringent regulations for the possession, traffic in and use of dynamite, giant powder and other nitro-glycerine products. No person may deal in these explosives until he shall have taken an oath that he will neither use them unlawfully for taking fish, nor sell them for such purposes, nor dispose of them to a purchaser until the purchaser in turn shall have delivered an affidavit setting forth that he will not use nor permit them to be used for killing fish. The several affidavits must be filed with designated public officers; violations are punished by imprisonment.

The statute is calculated to insure a close record of the trade and handling of explosives; under it there should be little difficulty in tracing the history of a case of fish dynamiting and putting the responsibility where it belongs. At the same time, owing to the peculiar nature of the product so controlled and to its restricted use, dealers may not rightfully complain of hardship or burdensome restrictions to trade.

In adopting this law Missouri has provided a check on what has been recognized as the most destructive agency affecting the food fish supply of the State. Public interest demands the rigid execution of the dynamite license law.

Fish Commissioner John W. Titcomb, of Vermont, who has come to New York with a new and ingenious landing net device, tells us that the trout supply in Vermont waters has been injured more severely than has been appreciated by the freezing of the streams and pools in the last winter. On the other hand, he reports a marked change in public sentiment regarding fish protection. In certain localities, where in former years commissioners and wardens encountered nothing but opposition in their efforts to apprehend netters, the feeling has been so changed that they now find abundant help, support and co-operation. In public sentiment must be sought the only efficient backing for the enforcement of game and fish laws; once this favorable attitude of the community is assured, the laws will virtually execute themselves.

THE FLORIDA "VOLCANO."

A PHOSPHATE prospector, J. Q. Martin, reports in the Orlando *Recorder* that he has solved the long-standing mystery of the Florida "volcano." From time immemorial a cloud of smoke has hung over the Pinhook swamp, a vast morass in Taylor and Jefferson counties, bordering the Gulf coast, and although repeated expeditions have set out to penetrate the swamp and determine the nature of the phenomenon, no one has ever before been successful. We believe that it was while on an exploration for the Florida "volcano" that Mr. C. L. Norton, known to our canoeing readers, fell from a tree with such disastrous results. Mr. Martin, who is an experienced swamp explorer, relates that, cutting a well-blazed path, he returned on his trail from time to time and carried in provisions, until he came to a part of the swamp where the ground was honey-combed with holes, sometimes five feet deep, made by fire, with miry bottoms; and ponds of acres in extent, also hollowed out by fire. The air was smoky, and the stench from dead fish and rotten water terrible in the hot sun. At noon he came where the ground was still burning, and here was the solution of the mystery.

The earth was solely composed of coarse vegetable matter, which burns like tinder when not too wet. In the heaviest rains some fire that has got into a rotten log will smoulder for weeks, only to ignite the ground again when dry enough. At some places a kind of moss grew, which shed water like a rubber coat. A subterranean outlet for rainwater drains the land. Sometimes a heavy growth of pine needles would fall point foremost and often straddle the twigs. When the fire comes to such a place the dry pine needles burn on the bushes to their very tops and the flames next devour the tops of the pines themselves. The smoke is black as night and will ascend for days and be seen at a long distance, and at night to sky looks red. And this is all there is about the Florida "volcano." I could guide any one to the spot. It must have burned for 100 years and there is muck enough to burn for 1,000 years to come.

This is but a sorry realization of the romance with which writers have been wont to surround the volcanic mystery. For the rest it may be added that Mr. Taylor found good hunting; he heard numerous bears and panthers, and killed 100 turkeys and a deer.

SNAP SHOTS.

THE advertising pages of a journal devoted to special interests afford data for estimating the condition of those interests. Determined by the bulk and variety of the advertising contained in this issue of FOREST AND STREAM, the interests represented must be in a healthy and flourishing condition. Our trade announcements relate to all branches of the field sportsmen's activities; nowhere else in this country may be found such a grouping of sportsmen's supplies, and it is not too much to say that in no other journal are the advertising pages read more thoroughly or with greater interest.

Tennessee sportsmen are talking of organizing a State association for the purpose of protecting their interests in the next Legislature. The Chattanooga *Times* is active in promoting the scheme. We have already alluded to the intelligent and efficient service rendered by the *Times* to the sportsmen of Tennessee; it is a pleasure to record such an instance of co-operation on the part of a lay journal. If every daily and weekly in the land shared the views of FOREST AND STREAM respecting our game and fish, this would be a great country for the man with the gun and his brother with the rod. Local game and fish protective organizations will find no more profitable lines of effort than through their home journals, particularly the small country weeklies. The country editor wields an influence which only fools deride; politicians appreciate this; sportsmen would do well to learn it.

Since our last acknowledgment contributions for the "Nessmuk" memorial fund have been received from the following:

MR. H. O. WILBUR, Philadelphia, Pa.

MR. C. A. TAFT, Whitinsville, Mass.

The total amount subscribed to date is \$233. The working drawings for the monument have been received; and we hope that the successful completion of the work may soon be announced.

In a recent raid lasting thirteen days, Harrison Hawn, State Game Protector, assisted by E. D. Crossley, of Skaneateles, discovered 110 bona fide cases of violation of the law and took twenty nets. Mr. Hawn reports that this spring the run of pike upon their spawning beds in his district is the heaviest for years.

The Sportsman Tourist.

THE GREEN BAY MONSTER.

"B. LAKE!" called the conductor from one end of the car.
"B. Lake!" echoed from the brakeman at the other end.

It was the evening of Sept. 1. It was the first day of my vacation; and never schoolboy enjoyed the beginning of a long holiday more than did I this beginning of mine.

I had traveled all day, and now as the sun was sinking behind the hills, I reached my destination, B. Lake. Gathering up my traps I appeared on the platform of the car as the train stopped at the little station, and almost the first object that met my sight was the sunburnt face of honest John Blake, my old boatman, and as I considered, the best fisherman on B. Lake.

After shaking hands with John and directing where my traps should be sent, I started with him to walk to my hotel.

"John," I said, "how is the fishing in B. Lake this year?"

"Purty fair, Mr. Sherman; purty fair."

"Have you caught many, John?"

"Well, not to say many; but I guess I've caught about my share."

"Any large ones?"

"No, I can't say as I have. None so very big, but some purty fair ones."

"How much did your largest weigh?"

"Well, now along to 'rd the last of August I caught one near the old icehouse that weighed nigh on to thirty pounds. That's the biggest I've caught, but I've seen a big one: I tell you there's an old whopper stays up in Green Bay. Why, Mr. Sherman, he's the biggest fish I ever saw in this lake. I do believe he'll weigh a hundred pounds. I've seen him jump out twice now, and he looks as though he's ten feet long!"

"Nonsense, John; that's a fish story."

"I tell you it's a fact, Mr. Sherman; you never saw such a fish."

"Well, why don't you catch him?"

"That's the trouble; he won't bite. I've tried him time and again, and lots others have tried him, but nobody can get him to bite. Oh! he's a cunning old fellow, I tell you. He's up to all the dodges."

After supper I strolled out on the porch in front of the hotel to feast my eyes with a sight of the lake and breathe the pure air coming over its waters. The proprietor of the hotel soon joined me.

"I suppose you are going to try the fishing again, Mr. Sherman?" he said.

"Yes, that is what I am here for."

"Well, you are likely to have plenty of sport, for the fishing is good this year."

"Have many been caught?"

"Yes, a good many, but there's one that hasn't been caught and he's the biggest fish in the lake. Why, I tell you Mr. Sherman he's a monster, a perfect whale of a muskallonge."

"You have seen him then?"

"Oh, yes," he answered, "and that only last week. A party of us were rowing across Green Bay one evening and when we got about the middle of it we heard a splash that sounded as if a Newfoundland dog had fallen in the water. We looked around and there he was about a hundred feet from the boat, splashing on top of the water, and while we looked his big tail raised into the air and he disappeared. I never saw such a fish in this lake. I do believe, without exaggeration, he would weigh over a hundred pounds."

"And they can't catch him?"

"No, he's a sly old chap. They've all been trying him, but he won't bite. I tell you it would be a feather in your cap if you'd catch him."

And I determined that catch him I would if patience and perseverance could accomplish it.

An hour later I walked up to one of the village stores to make a few purchases. The usual crowd of men were gathered there and the usual cloud of tobacco smoke filled the store. As I entered one of the men said:

"I'll bet you he'll weigh over a hundred pounds. Why only last Wednesday night he jumped out within fifty feet of my boat and I saw him plain. He's a regular old whale."

"Why don't you try to catch him, Seth?" asked one of the bystanders. "You can catch him if any man can."

"Haint I tried it? Haint I fished there three weeks steady for him? Haint I rowed around Green Bay mor'n a hundred times, and still I can't get him to bite? But I'll have him yet if I have to fish all fall for him."

"Not if I can help it, Mr. Seth," I thought, "I'll take a hand in that contest myself, and we will see who comes out ahead."

The sun was just coming over the hills next morning as our boat glided out on the lake, and, as if by instinct, headed for Green Bay. Five minutes' row brought us to this now famous part of the lake. Green Bay is a part of B. Lake, almost surrounded by land. The part thus inclosed is possibly a mile long by half a mile wide. The shores around it are covered with a dense growth of low green bushes, which gives to the place the name of Green Bay. As we passed through the narrow opening from B. Lake into the bay an unusual sight presented itself—more than twenty boats were stationed here and there over the bay. Often as I had been on the bay I had never seen more than one or two boats, but here was a whole score, a regular fleet of boats.

"All after the big fish," remarked John.

"How do they know he is here, John? He might be five miles away."

"No," answered John, "muskallonge don't do that. They generally stay near one place a long time. They go away sometimes to find food, but always come back."

For two hours or more we fished, moving slowly around the bay without a sign of the fish. We then left for other parts of the lake, but returned again in the evening to give the bay another two hours' trial. If possible, there were more boats there in the evening than in the morning, and we all fished until dark without a sign of the big fish. So three days went by, three days during which we spent a couple of hours each morning and evening fishing

in Green Bay, but though we gave this place the best hours of morning and evening, we not only never got him to bite, but never even got a sight of him.

I confess my patience was becoming exhausted, and I thought of giving up Green Bay entirely and spending all our time at other places, where there were more muskallonge if not so large.

The morning of the fourth day we pulled over again into Green Bay. We had gone possibly half its length, when suddenly there was a tremendous splash in front of the boat. I turned quickly and was just in time to see the tail of the fish disappear. Ye Gods! If the fish was in proportion to that tail he must be a fresh-water monster. "Pull John," I shouted, "Pull nearer." The boats from all parts of the lake were coming toward us. The news seemed to spread like wild-fire. Soon we formed a regular circle of boats around where he had disappeared. It was impossible for him to swim in any direction without seeing some of our minnows, but if he saw them he passed them all, for though we fished patiently all morning, we saw not another sign of him. But that one sight of his huge tail revived all my energies. I determined to have that fish if possible. All the fish in the lake sank into insignificance compared with him. It was the big fish or nothing. Instead of spending less time on Green Bay, we spent all our time there. We kept boys out exploring the county around for choice minnows, thinking to tempt him; but all in vain. Day after day went by without a sign of the fish. How many mornings we started out filled with hope, only to return at nightfall disappointed, discouraged. At last I suggested to John that we try live frogs, possibly they might tempt him. That night we started out torch-hunting for frogs, and soon succeeded in catching half-a-dozen very large ones. Again hope revived. The next morning we tried them, patiently, perseveringly, but with no better success. If he ever saw them he passed without touching them.

The afternoon of that day I shall always remember. It was intensely hot, so we did not start out until 4 o'clock. Just as we reached Green Bay a little breeze sprang up, which made it delightful after the heat of the first part of the afternoon. For some reason there was an unusual crowd of fishermen that afternoon. The little bay was dotted all over with boats. Several sail boats were out, and one steam "tug" with a party of ladies and gentlemen aboard.

I had but one frog left, and it my largest. I had saved this one until the last, and now carefully put it on the hook.

"John," I said, as I slipped the frog into the water, "that should tempt our big fish if anything will."

"Yes," answered John, "if anything will."

"Well, he must eat, John, and if we can only find what he lives on we may get him to bite."

"That's true, Mr. Sherman, but it's my opinion he feeds at night, and you'll never get him to bite in day-time."

I placed my rod in a position so the line would run clear. I fixed myself in a comfortable reclining position in the boat, lit a cigar and began thoroughly to enjoy the evening. Beyond raising the line occasionally to give the frog air I had nothing to do.

John by a dip of the oars now and then kept the boat nearly over the bar which ran through the center of the bay.

We had been in this position possibly half an hour. My cigar was finished and I was beginning to feel drowsy.

"John," I said, "I believe I could go to sleep if—"

Splash—splash—a streak of silver darted into the air not 50 ft. from our boat. Such a fish I never saw leap out of fresh water. Such a tail I never saw disappear in fresh water.

"Look out! Look out, Mr. Sherman," whispered John, "he's coming this way."

Scarce were the words out of his mouth when my line began to move and the reel to spin.

"Hurry, John, hurry," I called. "He's got my bait. Quick, follow him."

I was on my feet in an instant. John was rowing with all his might. Still the fish was gaining, and I had to give him line. Fifty, seventy-five, a hundred feet he ran like a race horse. Then he stopped. There was a moment of rest, a breathing spell. I glanced around. On every side the boats were coming toward us. The word was out and every one was coming to witness the struggle. Even the steam tug was turning in our direction.

All this I took in in an instant. I had scarcely more than that time, for away started the fish, and such a race as that I never saw a fish make. All the weight I could put on the line had no effect on him.

On and on went John rowing after him with all his might. I think we covered 500 yds. before he stopped again. When he did stop it was a relief. It was a comfort to have him rest. Five, ten minutes he remained motionless, and I confess I was afraid to rouse him.

In the meantime all the boats had approached as near as they could without being in the way. The steam tug lay off to one side, all the lady passengers eager spectators of the fight.

I confess I felt the importance of my position. It was something novel in my experience to play a fish of this size, with an audience of half a hundred. I knew all eyes were fixed upon me, and I knew, too, that I was excited, my hand was trembling more than I cared to admit, but yet I thought I should appear cool to the crowd of spectators. I remember reaching in my pocket, taking out a cigar and coolly (apparently) striking a match and lighting it.

Suddenly the fish started off of his own accord.

"After him quick, John," I called.

After him we went quick as John could send the boat, but in spite of John's best efforts I had to give him line. A hundred feet, two hundred feet, two hundred and fifty feet were out. I had only fifty left. I began to get alarmed.

"Faster, John; faster," I called.

Suddenly the fish shot off like a streak of lightning. The remaining line was out in an instant; the rod bent double; the line stretched and stretched and—snap!

Line and fish were both gone together. A subdued ah! went up from the crowd. Words can not describe the disappointment I felt. Only those who have felt a line part and a large fish escape can understand how I felt before such an audience at the loss of such a fish. Nevertheless it was an honor to even have hooked the big fish, and I felt it the more on my return to the hotel to find that the news had preceded me. That evening I had quite a number of callers who wanted to hear from my

own lips an account of my afternoon's experience. The next day the village newspaper came out. Its first column had the following heading:

"Mr. Sherman the lucky man. The big muskallonge bites for him, and after dragging the boat over half a mile, breaks the line and escapes. The scene as described by an eye witness."

Then followed a glowing and, I must admit, a somewhat exaggerated account of the afternoon's exploit.

I began to feel quite the hero of the hour. I sent copies of the paper home to my friends, at the same time informing them that I was going to get back the line I had lost—and I did.

It came about in this way: About a week later I received an invitation from the Jolly Fishing Club to spend that evening with them, their last in camp, as they were going home the following day.

It was a jolly party that evening around the great camp fire, and the story telling lasted away into the small hours.

As I was thinking of leaving, the Captain of the club called me to one side and handed me a small package, remarking that he believed it was my property. I opened it. What—could it be—was it possible that this was the silk line I had lost on the big fish?

"Has the fish been caught?" I asked.

"He has," answered the Captain.

"And who was the lucky man?"

"Your humble servant, Mr. Sherman, had the pleasure of bringing him into camp last night."

"But why didn't you tell us about it this evening?"

"Oh, you know Mr. Sherman, I am very modest, and I did not want it to get into the papers."

"So you caught him at night?"

"Yes," answered the Captain, "it was after dark last night."

"Just as John said," I replied, "John always claimed the scamp fed after night. Well, you have got ahead of me, Captain, but how much did he weigh?"

"I'll let you see him," answered the Captain, "and you can judge for yourself. Come this way."

He led the way to his tent, in the center of which a torch was burning, and under it on the ground lay the largest muskallonge I ever saw. I looked at him in silence several moments.

"Well," I said, "I congratulate you, Captain. Isn't he a monster? Why, he will weigh over a hundred pounds."

"Yes, he's quite a fish," answered the Captain, "but I don't think he will weigh so much as a hundred pounds."

"Isn't it remarkable that his eye remains bright so long?" I asked.

"Oh, no," answered the Captain, "that is the peculiarity of that kind of fish. He's not the ordinary kind of muskallonge, Mr. Sherman, examine him closely."

I stooped down to look at him.

"By the gods," I said, "his eyes are glass, and his body—why his body is gum. What's the meaning of this, Captain?"

The Captain was shaking all over with laughter.

"Is this the big fish we have all been fishing for?"

"I am afraid it is," answered the Captain.

"And you fellows have been fooling us all these weeks? A pretty storm you'll have about your heads when this comes out."

"But," said the Captain, "I want you to promise me you will not tell it until we get away. Honor among fishermen, you know, and we are all fishermen together. By the way, what rare sport we had that afternoon behind the bushes when the fish accidentally caught on your hook, and as we pulled him in, you and John came following after. We were all sorry when you got so near shore that, to avoid discovery, we had to give him a run and bring away your line."

"But how did you manage it all, Captain? I don't quite understand. How did you cause him to jump out?"

"Well, you see," answered the Captain, "the fish is weighted just sufficient to keep him on the bottom. You see there are two rings, one in the head and the other further back and under the fish. In each ring we fastened a fine wire, then at night we would drop the fish into some part of the bay, bring the lines to shore at a point where we could deep concealed behind the bushes. By pulling the line fastened to the head the fish followed the bottom; by pulling the other quickly, the mouth being opened, it shot upward, even out of the water. You see how simple it was?"

"Yes," I answered, "and I see how simple we all were to be taken in by it."

"But you'll promise me not to say anything about it until we get away, Mr. Sherman."

"Oh, you need not fear," I answered, "I'll say nothing about it."

And I didn't tell it, even after they had gone. And to this day at B. Lake they talk of the big fish I hooked that September afternoon. And the universal opinion is that my hook caused his death, and satisfactorily accounts for his never having been seen since that afternoon.

I accepted that belief, and from that time fished in other parts of the lake, but when the "big fish" is talked about I have very little to say.

F. I. SHERMAN.

A Michigan Verdict.

CENTRAL LAKE, Antrim County, Mich., April 29.—*Editor Forest and Stream:* The State game and fish warden, Hon. C. S. Hampton, this day secured the conviction of Wm. Tylor, Philip Tylor and Wm. Clark for having on March 25 last, pursued, taken and carried away a deer, contrary to the statute. The penalty imposed by Justice Green of this village, before whom the case was brought, was \$50 each or 30 days in jail.

The parties are all residents of this township, are not known to hunters, and much sympathy was felt for some of them at least. The jury would have been glad to acquit, but they were good men, and could not do it.

Mr. Hampton has made two visits to this place in working up this case, and its result will no doubt be far-reaching in its effect upon the minds of many who have been accustomed to regard the game and fishery laws as practically a dead letter in this region.

Now, we want to see the fishways at Bellaire and Elk Rapids repaired and kept effective, and to have the slayers of fingerling trout punished to the full extent of the law. The spearsmen are shaking in their boots, and well they may, for the hands of the warden or his deputies are liable to be heavy upon their shoulders. Some of them will "catch it" yet.

KELPIE.

Natural History.

WOOD BISON AND MUSK OX.

By courtesy of Mr. George Johnson, chief statistician at Ottawa, Canada, I have been placed in possession of published official notes of Mr. William Ogilvie, Dominion land surveyor, made in Government interest during the past six years along the basins of the Mackenzie and Peace rivers, in the British Northwest Territory, which give much information of especial value regarding the natural products of that vast region including the big game fauna. Of these perhaps the most interesting and the least known are the wood bison and musk ox.

A birdseye view of an area 2,000 miles in length by 1,000 miles in breadth, lying west of the Mackenzie River discovers it to be mainly forested and mountainous, with abundant streams, while the extensive barren ground region lying east of that river and north of the 65th parallel of latitude is chiefly moss-covered plain, interspersed with small patches of willow and coarse grass and pools of water, sloughs, bogs and swamps alternating with bare ridges of rock, frozen up for about six months in the year. Each of these distinct regions has its peculiar fauna. The first is the home of the wood bison, moose, elk, mountain sheep, goat and woodland caribou, and the latter of the musk ox, ice bear, reindeer and blue and white fox, though the country as now found is not comprehensively the bleak, inhospitable, desolate, unknown and inaccessible "great lone land," which it persistently remained for more than two centuries. Within the past ten years its development has kept pace with progress everywhere else. Railroads reach out to its hithermost confines. Steamboats ply on every principal lake and river. Tramways flank obstructions to fluvial navigation. Missions and towns have sprung up around the principal trading posts and at eligible commercial points. Roman Catholic and Church of England bishoprics cover all the territory. Steam flour mills and sawmills hum and whirr afar up under the edge of the Arctic belt. Even vegetables and grains thrive and mature where it was thought they could not possibly endure. The town of Edmonton, on the Saskatchewan River, 1,000 miles northwest from Winnipeg, is but a five days' all rail journey from Ottawa, and with a supplementary jaunt of less than 100 miles across country to the Athabaska River, one can take steamboat at Athabaska Landing and sail down to the Mackenzie River delta, on the shore of the Arctic Ocean in less than 20 days' time!

Such encroachments of civilization and facilities of access make it hard on the musk ox and bison, for even now sportsmen have begun to hunt specimens of horns and pelts for museum collections. It is well, therefore, for naturalists to note what Mr. Ogilvie, surveyor, has to say of the big game of this imperial territory as it is found in its stamping grounds to-day, for only a few more years are likely to change existing conditions essentially.

Imprimis, as to wood bison: Our authority, in his report of 1887-8, on the physiography of the Peace and Mackenzie river basins, after specifying the whereabouts of known bands of buffalo seen the previous winter, reckons their number at only about 180, yet five years later, in his report of 1892, with extended observation and sources of information, he is able to place the number as "probably not exceeding 300 in all." Bands of 50, 25, 30, 13, 25, 20 and 5, respectively, are enumerated. This apparent increase is gratifying in view of the attested fact that the Indians always endeavor to kill the whole band wherever they find them, whether they need food or not. It is their habit to drive the animals into a bog, if one be convenient, where they soon mire and are quickly killed. Fortunately, however, the bison are so wary, and so keen to see and smell the hunter before he knows of their presence, that they stampede at the first alarm, never halting until they are well out of danger. Their flight through the snow, as described by an eye witness, resembles the whirl of a rotary snow-plow with an occasional glimpse of a black spot in the center of it.

The haunt of the wood bison lies north and west of the Athabaska River, across the Peace to the Liard River. Occasionally they have been seen in the mountains back of Fort Liard. They graze in the little upland parks and court the cover of the thickets. The paucity of their numbers, in contrast with their great abundance half a century ago, seems inexplicable, as there is no record of any undue slaughter at any time by natives or traders. As recently as twenty-five years ago it was no uncommon thing for a few of the Indians in the neighborhood of Dunvegan and St. John (H. B. C. posts on Peace River) to go out and procure in a few days' time sufficient meat to supply their wants for the winter. One explanation of the mortality is that a heavy fall of rain, followed by a sharp freeze, occurred in one of the winter months twenty-five years ago, which formed an impenetrable crust of ice, so that all animals which could not subsist on browse were nearly exterminated by starvation. But it is objected that a rainstorm could hardly have been extensive enough to cover the entire vast territory, and if so where are the bones of the bison?

While naturalists hardly admit two species of buffalo, the fact of the wood bison having inhabited a forested country as far back as Hudson Bay Co's historical records go, and not being refugees from massacres of the plains, as has been urged, shows marked change of habit and appearance by environment. Size and color may thus be accounted for.

As for the musk-ox, he inhabits a much more inaccessible country than the wood buffalo. Still to reach the confines of his isolated home is little more than a pleasure trip, with the means of travel now available, and the fame of Mr. Warburton Pike, who recently penetrated to the hyperborean tundra and assisted in the slaughter of sixty musk-oxen and ninety caribou, according to his own published statement, is tempting others to strike out for this field of exploitation and dubious surprise, so that

Mr. Ogilvie, with much concern, is asking whether it is not admissible for Government to prohibit killing by outsiders, except by permit, at any season. Musk-oxen run in bands to the number of thirty in each. They are fleet of foot, but not at all shy and are easily slaughtered by the Indians, who drive them into pens or corrals. The female drops but one calf at a birth, generally in the month of April. It is said that she buries it in the snow as soon as born, selecting some sheltered spot exposed to the rays of the sun for the purpose. Three days after birth the young one is able to run with the dam.

The range of the musk-ox is from Hudson's Bay to the fringe of woods lying along the east side of the Mackenzie River, and from the Arctic coast southward to the east of Athabaska Lake. In winter the bands move southward toward the timber line. Pelts of musk-oxen are found among the collection returns of all of the twenty-eight fur posts situated in the Northwest Territory.

At Fort Simpson, on the Mackenzie River, the Hudson Bay Company has a most interesting museum which was

"LISTEN."

Equal Fifth Prize, Forest and Stream Amateur Photography Competition.
Photo by Col. Cecil Clay, Washington, D. C.

organized in the year 1887, for the purpose of collecting and preserving all the animals and birds and other fauna of the country, as well as minerals, fossils and any curiosities of interest, including aboriginal implements, bones, etc. Capt. Bell, of the steamer Wrigley, navigating the lower Mackenzie, is a taxidermist of great skill, who devotes constant attention to mounting stuffed specimens. Normally, this is one of the most important special museums in the new world, and should receive the aid and encouragement of all lovers of natural history and science. Plants are not represented, but there are some fossil star fish and ichthyic vertebrate of large size. The possibilities of this embryo collection are great.

CHARLES HALLOCK.

SPRING NOTES.

HIGHGATE, Va., April 24.—*Editor Forest and Stream:* I send you a few additional notes regarding the arrival of birds here:

Phebe bird, April 4, several pairs noted; hermit thrush, April 4, heard in warm thicket on south side of a deep ravine; song sparrow, April 5, one only; crow blackbird, April 6, several seen; blue heron, April 10, one only; wild pigeons, April 20, three seen. We have a few wild pigeons that breed near here that we are trying to protect.

STANSTEAD.

DETROIT, April 30.—In spite of the inclement weather the birds are putting in their appearance. The wood

thrushes arrived April 29, though one was seen April 9; brown thrasher, April 16; barn swallow, April 16; bank swallow, April 16; tree swallow, April 16; crested flycatcher, April 17; purple martin, April 28; belted fisher, April 2; Wilson's snipe, March 28. Yesterday (April 29) I took a set of two Cooper's hawk's eggs from a tall beech, 75ft. up. This hawk is a rare breeder here and this is the first nest I have found. Also took set of four crow's eggs from oak tree 50ft. up.

B. H. S.

AMONG MICHIGAN BIRDS.

THERE are so many secrets waiting to be divulged to one who will patiently look up, or down, in sky, tree, bush, or on the ground, for a little time each day from the early spring to the very end of winter, that it is a pity so few are receiving the benefit such pretty confidences impart to the monotony of every day life.

It is to the many who are not in touch with nature and her lovely children that I would like to tell how observation taught a very loving but ignorant friend of the birds a fact long since established among the wise ones, that they do follow in the wake of civilization.

Expatriation for many years from the land where the robin sings and rears his young had made the prospect of seeing him once more in all his happy cheerfulness a thing to be looked forward to with joyous anticipation, and when in 1886 I began to spend my summers at one of the "resorts" in northern Michigan, I confidently expected to renew acquaintance with him and all the other familiar friends of childhood.

But no, there were no robins there, and only once the long-drawn plaintive notes of the peewee came to break the stillness of the woods. One cunning pair of wrens had built their nest close by the noisy railway station, where Mr. Jenny sang and Mrs. Jenny scolded, just as they do wherever wrens are found the whole world over. Later in the season my note book tells of one or two stray visits from some titmice, but that there were any other singers is quite impossible.

The cottages spread over more territory each year, the farmers in the adjacent country cultivated more fruit and vegetables, and every summer the number of feathered visitors increased until last year the woods seemed full of them. We reached that northern clime the first day of July, and there was robin, hopping about as thoroughly at ease as the "oldest" summer tourist. He built his nest in trees whose branches grazed the most populous of the cottages, and almost every porch at We-que-ton-sing could boast of having given shelter to a brood of Jenny wren's small progeny. Boxes and pretty little houses had been put up on many trees in the park at Chautauqua's center at Bay View, and long before the Assembly opened the little homes were occupied. The evening and morning concerts were regular, and quite what was expected from such singers.

Above them all the lusty voice of robin soared in amusing contrast to the plaintive song of bluebird, peewee, and that grandest of all our woodland songsters, the bell-toned wood thrush. The orchestra was full indeed, for besides those mentioned there were the little sparrows—song, field and white-throat, phoebes, jays, blackbirds, goldfinches, woodpeckers, titmice, cuckoos and many and many a crow. Twice during the summer it was our good fortune to hear the far-off notes of whip-poor-will, whose song is so much sweeter than that of his Southern relative, who cuts his words so short that one longs to teach him how his more accomplished brother sings.

Alas! the woods seem dull and silent, when the birds have ceased to sing, as happens the very first of August, and if one walks about in them, where all before was life and music, a feeling of sadness comes that bears close resemblance to that experienced by one when left almost alone in some great hall at the close of a concert of more than ordinary grandeur. One sees, as in a dream, the crowd melt silently away, and one by one the orchestra file out.

A curious solemn feeling quite overwhelms one, and the conviction settles like a pall upon the thoughts that never again will music like that be heard.

Happily the analogy ceases just here, for the air, the scent of the earth, the sunshine on path, the rustle of leaves and the faces of flowers assure one that when the spring time comes the birds will return to take their places in nature's ever constant orchestra.

H. L. M.

The Woodcock's Ways.

HIGHLAND, N. C., May 1.—*Editor Forest and Stream:* A correspondent a short time ago asked some questions about the feeding of woodcock. I have noticed them every spring in my garden here quite early in the morning in small companies diligently boring for worms, which they take in large numbers.

This morning, just at dawn, when the moon had got to the western horizon and the light was just sufficient to make things barely visible at a distance of 20 or 30ft., I heard a curious noise outside and got out of bed to find the cause of it. It was close under my window, which is on the ground floor and looks out into the garden. Two woodcocks were fighting furiously, while ten more were busy in the soft soil digging for worms. This part of my garden is a worm preserve, used for gathering bait when fish are wanted in a hurry and the trout are not eager for the fly. By and by the quarreling birds made peace and went to feeding with the rest, and after watching them for several minutes I returned to the warm bed for a short doze before getting up time. Soon after five I got up and looked out of the window, and the twelve woodcock were still busy digging for worms, and kept at it until I went out, when they took their departure.

This bird is not protected in this State, but on account of the season I did not disturb them. Two years ago, I think early in July, in the same part of the garden I saw a pair of woodcock with a brood of young ones feeding about the same time in the morning or a little later, as the light was sufficient to distinguish the markings of

the younger birds. They were distinctly darker than the old ones, and were the most conical creatures one could imagine. The young ones struggled fiercely to bring their worm to the surface, and often failed, the old bird then went to their help and seemed to attend faithfully to the broods. H. S.

Game Bag and Gun.

QUAIL SHOOTING IN DELAWARE.

I LAY no claim to skill in handling either the gun or the pen, but wish to contribute a little during the off season by a plain, unvarnished tale to the pleasure of my brother sportsmen, the readers of the FOREST AND STREAM.

I left Chestertown, Md., by rail on Wednesday, Dec. 27, 1892, for a four days' outing with the partridges, determined to go south until I could find a place where there was no snow. My hopes of pleasure depended on two setters, Jake, a veteran, Ben, a black pup of two summers, and a trusty No. 14 gun, warranted to scatter. At Dagsboro, a village a few miles south of Georgetown, the brown breast of mother earth was first visible. I resolved to try my luck there, for one day at least. An obliging storekeeper, with a light open wagon, offered to carry me with him to his home, four miles back in the country. On the way he informed me that a young fellow in his neighborhood had a pointer dog and hunted almost every day, but added confidentially, "He can't kill nothing." I said to myself, "I will put up at that young man's house and cultivate his friendship; he knows where the birds are and has not shot them quite all." As this house was two miles further on, I left my impedimenta at the store and commenced gunning at once, as it was already after 1 o'clock. I was now in old Sussex county, where they still vote for Gen. Jackson, where water always stands still because it cannot tell which way to run, and where almost every woods is a thicket of scrub pine, nearly impenetrable on account of green briars. A lusty young blacksmith with a muzzleloader volunteered to act as guide. He allowed there were no breechloaders about those parts.

Jake and Ben galloped off in fine spirits over a large stubblefield. In the middle of it Ben pointed, Jake backed him firmly. The birds rose when we were 30 yds. from them. I got a good quartering shot and killed two. The blacksmith also discharged his piece and picked up one of the birds with a doubtful smile. I remarked that I believed the other one belonged to me. I followed them to the woods, took a couple of ineffectual snap shots at them among the pines and then we were off for flock No. 2. We hunted over a lot of excellent ground, where, the blacksmith assured me, there were plenty of birds on Thanksgiving Day; but the dogs found nothing. It was cold, cloudy and windy. We tried a thicket. Jake located a flock among a lot of bushes, old logs and green briars, where they had taken shelter. I killed one as they scattered in all directions and knocked down another at 50 yds. which we found after a most diligent search.

Flock No. 3 was in a field grown up with weeds, among which they were feeding. After much preliminary work both dogs pointed about 30 yds. apart. We walked up to Jake, but found nothing. We then hurried across to Ben who was firmly glued to the ground. Nothing there. Then back again to Jake, who was again stiff on his point, but with the same success. Finally we hastened to Ben, who was now standing rigid as a statue. This time half a dozen big fellows rose with a rush. I singled out and killed one. The rest flew a quarter of a mile and settled on the other side of a wild plum thicket. Jake finally located something on a ditch bank grown up with briars. I kicked up two birds, missed the first and dropped the second in a peach orchard. Although Ben ran to the spot immediately and I hurried across to him, yet in spite of us both that bird joined the vast flock of partridges which are shot down and never gathered in.

Flock four was found as twilight was falling. In open ground, grown up with low bushes and sedge, Jake pointed and then commenced roading. The birds were running, but we were between them and the woods. Finally a flock rose, large enough to fill a peach basket. Before, behind and above me they darted, and they rattled me to such an extent that the first barrel was a failure, but the second one found its bird. I followed them to a thicket of scrub pines. I missed the first as a half a dozen flew up, but shot down the next one that rose, as he was making some intricate turns among the feathery branches. On my way to pick him up I kicked up and killed another. It was now nearly night. Ben was missing, but I found him pointing at the edge of the thicket. Three or four birds dashed off into the darkness. I fired at the whirring noise in a general sort of way, but was well pleased to see Ben running after one which had fallen with a broken wing. This gave me nine partridges for the afternoon, and made me resolve to finish my outing in Sussex.

Bidding the blacksmith good-night, after a walk of a mile I found Johnson's. An old lady was picking up chips at the wood-pile. An old man was sitting by a chimney-fire. A few words of explanation and I was made welcome. The house belonged to a farm of 100 acres. On the first floor was a large living-room with an immense fire-place and two exceedingly small bed-rooms. A large garret formed the second story. A good supper in a kitchen 20 yards from the house, an evening by the roaring fire in the living-room, a night in a huge feather-bed in the garret, with the bare shingles just above my head, and I was ready for the second day's sport. The ancient pilgrim had prophesied snow, but as I lay in bed wondering if it had come some little substance falling from a tree upon the roof, and rattling stealthily down over the shingles assured me that the roof was still bare.

Burt, who had turned up some time during the night, was busy, as I came down, fixing the locks of his muzzle-loader. He was a tall, wiry fellow of 23. His work with the gun was being watched with great interest by Abe, a pointer as thin as his master, with a preposterously long tail. The briars had dealt unkindly with it, for the last foot or two was entirely devoid of hair. The kitchen in which we took our meals was typical of Sussex county thrift. The walls were unplastered. There were long

cracks of varying width in the weather boarding. The door, made of half-inch boards, was kept shut with a piece of twine. When closed there was a space of more than an inch around it unaccounted for. The ventilation was excellent. The room was kept warm with a red-hot cook stove, although the mercury had nearly all crawled down into the bulb of the thermometer. In some countries these chinks would have been stopped up, but not in Sussex county.

We ventured out at 9 o'clock, although it was quite cold and threatening snow. We went straight to a woods, where Burt knew there was a flock. Abe found them. Jake and Ben staunchly backed their new friend. I kicked them out from under a brush pile and knocked over one. The rest took a long flight, but we found them in a second woods. I missed a couple of shots in the bushes, but finally knocked down one, which the dogs failed to find. On leaving the woods Ben was missing. Whistling and calling failed to bring him. After 15 minutes we found him lying under a young pine with his nose to a little brush heap. Under it was the wounded bird within a foot of the pup's nose. Remarkable dog that!

After a long tramp with hands in our pockets we found a flock in an apple orchard. They got up wild. I concentrated my energies on one which went off by itself and got it. When I whirled around the flock was out of gun-shot, but we marked them down in a chopping among oak tops with the leaves on. We found them at once. I killed the first one which made a break for liberty. Then I dropped two which flew up from almost the same spot under a treetop a second apart. They fell within 15 ft. of each other. Then I missed the most beautiful open shot, but still felt encouraged.

The next notable event was the three dogs pointing in the corner of a field among young sassafras trees and blackberry bushes. I walked up expecting to find a single bird, when, like a young cyclone, a large flock came out directly in my face. I say it to my shame, but they escaped in the general confusion without losing a single feather from either barrel. Query. Who gets the most fun out of gunning? The man with nerves of steel, whom nothing can rattle, or the one whose heart beats and whose nerves fairly quiver with excitement, making it often a sheer impossibility to single out a bird, but irresistibly impelling him to shoot into the flock with the vague idea of gathering them all in?

Another flock rose before the dogs could locate them, but lit in an old graveyard grown up with young pines, at the edge of a dense thicket. Between the two was a road. Burt took the graveyard and I the road. As they crossed I was fortunate enough to drop one with each barrel. These pine thickets are a splendid protection for the partridges. When they once reach them two or three are, on an average, as many as one will find of a flock. They must light in the trees and watch with interest the fun going on below. The last flock we found just at dark. Jake pointed them. They were running. It was a pretty sight to see the three dogs roading them for a hundred yards, pointing every few steps. They finally got up out of gunshot and disappeared over the tops of the trees. I reached home with thirteen birds. Burt had shot but three times as the right lock of his gun would not act.

After supper Burt was arraying himself in his best to go to a party. In fact, he was at a party every night while I was there. "Burt," said I, "what do you do at these parties?" "Hug and kiss the girls." The old man growled out a reproof. Burt retorts, "You need not talk, you were worse after the girls than ever I dare be." The old lady, taking her pipe from her mouth: "That's so, Burtie, that's so." A general laugh.

Friday's sun rose cold and clear. Burt was busy making a sausage-shaped cover out of unbleached muslin for his dog's tail, which had been suffering severely from the briars. A belt was to go around Abe's loins and a crupper was to run from this down his back to the cover. Abe looked upon this simple but ingenious arrangement with undisguised suspicion. Was his tail no longer to have that upward turn and free swing of which he was so proud? Abe, soon after we started, seated himself on his beam ends and dragged himself along the ground on all fours. The tail cover, from the lack of a stay rope from below, proved a signal failure. Burt confidentially assured me that he proposed to do, to-day, his share of the shooting.

Into the first flock that we found he promptly emptied both barrels, and to his great delight killed two birds. He received my congratulations with a pleased smile and remarked that he now understood how the thing was done. While he was going through the complicated process of loading I followed the flock into the thicket. Here I had the satisfaction of killing two birds right and left in a dense clump of bushes, both of which fell within 50 ft. of me. I invariably change my shells to those loaded with No. 10 shot when I enter a thicket. The birds must always be killed very close and No. 10 is more likely to hit them if the gun is not held true. One ounce of 10s with 2 drs. Trap American wood powder make a dangerous load at a short range.

The next flock flushed wild and flew to the densest of thickets. Scrub pines, holly bushes and green briars made it almost impenetrable. I shot four or five times, and finally came out disgusted without having knocked loose a single feather. Ben held a point in that woods at least twenty minutes, as we could not find him, but he patiently waited for us. I find it an excellent plan to hunt him with a small bell on his neck. He is a wide ranger and can often be heard when otherwise one would in the bushes have no knowledge of his whereabouts. He is so cautious that even with the bell he seldom flushes a bird.

The next flock flew to a thicket of young pines without giving us a shot. Here I killed one behind a pine without seeing it, and knocked over a second and third at short range with snap shots. On our way home, Jake located a flock in a peach orchard within 100 yds. of the invariable pine thicket. Ben came in behind Jake, and Abe behind Ben. The hunters also came in and pointed. As they dashed for the woods I wounded one, but seeing he would reach the cover I knocked him over with the second barrel. In the woods I killed one in a most accidental sort of a way as he was threading his way among the small tree trunks. We reached the house at dark, very tired and hungry, for we neither rested nor ate during the trip, but with a very satisfactory bag of fifteen birds.

Saturday was the last day of the outing. The dogs, ex-

cept Ben, were decidedly stiff and sore. Abe carried his tail with the utmost caution, and gave all briars a wide berth. I was obliged to be back at the house by 2 o'clock, in order to catch the up train. We started early. Jake found three or four birds in the edge of a thicket of scrub pines. It was a slim chance. Burt kicked them up, while I held my gun ready for the slightest show. No one who has not shot among these pines can form an idea of the denseness of their foliage and how quickly a bird is out of sight among them. I was lucky enough to catch one as he plunged into the pines before he got forty feet from the ground. The others it was useless to follow.

The next flock got up wild and went to a thicket grown up with pines and scrub oaks with the leaves on. It was, for Delaware, a nice place in which to shoot, as the undergrowth is not thick. I missed a beautiful shot at a bird which passed me and went away straight as an arrow, but killed a second, third and fourth inside of five minutes. The next covey reached the woods in safety, as they flushed wild, but in the bushes I killed two very doubtful cases, one of which I kicked out of a brush heap and which persisted in flying behind me; the other I saw sitting at the root of a pine, and stepped back involuntarily to avoid pulverizing him, but the little fellow saved me from the disgrace of shooting him on the ground by whisking out on the other side of the tree through the undergrowth. I fired and a shout from Burt announced that I had been successful. Ben now got up a little side show of his own by running a rabbit, which he followed for a half hour and must have driven clear out of the country. A sound thrashing effectually cured him until the next opportunity, when the same circus was invariably gone through with.

I jumped down from a fence right into a covey. One that went straight down was missed beautifully. A second that darted through the fence and made straight for the woods was knocked down. Following them, I killed one as he was indiscreet enough to try to go over the pines instead of through them. Another that darted through the pines I caught a glimpse of for a moment, and pointed and pulled without raising my gun to the shoulder. I killed him. The reader will be kind enough to insert between the lines a goodly number of misses, as a man who wishes to make a good bag in this country must take every possible chance.

The last flock of the season we found in a woods as we hurried to the house. They got away safely in spite of three loads. Following them I killed one that Burt flushed. As it came past, well up, I tried to get my gun on it. It went behind a holly tree, through whose dense foliage I shot at a venture, as it was my only hope. I had the satisfaction of hearing it drop stone dead on the other side. Another shot and another bird and my season of '92 had closed.

I crammed my baggage into my grip, dropped my birds—48 in number—into an old coffee sack, together with 6 which I bought of Burt, his spoils for a three days' hunt, and three rabbits which I had shot during the trip, and then sat down to an excellent dinner, which Mrs. Johnson had insisted on preparing, of which the conspicuous features were roast chicken and mince pie. Then followed a hurried ride to the station behind Burt's colt, for which he had refused \$150, as he proudly informed me. Burt promised to let me know if the birds were plentiful next fall and I was to spend a week with him. He assured me that he would locate every flock in the neighborhood and Abe's tail should be at least six inches shorter.

Alas! the deep snows and the cold weather of January have almost exterminated the partridge in Delaware and the Eastern Shore. I was curious enough to keep a record of my shooting in these thickets. I found that it required a fraction over three loads to kill a bird.

C. W. REID.

THE PHEASANT'S WORTH.

Editor Forest and Stream:

I notice with great pleasure your timely remarks upon the beautiful Mongolian pheasant. It is fortunate that increased facilities for transportation, together with enlarged knowledge among sportsmen, have combined to render the importation, trans-shipment and artificial propagation of many of the choicest varieties of the pheasant family not only practical but profitable. It is fortunate also for the preservation of the species that almost all the varieties of pheasants are hardy and capable of adapting themselves to changed conditions.

The introduction of several of the Mongolian varieties into England and upon the Pacific coast of North America has passed the experimental stage, and the rapid dissemination of the bird over wide areas will be the logical result; restricted not by climatic conditions half so much as by the merciless ravages of the farmers' boys.

The three best known varieties of the Mongolian pheasant are the ring-necked (*P. torquatus*), the golden (*P. pictus*) and the silver (*P. nycthemerus*). The last two sub-varieties, together with the copper (*P. semmerringi*), are conspicuous for their extremely long tails and the brightness and beauty of their variegated plumage. Of all the foreigners, however, none commends itself to the sportsman and breeder so much as the first variety, *P. torquatus*. He is the prince of his race—strong, large, unnumbered with extra finery, but exquisitely beautiful just the same; a big, haughty, independent game bird in every sense of the word.

He has the two essential requisites for self-preservation—hardhood and strength of wing. In England his near relative *P. colchicus* does best, as *P. torquatus* does here, though the silver pheasant has been very successfully propagated in Scotland by Lord Tweedmouth, and is fairly hardy out here. The first three varieties enumerated are under protection now in this State, and are doing very well indeed. The first is becoming noticeably more plentiful, and is sure to win if the small boy can be suppressed. One of these predatory and eternal enemies to bird life killed a hen bird a few days ago a few miles from the city. All the birds upon Protection Island wintered well, but owing to an accident the stock of silver pheasants was reduced to seven male birds.

The exceptionally severe weather of last February tried them very hard, but they appear to have stood the test. For reasons deemed prudential, the Oregon and Victoria people have become very shy about letting their protégés get beyond territorial limits, and live birds are, therefore, at present hard to get. This difficulty is about to be met, however, by an importation of fifty pairs from the Orient.

This shipment will reach Tacoma in August, and will be ready for trans-shipment to Eastern preserves early in September.

A dry, clean shelter, sodded yards, plenty of gravel and ashes, cereal food, fresh meat occasionally, with table refuse and fresh water, are the essentials for successful breeding; and as the hens are very prolific, there should be little trouble in rearing the birds. J. A. BEEBE, M.D.

TACOMA, April 28.

DEER IN MAINE.

A SET of branching antlers over my dining-room mantel, the gift of a friend and disciple of Nimrod, had been for several years a constant reminder of the dun-coated, white-tailed denizens of the wildest regions of the Pine Tree State; and while my experience with a rifle had been limited to occasional target shooting, I always burned with enthusiasm and desire for an opportunity for a deer hunt whenever the subject was mentioned.

October, 1891, found me with a long-deserved holiday of twelve days ahead, and I lost no time in getting my kit together and starting for the woods.

Forty-eight hours by rail from the metropolis brought me to the little hostelry at K., the terminus of the railroad and stage route, and here I made the acquaintance of "Win," my guide, and 5 o'clock the following morning found us on the road in a regulation buckboard, drawn by a work-your-passage sort of animal, urged by old John Summer and his pipe; for, be it known to all men, you cannot separate their identity except at meals.

Two hours' ride over the rough country road and the fording of two streams brought us to an old lumber road which led up into the mountains, where we expected to make camp. We took this road, and I soon decided that walking was a luxury compared to the rest and comfort of a buckboard on a lumber trail.

With "Win" I pressed forward in advance of the buckboard, carrying the Winchester to look out for chance shots, for we had already found comparatively recent signs, and the latter with a heavy axe to clear the trail and occasionally relay the corduroy.

As we rapidly passed over the uneven ground, the soft moccasins making no sound upon the frozen turf or ever occurring corduroy bridging, I felt that wild, exuberant feeling which comes to the man who, fresh from the confining atmosphere and checkerboard existence of the city, finds himself in the midst of nature undisturbed; who sees the glories of an autumnal landscape, its brighter coloring relieved by a background of green and black upon the towering mountains, whose snow-clad peaks are partially hidden by the rolling clouds. I breathed in great long draughts of the delicious air, perfumed by the pines and cedars.

Our plan was to make camp in an old and long since deserted logging camp about twenty miles from K., and we expected to reach it with the buckboard, thus saving the usual "sacking." Judge then of our disappointment when within five miles of our journey's end we came into a swamp, where the corduroy had rotted away and passage for the horse and buckboard was impossible. There was but one way out of it and that to "sack" the baggage around the swamp and into camp. We divided the loads. Win strapped 75lbs. upon his sturdy shoulders and carried his rifle and axe; "Old John" took 30lbs. and the kerosene can, and the tenderfoot, with a grim determination to do or die, strapped on 40lbs. and carried a rifle in one hand and a tin "baker" in the other. In all the recollections of my after life those miles, five in number, shall stand as monumental evidence that the traditional 5,280 lineal feet to a mile is an unfounded delusion and that 20,000 is a nearer figure. Slowly we toiled along and about 5 o'clock the low flat roof of the logging camp broke on our view like a vision of the promised land. It was a rectangular building of logs with the bark upon them, a slab roof and inside was an enormous stone fireplace and the regulation tiers of bunks. To our surprise, we found that it was occupied. Two trappers had located for their winter's work and we found them preparing supper. Gladly they welcomed the new-comers and a hearty meal of fried pork and potatoes, delicious biscuits and fragrant coffee, was soon demolished by the hungry trappers. After the meal and a smoke, we unpacked our baggage, put our provisions into the common stock and made preparations for the hunt upon the morrow. Win fixed me up a bed of fresh spruce tips on one of the bunks that was more grateful to my weary limbs than any mattress that the inventive genius of civilization has yet produced.

The trappers were a pair for a study either by the artist or the student of humanity. One was an old and grizzled man of sixty-five, whose weight of years rested but lightly on his iron frame and sinewy strength. He was a talkative old chap, and his constant readiness to pour forth his store of backwoods lore and tales was a great source of entertainment for us. No one could tell a bigger yarn than he, and no matter how wonderful the tale was, he was always ready to cap it with another more improbable. He never "shot" or "killed" anything, he always "let it down," and many were the wondrous feats he had performed with his old 32in. .44-70 Winchester, so one day at dinner when I heard a venturesome partridge drumming close to camp, and after a few moments' absence returned with the quiet remark that I had "let him down," the mirth of Win broke all bounds, and it was a standing joke thereafter. The other trapper was a tall and black-eyed boy of twenty, whose patois immediately announced his French-Canadian parentage, and who answered readily to the cognomen of "Knuck."

Win's quiet humor and perfect mimicry of the patois brought us lots of fun during the long evenings by the camp-fire, and many a wordy war he had with Knuck, while the old trapper and I fairly shouted with laughter at their discussions.

The days passed rapidly, constant tramping through the valleys bringing no results beyond hearty appetites and refreshing sleep, for the dryness of the ground and the heavy carpeting of leaves covered up the treacherous twigs, which snapped like pistol shots when the weight of the foot rested upon them and gave ample warning of our most careful approach.

How we longed for snow, and each night and morning looked at the fleecy clouds with the anxious hope that they might presage a storm, but no snow came, and we were forced to be content with cautious work and watching at the "runs."

Partridges abounded, and we killed enough about camp

to supply our table with their delicious flesh, and several handsome foxes were allowed to sink out of sight unmolested, lest the report of the rifles should drive the deer further back in the mountains. That bears were plenty was evident from the plowed up leaves upon the beech ridges, but we did not come across one, much to our regret.

One day, determined to try my luck alone, and after careful admonition from the guide regarding landmarks and getting lost, I started up a trail for several miles, following one of the trapper's blazed lines and inspecting several unmolested and very wicked looking bear traps. Then I took the bed of a mountain brook for a few hundred yards, working along over boulders and logs in the hope that the roaring stream would drown the noise I made, and that I should come upon some wary buck in that way; but I was disappointed. Then I climbed a bluff to work in the hard growth I fancied lay there, but instead of that I found myself in that perdition of the Maine woods, a bad "blow down." In every way the prostrate trees lay broken and uprooted as if by a battle of the Titans, their roots, trunks and branches hopelessly entangled into an almost impenetrable mass. For four mortal hours I crawled and climbed, and when at last I emerged into the hardwood growth, I felt like an emancipated slave. I realized an exhilarating sense of freedom and of general satisfaction, and felt a profound conviction that the next time I went through a blow-down I would go round it.

That night, after supper and the recounting of the day's events, during which my experience in the blow-down excited great merriment, we all fell to story telling until quite late. The lantern's rays were very dim, the fire had died down to a glowing mass of embers, and the faint light of the moon, occasionally breaking through a drifting cloud, served only to intensify the outer darkness. Savage tales of fights with bears, of deadly encounters with maddened and ferocious moose and caribou bulls had been recounted, and the old man was seated on a log relating a ghastly tale of a battle with a catamount in his boyhood days. Suddenly without the camp, yet in its piercing shrillness penetrating until it seemed in our very midst, there rose a cry of human agony, of incarnate cruelty and animal ferocity. Again and again it echoed and re-echoed across the valley and died away in the stillness of the wilderness. The trapper instantly ceased to speak, Knuck sprang from his couch and listened intently, his hand reaching instinctively toward the rifle, which hung upon his bunk, and the writer felt the hair upon his head stand up as he turned to the guide with a quick look of questioning alarm. Win grinned, said "screech owl," and everybody laughed at me. Determined to get revenge on something for my scare, I seized my rifle, slipped in a cartridge, and opening the battered door peered into the darkness. The little light from the interior of the cabin reflected two glowing balls of fire in an old dead tree not 20ft. away from camp. A hasty aim, the reverberating crash of the old repeater and I heard the thuddet kind of a thud out in the bushes. In the morning I found the owl with his head all ripped to pieces and unfit for mounting.

Each day we worked and tramped, each night hoping that the morning would bring the longed for snow and the certainty of game, but we hoped in vain.

The last day came, old John must meet us the very next morning, for the writer dared absent himself no longer from his city desk and business cares. The case was desperate, and I rose at five, fully determined to strike something to take back as evidence of my prowess. Leaving Win to watch a "likely" runaway I took an old lumber trail and tramped slowly and quietly along, watching every patch of woods for the game I so longed to see, and avoiding every stick and leaf with extraordinary caution. Suddenly I came upon a fresh and good-sized trail, the sharp hoof marks showing distinctly on the hoar frost on the ground. The buck, for such the marks denoted, had stepped out of the undergrowth, and was traveling along the very same road that I was, and only a few moments in advance. I redoubled my pace and caution against noise and almost flew over the frosty ground. One, two, three miles I covered with pent up nerves and beating heart, expecting every moment to come in sight of the deer. Then I lost the trail. Search as I might, there was no trace of where the deer had left the road, and the frozen ground showed no sign that he had gone further up the old lumber trail. So I pushed on, hoping still, and soon I came into a clearing where lay the deserted hovels of the old logging camp. Carefully I looked around and seeing no signs of the buck I wearily and disconsolately made my way to one of the hovels and rested my rifle against its logs, when, presto, out from the other side, with a resounding whistle, leaped the deer, a handsome five year old buck.

Away he went with enormous bounds across the clearing, the white "flag" high in air. I threw my rifle to my shoulder, and as I pressed the trigger he stopped and turned his head to learn the cause of the disturbance. The leaden missile must have told him, for his antlers adorn my office wall.

HEMLOCK BARK.

THE HALLENSEE POWDER TEST.

RED BANK, N. J., May 1.—*Editor Forest and Stream:* During the year 1892 a society was formed in Germany, to test guns and powders. This society issued its report in circular form to its members, and as its report was adverse to our powder, it was immediately grabbed up by rival companies, industriously circulated throughout the world, and is now magnified in some journals into an official government test.

How one-sided and unscientific these tests were in their conduct is at once apparent to any expert, as the most important part to determine effectiveness of a powder, *i.e.* measurements of its pressure with scientific instruments, and without which it would be impossible to have a nitro powder to-day, had been entirely ignored and left out.

The effectiveness of our powder was merely determined by charges increased at will, which has led to very unjust conclusions. These new nitros cannot be tested with double loads, as the gas pressure of increased charges rises out of all proportion of increased loads, and all governments which have adopted these powders, have adopted a new rule for testing their guns; the old-fashioned rule of double loads had to be abandoned for above reasons.

In the latest imperial law regarding the test of guns with nitros, a blank space is left, as this is still under con-

sideration, as it is very evident that the same rule cannot be applied to all nitros, but must be regulated according to their action, and it will be very safe to say, that hereafter the Hallensee will not be permitted to issue reports as they please, made without scientific instruments.

As our powder is identically the same as the government powder, except in its sporting grain, it hardly appears reasonable that the government would condemn our powder and recommend Schultze.

From this unjust test we appealed to the *London Field*, whose impartial stand is world known. The *Field* issued its report on April 1, 1893 (No. 2,101), and not only reported our powder as very safe, but the competing English nitros which were taken for comparison were beaten on every point of merit.

A firm of our standing, established and manufacturers of explosives since 1814, whose products have been decorated many times, cannot and never will put a powder on the market which would be injurious even to ordinary guns, if instructions are followed.

Last fall we asked the American sportsmen in a half page advertisement in your esteemed paper to come out and test our powder at the tournament of the Riverside Gun Club. We have again offered to show its absolute safety in the cheapest grade guns in a public trial, our challenge to Mr. Von Lengerke, the agent of Schultze and "E. C.," to make his accusations good in a public test, has remained unanswered, and the forfeit put up by us has been returned to us.

An examination of our cartridge with its new safety primer, which obviates the faults of the present cap, will show even to the most uninitiated that we are progressive and not made of shoddy, as some people would like to have it. United States experts are pointing already to our shell with its filled-in base, as indicating the coming revolution in the length of the shell. Our record here in the United States, one year without a single accident or complaint, with an output which has already reached 50,000 shells a month, plainly shows that we are not quite so bad as competitors would like to make us.

The Walsrode powder is pushing its way across the civilized world in spite of the frantic efforts to stop it. Whether it will be the powder of the future or only the forerunner of new explosives, time can only tell. With its total absence of smoke, unaffected by either heat or damp, a winner in every impartial test, welcomed by every sportsman for its economy, it will undoubtedly make a strong bid for the powder of the future. We are doing all that it is possible to do to make sportsmen acquainted with this new explosive before we put it in their hands, but fifty years from now the same hayseed who still persists in blowing out the gaslight before retiring, and who pokes wet umbrellas at the dynamo, will injure his gun with new nitros by overloading. This cannot be helped; it is an impossibility. Science cannot stop for hayseeds.

We ask for no favors, but do ask of the independent American sporting journals fair play, and this, I am happy to state, has been conceded to us in every instance.

O. HESSE.

A MEMORY.

THE day was glorious; nature seemed to be in one of her most joyous moods, when I drove the gray nag up to the divide intending to entice my friend D. to join me and go to the haunts of that king of game birds, the grouse. D. was all ready, for he had seen me coming down the hill with Sailor under the buck-board, and we are soon off to the wood, from the west edge of which an entrancing view can be had of Seneca Lake, whose unruffled surface reflects, mirror-like, the fascinating picture of crimson and green about it.

We were after birds and had no time to dream. He on, good dog, and with a yelp of joy he was off. How eagerly he covered the ground; and there! he is stiff. "Look out now! don't let such a point as that be wasted, D." He did go up a little soon, but it availed him naught. The ever ready gun, held by the ever ready D., stopped him with charge of sixes. After some pretty work on the part of Sailor, who, although it is his first bird of the season, brings him in without a ruffled feather, we went on. Soon followed a flush caused by the dog's eagerness, but we marked the bird as he entered the big timber, and taking his line, and the old dog soon began trailing and then made a rather unsteady point. A word settles his nerves, and then before I was ready, up the bird flew and I scored a miss with my right, but retrieved myself by breaking his wing with the left, which is hailed with delight by D., who knows my inability to "get there," and never fails to praise when I kill and never finds fault when I miss.

Light fleecy scuds are now flying overhead and soon a pleasant breeze cools the air, giving relief to the dog, and we trudge on over to Breakneck Gully, where tall hemlocks spread their branches so thickly that they seem to be locked in fond embrace. Down into the alders went Sailor, and soon he had a point. We lost no time in getting down to him, half climbing and half sliding. When all was ready the word is given. On—short but effective. There followed a confusion of rising birds and discharged guns, and when the noise had ceased, six noble grouse had risen and four of them had fallen to rise no more.

"Where is Sailor, D.?" I cried.

"I don't know," he answered. "Well that was a hot place." Presently the dog came in with his head down, he well knew what the dog deserves that breaks and chases. But this time his punishment is a caress; thanks to D., who would not see him whipped and backed up his argument by saying: "You are human and you own that you were rattled. What do you suppose Sailor is, divine?"

We started for home by way of a vineyard, in which a flock of quail were reputed to be living, but they were found in a peach orchard, in the tall "summer grass." Here the old dog did his best, quail being his strong point. About fifteen were flushed and of the six killed, four are to the credit of my gun. I tried to console D. by telling him the plan of division I proposed to make of the spoils, but he decidedly objected and would take only what he had killed. No game hog he, nor pot-hunter, with that debasing thing, a ponderous bag of birds. Some will say, that Hector is a crank, but I stand by my colors and say that the taking of great bags of game shows a selfish mind.

HECTOR.

POWDER AND SHOT MEASURES.

JERSEY CITY, May 1.—*Editor Forest and Stream:* In connection with loading shotgun shells the writer desires to direct attention to the inaccuracy of powder and shot measures which has come to his notice. It would seem quite unnecessary in this age of general mechanical progress and accuracy to manufacture and offer for sale measures which are in error as much as 10 or 12%, as well as possibly dangerous when used to deal out large charges of the more powerful nitro powders. In proof whereof note the following: Comparing a new measure nominally graduated from 2 to 3drs. with one having a range of from 3 to 5drs., I find that 3drs. measured by the former more than filled the 3½drs. notch of the latter. Weighing out the range of charges in black and E. C. powder disclosed the fact that the first-mentioned measure is in error by ¼dr., giving that amount too much. Filing off the markings and putting new ones on I have a measure that I can depend upon. I further observe that 2½drs. of powder by measure equals 1oz. of Tatham's No. 8 shot, making precisely 80 loads from a 5lb. bag. Therefore, since there are 10 quarter drams in 2½drs., and 10 tenths in an ounce, it follows that variations in the charge by quarter drams will give shot charges in ounces and tenths instead of ounces and eighths, as combination measures are graduated.

The following table gives weights of equal measures of powder and shot:

2	drs.	powder	equals	in	bulk	8	100z.	shot.
2½	drs.	powder	equals	in	bulk	1	100z.	shot.
2½	drs.	powder	equals	in	bulk	1	100z.	shot.
3½	drs.	powder	equals	in	bulk	1½	100z.	shot.
3	drs.	powder	equals	in	bulk	1½	100z.	shot.
3½	drs.	powder	equals	in	bulk	1½	100z.	shot.

An equal measure of shot therefore weighs 6½ times that of powder. This measure will correctly deal out E. C. powder if lightly shaken down and struck off level, allowing 14grs. per dram.

I may also state that the above table, just as it stands, gives satisfactory loads of nitro or fine grain black powder for medium light weight guns for field wing shooting, using from ¾ to 1oz. of shot for 16-gauge and from 1oz. to 1½oz. for 12-gauge, with the amount of powder set opposite to the respective charges of shot. For the above powders one notch more powder than shot will give very strong shooting, while two notches more is apt to scatter the shot too much. In my opinion there is nothing gained in a cylinder or modified choke gun by using high powder charges, as it results in spoiling the regularity and closeness of the pattern. Just how to load shells, how much powder and shot and wadding, and what kind to get the best result for the various gauges and weights of guns, would afford a profitable subject for some expert, and be of interest and service to the general class of sportsmen, who have not sufficient spare time to make conclusive tests for themselves. T. H. G.

NOTABLE SHOTS.

WEST CHESTER, Pa., May 1.—*Editor Forest and Stream:* I have read with interest the accounts of notable shots which you have published, and would like to mention one which I saw made. Although it was a "scratch," it was none the less surprising.

Two years ago F. and I were rowing down the Brandywine Creek in a rowboat. F. was sitting in the stern of the boat and had with him a Winchester repeater .32cal., with which he was shooting frogs. As we passed by a large open meadow a plover sprang up from the grass and my friend fired at it. It was then about 60yds. off. F. said he did not expect to hit it and so he did not disappoint himself. The bird was now nearly back of us and flying about as fast as a plover can when scared. F., to give him a parting salute, fired at him again. This time the bird was about 100yds. off and still on the move. The bird fell and we sat and looked at each other. We rowed ashore and picked it up, and found that it was shot in the body.

Then F. said he was tired of shooting and thought he would rest on his honors until I made a better shot. He is still resting. LENAPE.

SPEAKING about notable shots, my friend E., who has hunted bear with me for several years, killed three without cutting their hide, in the following manner: The first he ever shot was sitting in a tree about 20ft. from the ground, having been run up by my bounds. I told E. to fire at the head, while I fired at the heart in case of a miss. We fired and down came bruin stone dead. On examination, my bullet hole was plain enough, having gone clean through him, but no other wound could be found. On skinning him, however, we discovered that the skull was smashed to atoms, E.'s bullet having entered the eye, showing only the slightest graze on the lower lid. Being an expansive bullet it stopped and split up inside the skull.

The next bear was in a trap and I took the first shot, breaking his jaw, E. then fired and the bear dropped, the bullet had entered the ear and split up inside the head as on the former occasion.

The third case was that of a small black bear, which, in his efforts to elude the hounds, ran straight in E.'s direction. E. had barely sufficient time to jump aside and avoid a collision. The bear passed and kept his course. E. fired at the retreating beast and knocked him over; in a few minutes he was dead, the bullet having entered under the tail and traversed nearly the length of the body. These facts are true and in each instance there were several witnesses.

Once when a small boy I was out collecting birds for stuffing. I fired at and killed a stone chat while it was dodging from rock to rock; pausing a few seconds to load my dear old single-barreled muzzleloader I went after my bird, and when stooping to pick it up a skylark dropped dead at my feet. It had no shot marks and could not have been hit. I always concluded this was a case of heart disease. A. P. F. COAPE.

CHICAGO, May 3.—*Editor Forest and Stream:* I have a short tale to tell of a notable shot which I made, and which is so unlike the ones that have been published in your journal that, instead of hitting all kinds of game by the discharge, I hit nothing and still got what I was after.

I was hunting around a slough in Dakota with my Winchester, trying to kill a few stray ducks. As I was walk-

ing through the tall grass up jumped one of the numerous bitterns which infest all of the sloughs in that State. I despise the rascals for their always rising just in front of you. They look so big one thinks he is flushing something worthy his skill. I was mad at this particular one and I took a snap shot at him just to scare him, and I was surprised to see him fall all in a bunch as though struck by lightning. I went up to him and he was sitting back with his head drawn back just as a snake does before striking. The cuss drove his bill through my shoe as I was prodding him up with my foot. I took possession of him and examined him carefully, and could not find a single scar, wound or bruise on him anywhere.

I was studying natural history at the time, and I took the bird home with me and kept him in a large box, feeding him on frogs which I took the trouble to catch for him. He would never touch one while I was watching him, but the moment I turned my back he would gobble them up with surprising rapidity. He afterwards escaped from me and may be eating frogs to this day.

I have often wondered whether the bullet went near enough his head to daze him, or the noise of the bullet to scare him into dropping.

I once made a loon dive, while flying over the surface of the lake, by shooting at him with my rifle, and I know I never touched him. OLD AVALANCHE.

[A number of instances like the one related above are on record, and it appears not very uncommon for bitterns and night herons to be "scared to death," or at least so frightened that they will fall to the ground. A friend who was duck shooting in a marsh in western Wyoming having discharged both barrels at a brace of passing ducks, discovered a female redhead flying close by his head. Unable to load in time he yelled at the bird, which fell in the water and was retrieved.]

A TOUGH WOLF.

HAVING read about fat wolves and lean wolves in FOREST AND STREAM some time ago, tough wolves are next in order. I have before me a description of a little hunting incident which bears that heading. The writer, Rev. H. Q. Schmieder, is like myself, a minister living in the wilderness of the northwestern territory of Canada, where moose and elk and deer and wolves, fat, lean and tough, abound. When he visited me a few weeks ago he told me of this story of a tough wolf, and thinking it might interest my fellow readers of FOREST AND STREAM, I asked him to write it down. This he did, and I have translated it from the German, for the better understanding of the editor, printer and reader. My friend writes:

Hunting and shooting have always been my favorite sport. When a lad of nine summers I roamed through the fields carrying my little weapon and frightening the sparrows, of which occasionally I brought one home for breakfast. After a while I began to think rabbits and partridges might be a more desirable food, and making peace with the sparrow world I declared war on these. Then came my college years. No more hunting and shooting—but studying from morning till night. Solomon says, there is an end to all things, and fortunately there was an end to my college course.

When I had taken possession of my humble block house in the prairie of the Northwest, I secured a 16cal. shotgun, at first only to frighten away the numberless hawks which threatened destruction to any chickens and ducks. Then, finding that the wheat fields were fairly alive with prairie chickens, I began to hunt them, as soon as the law would permit it, and often bagged twelve and more a day, though I had no dog. As occasionally a fox or a wolf was seen in the neighborhood, and when one day the news reached me that a neighboring farmer had in one night lost five sheep, which had been killed by wolves, I made up my mind then and there to go on a wolf hunt.

At the same time a brother sportsman, Mr. T. Karst, informed me that he had seen the carcass of a horse at a lonely spot which was the rendezvous of foxes and wolves, and if I cared to go, he would call for me and take me along. Did I accept? Well! The next day when he came it was cold, 5° below zero, just the right weather for wolf hunters. When we reached our destination we fastened sleigh and horses in a thickly covered place and awaited developments. After some fifteen minutes had elapsed K. said: "There, I see one coming with great bounds, but he is 200yds. away yet—there, he turns to the right and disappears." Not standing as high as he did, I had not seen anything. After a few minutes K. called to me to see, whether the wolf had come out on the other side of timber. There, sure enough, not more than 12yds. from me was the big fellow.

Neither had time to express his surprise—he turned like lightning and I brought my gun to my shoulder just as fast. There was a report and a cry, and a mortally wounded wolf in the snow. But hold on, he was not dead. On coming up to him he showed fight, he showed his teeth and his eyes flashed. K., who meantime had come up too, thought I should give him another dose, but I did not wish to spoil the fur, so I aimed at the head and shot off his lower jaw. The blood was flowing profusely and now he seemed indeed lifeless, so we carried him to where we had left the sleigh, and after having thrown him in we started for home.

There arrived we carried him into the house, and, oh, the joy of my little boys as they danced around that big wolf. As I had asked K. to help me skin the wolf, I went out again with him to unharness the horses. Coming back again I found my wife and children in great excitement: "That wolf is alive yet, he has snored, and he moved too," they all tell me in one breath. I tried to quiet them and told them that a dead wolf would neither snore nor move, to which they would not listen, however. K. now got out his knife and began skinning. Hardly has he loosened the skin of one of the hind legs, when suddenly the wolf threw himself back and forth and uttered such unearthly, blood-curdling howls, as I had never heard before. My wife ran, my children ran, everybody ran. Only K. held on to the hind leg, and I tried to put my foot on his neck and finally succeeded in holding him down, until my stableman brought an axe, with which I managed to crush the skull.

After I assured the rest of the family that the wolf was dead now they returned, but my boys said: "Papa, you must not bring home any more wolves, only rabbits and prairie chickens."

So far the writer and we will all acknowledge that that was surely a tough wolf. E. C. J. K.

Indiana Quail.

RIVERSIDE, Ind., May 4.—Quail have done much better during the past winter than was thought. Many more lived through the winter than was expected. They are beginning to mate now. J. E. F.

Snipe Shooting.

Mr. Crittenden, of the Princess Anne, Virginia Beach, Va., has leased one of the best snipe grounds on the Atlantic Coast, comprising about 1,300 acres of land, and will preserve it in the interests of his guests. Sportsmen who desire good shooting in conjunction with good accommodations would do well to drop Mr. Crittenden a line, as this is a chance for sport not to be had every day.—Adv.

Fishing and Shooting

is the title of a little book published by the Canadian Pacific Railway, which describes in detail the paradise for sportsmen which this rail road has opened up. The kinds of game to be found in various localities are named and also the fishing to be had, and the book is illustrated. It will be sent free on request to the Gen'l Passenger Agent, Montreal, or E. V. Skinner, 353 Broadway, New York.—Adv.

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

TO ANGLERS ABOUT VISITING CANADA.

THE avidity with which the columns of FOREST AND STREAM are seized upon by Americans in search of sport is illustrated by the number of inquiries that have recently reached me concerning the opening of the angling season in Canada, of which I wrote in the issue of the paper of 27th ult. I have endeavored, so far as time and circumstances would permit of it, to be as useful as possible to my brother anglers in the United States, by furnishing them with the information that they individually seek; but it occurs to me that I can probably save myself and others considerable correspondence, and can certainly interest a large number of the sporting fraternity by craving permission to repeat in FOREST AND STREAM what I have conveyed by letter to some of its readers. From a mass of correspondence before me I select a letter of inquiry from a gentleman in Bethlehem, Pa., a portion of which runs as follows:

"Your very interesting article in the FOREST AND STREAM of April 27, in reference to ouananiche fishing in May and June, attracted my attention; so I take the liberty of writing to you, as I intend visiting the Lake St. John region the latter part of this month and beginning of June. I visited the Metabetchouan last August with splendid success, and when I left I made arrangements with my guide to telegraph me when the fish begin to be taken. What I would like to know is when to get the best fishing at each place, namely, Lake Edward for trout fishing, the mouth of the Metabetchouan; and if the steamer runs to the Grand Discharge at that time, I would like to take a few days there."

The steamer does not run regularly to the Grand Discharge during May, nor yet during the first few days of June, and even if it did I would not advise anglers in search of sport to spend any time there before the middle of June or thereabouts, for the ouananiche are not due in the Discharge from the rivers until June 8 to 12 at the earliest—that is to say in any number. My Bethlehem correspondent has acted wisely in arranging with his guide to telegraph him when the fish commence to be taken. I always await similar advices by wire from B. A. Scott, Mayor of Roberval, before running up to the lake for my spring fishing, which I enjoy most in the mouth of the Ouitchouan. I am quite sure that Mr. Scott would similarly oblige any brother angler applying to him for similar information. Present indications point to the improbability of the ouananiche fishing opening this year more than a very few days prior to June 1. The trout fishing in Lake Edward often commences between May 10 and 15, but this opening may also be delayed this spring by the backwardness of the season. But while *fontinalis* and the angling fraternity in this Province are, this spring, strangers yet, and separated by the thick ice covering of our northern waters, and the law prohibiting fishing through holes cut in it, our western neighbors have been taking trout in open waters for nearly a month past. My friend, Lieut.-Col. Andrew C. P. Haggard, D. S. O., sends me a Victoria (B. C.) newspaper, by which I see that in the Province by the Pacific, the fly-fishing was reported excellent during the second week of April, and Col. Haggard himself had been having good sport for some days in Lake Cowichan, out of which he took sixty-six trout in two and a half days, which averaged in weight but a fraction less than a pound apiece. In Ontario and the prairie province of Manitoba, fly-fishing is already reported good, and Hon. John Costigan of Ottawa has enjoyed good sport in the Du Lievre.

Lake Beauport, within twelve miles of Quebec, whose brightly tinted trout have of late years increased considerably in both size and number, as a result of protection, promises to become quite a popular resort during the approaching summer, and some of the cottages are to be occupied by families from the United States.

QUEBEC, May 3.

E. T. D. CHAMBERS.

Mink on a Hook.

MONCTON, N. B., May 3.—*Editor Forest and Stream:* I inclose you an account of mink fishing in Kent county, N. B., while fishing for trout. It is genuine: "A New Industry.—On Saturday last, while Johnnie Palmer was fishing through a hole in the ice near Mill Creek Bridge, he hooked and drew up a fine mink. As the fur is of an excellent quality, Johnnie expects to get \$2 for the skin. Now, is not this industry worth prosecuting? Even supposing only five were caught daily, it would pay well, and so far as is known, the Government has not yet established a close season for fishing mink through holes cut in the ice." It is supposed the mink clawed at the bait and hook fastened into the foot, and the animal was pulled up through the hole in the ice. R. P. D.

Flounders at Barnegat, N. J.

BARNEGAT, N. J., May 8.—About 300 flounders were caught here yesterday by Messrs. Peterson, Grant and Brown. The fishing is poor just now. W. C. I.

FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

"FOREST AND STREAM" WORLD'S FAIR BUREAU.

THERE are sixty-five millions of people in the United States. Stand the population up in line, divide the line into squads of 125 or 150 each, and take out one person from each squad; then you have the state of things last Monday. It was only a collection of broken squads that staid home. The rest were at Chicago and at the World's Fair. While so much of America converges here, shall we talk wholly of jacksnipe and of trout? It would not be journalism; for out of that world's per cent. now gathered here, there is too strong an inner per cent. of sportsmen eager to see what sportsmanship means to-day, and what it will be after the studies and comparisons of the World's Fair are past; and out of the home-staying per cent. there are so many who wish to know about things they are not yet privileged to see. No words will fully do for this. No words, and indeed no picturing of any sort can bring to the mind the impression made by the genie city itself as it lies out in its simple power. It compels the eye and the soul most strongly for itself. Neither could any writer nor any artist depict what lies within the great white buildings, even had he all the white paper or all the canvas that he wished. The condensation of interest is too much. The focus is too strong. It blinds, it confuses. No lime light can reproduce it. Still, the paper which does not recognize this focus of interest, and which makes no attempt at a record of this most thrilling story of the years, stamps itself as hopelessly un-American and quite unworthy of place in a calling whose main requisite is that of thoughtfulness. Some sort of a record, and such as time and space may permit, FOREST AND STREAM will offer to the readers who rely upon it to be always up with the times.

June a Good Time.

Matters at the Fair are now rapidly reaching the stage of completion, but are not yet fully completed. This makes little real difference, for no one can see the whole in a day, or in a week, and any one building will be enough for a day's occupation; still, in view of these little finishing touches yet to be, and more especially in view of the wretched weather of early spring here, it is perhaps safe to say that June will be the best month for a visit to Chicago. The weather will then be more settled, and so will room rent and restaurant charges. Moreover, June is the best fishing month in the Wisconsin and Michigan North Woods. Come to Chicago in June, see the Fair, and then take a fishing trip. If you do this, 1893 will be a red letter year in your book for a long, long time.

Two Un-American Things.

The Fair is not American, but cosmopolitan, as one learns early in his first visit to it; but there are two things about it which impress me as un-American. One is the sword carried by the Columbian guard. As an ornamental part of the uniform, this snickersee may be very well, but as an instrument of peace it is worthless, and as an instrument of war—well, I should think it would make an American angry to have a sword flourished over him by an officer.

My other grievance is the camera license. You have to pay \$2 every time you take a camera into the grounds, and it mustn't be larger than a 4x5 camera, and you have to sign an iron-clad agreement not to make stereoscopic views or anything else out of the pictures you take—indeed, I am not clear that they allow you to take any pictures at all after they get your \$2. This is an unfortunate idea. It is monopoly too much. The people helped in part to pay for these buildings and it is their right, in part, to survey them, if they do so without injury, and to study them and to bear away the lessons of them. The amateur photographers of this country are now so large a body, and their craft is so useful and so natural an one upon an occasion like this, that it seems the privilege, or more properly speaking, the right of seeing the Fair with a camera might have been guarded a little less selfishly. Outside of this, I question whether a man has not as much right to view these great buildings through the crystal lens of a camera as through the crystalline lens of his eye. The latter is for himself only. The former may be for his friends or family who are not able to use their own eyes there. The facts that all exhibitions tax cameras, or that there is money in doing so, hardly reconciles me to the \$2 a day, the 4x5 and the iron-clad agreement—which latter, in my humble opinion, doesn't amount to a pinch of snuff, legally speaking.

Lunch "On the Grounds."

To take lunch at one of the restaurants on the grounds required a long purse this week. Pork and beans was a dish only millionaires could afford. The management very promptly sent away these forty thieves, and they will lower prices or leave the grounds. Outside the grounds the prices are about as they always were, and not at all unreasonable. In speaking of this I am constrained to remember an incident that once befell when I happened to be journeying with a facetious friend. We were just outside of Cairo, and a little late, and the porter came through with the usual inquiry, "Will you wait till the station, sah, or take breakfas' on de car?"

"I will take breakfast on the car," said my friend. He

did so, and a very hearty breakfast, too, but when the porter presented his buffet bill he refused to settle.

"I thought you told me this breakfast was on the car," said he.

"It am, sah, it wuz, sah," said the porter.

"Well," said my friend, "if it's on the car, why don't you take the bill to the car? Don't bother me this way."

Even after the porter was later paid, he didn't exactly realize the point of this, but when it struck him he laughed for half a day. It used to double him all up, clear down into Mississippi. I fear the French waiters here will not be so fine of wit as that, and that the best way to take lunch "on the grounds," is to carry it along in your coat-tail pocket—unless the restaurants reform. Still, I wish that the ladies and gentlemen who have formed the habit of making the FOREST AND STREAM space a picnic ground, would please brush the crumbs off the chairs

CAPT. JOSEPH W. COLLINS.

Chief Department Fish and Fisheries, World's Columbian Exposition.

when they get through. Part of the force is absent-minded, and also has new trousers this spring.

Instructive Exhibits.

There is always something fascinating in the outlines of a well made boat under sail. Many visitors gather about the display of the St. Lawrence Skiff, Canoe and Steam Launch Co., which shows eight boats, running from the 16ft. single-hand canoe up to a 20ft. fin-keel. The boats are very handsome. The exhibit is under the charge of Mr. Loeb, of A. G. Spalding & Bros. There being a rumor that the Spaldings had bought out the St. Lawrence people and so made their first step into the boat trade, I saw Mr. Gerould, manager for the Chicago house, and asked him about it.

"We have not bought out the St. Lawrence folks," said he, "but we may possibly have some of their stock. You may say that our relations with them are very intimate."

This is in the Anglers' Pavilion, whose exhibits I have already briefly mentioned in part. On beyond, where Mr. Comstock has painted some green grass on the boards to make his tent scene more realistic, I found in said tent a low hanging cot, two of which the Protean accommodated nicely. Perhaps I am losing my nerve, or getting old, but it did seem to me that I would rather sleep on that cot than on the ground. Incidentally we hauled out the cot and six of us stood up on it. This belongs to the exhibit of the Gold Medal Camp Furniture Co., who show a fine lot of furniture of the contortionist, collapsible, condensable sort, but all able to carry weight.

Near by the above, Mr. Head, representing Mr. J. B. Thurston, patentee, shows a nice and apparently very useful device, called an "interlocking rod ferrule." The female ferrule is split and carries a sliding ring which closes it tightly when pushed up over the male ferrule after introduction of the latter. The wood of the rod does not run down into the male ferrule, which tapers slightly. It is claimed for this joint that it is tight, and can always be released with ease, not being affected by swelling of the wood.

Steel Rods.

The Horton Mfg. Co. have in a fine lot of their Bristol

steel rods, and in the product they seem to have mastered the torsional action or "side bend" which is so great a quality of the split bamboo. The steel rod of to-day is quite different from those of earlier years, and is light and graceful to a degree once unthinkable for so stern a material.

Split-Bamboo Rods.

The Kosmic case shows thirty rods of magnificent finish. One, a trunk rod in blue satin case, is marked \$500. One baby rod, 7½ft. long, weighs only 1½oz., but has a card saying \$75 is necessary to take it. Yet another rod, of the same price, weighs only 2½oz., though it is 8½ft. long. There is a "Tourist fly-rod" valued at \$200, a 5ft., 5oz. single-piece frog-casting rod with ivory grip, at \$250, and a line of all sorts, fly and bait, at lesser cost. The sections of unglued bamboo are shown in illustration of the process of manufacture of these sterling tools. The Spaldings also have in their case a half-mount of a 9lb, 2oz. brook trout, taken at the upper dam, Rangeley, "on a 6½oz. Kosmic." This is a very pretty case indeed.

A Horsehair Braid.

Just in front of the glass case wherein the State of Missouri has some old-gold catfish, the head of a bass that weighed 14½lbs., and a full line of other celebrities, there is a little braiding machine presided over by a boy about the size usually known as "kid." The boy braids a line made of silk and horsehair mixed, something of the sort one I. Walton used to write about.

An Ancient Spoon.

Near by, the horsehair "kid" is the interesting show case of the J. T. Buel trolling baits, small, but complete, and showing many different styles of artificial lures for use in trolling. Perhaps the most interesting thing there is the big German silver table spoon, with a single hook soldered in the end, and with half the shank left on for attaching the line. This spoon is not pretty, and looks as though it had seen better and cleaner days, but it has a history. Its card says, "The original spoon hook. Designed by Julio T. Buel, 1834." Here again is progress shown, almost dramatically, and certainly usefully. Such are the uses and benefits of a World's Fair.

State Exhibits.

Missouri and Ohio confine their fish exhibits mostly to mounted specimens under glass. Wisconsin will have aquaria and a fine exhibit, but is very backward. Pennsylvania will probably lead in this building. Col. Gay now has the work nearly done in his fine department. Much thought and much money have been spent in this work, and the result is artistic in its conformity to the intentions of the exhibit. The decorations of the lower section, where the aquaria appear, is of rough cork bark, the upper decorations being of cedar bark. The arch to the main entrance is covered with cedar bark, and the arch proper is surmounted by the keystone emblem of the State. Col. Gay has got the aquatic whisksers all on his aquaria, but no fish as yet, his water works being not yet finished. When he turns on the hose he will have a cascade, a river, a dam, and a Rogers fishway in full operation shown in the dam. The other day there was a ladder left standing by a workman along the face of the rock wall where the cascade is to be and just above the Rogers fish ladder. A waggish bystander explained to a friend that the fish went up over the dam by the fish ladder, and up over the cascade by the plasterer's ladder. This is now one of the standard jokes of the Pennsylvania exhibit.

A Limitless Fund.

There is a limitless fund of interest for sportsmen, and the attempt to cover the great field thoroughly is a discouraging one at the start. Next week one should look into the great Manufactures Building, and try to find what all the gun men are doing. The Government fish exhibit in the east annex of the Fisheries deserves separate mention.

E. HOUGH.

909 SECURITY BUILDING, CHICAGO.

There is not a department at the World's Columbian Exposition but what has an endless array of attractions. There is not one, however, in its special field, which is more interesting and complete than that of the fisheries. The different implements of the sport and trade, from the tiny trout hook to the harpoon; from the small minnow nets to the large nets used in deep-sea fishing and which are at one swoop capable of taking whole schools of fish; and from the tiny canoe to the large fish boats are all there. To attempt any general description would be worse than useless. Every exhibit requires time and study to appreciate it. Every exhibit has its own special history and development. The sub-divisions of each branch are endless. Nevertheless, there is hardly a detail but what is illustrated by an object lesson of some sort, mostly a complete illustration.

I was exceedingly fortunate in finding that Capt. J. W. Collins, the Chief of the Department of Fisheries, could spare a half hour last Friday in showing me around and giving a general explanation of the exhibits. In reply to the question as to how his department in respect to installation would compare with other departments, he said:

"Exhibits are more advanced in this building than any other one on the grounds. Excepting the Russian and Brazil exhibits, which are now en route, they may be said to be practically complete. Two or three States are behind hand on account of late appropriations and bad weather. Oregon is in such a position that it cannot complete its exhibit till after the spring pack of salmon. However, under rules of exhibiting, perishable goods can be brought in late."

"What time did you begin the duties of your office, Captain?" I asked.

"I organized my office here in January, and it has been something of a hustle ever since. I sent out from 500 to

1,000 circular letters some days, and I reached every important fisherman in the world."

Captain Collins then explained how his knowledge of details in the fishing world had been of great assistance to him in arranging matters expeditiously and how he had outlined it all before he left Washington.

He then made a running commentary in a general way on the most important features of the different exhibits. There were photographs of scenes showing the methods employed in the menhaden fisheries. Pictures illustrating the important stages in codfishing, from baiting to unloading the cargo. There were models of nets set for use. One seine was set and illustrated how a school of fish were taken all at once. The boat in which Ida Lewis performed her daring life-saving act is on exhibition. A catboat used in the scallop fishery and the implements of the occupation were next described. The North Sea fisheries were represented.

A large space was devoted to showing the city of Gloucester, Mass., in miniature, with its fishing industries described and illustrated by text and picture. It is one of the most interesting in the building. Around it are several pillars, on the sides of which are interesting historical and explanatory matter. One side of one post bears the following: "Exhibit intending to show the chief industry of Gloucester, Mass., by models of different types of her fishing vessels from 1623 to 1893, reproduced in miniature on a scale of a half inch to a foot, or one-twenty-fourth of original size. Those of 1893 are from models of late well-known designers of Boston, Edward Burgess and D. J. Lawler, and by a Gloucester fisherman, George M. McClain, each of them being prize winners in their class in a fisherman's ocean race, sailed in a violent storm in 1892, during the 250th anniversary celebration of Gloucester. In the rear of the vessels are wharves, fish-houses, marine railways, etc., showing in miniature old and new methods of its business. In the rear of miniature exhibit are shown fishing gear, seines, nets and implements, outfits, fish packages, curiosities of the sea, waterproof clothing, etc."

The contrast between the model of the ketch, wrecked on the coast of New England in 1623, and there buried in the sand till two or three years ago, when it was washed out of the sand and thus discovered, and the modern fishing vessel is vast. All these matters are so broad in scope that they will require special elaboration later on.

The installation has been greatly delayed by the difficulty in getting cars which are on the grounds, in place to unload them. It is sometimes difficult to find them.

B. WATERS.

909 SECURITY BUILDING, Chicago, May 6.

ANGLING NOTES.

The Fitch Creel, Girth and Strap.

My reference to the improved creel strap caused Judge Fitch to write me an interesting letter concerning the birth of the strap which should in fairness bear his name if it is to bear the name of any man as the inventor. He says: "I have read *FOREST AND STREAM* in which you vindicate my just claim as the inventor of the left shoulder and girth strap. It led me to fix the precise date of the invention if I could, not as a matter of vital importance so much as curiosity, knowing that the investigation would revive memories of by-gone days and of dear and cherished friends who were with me at the time—few of whom survive. First I read an article in my scrap book that I wrote in April, 1882, in which I describe the strap and the circumstances attending the invention which were substantially as narrated by you, and fix the time as being 'near the end of May, 1859. Two parties of anglers numbering three and four, respectively, all acquaintances and worthy 'Yorkers,' spent two weeks on the Beaver Kill." The parties were Wm. Adams, John G. Sundberg and myself, constituting the first; J. Spruicer Van Cleef, Wm. Black, Jr. (son of Wm. Black, of Ball, Black & Co., the then leading jewelers of New York), E. B. Monroe (son of one of the company, and now or lately president of the Safe Deposit Company in the Mutual Life Insurance Co. Building, New York), and Dr. Daniel Kissam, the second party. We had met before at the same place, and on this occasion by appointment. Of all these attached friends, but three are living: Van Cleef, Monroe and myself. In my fishing 'score,' collated in the past ten years from old diaries and various memoranda, I put under score for 1859 this note:

"On one day of May bout I caught 121 saving trout, weight 254lbs." That was the strap's birthday. Next I referred to two photographs, taken when the art was in its infancy, and immediately after I caused to be made the first strap of the kind of which I have any knowledge, with a view mainly of showing the strap. I named the pictures "Going Out" and "Coming In," and by attitude endeavored, quite successfully, to convey the idea suggested in the names. One of these I inclose. You will see in pencil on margin, "1858." The strap shown in the picture was of webbing with leather loops where it was attached to the rings. After a day's experience in the rain I found the shoulder strap absorbed too much water, so I had it covered with "aqua scutum," like that used in the making of my fishing coat, which is not represented in the picture. So I have not yet fixed upon the exact year of its creation, though of the opinion that the date on the picture is correct." It was quite natural that a knowledge of the Fitch strap and girth should spread among the fly-fishers who in that day followed the trout streams of Sullivan, Ulster and Delaware counties, and it was not long before a tackle dealer in New York made the strap and gave it his own name, and as I recall the incident, I think it was Judge Fitch himself, who, curious to see what kind of a strap Smith had invented went into the shop only to find his own strap sold under another man's name.

Tacoma Fishing.

The statement of Dr. Beebe in regard to the hunting and fishing about Tacoma, Wash., and the criticism which followed, and the data which followed the criticism, reminded me of a photograph of fish and the fisher which I possess, taken in one of the streets of Tacoma. The fisherman is Dr. McLennan and his catch is the result of an hour's fishing for salmon. I do not know the exact number and weight of the fish suspended on a pole between Dr. McLennan and his boatman, but I can count at least eight and as the fish are tied in two bunches, so it is not an easy matter to count them, there may be more than

eight of them. My brother sent the photograph to me from Tacoma, not as a remarkable catch but to fill out what Dr. Beebe's critic might call an assorted lot of fish stories, which he told in a letter, and for every one of them he vouched. Gen. Wm. Y. W. Ripley, of Rutland, Vt., well known as a salmon fisherman on the salmon streams of Canada, wrote me a letter from Tacoma, after fishing there for salmon, and spoke of the fish in much higher terms than I expected from an old fly-fisherman. If I mistake not, Gen. Ripley introduced the phantom minnow as a lure for salmon, at any rate, he used it with success in the waters about Tacoma.

Hudson River Fishways.

Chief Fish and Game Protector Pond called upon me a few days ago for a social visit and we discussed several matters pertaining to his department, one being the fishways in the Hudson. It is probably known to readers of this journal that the fishway in the Troy dam is boarded over and useless, for I think I have mentioned it once or twice, and such of the salmon as go above Troy go over this dam during high water, as they have been seen to do, or through the sloop lock in the dam on the city side of the river, as they have also been seen to do. The trouble with the Troy fishway is that the dam itself gave way in a measure and threw the fishway out of position, and no attempt was made to repair the damage until two years ago, and fear of high water then caused operations on the dam and fishway to cease before the fishway could be repaired, and therefore it was boarded over to protect it, and it must so remain until a season of low water, but that is work that comes under the department of public works. The next fishway above Troy is at Mechanicsville, and without the fishway the salmon cannot pass the dam. Major Pond visited this fishway late last fall with Protector Kennedy and found it filled with driftwood and gave directions to have it cleaned and kept open. If this has been done the salmon should be able to run to Fort Edward, for Mr. John A. Dix, of Thomson & Dix, told me that he cleaned the fishway in his dam at Thomson's mills last fall, and in the future would keep it open, and that is the next fishway and dam above Mechanicsville. Major Pond told me that he would make every effort to keep the fishways in order. I have always found him to be a capable, energetic officer, and I have little doubt that the salmon will be seen this year at Fort Edward. I received a lot of salmon fry from Cold Spring Harbor and planted them in Clendon brook April 25, as fine a lot of fry as I have received in the ten years that fry have been planted in this stream. Superintendent Mather was here at the time and we went to the headwaters of the stream to plant the fry. I had a letter from Protector Kennedy, from Hudson, dated April 30, in which he said that no salmon had yet been caught in the nets in the Hudson that he had heard of, although he had no doubt that some are caught below Hudson, but it was a difficult matter to find out the fact, unless the netters were honest enough to return the fish to the water. Last year Mr. Kennedy caught, as I remember, about a dozen salmon in his own nets within two weeks' time, all of which were returned to the river uninjured.

Opening of the Trout Season.

The legal season for lake trout fishing opened in Lake George May 1, and the ice went out April 29, although some portions of the lake had been open for a day or two before. On the first day, Monday, there were plenty of boats out in spite of the rain, and from that time until the close of the week some remarkable catches were made. On Wednesday a rough estimate of the fish in the boats in sight at one time from the Sagamore Hotel dock weighed 300lbs., the figures being given by the fishermen in each boat. Two trout of 15lbs. each were caught and one boat had a trout which had not been weighed for lack of scales, but was estimated to weigh 18lbs., which is about the maximum for Lake George. Mr. Eber Richards, of Sandy Hill, caught 50lbs. of trout in part of one day and had but five fish. The trout fishing in this lake has improved very rapidly under the system of stocking by the Lake George Association; but this promises to be the banner year, and the trout are at the surface. A boy of six years, a son of "Wint" Finkle, a fisherman, caught two trout weighing over 6lbs. each. It is much too early for trout fishing in the streams, as the brooks are high with rain and snow water. A few, a very few, trout have been caught in the brooks by worm fishing, but it is much like fishing for suckers and will be for a week or two more.

A. N. CHENEY.

Later.—A lake trout of 19lbs. has been taken on Lake George; this breaks the record for the lake.

THAT PREHISTORIC REEL.

Editor *Forest and Stream*:

I think I can give you a little light on the history of that "curious reel" that E. W. Raymond writes about in last week's *FOREST AND STREAM*, but not enough to trace it to its origin, for I am of the opinion that it is one of the first efforts of the Mound Builders to invent a "whanger" to winch fish out of the water with the aid of a line. Eight or nine years ago, as near as I can now recall the time, B. K. Brant, then of Hamilton, O., and one of the "Kingfisher" party, found it on a sand bar under the big railroad bridge spanning the big Miami River above Hamilton—rusty, corroded and weather beaten, as it now is, and presented it to me as a curiosity in the matter of reels.

As we went North that summer for the annual camp in Michigan I showed it to "old Bill Hess" (W. T. Hess) while the train stopped a short time at Grand Rapids, and the moment the fun-loving "ole critter" got his eye on it he demanded it outright to send to his friend, Tom Chubb, as a pattern for his reels, which he said would be sure to "boom his business." As none of the Kingfishers were ever known to refuse or begrudge anything to old Bill Hess, he got the reel and sent it to Chubb with, I have no doubt, a very characteristic letter, and now it turns up after these years to remind me of some very dear old friends and some pleasant "episodes" of camp life. This is the history of that crudely worked piece of iron as near as I can remember it. However, whether fashioned by the Mound Builders, or hammered out by some fishing country blacksmith, who, from a "lack o' siller" was unable to buy a better one, I will be glad to see it at the World's Fair (if I get there) for the associations connected with it, if for nothing else. Yours very truly,

KINGFISHER

ON THE NORTH SHORE.—III.

The Return Trip.—III.

[Continued from page 386.]

We were aroused early the next morning, and ever anxious about elemental conditions, stuck our head out of the tent before dressing. A smoky haziness was observable all around, while the sun came down with a tropic glare, indicating not only a warm but a very hot day. We, however, despite the heat, were exceedingly eager to be afloat, confident, if the ripples held, that it would be a red-letter day for us among the dandies of the scarlet spots.

Immediately after breakfast we took the boat and went to the mainland, working along it until we reached some grounds we had not yet fished over. We caught two going there, and on striking the promising waters, Ned made a double catch, which gave him considerable pleasure in their wild play, and after having killed them and brought them to the side of the boat, was fearful the astronomical Emery, who had the net in hand, would lose one or both. Ned instructed him how to operate, but he did not catch on at all, so after getting one in the net, he lifted him in with the other dangling on the outside and endeavoring to struggle off. Ned was so horrified at the clumsy work that he was perfectly speechless, but owing to the kicking trout being so well hooked, it also was dumped into the boat.

"That discounts anything in angling I ever saw," exclaimed the irritated Ned, after the fish were aboard and he had recovered his speech.

"*A coup de maître*," I cried out, with a pain in my side from merriment.

"I got 'em. Aint they in the boat?" replies the astonished astronomer.

"Yes, you got 'em badly, too; but never more be better of mine," and with this he dismissed the subject, and then commenced, with unusual vigor, whipping the waters as if desirous of ridding himself of the pent up indignation that possessed him. I laughed so heartily over the amusing exhibition that Peter finally became infected with it, and he also had to yell out. Emery's face was now of a roseate hue, realizing, at last, his blunder, but while he could tolerate Ned's chafing, he was determined his nephew should not indulge in the hilarity without a protest, so the aroused astronomer went at him with such a violent attack in French that Peter somewhat subsided by way of mollifying the mortified reader of the celestial highway. It was a very laughable incident, and ever and anon when the uncle's back was turned, Peter would pantomime the awkward dip to me, and then smile all over.

Emery may read the signs of the heavens and the zodiac, and "tell a hawk from a heronshaw," but he can't dip a double catch even a little bit.

The farce of the dangling trout having concluded with a roar, the tragedy of "the trout and the fly" opened with a persevering fidelity that promised glorious reward to the *dramatis persone*. Ned, with murder most foul in his heart, seeing a monarch of the Naiad realms sticking his royal red nose out of his front door, for the purpose of examining a ruby fly that was passing by, pierced him with a needle-pointed stiletto so fatally that he expired in a short time in a frantic endeavor to extricate the subtle weapon. This was the first act of the crimson tragedy, and after a few minutes' intermission, the second act commenced with other murders of the royal family of *fontinalis*, all of which were committed with a dash and daring that evoked unstinted applause. To drop simile, will relate that the brook beauties were out in great numbers, many of which met with a sanguinary fate. I hooked one, which acted as if he would never surrender, and began to think I had a foul hold on him. I let him wander whither he would, under a taut line, until patience became a lost art, and then determined to see how the gamy fighter was held. Pull and pull it was, but it was futile, he being a deep dweller, and would not show his colors to mortal eye under forfeiture of liberty. After waiting some time for him to manifest signs of departing vitality, I realized a disappointment, for it came not. Ned cautioned patience once more, and then I gave him run after run, but he never wearied a bit, and this satisfied me he was hooked foul, and determined me to bring him to the top. It was hard work on that little rod—a Chubb—but he gradually came, inch by inch, and once or twice I was compelled to let him slide in order to save rod and line.

After one or two more attempts, the stubborn and gallant warrior, who fought under the mantling banner, came far enough to the surface to show his spotted robe, and then with one accord we declared the barbed steel had pierced his side. Still I let him race again and again, until every one announced his capture an all-day job. Ned, in the meantime, while I was playing my athletic prize, had caught one, and had been the last five minutes endeavoring to persuade another to investigate his lures. Word now went out from all to bring up the fouled trout. At it I went, and after divers attempts, finally brought him to the surface with his displaying almost as much strength as at first. Peter, at an opportune moment, made an adroit dip of the still struggling fish, and when he landed him in the boat, great was the surprise to observe that he was not snagged at all. He was a three-pounder, and the gamiest habitué of the icy realms I ever captured. I have regretted ever since that I did not play him under the rules, that I might ascertain his complete fighting time. This I should have done had not the verdict been in the negative. I verily believe that trout would have fought fully half an hour, just twenty-five minutes more than the ordinary fighting time of his class. Ned at last called a halt in the slaughter, satisfied that more captures would be wanton waste. Again to camp we proceed with our glittering spoils as admiring objects.

Our outing that morning was one of unalloyed pleasure that will ever lie in the "chambers of the brain," and when we are relegated to the old arm chair, will again flash out at command, and the dappled beauties in their coats of crimson and gold reappear in battle as of old. The circling flies, the feathery fall, the skillful flutter, the wolfish snap, the hum of reel, the bend of rod, the frantic race, the lofty leap, the death struggle, the victory, the deep excitement and all the minutia of the pleasant pastime again return as vividly as ever and

"Rise to transports past expressing,
Sweeter by remembrance made."

We went softly rippling along to the twin isles, over

the smooth folds of the swell, with every face a picture of content. Even Emery had forgotten the part he played in the farcical dip, while Peter was so overflowing with good humor, that he set his mournful voice in an endeavor to interpret the light melody of some frivolous French ditty. He pleased himself and doubtless the astronomer, but Ned and I would have howled a protest if the morning's sport had not put us in humor to endure almost any kind of voice or song, or even the grind of an organ just then would have been tolerated. As sunshine follows rain, generous delight follows good trouting, hence Peter's vocal strains were left undisturbed to echo o'er woods and water or distract Pan, the sweet fifer of the reeds.

"Well, here we are at camp once more," says jolly Ned, "and now for dinner, and a good and ample one," fell upon my ears as the boat grated on the shore in the dividing channel of the Twin Sisters. I was heart and soul in the culinary instruction, being hungry enough to gnaw a bone.

After dinner our trout were dressed, and all but enough for immediate use were strung and placed on a rack over a smudge.

Growing weary of books and cards, which had occupied our time for a few hours, we ordered the boat and went to the main shore, by way of breaking the monotony of camp life. Arriving at some choice waters we made a few casts, hung one beauty that escaped, and then another taking my scarlet-ibis was hooked and landed after the usual paroxysms of bewilderment. At this period Mr. Schilling and his son put in an appearance in a canoe, with the missing frying-pans. We insisted on their going with us and remaining for supper, which they cheerfully did. He stated his boy—the one accompanying him—killed a big black bear at our last camp, Jackson's Cove, just before going ashore to look for the pans. The young hunter in giving an account of the adventure said: "I see something black move 'bout bushes on shore, and said that bear. Soon he walk out and look right at us. I said, 'Brother, hold canoe steady and I shoot.' Then I pick up gun, take aim good between shoulders, pull trigger, bear snort, fall down, struggle a bit and then quiet. I say he dead, brother say play 'possum, then I load up, land canoe, get out with gun, tell brother hold canoe ready. I go 'long careful, ready to shoot. Soon I got there and saw he dead. Give one kick and he no move. Brother now come and we drag bear to canoe and put 'im in. He make big load, fill canoe, and make water come most over top. Then I hunt frying-pans, find 'em and start home happy. We paddle hard, 'fraid it blow, but it smooth all way. Skin bear at home, and father gave all meat to Indians who have big feast—and that all." The young narrator, as he went through the exciting incidents, accompanied them with an expression facial and otherwise that held us rapt till the close. We rewarded him for the recovery of the pans, to a degree that made his eyes twinkle with unspeakable gladness.

The boys, always pleased with company, made a royal spread of the supper, which our tawny guests enjoyed with admirable gusto. Mr. Schilling stated during the meal, that his family had never been on the island, and that on next Saturday, two days hence, would bring them over, weather permitting. We told him not only to bring them, but insisted that they dine with us, as we were always provided for guests. He very courteously accepted the invitation. The boys were in high glee over the expected arrival of the Schillings and particularly of the three handsome girls. After the departure of the agent and his youthful Nimrod, Ned and I consulted as to the bill of fare for the approaching banquet, and after struggling over it till near bed-time, arranged the following:

MENU.

POTAGE.

Julienne.

Broiled brook trout, à la Maître d'Hôtel.

Cream of asparagus.

Pommes en surprise.

Boiled brook trout, Diplôme.

Pommes duchesse.

Smoked brook trout, Astronomical Emery, à la camp Superior.

Boiled ham, champagne sauce.

Baron of beef, à la Armour tin can.

Brown potatoes, very brown.

Breast of pheasant, plump à la Parisienne.

French peas, à la tin can.

Roast goose, in dubio.

Lemon sherbet, in futuro.

Potted pigeon, in nubibus.

Mashed potatoes, boiled potatoes, brown potatoes, all-round potatoes.

Chicken salad.

Plum pudding, à la tin can.

Native huckleberries.

Island strawberries.

Ginger snaps.

Angel toast.

Ben's water crackers.

Sault Ste. Marie hard tack.

Nuts, raisins, ad libitum.

Café noir.

Cigars.

When the boys came that evening to make our beds, we read them the bill of particulars for the feast, which we thought would meet with generous commendation. It was, however, the reverse, as they both smiled over it. Peter, after recovering his serenity of countenance, dashed our hopes of the prospective magnificence of the dinner by stating, "all they want is a pot of potatoes and a dish of beans. You, gentlemen, eat first, and we will set around afterwards on the rocks, and take our dinner. I'll arrange that," and then they stalked away somewhat confused, if not tickled, over the elaborate cuisine we had so carefully selected for the forthcoming banquet. "It is no use," I said to Ned, who was bowed down with disappointment, "to attempt to pay homage to beauty by playing the role of Lucullus. Think of the suggestion of that red-handed barbarian. Beauty and beans upon a wave-washed rock. What an unpoeetical greeting to Neptune as he dashes by with his foaming steeds; what a sight for the naiads and nereids, as they arise to the surface in sportive play, and what a subject for some future Tintorette. Beauty and beans, forsooth! Much rather beauty and beast, but beauty and beans, avaunt, and leave my sight forever, I'll have none of thee! And now let's to bed, with a prayer that the vision of beauty and beans may not re-appear and make each respective hair stand in horror."

Strange to say we slept soundly that night, having been lulled to forgetfulness by the endless moan of the waters that beat upon all sides of us.

Arising the next morning fresh as daisies, we took a glimpse, as usual, of the upper and surrounding elements. The sky was mottled in fleecy folds of snowy whiteness, while the lake was smooth as burnished steel. We thought it useless to fish in such a sea, but nevertheless went, expecting to return without a fin. This time we coasted along the west shore for about a mile, receiving only one rise, and that from a nursing. Ned suggested we try an

islet of rocks just opposite camp, where he said he had had unexampled sport some years ago. Accepting the suggestion the boat was headed for the place, which on reaching we went ashore, and then climbing up a slippery and steep side of the gigantic rock, commenced casting. On my second cast I aroused an old patriarch, which I hooked, but which, unfortunately for me, soon cut off the communication, and left without the formality of a polite adieu. A half dozen large trout slowly came with him, when he took my fly, which led me to believe I was in a generous preserve. Again and again I whipped the waters, and for the first two or three offerings a number of them would follow the flies a short distance, then turn tail as if they had discovered the counterfeit. Concluding to change my stretcher I put on a black hackle, and when it made its maiden visit to the shaded lines, was eagerly snapped up by a vicious-biting golden fin, who paid the penalty of his greediness with his life. It was a good three-pounder. In a short time I caught another of about the same size, a regular acrobat, who made three lively leaps from the surface, and just before landing turned a complete somersault. His mouth disclosed an ugly rent, indicating that some unlucky angler had been having an active fight with him. This was all we caught at the rock, and the lake still continuing without a ripple, returned to camp to seek other diversions.

About 5 o'clock in the evening we started on another trip to the main shore for an hour or two's angling. On arriving I was left on the flinty monument I had fished from in the morning, with Peter as netter, while Ned took the boat with the astronomical Emery, and went along the west side. Repeated casting from the apex of the rock failed until I changed my position, then I succeeded in catching a three-pounder, who took my fly when about to lift it from the surface. He fought like a tiger, and fully recompensed me for the trip. Again I commenced whipping around the circumscribed space wherever I could get a strong foothold, but they were not on the rise, and so laying aside my rod, sat down and watched the trout and other fish as they leaped from the sun-kissed waters. They arose on all sides, and were of all sizes. The *S. fontinalis* flashed up into the sunlight with a spangled glitter, while the herring, which were quite numerous, shone like bars of dazzling silver. The dull-colored fish, which lazily vaulted, were principally suckers and pike. "There goes a boss trout, here a little silver-side, and yonder a heavy pike," were the exclamations that fell from our lips, as they continued their holiday pranks on the shimmering surface of the great lake. On Ned returning with the reported capture of a two pounder, we boarded the boat and returned to camp, assured that unruffled waters will never satisfy the aspirations of an ardent angler.

The sun went down that evening with an angry glare that foreboded a change in the quiet weather, and long before we sought our blankets the heavens were alive with swift clouds of a decided slate color, that dimmed the large and brilliant stars which, in the early hours, glittered in flakes of white upon the lake. Emery, as he went by us on the way to his tent, stopped awhile and read us the signs of the heavens. As we were somewhat in accord with him, no dispute arose relative to his indications. "Something break loose soon," were his parting words to us, and that was just what Ned and I thought. The clearness of the atmosphere had departed and a heaviness seemed to possess it. Being in good quarters, and having had quite a spell of pleasant weather, the breaking of a storm-cloud just then had no terrors for us and would have been received quite composedly. The tent being well anchored with heavy rocks it could stand anything but a terrific cyclone. We retired with expectations of rain during the night. ALEX. STARBUCK.

[TO BE CONTINUED.]

MAINE FISHING IN MAY.

THE ice still lingers in the Maine trout lakes and ponds, and at the time of this writing there are no indications that the Rangeley waters will be clear before the 15th, or later, or that Moosehead will be clear previous to that time. There is one exception, however. Sebago Lake, celebrated for its landlocked salmon, cleared of ice on the night of May 4. Fishermen tell me that this lake cleared last year on May 5. On receipt of the news that Sebago was clear of ice, several Boston fishermen were soon on the way for a trial for the big landlockers. It had been reported for some days that the smelts were running, and this indicated that the salmon would bite. Mr. L. Dana Chapman, of Dame, Stoddard & Kendall, was the first to have the news of the departure of the ice, and with his friends, Dr. Defriez, Mr. Kimball, I. H. Caliga and Chas. H. Kilham, he was off for Portland on the evening train of Friday. One or two other parties followed them the next day.

Not only the lingering of the ice, but other causes will conspire to make the number of sportsmen going to the Maine waters less than usual this year. In the first place there is the world's fair at Chicago. Many Boston fishermen will give up their spring trips, at least, with the World's Fair in anticipation. Some of the parties of other seasons will be entirely broken up for this reason. Other parties will go, but old time members will be missing. The Stevens party, owners of Campe Vive Vale, in the Narrows of Richardson Lake, will be off as usual as soon as the ice is out. But this party is not likely to be composed of any but Mr. C. P. Stevens and his nephew, Mr. F. B. Stevens. Mr. E. J. Shattuck, of the printers' ink house of Geo. K. Morrill & Co., who has been so many years with the Stevenses, will take his family to the World's Fair this year and leave the fishing trip out, much as he dislikes to give it up.

The Magee party will make its spring fishing trip this season to the Rangeleys. The party is thoroughly organized and has visited the same waters regularly for many years. It is likely to be made up this year the same as usual. Mr. A. N. Parlin, of the Magee Furnace Co., is the leader. He is likely to be accompanied by Mr. John Magee, founder of the above company, with his wife and daughter. Mr. Magee is over seventy years of age and has scarcely missed his annual fishing trip for many years. Still his health is not of the best and he, with his estimable lady, almost fears the exposure. May he not be deprived of his fishing trip this year is the hope of his friends. The party is likely also to contain Mr. Frank A. Magee and wife, Mr. Rufus F. Greeley and wife, and Mr. and Mrs. Amos M. Kidder, of Plymouth. The Magee party will change its location somewhat this year, going

to the Birches, Capt. Fred Barker's camps, in Moosehucmaguntic, instead of Haines's Landing, as on former seasons. It ought to be mentioned that Mr. A. N. Parlin is interested with Mr. Austin Corbin in the great game preserve in New Hampshire. He has purchased a brick farmhouse overlooking the preserve, and has added to it and improved it till he has a most beautiful place for a gentleman of taste and leisure, as he is. He says that their herds of big game have wintered finely and that a host of fawns from moose, deer and elk are expected this spring, with a number of buffalo calves. The cow moose exhibited in Boston last winter by Peter Leroy, mentioned in the FOREST AND STREAM at the time, was purchased by Mr. Parlin for this preserve. The poor little baby moose, "subdued" by horse-tamer Gleason at the Casino some time since, Mr. Parlin would have purchased had he known that it was obtainable.

Mr. Wm. J. Follett, of the Boston wool house of Geo. Follett & Co., Boston and New York, with his friend Robinson, had extraordinary good luck with trout at Falmouth the other day. It was in the cranberry bog streams that they fished, and they "happened to strike them just right." They caught thirty-two trout, the largest weighing 2½ lbs.—a very large trout for those waters. Mr. Follett is convinced that they struck a run of trout that had come up from the salt water. The fish were especially fine. He succeeded in landing the big one without a net. He took a net from Boston, but the people of the Cape laughed at the idea that there was anything that could not be landed without a net.

The Foster party, one of the first to be off for the Rangeleys, is likely to be considerably lessened in numbers this season. Probably Mr. Foster, of the firm of Lamkin & Foster, will make his fishing trip, but others who have been members on former seasons, are likely to be hindered. Some will go to Chicago, while Mr. Field is sick.

A Bangor dispatch of May 4, says that Mr. Edward A. Buck of that city has taken the largest salmon ever taken in that celebrated pool. It was taken with fly and leader, so the dispatch says, and weighed 30 lbs. Unusually good success with large fish is being had at Bangor this year.

Miss Eleanor Dean, daughter of Chas. A. Dean, of Boston, is reported to have taken this spring a tarpon or silver king, in Florida waters, weighing 120 lbs. Notwithstanding the tremendous size of the fish, the lady is reported to have brought him to the boat without aid.

The Kennebec, Maine, Fish and Game Association has in it 5 hatcheries, at the outlet of Ellis Pond, North Belgrade, about 75,000 trout and salmon that are being kept to a proper size for restocking MacGraw, Ellis, East, North, Great and Long Ponds, in Kennebec and Somerset counties. The sportsmen of that vicinity have at last waked up to the value of the waters they have close at hand, if only stocked with trout and salmon. The last Legislature passed a law closing these ponds for five years to landlocked salmon or trout fishing. The same law also prohibits the taking of white perch from the waters named, for sale or to be offered for sale, under a penalty of \$10 for each offense. The association has also had printed and posted, on all the roads leading to the ponds, a large number of notices, calling attention to the statute.

A Keene (N. H.) dispatch to the Boston papers says that on the night of May 2 the State fish hatching house, on Beech Hill, was broken into and the water turned off, destroying 150,000 trout and other fry, which were to have been distributed this month.

May 8.—A very handsome string of trout were shown at Appleton & Basset's on Monday. They were the catch of Dr. John T. Stetson and his friend S. W. Rich, better known as the manager of the Phillips & Rangeley R. R. before its lease to the Maine Central. They caught the trout in a preserved brook in the vicinity of Wareham. The largest weighed 2½ lbs., while there were a dozen that weighed at least 2 lbs. apiece. This is one of the finest catches of trout this season from that town.

At the time of writing the L. Dana Chapman party, at Sebago for landlocked salmon, had been heard from and three salmon had been taken.

The date of the going out of the ice from the Rangeley Lakes for a period of 11 years will doubtless be of interest to the readers of the FOREST AND STREAM. The dates correspond with the dates of the dispatches to the Boston Herald each year announcing that the ice has gone out. In 1882 the ice went out on May 12; 1883, May 14; 1884, May 13; 1885, May 15; 1886, May 3; 1887, May 16; 1888, May 21; 1889, April 30; 1890, May 9; 1891, May 10; 1892, May 4; 1893, — the blank is yet to be filled. Reports received on Monday would indicate that the date can scarcely be earlier than May 15, and more likely the 18th to the 20th.

Senator W. P. Frye, of Maine, is getting ready for the spring fishing, as soon as the ice is out. He will visit his beautiful camp on Moosehucmaguntic Lake this season, as usual. This time Senator Chandler, of New Hampshire, is likely to be with him, as well as Mrs. Frye. At least, they walked into Dame, Stoddard & Kendall's tackle store the other day, where Mr. Henry Litchfield, so long known in the tackle trade, was made acquainted with the Senator from the Granite State. He sold him a fly-rod and outfit, Senator Frye remarking that his colleague was a beginner. Others think they heard the Maine Senator slyly remark that the New Hampshire Senator should not have his tackle to learn with.

SPECIAL.

The Law in Vermont.

RUTLAND, Vt., May 1.—State Fish and Game Warden Fisher, assisted by John T. Preston, nabbed three fishermen while in the act of drawing a seine in Missisquoi River, a spawning ground to Lake Champlain, where the wall-eyed pike are very plenty just now. These men were taken in the act of hauling the seine out of the water with ninety-two pike and other fish.

Fish Warden Polley, of Fair Haven, last week took five fyke nets out of Lake Champlain below Benson Landing, two on the New York side of the lake and three on the Vermont side. WHELOCK.

The most ancient known work on fishing is said to be the "Haleutics of Oppian," the work of a Greek poet, A. D. 198, from which it is learned that many articles on fishing, thought to be modern, were known then; while from Athenæus it is learned that several writers wrote treatises or poems on fishing centuries before the Christian era." F.

LARGE-MOUTH AND SMALL-MOUTH.

CINCINNATI, O.—*Editor Forest and Stream:* I inclose you the "versified" notions of Uncle Billy Hall, a member of our Cuvier Club here, on the "Mutability of the Black Bass." Uncle Billy is a bass fisher of forty years' experience, has fished nearly every stream within a hundred miles of Cincinnati, and is the most persistent "wading bird" known to this region.

Of late years he has been studying black bass, and has come to the unalterable conclusion that small-mouthed bass under certain conditions change to large-mouths, and that large-mouths under certain other conditions will swap back into small-mouths.

He claims that Ross Lake, a considerable body of weedy, shallow water near the city, was several years ago stocked exclusively with small-mouthed black bass, and now there are none taken from it except big-mouths. Something more than three years ago he took out of Ross Lake 1,150 big-mouthed bass—little fellows 2 and 3 in. long—and placed them in a pond of good, pure water near Madisonville, this county; it was a new pond and these were the first bass put in it, and he says that last year he took quite a number out of it with rod and line, weighing from 1 to 1 lb., and that every solitary mother's son of them were small-mouths. If you have a mind to publish his verses, which I am permitted to send to you, it may be the means of stirring up a hornet's nest; or rather a "bass nest" among the admirers of little-mouth and big-mouth.

KINGFISHER.

MUTABILITY OF THE BLACK BASS.

Some ichthyologists who claim
That small and lazy large-mouth bass
Are not and never were the same,
May live to see both in one class.

We, from a stream, young small-mouths take,
Place them then in poor pond water,
There let them roam at will to make
Large-mouths three or four years later.

And let us place young large-mouth bass
In good, fine water to remain.
Allow three years, or more, to pass,
We welcome small-mouths back again.

Late tests, most practical in kind,
The best, and hardest to combat,
By which the difference, we find,
Is caused by change of habitat.

FROSTY POW.

THE TAMING OF THE BULL.

COL. J. G. CRISP, a very prominent and popular citizen of Kansas City, Mo. (and a man who never jests about such things?) is responsible for the following very interesting account of a rather savage onslaught by a wall-eyed pike upon a Jersey bull, which, Col. Crisp avers, occurred under his immediate observation, and he is ready at any time to make oath as to its accuracy:

The Colonel's taste is somewhat bucolic, mingled with an intense fondness for angling, as is evidenced by a well stocked farm owned by him near Kansas City, on which there are several magnificent fish ponds that are pretty well inhabited with a variety of nice fish, chiefly wall-eyed pike—the product of some breeding specimens the Colonel obtained from the U. S. Fish Commission some years ago.

Among a herd of choice Jersey cattle belonging to the Colonel was a very insolent bull who did just as he pleased, and was so ferocious that it was sure death to get on the same side of the fence with him. His good-natured owner had exhausted every means in his power to subdue the unruly brute, and found him unconquerable. One day while the Colonel was seated on his porch he saw the bull standing on a little peninsula that sloped gradually off into one of the lakes, apparently very much annoyed by what are known in that section as "heel flies." Finally the flies became intolerable to the bull and he took to the water. He waded out to a depth of about 2 ft., when, of course, the flies left him and the colonel paid no more attention to him.

After several minutes had elapsed, the Colonel was startled by the piteous bawls of the bull, and casting his eye in the direction from which the sound came, saw him struggling desperately as if he were trying to free himself from some powerful grip. Hurrying to the scene of trouble, Colonel Crisp discovered that the bull had attempted to drink, and when he put his mouth into the water, a large wall-eyed pike about 4 ft. long, which was lying quietly near the shore in wait for small bait, mistook the bull's nose for something to eat and seized on to it with the grip of a bulldog, and then the fun commenced. The bull struggled with all his might to get loose, but it was not worth the while, the wall-eyed pike had him. They rolled and wallowed about in the water for some time, and finally the bull gave up in despair, and Colonel Crisp declares that that bull was never so glad to see any one in his life as he was to see him at that time.

Figuring on a Fish.

J. E. Gunkel, John W. Toulerton, Master Carpenter, of the Lake Shore, and Dewitt C. Baldwin, representative of the Red Line Transit Co., were sitting together the other day enroute to Detroit. While passing over the bridge which spans the river Raisin, at Monroe, some one said it was reported that there were more fish entering the rivers this spring than for many years. At that moment Mr. Toulerton saw something unusual in the water immediately below. It was the dorsal fin of a fish, following the deepest channel up the river.

The window was raised and all three gentlemen took a good look at the exposed fins.

"Now," said Mr. Toulerton, "you see the length and height of that fish's fin, what is the length of the body?"

While they were looking Toulerton dropped his eye glasses into the water below. A moment later the train was gliding through the country and the gentlemen began to figure. The size of the fin was indelibly impressed upon their minds. Gunkel and Toulerton are old veteran fishermen, and several gentlemen passing the three expressed sympathy for Mr. Baldwin. When the train arrived at Newport notes and figures were compared. They were not satisfactory. Mr. Toulerton declared that Baldwin should figure by the "single rule of three" instead of taking the shorter distance and going at it on a geometrical basis.

"Well," replied Mr. Baldwin "here's a simple problem

any Warren street school boy can solve. You have a divisor, quotient and remainder, now find the dividend—that fish measures exactly 9 ft. in length." Toulerton declared they didn't figure that way in Adrian. They changed their seats and were again buried in deep study. They both affirmed that Gunkel was "away off" in his calculations and his figures were the result of imagination instead of personal arithmetical methods. The time was spent in figuring until the train arrived at Gratiot avenue, Detroit. John Toulerton's final answer was, and he declared he wouldn't take off an inch, 13 ft. and 4 in. Dewitt C. Baldwin's estimate was 9 ft. and 3 in. Gunkel taking the two results subtracted one from the other, and he replied the length of that fish's body must be 4 ft. and 1 in.

Toulerton and Baldwin paid no attention to Gunkel's estimate, asserting that his knowledge of fish cut no figure with men who had been accustomed all their lives in giving estimates. The gentlemen separated in the Lake Shore depot, but agreeing to return together on the late train. The train left the Brush street depot on time but without Gunkel. When at Monroe, Toulerton was agreeably surprised to see Gunkel enter the coach and hand him his eye glasses with silk ribbon attached, all in perfect order. Both Toulerton and Baldwin eyed Gunkel closely.

"How did you get the glasses?" asked Mr. Toulerton.

Gunkel replied that when they parted in Detroit they cast certain reflections touching his reputation as an angler, and the more he thought the matter over the greater came his convictions that he had better take the afternoon train, go to Monroe and catch that fish. He got the assistance of an experienced fisherman, and after some trouble found the fish struggling to get over a riffle—he caught him.

In the dorsal fin Gunkel found the eye glasses, with the silk cord attached around the bony substance. The fish proved to be a sturgeon and measured exactly 4 ft. and 1 in. in length.

Toulerton and Baldwin refuse to speak to Gunkel, and if his name is mentioned they simply shake their heads.

Mr. Baldwin says he was surprised that Gunkel didn't find the glasses over the eyes of the fish.—*Toledo Bee.*

OHIO FISH LEGISLATION.

TOLEDO, O., May 5.—*Editor Forest and Stream:* The Ohio Legislature adjourned on the 27th ult., having accomplished little in the way of revision and improvement of our fish and game laws. Early in the session a joint commission was appointed by the Senate and House for this purpose, and a number of bills were reported, several of which were based on the petitions and suggestions of the friends of fish and game protection. But the commission as a body proved apathetic and indifferent, and, with a single exception, all these bills were put over from time to time as they came up in the calendar, till the day of the adjournment found them buried too deep for resurrection. The exception was Senate bill No. 548, and it is now the duty of all sheriffs and deputy sheriffs in Ohio to arrest all violators of the fish and game laws of the State. It is also made the duty of any constable in the State, in addition to his regular duties, to keep diligent watch in his respective township, or in any township in the county in which he is commissioned, and arrest or cause to be arrested, wherever found in the county, all violators of any of the provisions of the various sections of the fish and game laws. Each sheriff, deputy sheriff or constable shall receive one-half of the fines collected for each conviction he procures; the other half shall be credited to the county fish and game fund, and be used toward paying sheriffs, deputy sheriffs and constables for convictions procured.

Senate bill No. 547, which contained some excellent amendments, and was a revision of a number of the existing sections of the laws, failed to receive even serious consideration in the Senate, and did not reach a vote in the House.

Northern Ohio, including the entire lake front from Toledo to Cleveland, has no representative on the State Fish and Game Commission. On the other hand all the powerful and extensive commercial fishing interests are planted along the lake shore, and he would be a dull-witted man indeed who could not understand the resultant situation so far as fishing legislation is concerned.

JAY BEEBE.

Adirondack League and Bisby Consolidation.

Editor Forest and Stream:

A movement which has been for some time on foot for the consolidation of the Adirondack League and the Bisby clubs has culminated in a union which promises to be of great value to both, and to make the consolidated organization the most extensive and important of all the preserves in the Adirondacks. The League Club owns and controls about 150,000 acres of the most valuable hunting and fishing grounds in the great wilderness, including a long stretch of the south branch of Moose River with its many tributaries of streams and lakes. This territory, until its purchase by the League Club, was the favorite hunting ground of the Bisby members. By the consolidation the Bisby Club acquires the same rights of hunting and fishing that the League Club possesses, and the League Club gains the valuable privileges possessed by the plant at the First Bisby Lake, which embraces their large and excellent club house, well-equipped fish hatchery, cultivated land, boats, and the best all summer fishing to be found anywhere in the woods. The Bisby plant is situated at the very gateway of the Moose River hunting grounds, and its acquisition by the League Club gives their members the most convenient access to these grounds. The Bisby club house is about midway between the two principal club houses of the League Club and makes a convenient half-way house for parties going from one to the other. There has been from the first a close affiliation of sentiment and personal respect between the members of the two clubs, and they have vied with each other in acts of hospitality and courtesy. While the Bisby Club disappears from sight as an organization, its members will always cherish the most pleasant memories of the rare enjoyment they have had at their lovely retreat, which is still their own, though hereafter it will go by a new name. Their surrender is such only as a bride must make when she takes the name of the man of her choice. The consolidation has been made in this case on a financial adjustment which each of the parties regard as fair and equitable. "Long may they wave,"

S.

ONE WAY OF KILLING A SALMON.

HAVE you, my friends, ever killed a salmon? If you have, you doubtless did it in the so-called "scientific" manner—played the fish until you tired him out, then gently drew him within reach of the cruel gaffer, who safely brought him to land.

Such had been my method until July, 1891, while fishing on the shore of the beautiful Margurite River in Cape Breton. Then the conditions were decidedly changed, and through force of circumstances I learned what it actually means to kill a salmon.

One cool, bright morning, two ardent anglers started out for the usual daily fishing. We carried but one gaff, and it was agreed that in case either hooked a fish, the other should gaff him. This plan worked well for some hours, though we met with but indifferent success.

Being tempted further and further down the stream, I became separated from my friend, although, as I supposed, within hailing distance. With but little hope of raising a fish, I whipped the pool beside me over for the second time. When the furthest point was reached a change came over me! I found business on hand! A fine fresh-run salmon had struck and was fairly hooked, and the reel was playing the symphony so sweet to the true angler's heart. I turned to my friend who had retained the gaff, but he was not in sight. The fish rushed this way and that—now down—now up, repeatedly leaping out of the water, flashing like silver in the sunlight.

The thrill of the strike thrills through me now,
And the whirr of the reel I hear,
As he madly sped with the silken thread,
And plowed through the waters clear.

While fighting and watching him, I shouted and called—but heard no response. The wind was contrary, and the sound could be heard but a short distance. The mighty fish leaped and rushed again and again,

Hard to the music of the reel!

but, ere long, his struggles became fainter. The flexible rod had apparently done its work, and were the gaffer but there, the salmon would soon be safe. But, alas! He came not, and the battle must be fought single-handed and alone!

My mind was full of anxious thoughts. What could be done? How much strain would this single leader, once tested at 6 lbs., now stand? The bank was rough and shelving. There seemed but one way, and that a very risky one, but I must take the chances and "beach him."

While hesitating and trying to decide, the fish had worked back into the current, seemingly with new life and a determination to conquer. Another but shorter fight, brought him into quiet water once more.

Then reeling up as much line as possible, I selected the smoothest place in the edge of the pool, turned the salmon's head toward it, and with all the force I dare use drew the fish toward the bank.

When about one-half of the body was out of the water, the leader parted! Imagine my dismay! Quick as thought the rod was thrown back, and as the grand 12 lb. hero flopped back into the water, I threw myself bodily upon and back of him, and with hands and knees held the noble fellow and threw him upon the shore, fairly killing him!

Anglers—you do not know of the excitement and glory of killing a salmon, unless you have done likewise!

H. O. WILBUR.

Peelee Island Bass Fishing.

TOLEDO, O.—A private letter from Dr. McCormick, of Peelee Island, just across the Canadian boundary line through Lake Erie, informs me that the black bass season will open there on May 15, as usual, and that the Peelee (Chicago) and Dayton clubs will be on hand in force the day beforehand, also as usual.

JAY BEEBE.

OTTAWA, May 3.—*Editor Forest and Stream:* In reply to your inquiry of March 24 last, I am to inform you that the issue of special angling permits for bass fishing round Peelee Island will be issued for this year only.—WILLIAM SMITH, Deputy Minister of Marine and Fisheries.

"Forest and Stream's" Fishing Postals.

SHOHOLA FALLS, Pa., May 5.—Mr. Weiss caught 40 fine trout this week. Mr. McKean caught 80 trout in four hours. The fishing is backward this spring. Streams are high and weather cold. Prospects are good for next week if weather gets warm. Trout are in fine condition.

G. W. HART.

RUTLAND, Vt., May 1.—The trout season in this vicinity is very late, as the snow is still on the hills and in the woods.

WHEELLOCK.

DINGMAN'S FERRY, Pa., May 1.—One of my guests this morning caught 19 trout, weighing 18 lbs., in Dingman's Creek. Streams are yet a little high and water cold. Next week promises very good fishing.

PHILIP F. FULMER.

HIGHGATE, Va., April 24.—The ice is now well out of our streams and small lakes, but the heavy body of snow on the mountains will make the trout fishing late.

STANSTEAD.

The Patent Bait

manufactured and sold exclusively by Messrs. Welch & Graves, of Natural Bridge, N. Y., is one of the most original inventions ever made. By means of this device the small fish used for bait is kept alive and secure from harm indefinitely, and at the same time magnified. It is said to be very killing.—*Adv.*

Minneapolis and St. Paul

Are reached most directly from either Chicago or St. Louis by the Burlington Route. Daily vestibuled trains with Pullman sleepers, chair cars (seats free) and Burlington Route dining cars.—*Adv.*

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST and STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST and STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Fishculture.

Valuable Papers Burned.

COLUMBUS, O., April 22.—*Editor Forest and Stream:* About 2 o'clock A. M. of the 21st ult., a nearly new building at the rear of this number was destroyed by an incendiary fire. It was, at the time, used for storage, and all the contents were consumed. I had stored therein several boxes of letters, running into the thousands, the larger portion of which related to fishcultural matters, some dating back to 1854. They were from all the leading civilized countries of the earth, and next to the accumulated correspondence of the U. S. Fish Commission were undoubtedly the most valuable collection in this country. With the rest, I had a trunk full of specially prized correspondence from various parts of the world, all related to fishculture. I had in this trunk some rare and valuable documents, pamphlets and translations. I also had in boxes complete files of FOREST AND STREAM from the second year of its publication, with marked covers of numbers containing my own articles. None but the long-time readers of FOREST AND STREAM can fully understand how highly I prized this accumulation. I also had there remnants of stocks of books and pamphlets of my own authorship, all of which are a total loss. I supposed these boxes were in the safest possible place.

MILTON P. PEIRCE.

Postscript.—Since writing accompanying communication concerning fire, I have read in FOREST AND STREAM of this week a disrespectful anonymous attack upon my reputation, which will at least amuse the early readers of FOREST AND STREAM. Of course I am too old a newspaper man to notice anonymous attacks to the extent of a reply. I always give prompt attention, especially to those pleading ignorance, over their own signature. M. P. P.

The Kennel.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

May 17 to 20.—Seattle Kennel Club, F. R. Atkins, Sec'y.
May 30 to June 2.—American Pet Dog Club, Lexox Lyceum, New York. Marion E. Bannister, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 15.—American Field Trial Club trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

POINTS AND FLUSHES.

[By a Staff Correspondent.]
Owners and Passes.

CHICAGO, May 6.—There is a great deal of interest at present in the matter of passes, by the exhibitors who contemplate entering their dogs in the dog show of the World's Columbian Exposition. In this connection the following will be instructive.

In an interview a few days since, Mr. Buchanan told me that it was contrary to the rules of the Exposition to issue a pass to an exhibitor on the mere fact of ownership in a dog or dogs entered. To conform to the rules, the owner who applies for a pass must do so on the ground of being the caretaker of his dogs, or that his presence is necessary in some such capacity.

It is useless to ask for a pass on the fact alone of ownership. In such way a pass can not be secured. As an attendant, the owner, it he makes application will have no difficulty in obtaining a pass which will be good during the five days of the dog show.

The Judges.

The powers in authority were, up to yesterday, still wrestling with the problem of a list of judges. The list at that juncture might be made at any moment or might not. It was then under consideration by the National Commission. The birth of an official list of judges is not the effort of an idle moment. It must comport itself with the dignity and importance of the occasion. The forthcoming list was first selected by the Committee on Awards in connection with the Director-General, and is to be approved, before it has official life, by the National Commission, before which august body it was last Friday. The revised programme has been some time ready, but the publication of it has been in abeyance awaiting the official appointment of the judges. It will be issued soon whether the judges are appointed or not. It is possible that the date of closing the entries will be extended from May 20 to June 1. There is hardly a doubt but what the judges will be appointed before the dog show is past.

Notes from Tennessee.

In a chatty letter from that well-known owner and handler, Mr. H. S. Bevan, of Somerville, Tenn., I take the following interesting news items:

"Mr. J. M. Arent, in the matter of his suit against the Illinois Central R. R., for killing one of his dogs, has not yet reached a final settlement. At the meeting of the Supreme Court at Jackson, Tenn., the decision in his favor was reversed and the case remanded. This on account of a witness stating that Mr. Llewellyn had said that the great-grand-sire, Count Wind'em, of the dog (which was killed) was the best setter he had ever owned or bred. The case is to be tried again at Bolivar, Tenn."

"Mr. B. M. Stephenson has purchased Laftonia (Paul Gladstone—Latonia) and Ruby (Diamond—Topsy Noble), from Mr. Baughn, Ridgeville, Ind. Mr. Tucker has purchased an Antonio—Daisy Hunter and a Rod's Ace—Fanchette Noble dog from Messrs. Hunter and C. M. Rounds. These are said to be world-beaters."

"Mr. A. P. Gilliam will handle dogs for the Manchester Kennel Company only this next year."

"Gloster died in New York about three months ago. He fell dead in the field."

Mr. Bevan also mentions that he has purchased a half interest in a setter bitch by Eugene J.—Dell Rivers. He says: "Mr. Tucker was anxious to secure her for a Derby entry for Mr. Lorillard, after seeing her in the field, but I preferred keeping her in my own kennel."

The legal case to which he refers is one decided some months ago in favor of Mr. Arent, the suit being for damages for the killing of one of his dogs by a train on the I. C. R. R. The jury before which it was tried awarded \$500 damages.

Mr. J. B. Stoddard, the celebrated field trial handler, made

this office a call to-day. He showed all the healthfulness and good spirits which come from an active outdoor life in pleasant pursuits. He has sold off many of his dogs and left North Carolina permanently as a place of residence. Chicago will be his home for a few weeks.

The winter in North Carolina, he told me, was very severe, and destructive to the birds. Whole beveries were destroyed by the cold, combined with the scarcity of a food supply, the latter caused by the heavy snow. Beveries which survived these severities were poor and weak. In such a state they would be an easy prey to hawks and other enemies. Field trial clubs whose preserves are in that section would do well to investigate this matter.

The Northwestern Field Trial Club.

The following reprint explains the recent doings of the Northwestern Field Trial Club:

The annual meeting of the Northwestern Field Trial Club was held recently, when the officers for the ensuing year were elected as follows: Patron, A. P. Heywood-Lonsdale, President of the National Field Trial Club; Pres., Thomas Stone, Calgary, Alta; Vice-Presidents, W. T. Hunter, Wheatland, Dak., and W. B. Wells, Chatham, Ont.; Sec'y-Treas., Thomas Johnson, Winnipeg, Man.

The board of management of the trials elected for the year were the above officers and Rev. W. H. Spence, Thos. A. Montgomery and James C. Phillips. As previously announced, the trials will take place at Morris, Man., commencing Sept. 4. There will be two stakes, a Derby and All-Age, \$5 to enter and \$10 to start in each stake. The whole of the entry and starter fees shall be given in prizes, less judge's expenses. Assuming the entries and starters number the same as last year this will give near \$1,000 in prizes. Entries for the Derby close June 15 and the All-Age Stake July 15. Entry forms and all particulars can be had from the secretary-treasurer.

I had the pleasure of meeting Mr. J. B. Goodwin a number of times recently in this city, before I learned his identity as a sportsman. He has a large exhibit in the Manufacturers' Building at the World's Columbian Exposition. Mr. Goodwin's home is in Rhode Island. He will be remembered by the readers of FOREST AND STREAM as one of the prominent field trial pioneers. At one time he owned the great setter Grosedale, and others of equal celebrity which competed in the field trials of a decade or more ago.

The signs of the times in the dog world seem to indicate that it is a bad year for oracles. B. WATERS.
909 SECURITY BUILDING, Chicago.

Flaps from the Beaver's Tail.

TORONTO, Canada.—When the following case was reported to me I was uncertain whether to use it here or to send it to your "Fishy" column. However, you can judge. On April 29, my correspondent states, and his story is vouched for by eye witnesses, a pug bitch owned by Mr. P. Curtis, a hotel keeper at Dixie, near Cooksville, on the C. P. R., whelped the multitudinous litter of (don't faint) thirty puppies, of which, a few days since, twenty-eight were living. Ask your Chicago correspondent to bring on his next.

A lengthy meeting of the Canadian Kennel Club was held on Wednesday, 3d inst., at the Queen's Hotel here, beginning at 3 P. M., and lasting, with an hour's intermission, till after midnight. Dr. Wesley Mills occupied the chair, others present being: Dr. J. S. Niven, and T. G. Davey, London; H. Gorman, Sarnia; A. D. Stewart, Hamilton; T. G. Mitchener, C. A. Stone and H. B. Donovan (Secretary), Toronto. All the afternoon session and part of the evening was taken up with the selection of dogs to represent Canada at the World's Fair show. About 150 have been finally decided on, and these, with several still in abeyance and the dogs from distant Provinces, will make up to nearly the desired quota of 200. Spaniels, of course, predominate, closely followed by setters and pointers, with other breeds bringing up the rear. On motion of Dr. Niven, seconded by Mr. Davey, it was decided to offer C. K. C. diplomas to first, second and third dogs in all stakes at all field trials run in Canada. The letter following from Mr. Mercer was read:

OTTAWA, April 18, 1898.—H. B. Donovan, Esq., Sec'y Canadian K. C.—Dear Sir: Replying to your letter of yesterday would say that I would be obliged by your sending me a certified copy of the rules of the C. K. C. at the time when I was disqualified, also of those in force in October, 1891, and a copy of Mr. J. L. Little's (certified) as read before the meeting of 6th inst. Yours faithfully, F. H. MERCER.

The secretary stated he had declined to send Mr. Mercer the papers asked for without the sanction of the executive. Moved by Mr. Gorman, seconded by Mr. Davey, that in the opinion of this executive it is not the duty of the secretary to furnish the certified documents asked for. Carried.

Moved by Dr. Niven, seconded by Mr. Mitchener, that a list of members in good standing be supplied to any one requiring same at a fee of \$3 to pay for the clerical work. Carried.

Moved by Mr. Gorman, seconded by Mr. Davey, that a list of members in good standing be published in official organ the month previous to date of nominations. Carried.

Several changes were made in the constitution and by-laws and ordered to be published in *Gazette* for discussion and final adoption.

Mrs. C. M. Nelles, Brantford, and Dr. Armstrong, Toronto, were received as members.

During the C. K. C. meeting Mr. A. D. Stewart was taken seriously ill and was unable to proceed home that night. From a letter received from him to-day (Saturday) I am glad to know that he is much better, though not entirely recovered. Mr. Stewart complains of being greatly overworked lately, but hopes his proposed trip to Europe will set him up again.

Owing to Mr. Stewart's intended tour, and no one else caring to tackle the preliminary hard work, and no suitable building being ready, no show will be held in Hamilton this fall.

A meeting of the Canadian Fox-Terrier Club will be held in Toronto on Friday next, during the holding of the local show.

The executive of the C. K. C. trusts that every exhibitor at Chicago from Canada will see that his dogs are in the best possible condition at the time; clean and in as good coat as may be. Breeders who send their dogs in a dirty state and in close, small, foul-smelling boxes will please note. As the weather at this time will doubtless be exceedingly hot, and dogs from many parts of Canada will be confined to their crates for a long period during transportation, it should be seen to that ample ventilation is provided and crates constructed so that sufficient air may be supplied to their inmates.

Mr. Stewart has sent intending exhibitors a circular and form to be filled out which contains many good points applicable to all making entries. He says:

"I intend to get out a special catalogue of the Canadian dogs exhibited at the World's Fair bench show, and in order to make it as full and attractive as possible I wish to get a complete list of the winnings of each dog exhibited. I am unable to compile such a record at present, on account of the careless way in which most of the entries have been filled out, so I send you now a form which I will be glad if you will fill out very carefully. Please put down

every prize separately, and give the classes in which they were won, and also the place and the year. You will see at once that it is no use to say "First at Kingston, New York, Toronto and Detroit," because it does not say whether the prizes won were in the puppy, novice, open, or challenge classes, nor does it say in what years the prizes were won. Another point on which I desire to be accurately informed is whether your dog is registered in the A. K. C. or C. K. C. stud book. The number alone is of no use to me unless I know to which stud book it refers."

The form to be returned contains blanks for answers to the following questions:

From; address; name of dog; stud book and number (say whether A. K. C. or C. K. C.); date of birth (give exact date); if date of birth is not known, say so; name of breeder; if breeder is unknown, say so; if dog has never been shown, say so; list of winnings, either bench show or field trial."

H. B. DONOVAN.

National Beagle Club Meeting.

AN executive meeting of this club was held May 8, in the office of the A. K. C., 44 Broadway, New York, commencing at 3 P. M. Present: H. L. Kreuder in the chair, John Bateman, H. F. Schellhass, H. W. Lacy and Geo. Laick, secretary. The report of the auditing committee on the last secretary's accounts, etc., was accepted and committee discharged. The votes for club judges were then opened, Mr. H. F. Schellhass acting as teller. Six judges were to be chosen as a guide for bench show committees. About a dozen members of the club received votes, Messrs. Dorsey, Lewis and Lacy receiving the highest number, 12 votes each, and the executive committee being empowered in case of a tie to decide in which order they should be placed on the list, a ballot resulted in their being named in the following order: Pottinger Dorsey, H. W. Lacy, Joe Lewis, John Davidson 11, W. S. Clark 9, H. L. Kreuder 8. A letter from the secretary of the Pet Dog Club was read asking for specials at the coming show. It was decided, in view of the expense of the coming field trials, not to give a special. New members were then elected. F. B. Zimmer, Gloversville, N. Y., proposed by H. L. Kreuder, seconded by H. W. Lacy; A. C. Krueger, Wrightsville, Pa., proposed by F. W. Chapman, seconded by C. S. Wixom; Frank F. Dole, proposed by H. L. Kreuder, seconded by H. F. Schellhass.

The date and place for the field trials were then considered and after some discussion it was decided that the trials be held at Nanuet, N. Y., Monday, Oct. 30, and the claim for that date be filed with the A. K. C. This will not interfere with the Brunswick Fur Club as the original date suggested would have done. A communication had been received from Ellicott City, Md., desiring to have the trials there, but as no definite information was given and there being few members in that direction it was thought best to stick to Nanuet, as Mr. Kreuder promised every aid in his power, and the beagle men know what that means.

The question arose whether the executive committee should settle the classes for the field trials or leave this to a field trial committee. An informal discussion took place on the classes and it is likely that the prospectus sent out by the president will be altered in some minor respects, and the absolute winner classes be omitted. The following composes the field trial committee for 1898: J. W. Abbott, W. T. Tallman, E. Gerry Roberts, John Bateman, H. L. Kreuder, H. W. Lacy, Geo. Laick, H. F. Schellhass, F. W. Chapman, B. S. Turpin and Pottinger Dorsey, and they will be invited to meet in a month or so to decide all business connected with the trials. Messrs. Kreuder, Bateman and Schellhass then audited all bills up to date and they were ordered to be paid. The club specials offered last spring were won as follows: Keystone Kennel Club's piece of plate won by Mr. Kreuder's Lonely, Baltimore special won by Lonely, Elmira special, best bitch winning second, won by F. W. Chapman's Gypsy A., Boston special for best kennel, Rockland Kennels, have all been forwarded to the winners. Meeting then adjourned.

Those "Fake Pictures."

Editor Forest and Stream:

Re chat concerning "Fake Pictures" in your issue of March 23. The facts of the case are about as follows: A Skye terrier named Bruce was exhibited at the Keystone Kennel Club show in Philadelphia, and did not secure a first, second or third prize, and was represented in the Philadelphia *Inquirer* by a cut which was a reproduction of a cut of champion Iron Duke, a noted prize winner, owned by Mr. Thomas Young, of Birmingham, England, a prominent Skye judge and breeder. I noticed a statement of the case in English *Stock-Keeper*; and having, as I think, the best brace of Skyes in America, the injustice of the matter struck me quite forcibly at the time, and I want to show you how it has affected me since. I was presented with a photo of Iron Duke by Mr. Young a year or two since, and now he writes me that I am the only person in America who has a copy, and wishes to know if I am connected in any way with this reproduction. I have written the editor of *Inquirer* asking him to clear me in the matter, and no doubt he will do so. But should he treat the matter in the easy, offhand manner that your article does, you can readily see in what position I will be. I think it is all right for newspapers, sporting or otherwise, to give cuts of representative specimens of any breed as such, but to represent them as any other dog, especially an inferior one, is not square. C. H. SMITH.

ST. STEPHEN, N. B.

[We can clear Mr. Smith of any suspicion of blame in this matter. The cut of Iron Duke, said to be Bruce, that appeared in the *Inquirer*, is an exact copy of the pen and ink sketch by R. H. Moore that appeared in the English *Stock-Keeper* Dec. 5, 1890, and the rest is easy to surmise.]

Beagle Type.

Editor Forest and Stream:

Mr. Geo. F. Reed's letter in FOREST AND STREAM of April 27, on beagle type, is to the point. He speaks words of caution to beagle breeders and advises them to breed to the right dogs. We have too many weedy, long-backed, snipy beagles, showing no beagle character; and great care should be taken in the selection of stud dogs. None but the very best should be used, dogs that are well formed, strong in loin, with good bone, good legs and feet, and showing beagle character. When well formed bitches are bred to such dogs the result will usually be gratifying. I trust that the union between Frank Forest and Lonely will fulfill the expectations of their owner.

I have selected several good beagle bitches and intend to breed them to my imported Laick's Rattler. Pearl has already been bred to him, and I am looking forward to some extra good one from her. In the selection of these bitches their disposition and general formation were taken into consideration. They are strong in loin, have good legs and feet, lots of bone, and are of the truest breeding.

With this line of breeding laid out, I confidently expect some great results, and while I have bred some of the best known beagles in the past, I am not content, but will try and produce some still better in the future. GEORGE LAICK.

TARRYTOWN, N. Y., May 8.

Business.

CATSKILL, N. Y., May 4.—*Editor Forest and Stream:* I received a great many letters from my small advertisement in your paper and had good sales and realized extra prices from it. You will have my advertisement soon again. F. M. THOMAS.

Mr. Raper's Opinions.

MR. GEORGE RAPER has been under the fire of the ubiquitous interviewer lately. He arrived in San Francisco from Los Angeles on Saturday week last. From remarks attributed to him in the San Francisco *Call* we gather some interesting reading. The greyhound men on the coast had heard of Mr. Raper's connection with greyhounds, and the show of this breed at San Francisco was likely to be much better than in years past. Speaking of Fullerton Mr. Raper said that in many particulars he was a far superior dog to the world-renowned Master McGrath. The latter was decidedly homely in appearance and, although a remarkable dog on the coursing sward, his appearance on the bench would never command favorable attention, that is if placed in competition with a class of dogs of the Fullerton kind.

Speaking of the shows held in New York and other large cities east of the big mountains, Mr. Raper said that the pointer, so far as sporting dogs were concerned, outnumbered his competitors.

"The sportsmen of the East are gradually giving the setters the cold shoulder because they can traverse more country and go a longer time without 'wetting up' than either the English, Irish, Laverack or Gordon setter. At Eastern field trials a dog that cannot range fast and wide is not now considered worth having; consequently Eastern sportsmen are breeding a racy class of pointers which will answer their purpose best and win honors at field trial meetings."

We have seen little evidence of that cold shoulder. "In Germany," he went on to say, "and England it is quite different. The heavy pointer dog is the most popular among German sportsmen, although of late years medium-weight pointers are growing into favor. In England the pointer is the most popular, and next in favor is the English setter, then the Irish and Gordon. At the English trials retrievers are always on hand to retrieve the game killed over the competing dogs. You know it is not the custom in that country to allow either pointers or setters to retrieve game killed over them. The smooth-coated retriever, which is a cross between the Labrador dog and the retriever, is now used almost exclusively for retrieving purposes in England."

Being asked about the non-sporting dogs Mr. Raper said that there was a big field for improvement in the class of terriers that have been exhibited in this country, and the fox and Scotch terriers in particular. The collie has been very much neglected in this country, and the small numbers of collies that have been exhibited at the shows in the East do not at all compare, from a bench-show point of view, with the shepherd dogs of England and Scotland."

Concerning big dogs, such as St. Bernards, great Danes, mastiffs, etc., Mr. Raper said that the recent importations from foreign countries have materially assisted to develop a high-class quality of heavy-weight dogs, and in this particular a noticeable improvement was manifest this year in Eastern shows.

Mr. Raper will depart for Seattle after he has passed judgment on the dogs that will be exhibited at the Mechanics Pavilion next week. He will judge the Seattle show and then depart for New York, from which place he will proceed to Germany, so as to be on hand in season to judge the dogs that will be exhibited at the Munich show, commencing June 8.

World's Fair Show.

Editor Forest and Stream:

I desire to notice briefly some comments published recently, referring to myself, the substance of which is that I am accused of signing the protest against the fake list of judges with a view of getting an appointment myself, more particularly since I expressed an objection against Mr. Muss-Arnolt as the judge of great Danes at the forthcoming bench show of the World's Columbian Exposition. I ask the reader to note that nearly all the writings thereon are inferences drawn from suppositions and conjecture. Motives are manufactured and ascribed to me as if they were my own. In short, each writer assumes enough to prove his own individual guesses. Each one has a different guess. I am accused further of the unpardonable offense of aspiring to be a judge at the World's Fair. Assuming that such is the fact, is there anything other than commendable in such an ambition? Were it true that I had a great longing to judge I absolutely would decline under existing circumstances were an appointment offered to me. The whole matter is degenerating into an unseemly wrangle. There is an absence of system, skillful management and a knowledge of the situation of matters in the canine world.

While decrying my liberty to express an opinion the gentlemen who criticize me take the widest liberty in expressing their own opinions. As an important exhibitor I cannot imagine any reason why I should not have opinions and the freedom of expressing them, and also preferences, if it so pleases me.

In regard to Mr. Muss-Arnolt, I have nothing against him personally. I object to him as a judge. I know he is a gentleman, honest and sincere. I do not believe that he is competent to judge great Danes. Were I alone in this belief, I might feel that I myself was in error. But I am not alone in my objections. Was there ever more dissatisfaction that at New York?

If Mr. Muss-Arnolt is right, then Messrs. Mortimer, Mason and Davidson are wrong, for these gentlemen have all reversed his decisions; they disagreed radically from him. If he is right, then objections to the three judges I have mentioned are in order. When there are such opposite views, all cannot be right. I feel that, as an old exhibitor, I had and have a right to express my views and preferences. Make your choice now, gentlemen, to suit yourselves. I have the undisputable right to make my entries or not to make them if the judge is one I do not approve. This much, I think, the great Dane men will concede. Conceding that, there are several others who will make use of the concession.

If all the other breeds have the same wrangles in their interest, what a great show it will be?

HARRY L. GOODMAN.

NASHVILLE, TENN.

Instinct and Reason.

Editor Forest and Stream:

Everybody has heard or read of the homing instinct of dogs, but the wandering instinct of some of them is a still more curious characteristic. When living in the woods of northern Michigan, three miles from a railroad station, one day coming home, as I left the cars, a yellow dog jumped off with me and followed me home. He stayed a week or so and then left, and I saw him no more until some time after, being on the cars twenty miles from home, I saw this same yellow dog get aboard at a station and make himself very much at home. He came and renewed his acquaintance with me, and although I did not get off at my usual place the dog did, and when I returned in the evening the dog was at my place and stayed a few days, when he went off again in the usual manner. The conductor afterwards told me that this dog was one of the most frequent travelers on the road, going back and forth, visiting at different places, and always coming to the various stations on time for the cars. This continued for three or four years, when I left the vicinity and saw the dog no more.

A touching incident of a bulldog once occurred to me that disproves the mistaken impression commonly existing in regard to this breed. A large bulldog belonging to a neighbor, in the same locality above mentioned, was getting very old and had lost his teeth, so that he was unable to defend himself against former vanquished enemies, who now seemed to delight in worrying poor old Major, the friend and companion of my neighbor's children, with whom the dog had

gone to school for years and had made himself their voluntary care-taker. Not one could leave the house but Major got up and accompanied them; he shared their play, and drew their little sled and romped in the snow with them. Major became a good friend of mine and one day when at his master's house the dog came and sat at my feet. The owner told of the dog's age and of his decrepitude, "It was time that Major should be put out of his misery. Poor fellow! he has not a single tooth left, he can't eat or fight any more, and all the other dogs impose on him. We shall have to shoot the poor fellow and give him an honorable funeral. Shant we, Major," said he, as the dog got up and laid his head on his master's knee and whined piteously. "I bet that dog knows what you are saying," I remarked. When I left the dog went with me to my house and staid a little time with my boy, who was often one of his playmates. Then he left and was seen soon after by one of my workmen on the shore of the lake, near the village, where he was cutting wood. He saw the dog swim out to the middle of the lake, where he sank, and was seen no more until the body was washed to the shore a few days afterward. Did that dog, remarkable for his intelligence, know what had been said to him and take this means to avoid what he knew was about to happen to him? H. S.

HIGHLANDS, N. C., May 1.

"Our Bulldog Pictures."

Editor Forest and Stream:

S. R. Tisdell's scathing article on the bulldog pictures and your able defense of same have no doubt been read and thought about by most of your readers, and there isn't a doubt but what the sympathies of the majority are with Mr. T. I have often said that a dog is somewhat of an index to the character of his owner, except in cases where the dog is for some special purpose. In the case of the bulldog owners you mention the dogs are owned because of the owners' fondness for monstrosities or because bulldogs are the fashion. It is evident that these gentlemen do not keep bulldogs because of their good looks, their affectionate dispositions, or their intelligence, for they are exceeded in all these virtues by the setter, the spaniel or the collie. Among the men I know who keep bulldogs because they like that kind of a dog is Mr. A. At the corners of all his fields are "No hunting" boards; no one who knows him ever hunts on his lands or asks the privilege of hunting. He always has trouble with his hired men, and has nothing to do with his neighbors. Some years ago his dog attacked a little child, and would have killed it but for timely rescue, but the dog was allowed to live. A few days ago the dog attacked a boy, and when clubbed off by his owner, turned upon and bit him, but the dog still lives. Mr. B. is another lover of bulldogs, and says "no hunting" also, but instead of being unsocial, like Mr. A., makes use of apparent friendliness to gain disreputable ends. Mr. C., another bulldog man, is noted as a quarrelsome fellow, a backbiter, having no friends and apparently wanting none. Mr. D. has a bulldog that without any provocation severely bit the little son of Mr. D.'s hired man. Mr. D. is a man of strict integrity, but never makes a social call on any of his neighbors.

The above are a few instances among many. Give the "tough" his choice between a bulldog or a collie; which will he take? Which would he prefer to witness, a fight between savage bulldogs or a field trial contest between high class hunting dogs? What is a bulldog good for, anyway? As a watch dog? Burglars have proved dozens of times that they care nothing for him. One little black and tan terrier is worth a brace of bulldogs any night. If he is good for anything except ugliness and stupidity, let us know what it is. You say he is not responsible for his ugliness, the use to which he was put in a long past barbarous age demanding such formation. Doesn't that show that he comes of very bad stock? And what training has he had since to in any way ennoble him? He is, as you say, a relic of a barbarous age, and the quicker he disappears the better.

O. H. HAMPTON.

WILLIAMSBURG, IND.

[We have had our little say. We now depend upon the owners of the bulldogs to defend their breed. It should be an easy matter.]

San Francisco Dog Show.

THIS show opened May 3 with 360 dogs and is considered a great success. The awards made by Mr. Raper received up to going to press are as follows:

MASTIFFS.—Dogs: 1st, G. McNabb's Ingleside; 2d, Gen. W. H. Dimond's Liver; 3d, D. H. Everett's China. *Bitches*: 1st, J. W. Mitchell's Lomita Minting; 2d, W. S. Whitwell's Venus. *Puppies*—Dogs: 1st, J. W. Mitchell's Lomita Cautious; 2d, Dr. R. Lord's Lewis; 3d, H. Schmidbauer's Sam. *Bitches*: 1st, Mitchell's Lomita Minting. Very high com., C. F. Martin's Queen.

GREAT DANES.—Dogs: 1st, J. G. Borglum's Titan; 2d, Borglum's Richard; 3d, Dr. P. Muffe's Hector. *Bitches*: 1st, J. G. Borglum's Marjell; 2d, G. Bertin's Mirtha; 3d, B. W. Marlin's Hager. *Puppies*: No 1st or 2d; A. W. Cornwall's Ko-Ko third.

ST. BERNARDS.—Rough—Dogs: 1st, John G. Barker's California Bernard; 2d, F. H. Allen's California Alton; 3d, Dr. A. Regensburg's Region. *Bitches*: 1st, Summerhayes & Koenig's Fernwood Inez Zurich; 2d, E. F. Schell's Lady Delight; 3d, Capt. W. Pool's Victoria. *Puppies*—Dogs: 1st, Regensburg's Regio; 2d, Capt. Pool's Columbus; 3d, B. F. Lacy's Lion. *Bitches*: 1st, L. S. Owen's Lady Grace. *Smooth-coats*—*Bitches*: 1st and 2d withheld; 3d, J. F. Jordan's Fidele J.

NEWFOUNDLANDS.—Dogs: 1st, R. B. Monk's Nero; 2d, J. B. Banning's Strap; 3d, M. J. Doolin's Prince. *Bitches*: 1st, Abilstrand's Flora; 2d, C. Pardis's May; 3d, Mrs. J. R. Theller's Queen.

GREYHOUNDS.—Dogs: 1st, George Dougherty's Peter Jackson; 2d, Hugh McCracken's Donald; 3d, C. S. Wieland's John W. *Bitches*: 1st, H. McCracken's Lady H. Glendyne; 2d, P. D. Nolan's Valley Queen; 3d, C. S. Wieland's Cleverness. *Puppies*—Dogs: 1st, P. F. Samrat's Stamboul; 2d, Canavan's Extra Pale. *Bitches*: 1st, 2d, 3d, Canavan's Eureka, Stamboul Queen and Yreka.

DEERHOUNDS.—Dogs: 1st, E. J. O'Kell's Stag; 2d, B. D. Lacazette's Leo; 3d, H. J. Jonett's Scott. *Bitches*: 1st, H. W. M. Sandback's Lassie; no second.

AMERICAN FOXHOUNDS.—Dogs: 1st, F. W. Sanderson's Paddy; 2d, Albert Bulger's Carlo; 3d, Clarence Walter's Jack. *Bitches*: 1st, W. H. Staniel's Julie. *Puppies*—Dogs: Mrs. E. A. Rix's Tasso. *Bitches*: 1st, W. S. Hobart's Jeanette; 2d, G. Goodenow's Lady Cloud.

ENGLISH FOXHOUNDS.—Dogs: 1st, J. Eratson's Landlord. *Bitches*: 1st, J. E. Watson's Landress.

POINTERHOUNDS.—1st, C. H. Koback's Premier IV.

POINTERS.—CHALLENGE—Dogs: No entry. *Bitches*: 1st, Henry Huber's champion Sally Brass II. *OPEN*—Dogs (55lbs. and over): 1st, H. Spencer's Buck S; 2d, A. P. Kerechoff's Jap; 3d, Mrs. B. F. Napthal's Pat. *Color*: 1st, James Watson's Old Black Joe II; 2d, C. M. Osborn's Professor Lad and B. Povers' Wade Hampton. *Bitches* (50lbs. and over): 1st, L. M. King's Rose K; 2d, W. J. Golcher's Jill; 3d, J. H. Sammis's Hornell Bess. Very high com., H. R. Brown's Donna Sensation and Henry Brulon's Miss B. *Dogs* (55lbs. and under): 1st, T. E. Walker's Ben Koo; 2d, William Dornier's Bruce R; 3d, J. E. Watson's Jim F. *Bitches* (50lbs. and under): 1st, H. M. Tonner's Amethyst; 2d, C. J. Miller's Bess; 3d, Howard Vernon's Meg Merries. Very high com., E. N. Lowry's Fly and Dave Berwick's Betsy B. *Puppies*—Dogs: 1st, H. M. Tonner's Amador; 2d, B. A. Truman's Kent of Crotchet; 3d, A. Larsen's Dick. *Bitches*: 1st, J. Tiedman's Marion G; 2d, E. W. Briggs' Little Nell; 3d, Leonard Goodwin's Chic M. Very high com., A. B. Truman's Patti of Bloome.

ENGLISH SETTERS.—Dogs: 1st, E. Bosqui's Pop C; 2d, G. A. Van Derbeck's Kash; 3d, C. A. Loud's Dictator. *Bitches*: 1st, 2d and 3d, P. Linsville's Flaker L., Florine and Dottie May. Very high com., Gardiner's Estrella and Betsy Mark and Loud's Zippie Zip. *Puppies*—Dogs: 1st, C. A. Loud's Bunch. *Bitches*: 1st, L. Corrigan's Lady R; 2d, C. A. Loud's Dame Trot Noble.

GORDON SETTERS.—Dogs: 1st, 2d, and 3d, J. W. and H. V. Orear's Dick II, Rock II and Orear's Grouse. *Bitches*: 1st, Orear's Bijou; 2d, Miss Sohneck's Mirza.

This ended the judging for the first day.

DOG CHAT.

Benching in Rotation.

* We must enter a strong protest against the loose way in which the dogs are being benched nowadays at our shows. Several years ago the same outcry was made and it was understood that dogs should be benched in rotation in future. The W. K. C. seem, however, to have started the backsliding, and it has obtained more or less at every show this season, Indianapolis being an agreeable exception, and culminated at Boston, where really there was no semblance of order. In many breeds there was hardly a number in rotation and in some cases it was almost impossible to find animals when wanted for the ring. This delays judging and often no doubt a dog is marked absent when all the time he is in the show but cannot be easily traced. This we have repeatedly found to be the case in making our notes after the judging. Keepers are not as a rule the most painstaking individuals, and rather than hunt up a dog that does not come handy to their search they report him absent, the stall under his number being empty. A case of this sort occurred at Boston. The dog was placed in a wrong stall and overlooked, when judging time came on he was marked "wrong class," so evidently some other dog had been taken in instead. The dog was afterward found and the class rejected. This dog's proper stall was thirty numbers away from where it should have been. The benching all through that show was badly arranged. Of course we understand that the exhibit of the N. E. K. F. T. C. upset things somewhat in sporting classes, but the trouble was not confined to these breeds alone. Another season we trust that this important matter will be properly adjusted, and particularly at the coming World's Fair show. Even an exhibitor with two dogs in different classes will contrive to get them together, when their numbers may be really the length of an aisle apart. Another thing in connection with this "bunching" is the carelessness with which dogs of a kennel are chained. It is not every kennel man that will take the trouble to see that when his dogs jump on the bench from exercising that they settle down under their proper name and number. This leads to confusion and often misleads the reporters which last abused individuals cannot be expected to know by sight every dog that travels the circuit. This matter of benching should be considered in the new rules for dog shows, and the A. K. C. pay some attention to the subject.

New Jersey Kennel League.

A meeting of the executive committee of this club was held at Newark on May 5, when the following were present: W. O. Kuebler, E. H. Morris, Frank Link, M. A. Hanchett and E. A. Dillhoff. Mr. W. O. Kuebler occupied the chair. The diplomas won at the sheep dog trials and whippet races were ordered to be signed and sent out. The committee on similar events for the World's Fair made a report, which was accepted, and the committee was discharged with thanks for the efforts made. The American Kennel Club delegate reported acceptance of his credentials at the annual meeting of that club; further, that remarks tending to injure the standing of the league, and prevent a further course of usefulness were made by a representative of another club. In this connection it was resolved that in sending a report of the meeting to the press, it be stated that there are 70 members, and that the roll does not include any of the officers of the disqualified N. J. Kennel Club. It was resolved that Mr. E. H. Morris, Hackensack, N. J., be appointed a committee to take charge of negotiations for a special car, suitable for the season, for the conveyance of dogs from the State to the World's Fair, and that if space be left dogs owned by friends of the members be taken. Mr. W. O. Kuebler was asked to appoint a committee to arrange the annual meeting and dinner during the present month. It was resolved that after the annual meeting the initiation fee be made \$5 as per provision in the constitution.

Death of Beagle Emeline.

Another good dog has gone to happier hunting grounds. We refer with regret to the death of Mr. H. L. Kreuder's Emeline. We feel more than a passing interest in this announcement, it having been our pleasant duty to award several prizes to this good beagle, whose light was only eclipsed by that of her new kennel mate Lonely. Emeline was very heavy in whelp to Mr. Kreuder's champion Frank Forest, and was due in ten days. Her owner says something went wrong with her internally early on the morning of May 6, and after having several fits she expired about 2 P. M. the same day. Emeline was bred by Mr. P. Dorsey and is by Lee II. out of Flirt, was whelped May 1, 1890, and purchased when a small puppy for \$10. Mr. Kreuder tells us that the day prior to her last he thinks he would have refused \$500. Her winnings were first, puppy class, New York; second, open, Baltimore; and second, Hamilton, 1891. First and special for best bitch, New York and Nantuet; first, Brooklyn, 1892; first, Gloversville; first, New York; second, Philadelphia, to Lonely; first, challenge class, Baltimore and Washington, 1893. Her late owner writes: "She was very near to me, and her place will be very hard to fill."

New England Field Trials.

The arrangements for the New England Field Trials are progressing. It should be remembered that the entries for the Derby close June 1. First forfeit \$5, second \$10 on Oct. 1, and \$10 additional to start. The prizes are \$200, \$100, \$50, and \$25. Birds, Mr. Brooks tells us, have wintered fairly well. The club has secured a house on the grounds and will have kennels for the dogs, and accommodations for judges, handlers, press, etc. This will be a boon and be much appreciated, more so than the proviso our correspondent naively adds, "that every reporter must drink a quart of rye per day or else be fired;" personally we would rather feed it to the birds; it would make them stronger on the wing than last year. There is little doubt, however, joking aside, that the trials this year will score a big success, and we trust the field trial men from other States will enter some of their dogs. A dog may not come up to the speed requirements of Southern clubs but would probably find the New England country more adapted to his style. Owners should bear this in mind. The judges, Messrs. Wallace and Tallman, are acknowledged experts.

Saratoga Poultry and Kennel Club.

A meeting of the above club was held May 2, with Vice-Pres. Edward Rosa, of Schenectady, in the chair. The poultry judges selected are Messrs. F. B. Zimmer and J. H. Drenstedt. Benching and hiring of judges for the dog show was left to the directors. A committee of six was appointed to secure specialists. The rules and regulations were so amended that three entries in the poultry department and two in the kennel department will be required to secure first prizes. Otherwise the first prize will only secure second money. The new members elected included W. H. Boeker, Ralph Russell, Wm. S. Ostrander, Philip E. Rice, Samuel J. Mott, Emmett Carragan, Chas. F. Wells, H. J. Eppler, C. H. Gage, R. W. Fitchett, F. H. Smith, Dr. I. G. Johnson and C. H. Holmes. The next meeting will be held on the first Tuesday in June.

Death of Harry C.

Many field sportsmen will be pained to hear of the death of such a good dog as Harry C. He died last Sunday of acute pleurisy. Harry C. was a handsome English setter

and considered a stylish, high-class dog in the field, though in many ways an unlucky dog. He had his off days, which sometimes came at a critical moment when records were to be made. Mr. S. C. Bradley, his late owner, writes: "Harry C. with his kennel mate Rowdy Rod was as a brace the best I ever expect to shoot over; and to mount a good saddle horse and follow them in their work through the fields of North Carolina would bring a sportsman's heart near paradise. As companions they would win the love and affection of the hardest heart. To lose Harry C. when just in the prime of life is very discouraging and a great loss." Harry C. was sired by Roderigo out of Countess House; whelped June, 1888. He was well known as a field trial performer, having won third Eastern field trials Derby in 1889; second Central field trials Derby in 1889; divided third Central field trials All-Age in 1891; third Eastern field trials All-Age in 1892; first Philadelphia Club's All-Age in 1892.

Ch. Spinaway.

One cannot but admire Mr. L. C. Whiton's persistent efforts to secure a litter from his greyhound champion Spinaway, that he hopes will do justice to the bitch and her breeding. After paying the largest stud fee demanded for any dog, \$200, and incurring the additional expense of a voyage to England and return, his efforts proved of no avail owing to Fullerton's impotence. He returned the bitch to the Short Flats Kennel, and mating her with Young Fullerton, a brother of the celebrated courser, this time he has been more fortunate and the result is two puppies, five of which are dogs. They are all brindle in color and were whelped at the Marlboro Kennels, Lawrence, L. I., and should the puppies be well raised Mr. Whiton will have the nucleus of both a good show and field kennel. Young Fullerton is said to be the fastest dog in England, and we all know how good the Neversettle and Partera blood, from which Spinaway springs, is in the field. We trust Mr. Whiton will have the success with them that he deserves.

An English Visitor.

We are sorry to have missed Mr. W. H. Rothwell, of Rochdale, Lancashire, England, who called at this office the day he sailed for England. Mr. Rothwell has been on a visit to Chicago and is a well known fox-terrier fancier on the other side, being the owner of no less a dog than Milnrow Process. Last Sunday Mr. Rothwell saw Mr. Belmont's kennels and also the Grove Kennels, owned by Messrs. Purroy and German Hopkins. Mr. Rothwell thinks well of both kennels, some of the bitches being good, but the dogs are too strong in head—skull properties. He left us a capital photo of Milnrow Process, which presents a very smart-looking terrier. Mr. Rothwell sailed on the Servia on Tuesday.

Must Not Be Hurried.

The following dispatch appears in the *Evening Telegram*, N. Y.: "CHICAGO, May 9.—Perhaps there will be no dog show at the World's Fair after all. The American Kennel Club wants the judges of dogs appointed at once, and Chief Buchanan, of the Department of Agriculture, has made such want known to the Live Stock Committee of the National Commission. This matter was considered by the Live Stock Committee last evening, and it was decided not to recommend that the club's request be granted." We asked Mr. Vredenburg about this, and he stated emphatically that the American Kennel Club had sent no such notice, nor had there been any meeting authorizing him to do so.

Pointer Club Meeting.

A special meeting of the Pointer Club was held at 40 Broad street, New York, last Monday at 3 P. M. Present: Messrs. John S. Wise, G. Muss-Arnolt, George Jarvis, G. F. Webster and C. F. Lewis. Resignation of president, Mr. J. L. Anthony, was received and accepted. Mr. Adrian C. Pickhardt was elected a member and also elected one of the executive committee in place of Mr. Anthony. A resolution was adopted that members in arrears for dues 90 days should not be allowed to compete for club specials. Mr. George La Rue's resignation was also accepted. Another meeting will be held June 8 and a president elected. The club has 43 members.

Fox-Terriers.

A writer in *Scottish Fancier*, over the pseudonym of "Utility" says, "Any one with a knowledge of fox-terriers for the last fifteen or twenty years should know how the type of the fox-terriers has swung backward and forward like a pendulum. The original rough-and-tumble huntsman's terrier was refined until it was openly hinted that an Italian greyhound cross had been introduced, when the revulsion of feeling brought in a hardy-looking, cobby stamp, like old Raby Tyrant. Since then we have gradually drifted back, until perfection is a dog that should weigh 24lbs., but only weighs 18lbs., as he has neither bone nor brisket."

Dog Law in Pennsylvania.

The act of 1889 has proved very unsatisfactory to the sheep growers of Pennsylvania, and it looks now as if a new bill will be passed by the present legislature. It has already passed the House, and is now in the Senate. It provides that the county commissioners shall annually levy a tax upon each dog of not more than two dollars and of not less than fifty cents. This money shall then be paid into the county treasury as a dog fund, to be applied to payments of losses of sheep. If more than \$200 of the fund remains over at the expiration of the year, the money reverts to the county treasury for county purposes. Under the act dogs are made personal property.

Mascoutah Kennel Club.

The Mascoutah Kennel Club held its annual meeting May 1 in room 814 Monadnock Building, Chicago, at which the following officers and directors were elected for the ensuing year: Pres., W. J. Bryson; First Vice-Pres., W. Borden; Second Vice-Pres., E. W. Bangs; Treas., Clifford S. Payson; Sec'y, John L. Lincoln. Directors, to serve three years—W. J. Bryson, Arthur Meeker, Charles Schwartz, G. A. Schwartz, Frank Floyd, W. A. Daniels, W. B. Linn.

A New Gordon in the Field.

Mr. Edwin H. Morris has just received per steamship Exeter City the second prize Gordon setter bitch at the last Cruft's show. She was then out of coat, having just had a litter of pups, or would probably have been first. He also had on this same ship a Sussex spaniel of the most celebrated strain, being sired by the dog Mr. Jacobs used to the last and said was the best sire in England. Mr. Morris does not want to tell any more about this dog, as it is a dark one for World's Fair honors.

The systematic way in which Mr. A. D. Stewart is arranging for the Canadian exhibit at the World's Fair show strikes us as worthy of emulation. Preparations seem to go on irrespective of the dilatory work of the W. F. show people in respect to the coming show. There is, and we suppose where there are so many men and interests it is unavoidable, so much red tape about the whole of the preparatory work. At 5 P. M. on Wednesday, May 3, we received from Mr. Waters, our Western staff correspondent, the following telegram: "The list of World's Fair bench show judges is being considered by the National Commission to-

day and they will probably be appointed to-day. The revised programme will be issued immediately thereafter. There is a probability that the closing of entries will be postponed till June 1." Later advices from Mr. Waters state that the judges' list has not yet been decided upon. With entries closing on June 1 there would still be ample time before June 13 to get the catalogue ready. As the promised revised premium list is not yet forthcoming it may be well to again suggest that the rule regarding returned entry fees for absent dogs be rescinded, and while the entry fee might still be kept at the same amount the fee be a forfeit, in the usual way, whether the dogs show up or not. This will do away with a lot of clerical work and keep the catalogue within reasonable bounds.

Dr. Hoyt, of Sharon, Pa., sends us a capital cabinet photo card containing fifteen acrobatic scenes, in which his little Italian greyhounds are taking part. Any one who knows how difficult it is to obtain good photographs of these shivering little "dudelets" of dogdom, will appreciate the cleverness with which these pictures have been secured, and the high state of training to which the dogs have been brought.

We have received photographs of the Cumberland Kennels' great Danes champion Melac, Minerva, Charmion, Jennie, Zellar, Norman and Theseus, names which have become familiar during the past show season. Some of the pictures are good, while others, such as Melac's and Minerva's, do not by any means do justice to these dogs. The pictures, however, are a welcome addition to our collection of canine celebrities.

We understand from Mr. W. J. Johnson, an Englishman, who came to this country last September, that his brother will bring over some of Lord Aylesford's fox-terriers for the World's Fair show. He will arrive about the end of this month.

There is no more enthusiastic mastiff man in this country, if we except Mr. Wade, than Mr. C. E. Bunn, and it is peculiarly gratifying to find he has succeeded in breeding a litter of five pups, all dogs, from his celebrated bitch Caution's Own Daughter. The pups are now nine days old.

Dog poisoners are rampant in Hamilton, Canada. Several good ones have already been poisoned. Among them Harry Brey's beagle bitch Juno, which won first in the Hamilton show in 1891, beating some well known and good ones. She created a good deal of attention then but was never shown afterward.

The Cragstone Kennels, owned by Mr. Pierpont Morgan, and of which R. K. Armstrong is the manager, one would think would be content to rest on their oars this year at least. Not so, however. They are after a greater yet than Sefton Hero, but the price set, \$7,500, is thought too high, further news than this we cannot as yet disclose. The new kennels will be completed in a fortnight. Besides the collies bought at the Collie Club show, Mr. Armstrong tells us there are some more on the ocean, particulars of which will be given later. With this new active blood in the collie world, this breed, neglected somewhat lately, except by two kennels, will take on a new lease of life we hope.

Mr. D. P. Robertson, of Brooklyn, who has been spending the winter in South Carolina, had his valuable pointer dog eaten by an enormous alligator. But Mr. Robertson killed the alligator, which weighed nearly 700lbs. The pointer was well known in Brooklyn and was a pet of "Boss" McLaughlin.—*Exchange*.

A good many people have asked us where the Lenox Lyceum is, the venue of the Pet Dog show to be held the end of this month. It is situated at Fifty-ninth street and Madison avenue, New York.

Mr. R. G. Stewart, of Washington, D. C., has just imported the smooth fox-terrier Holster. He is by Kermicham Lancer out of Qui Vive and was whelped July, 1891. Bred by Mr. F. L. Evelyn, England. *The Field*, England, said of Holster in a March last issue: "He has a hard close coat, good legs and feet, nice terrier expression, and withal quite a useful sort." Although only shown four times he has beaten some of England's best, including Dane Forester, Milnrow Process, Hunter Honeymoon, etc., and won second to Vice Regal at Manchester, first and second at Leominster and second Kennel Club show, Islington. Mr. Stewart will shortly place him at stud.

Refuge II was opened by Dr. Sherwood after death and a large ball of hair was found in his intestines, and this was the cause of death.

A correspondent in one of the suburbs of New York requests us to state that he has recently purchased a setter dog which subsequent investigation leads him to believe has strayed away from his former owner. The dog in question is well bred and broken, but perhaps a little gun-shy. Any one who will accurately describe the dog, give correct date as to time of disappearance and produce undoubted proofs of former ownership, can communicate through this office with the present owner by addressing "W." care of FOREST AND STREAM, 318 Broadway, N. Y.

Mr. "Al" Eberhart, while enjoying his A. K. C. vacation, still has an eye to future business. Going to Lima, O., he bought the Irish terrier bitch Biddy Mahone from Frank Dale. His Nora II. is due to whelp this week to Valley Boxer. The Dandie Sarah has brought him four good bitches by Amphion and to-morrow Ainsty Daisy is due to whelp to King o' the Heather. Mr. Brooks will soon have a kennel of workers that will, no doubt, afford him lots of pleasure, as the owner of the Heather Kennels is a sportsman and does not believe in bric-a-brac dogs.

Mr. Ed. Brooks is extending his kennels at Hyde Park, Mass., and they will soon be finished. The other day he bought the Irish terrier bitch Biddy Mahone from Frank Dale. His Nora II. is due to whelp this week to Valley Boxer. The Dandie Sarah has brought him four good bitches by Amphion and to-morrow Ainsty Daisy is due to whelp to King o' the Heather. Mr. Brooks will soon have a kennel of workers that will, no doubt, afford him lots of pleasure, as the owner of the Heather Kennels is a sportsman and does not believe in bric-a-brac dogs.

Mr. James Mortimer tells us that he knows absolutely nothing about the arrangements for the World's Fair show. Mr. Mortimer has been generally credited in different papers, both daily and class journals, with getting up that "fake list," but he assured us, very emphatically, that he has had nothing to do with it. Further as a little item regarding the way things are managed in Jackson Park, Mr. George Gall, who went out to attend to preliminaries, etc., has to pay admission every time he enters the grounds. This emphasizes the important information Mr. Waters sends in this week regarding passes.

We recently published particulars of the new dog tax law in Maine, and now we find that there is much kicking in the country towns against the payment of the tax. It seems

that notices were not posted as required, because the law did not take effect until too late, and this has caused the difficulty. An eminent Maine jurist has given it as his emphatic opinion that notice or no notice, the tax can be legally collected. The dog owners are trying to shirk the tax because of the defect in the law mentioned above.

A dispatch from Minneapolis, Minn., states that a meeting was to be held on the 10th (yesterday) to organize a kennel club. As a result of the organization a dog show will probably be given in connection with the summer carnival.

The Lincoln Park commissioners have purchased recently a St. Bernard from Mr. Harry L. Goodman, to be put in company of the baby lions with a view to fraternizing them. This opens up a new sphere for the "holy breed," and a not altogether delightful one for the St. Bernard, unless it be of the proportions of a Lord Melrose, or Lord Bute.

The Homing Instinct in Dogs.

Editor *Forest and Stream*:

In connection with the homing instinct of dogs, I send you an instance that outranks anything of the kind that I have ever read or heard of. A family moving from the township of Plympton, Lambton county, Canada, to the northwest, via Chicago and St. Paul, took with them a liver-colored spaniel dog. This animal disappeared at St. Paul, and in two weeks from that time was back at his old home in Canada. Among other difficulties to be overcome would be the crossing of the St. Clair river. Now, as it seems improbable that he could travel that great distance in two weeks, the question is: how did he make the journey?

ALLAN DUNCAN.

WYOMING, Canada, May 3.

Not Against the Greyhound Judge.

Editor *Forest and Stream*:

During the time of the Continental Kennel Club show I signed the "protest" against the judges appointed for the World's Fair show. Being a greyhound fancier many no doubt take it that I signed said "protest" because I wished to oppose Roger Williams. Such is not the case. I signed it because I did not approve of the method pursued in appointing the judges. Also, because, like many others, I thought John Davidson should have been recognized. In justice to Roger Williams I would state that the Western men appreciate his appointment because he is a Western man and because he is competent.

L. F. BARTELS.

DENVER, Col., May 5.

Separate Rings for Toys.

Editor *Forest and Stream*:

Your article in last issue as to bench shows providing a separate exercising ring for toy dogs, is just exactly correct. It should be done at all shows, and can be at a very slight expense. I've had several narrow escapes at several shows when big dogs tackled my toys. Being in the ring with the dogs and jumping between them in time was all that prevented disaster.

AL. G. EBERHART.

William Rabbitts, Jr.

We have not heard much of Mr. William Rabbitts, Jr., since his marriage, he not having devoted much time to business. Mr. Rabbitts is, however, again on the warpath, and is at liberty to communicate with high-class manufacturers with a view to bringing meritorious goods to the front. There is no man better known on the road, for he has fraternal acquaintances over territory from Atlantic to Pacific and Canada to Mexico. He will soon begin his trip through the United States, calling on druggists, grocers, sporting, goods dealers, seed merchants, etc. His permanent address is Post Office Lock Box 306, Philadelphia, Pa.—*Adv.*

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Golden Flash. By J. B. Martin, San Francisco, Cal. for white, black and tan fox-terrier bitch, whelped July 9, 1892, by Brockenhurst Tyke (Brockenhurst Chance—Fairly) out of Hillside Spinster (Spaulger—Pigeon).

Lady Graphic II. By Banks & De Russy, New York city, for liver and white pointer bitch, whelped May 10, 1892, by champion Pommerly Sec (champion Graphic—Lady Vinnie) out of Lady Graphic (champion Graphic—champion June S.).

Lottery. By Banks & De Russy, New York city, for black and white pointer dog, whelped April 25, 1892, by champion Pommerly Sec (champion Graphic—Lady Vinnie) out of champion Fan N. (Fauser—Corsicana Tobe).

Albert's Pansy, Lilly, Violet, Rose and Bluebell. By Warwick Kennels, Bridgeport, Conn., for three blue belton and two black, white and tan English setter bitches, whelped April 10, 1893, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Albert's Daisy (Albert's Garry—Fanny San Roy).

Albert's Snow and Albert's Dan. By Warwick Kennels, Bridgeport, Conn., for white and lemon and white English setter dogs, whelped March 30, 1893, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Fanny Lewis (Jim Gladstone—Nina).

Albert's Uno and Albert's Cora. By Warwick Kennels, Bridgeport, Conn., for blue belton and black, white and tan English setter bitches, whelped March 30, 1893, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Fanny Lewis (Jim Gladstone—Nina).

Albert's Prince and Albert's Ning. By Warwick Kennels, Bridgeport, Conn., for blue belton and black, white and tan English setter dogs, whelped March 30, 1893, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Fanny Lewis (Jim Gladstone—Nina).

BRED.

Prepared Blanks sent free on application.

Albert's Queen—Albert's Beau. Goff & Miller's (Bridgeport, Conn.) English setter bitch Albert's Queen (champion Breeze Gladstone—Albert's Duchess) to Dr. Hair's Albert's Beau (champion Count Howard—champion Donna Juanita), Feb. 20.

Dixie B.—Albert's Beau. S. Bates's (Bridgeport, Conn.) English setter bitch Dixie B. (Mack B.—Pet Bervin) to Dr. Hair's Albert's Beau (champion Count Howard—Donna Juanita), March 4.

Girl—Bow Bondhu. G. S. Raynor's (Riverhead, N. Y.) English setter bitch Girl (Evel—Dora Dale) to Dr. Hair's Bow Bondhu (Gus Bondhu—Bo Peep), Feb. 28.

Devon Fan—Devon Sancho. Dr. Hair's (Bridgeport, Conn.) pointer bitch Devon Fan (champion Banker—Village Juno) to his Devon Sancho (Molton Baron—Juno), April 13.

Sunbeam—Blenion Reefer. A. L. Cresswell's (San Francisco, Cal.) fox-terrier bitch Sunbeam (Rustic Royston—Silverdale) to J. B. Martin's Blenion Reefer (champion Venio—champion Rachel), Feb. 16.

Governor—Blenion Reefer. G. Berrill's (San Francisco, Cal.) fox-terrier bitch Governor to J. B. Martin's Blenion Reefer (champion Venio—champion Rachel), March 25.

Judy—Blenion Reefer. D. Shannon's (San Francisco, Cal.) fox-terrier bitch Judy (Le Logos—Vixen) to J. B. Martin's Blenion Reefer (champion Venio—champion Rachel), March 26.

Chatham Queen—White Wonder. H. M. Hoves's (Boston, Mass.) bull-terrier bitch Chatham Queen (champion Jubilee—My Queen) to H. A. Haines's White Wonder (Gully the Great—Kit), April 8.

Pearl—Luick's Rattler. G. Luick's (Tarrytown, N. Y.) beagle bitch Pearl (Trailer II.—Spot) to his imported Luick's Rattler (Chancellor—Careless), March 24.

Rideau Romola—Obo. Jr. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Romola (Bob Obo—Cleo) to their Obo, Jr. (champion Obo—Nellie), April 13.

Fury—Rideau Rivet. H. C. Bates's (Kingston, Ont.) fox-terrier bitch Fury to Rideau Kennels' Rideau Rivet (Dudley Dandy—Bodkin III.), April 4.

Rideau Flossie—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Flossie (champion Obo—Gipping Floss) to their Bob Obo (champion Obo—Nellie), April 3.

Rideau Rhea—Black Jacket. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Rhea (Bob Obo—Cleo), to Corktown Kennels' Black Jacket (champion Brant—Woodstock Dinah), April 4.

Flora Kay—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Flora Kay (Obo, Jr.—Princess Tiney) to their Bob Obo (champion Obo—Nellie), April 4.

Rideau Renah—Black Jacket. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Renah (Bob Obo—Flora Kay) to Corktown Kennels' Black Jacket (champion Brant—Woodstock Dinah), March 20.

Duchess—Rideau Rivet. S. Simms' (Ottawa, Ont.) fox-terrier bitch Duchess to Rideau Kennels' Rideau Rivet (Dudley Dandy—Bodkin III.), March 18.

Idle Obo—Corktown Cupid. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Idle Obo (Bob Obo—Cleo), to Corktown Kennels' Corktown Cupid (Obo, Jr.—Dot Smiler), March 20.

Nellie Mac—Duke of Dexter. C. D. Roberts' (Dexter, Me.) pointer bitch Nellie Mac (Beaufort H.—Fanny) to his Duke of Dexter (Duke of Vernon—Boski), April 17.

Uno King Don—Duke of Dexter. R. W. Pope's (Gardiner, Me.) pointer bitch Uno King Don (King Don—Fatti M. II.) to C. D. Roberts' Duke of Dexter (Duke of Vernon—Boski), March 28.

Duke of Dexter. C. B. Pineo's (Bar Harbor, Me.) pointer bitch — to C. D. Roberts' Duke of Dexter (Duke of Vernon—Boski), Feb. 2.

Drytime—Royal Crest. J. H. Watson's greyhound bitch Drytime (British Still—Haytime) to his Royal Crest (Greenick—Royal Rate), April 7.

WHELPES.

Prepared Blanks sent free on application.

Lady Alice. J. B. Blossoms' (New York) Irish setter bitch Lady Alice (Redstone—Lady Noreen), April 30, twelve (nine dogs), by his Bedford (Almstrud—Aureole).

Fanny Lewis. J. H. Bridgeport, Conn.) English setter bitch Fanny Lewis (Jim Gladstone—Nina), March 30, six (four dogs), by his Bow Bondhu (Gus Bondhu—Bo Peep).

Albert's Daisy. Dr. Hair's (Bridgeport, Conn.) English setter bitch Albert's Daisy (Albert's Garry—Fanny San Roy), April 1, five bitches, by his Bow Bondhu (Gus Bondhu—Bo Peep).

Minute. G. Laick's (Tarrytown, N. Y.) beagle bitch Minnie (Trailer II.—Daisy), March 9, six dogs, by Rosebrook's Rover (champion Trailer II.—Spot).

Kate. Multnomah Kennels' (Portland, Ore.) pointer bitch Kate (Tim—Guiferna), March 31, seven (four dogs), by W. C. Kennerley's Brown Stout (Graphic—Hops).

SALES.

Prepared Blanks sent free on application.

Snouflake. Lenon and white pointer bitch, whelped June, 1888, by champion Tannum out of Juno II., by Dr. J. E. Hair, Bridgeport, Conn., to Broux Valley Kennels, Tuckahoe, N. Y.

Fanny San Roy. Black, white and tan setter bitch, whelped November, 1887, by champion Pembroke out of Fanny San Roy, by Dr. J. E. Hair, Bridgeport, Conn., to A. G. Hooley, New York City.

Fan N. Black and white pointer bitch, whelped March 2, 1887, by Fauster out of Corsicana Tobie, by W. H. Hyland, North Tarrytown, N. Y., to R. A. De Rusey, New York City.

Rideau Reckon. White, black and tan fox-terrier dog, whelped Nov. 27, 1892, by Rideau Rivet out of Clytie, by Rideau Kennels, Ottawa, Ont., to L. W. Breek, Kingston, Ont.

Uno King Don. Liver and white pointer bitch, whelped Sept. 2, 1889, by King Don out of Fatti M. II., by C. D. Roberts, Dexter, Me., to R. W. Pope, Gardiner, Me.

Strebor Don. Liver and white pointer dog, whelped July 13, 1892, by Duke of Dexter out of Uno King Don, by C. D. Roberts, Dexter, Me., to F. R. Hoyt, Watkins, N. Y.

Dexter's Flirt. Liver and white pointer bitch, whelped Sept. 30, 1892, by Duke of Dexter out of Benet's Flirt, by C. D. Roberts, Dexter, Me., to W. C. Hathaway, Plymouth, Mass.

Strebor Martha. Liver and white pointer bitch, whelped July 13, 1892, by Duke of Dexter out of Uno King Don, by C. D. Roberts, Dexter, Me., to W. W. Burridge, Lawrence, Mass.

Strebor Flora and Strebor Tutti Frutti. Lemon and white and liver and white pointer bitches, whelped July 13, 1892, by Duke of Dexter out of Uno King Don, by C. D. Roberts, Dexter, Me., to Fred Loucks, Sharon, Conn.

Brockenhurst Tyke—Hillside Spinster whelp. White, black and tan fox-terrier bitch, whelped July 9, 1892, by A. B. Townsend, Bonner's Ferry, Idaho, to J. B. Martin, San Francisco, Cal.

Simon—Luna whelps. Black, white and tan beagle bitches, whelped Jan. 13, 1892, by G. Laick, Tarrytown, N. Y., one each to E. P. Eastman, Lancaster, N. H., and to W. H. Wilkesbarre, Pa. We should say we have passed his usefulness as a stud dog. Beagles not registered.

Dick Swivel—Dietie whelps. Red Irish setters, whelped Nov. 18, 1892, by Oak Grove Kennels, Moodus, Conn., a dog each to Mrs. Anna Meeker, Brooklyn, N. Y.; W. S. Boody, Camden, N. J., and D. Laughlin, Utica, N. Y., and a bitch to Mrs. J. L. Cole, New York City.

Kildare—Kildare Joan whelps. Red Irish setters, whelped July 31, 1892, by Oak Grove Kennels, Moodus, Conn., a dog to Dr. C. H. Stevens, Charlestown, Mass., and a bitch to C. H. Sunderland, New York City.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to the contents of dogs will be answered by Dr. T. G. Sherwood, of the Royal College of Veterinary Surgeons, London, England. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

In regard to prescription in answer to A. A. B., Grand Rapids, Mich., issue of April 27, our veterinarian writes: "You omitted the water, doc., that prescription."

E. F. D., Toronto, Can.—Mr. Charles Heath, Newark, N. J., owns champion Grand was 12 yrs. old last July. We should say we have passed his usefulness as a stud dog. Beagles not registered.

BILL, New York City.—Willie H., whelped June 26, 1886, by Rhodrick (9238, Vol. V.) out of Spotty (9319, Vol. V.). Modest Girl, whelped May 10, 1888, by Drum II. (9233, Vol. V.) out of Yun Yum, by Minnie out of Lead.

E. S. B.—Could you kindly tell me in your next issue the pedigree of —, and also if he has been in any dog show and who his owner is? Aus. As you are advertising for sale this dog in to-day's issue, you should know as much about him as we do.

C. A. B., Fort Dodge, Ia.—The Chesapeake Queen, owned by the person you named, is not registered. There is a Queen (25,071) owned by W. A. Fonda, of Fanti, Ind., bred by H. H. Smith, Malvern, Ia. Whelped Aug. 20, 1891, by Barnum out of Ruby III. Extended pedigree of this one can be given if required.

SUBSCRIBER, Colverline, Va.—1. Irish setter Maid is by Brag (2368, Vol. II.) out of Effie, by Tollstone out of Ruby II. (2631, Vol. II.). Tollstone, by Grouse out of Fanchon. Brag, by Bob (543) out of Duck (697), 2. No. Let the pup run. You can correct him when you start regular training. 3. There is little choice; should prefer the Ben Hill pup. 4. The dachshund is considered a capital dog after rabbits; consult our advertising columns for good stock.

F. L., Sharon, Conn.—1. I have a pointer dog one year old. He does not carry his tail quite straight, but so that it is sore all the time. 2. Some people tell me to cut the end off at the first joint. He is almost white but his body is full of liver ticks. Will they show through this year when he sheds his coat, or when do you think they will. Aus. 1. Dress the wound on tail with tincture of benzoin and bandage. 2. Probably at shedding.

X. Y. Z., Richmond, Va.—1. You can find no better book than "Kennel Secrets" in which you will find much useful information in addition to that about puppies. We can supply it. Price \$3. 2. No. Pure English setters are white, white and black, white, black and tan; never red. 3. It probably would if the parents were of good field stock. But we see no reason to cross the two breeds. Keep them pure. Your kind wishes are appreciated.

I. W., Colchester, Conn.—Will you please advise as to a puppy about 18 mos. old, which is very thin and system all run down. I have tried several worm medicines, which have failed. He does not seem to have any appetite. Aus. Give the following mixture:

Tr. ferri perchlori..... 3 i
Liq. arsenicalis..... 3 ss
Aq. ad..... 3 viii
Mix. Give one tablespoonful three times a day. Also give a teaspoonful of cod liver oil twice a day and a little raw meat daily.

J. W. G. D., Chestnut Hill, Pa.—I have a spaniel (dog) that was lost about two weeks ago, when found two days afterwards his hind legs were paralyzed, I think from a blow. He was very tender along the back, from which I think he was hurt. He also hurt him to be lifted up or moved about. The only comfortable position for him to be in was when he was sitting up straight. He had no feeling in his legs or feet (hind ones) that I could see. He was also very weak, having had nothing to eat for three days and being exposed to a cold rain for a day and a night. He is naturally a hardy dog and well used to rain and cold weather out hunting. This way we have been treating him is this: His back was bathed with witch hazel, until the soreness had gone (about a week), and since then he has been well rubbed (dry) along his spine and hind quarters. His bowels have been kept open with castor oil and buckthorn. I don't think he has any power over these or his bladder, but I am not positive on this. He has also

had a nerve tonic, 3 times a day. He gets a good deal of milk, a little raw meat and macaroni, and stale bread and milk toast. His appetite is very good. He has improved somewhat, all the soreness has gone, and he can be punched and rubbed all over without pain. He also can lie in any position comfortably. He can wag his tail and draw up his legs (hind ones) when pinched or tickled, and can also stretch them out. When placed on his feet he can stand sometimes without being helped, but has no power to walk with his hind legs. He pulls himself about with his front legs and is able to lift his hind quarters about half off the ground. He has also gotten strong again and looks otherwise in very good condition. When lying down on his stomach he keeps his hind legs out underneath him on his left side, they never seem to be out on the other side. When placed on the right side they seem stiff. There seems to be no swelling or sore spot anywhere. Kindly let me know if there is anything further that I could do for him. Aus. Give the following pills:

Ext. nucis vom.....grs. ii
Ergotine.....grs. xii
Make 12 pills. Give one three times a day.

H. A. B. P., Manchaug, Mass.—My mastiff dog was found dead a short time ago, in about three inches of water on the edge of a pond. He was not swelled in any way; he had been gone about eight days before he was found, and when found he was lying in a natural position such as he took when sleeping. He had about seven pounds of raw meat per day and the water he had been in the habit of drinking was not strictly pure. He was allowed to go where he pleased, and could have had fresh water from the numerous neighboring ponds had he so desired. For several months he has drooled considerably and was frequently sick during the day, so he would not eat his meat. Can you give me, from this description, an idea of the cause of his death. When taken out of the water, smelled very badly. The dog was muzzled. Do you know of any poison that acts in the way we have described, or do you think he died from black-tongue or blain. The dog was four years of age. Aus. The drooling may have been due to disease of gums, teeth or tongue, or paralysis of the cheek. It is impossible to tell the cause of death.

S. F. R., Danville, Pa.—I have a valuable spayed setter bitch that cannot hold her urine. Will you kindly inform me if it can be cured; if so, how? Our veterinary surgeon says not. I do not want to lose her if a cure is possible. Aus. The inability to hold the urine may be due to the spaying, in which case it would be incurable. Try the following mixture:

Perri phos.....3iv
Tr. nucis vom.....3i
Tr. belladonna.....3ii
Aq. ad.....3vi
Mix. Give one tablespoonful twice a day.

J. K. N., Delphos, O.—We have a St. Bernard dog about eight months old that is troubled with an inflamed condition of eyes, extending from cornea to inner canthus and afflicting the conjunctiva. The left eye seems worst; has had it since birth. There is also some pus in inner canthi. What shall I do for it? Aus. Try the following lotion:

Zinci sulph.....2i
Acid boracic.....3i
Tr. opii.....3ii
Aq. distil ad.....3viii
Mix. Lotion. Apply to eyes frequently with a piece of sponge. I presume the eyelids are not turned in.

Canoeing.

An Adjustable Steering Gear.

IN THE FOREST AND STREAM of March 2, 1893, appeared an article on the Dorion adjustable rudder head. I submit the inclosed sketch as an improvement, it being applicable both to a rudder head or to a deck yoke in canoes or boats carrying a mizzen. For this use B is divided into two distinct parts, c is a plate fastened to the yoke and d the socket for ball joint, screwed either to the yoke or to the deck.

At first sight this may seem more complicated or more difficult to construct than the Dorion, but it will be found that by using Babbitt metal an amateur with a little ingenuity can produce one. In casting the socket a glass marble of proper size can be used to mold the inside. The glass can also be used for making a plaster Paris mold for casting the ball; when doing this a bolt can be cast into the ball and then screwed into the piece which acts as a socket for the tiller handle. To disconnect the tiller from the ball socket it is only necessary to take out the two screws e in plan B.

R. EASTAN BURNS.

The Susquehanna River.

HARRISBURG, Pa., May 5.—Editor Forest and Stream: Under the head of Canoe News Notes in your paper of May 4 I find one of your correspondents asking for information about the Susquehanna River from Harrisburg to Havre de Grace. If you will kindly tell him to address me and propound his question I will be only too glad to give him any information, as I have made the trip twice, and also wrote quite a lengthy article on the Susquehanna in your paper several years back.

MARR. W. FACHS, Sec. Harrisburg, C. C.

Your correspondent's cruise was published in the issues Jan. 15-22, 1891. Charts of Chesapeake Bay can be had of D. Eggert's Sons, 76 Wall street, New York.

CANOE NEWS NOTES.

The annual meeting of the Jackson (Mich.) C. C. was held on May 1, the following officers being elected: Com., S. B. Mettler; Vice-Com., G. G. Case; Sec., F. M. Yerrick; Meas., E. L. Smith; Directors, W. W. Todd, F. C. Mead, C. A. Blair, F. H. Helmer, C. E. Markham, S. B. Mettler, G. G. Case, F. M. Yerrick, E. L. Smith; Regatta Committee, Clyde Brown, C. A. Blair, Frank Smith.

The South Boston and Massachusetts C. C. consolidated last month and held their first smoker on April 25, at the club house, under the name of the South Boston C. C., the name by which the club in the future will be known. Music (vocal and instrumental) legerdemain and a fine athletic exhibition were among the evening's entertainment. We hope to have a good season, and will try to make it lively if possible. The following officers were elected: Com., G. B. W. Armstrong; Vice-Com., N. W. Fitzwilliams; Sec'y, J. W. Manley; Treas., D. A. O'Neill; Meas., J. Hodges.

31. Cedar Pt., Opening, Cedar Pt.

The Boston Herald of May 7 contains a very fair and impartial summary of the course of designing and racing since the Volunteer—Thistle races, giving due credit to both sides, and with none of the rampant spread eagles that is affected by so many American yachting writers. While he has a hard rap at British conservatism, the writer points out that the prevailing type of late years, such yachts as Liris, Pappoose, Tomahawk, Saracen, Kathleen and Gosson, are essentially of the British type. We are glad to see that the Herald is at last awake to the advantages of the 40ft. class, as the smallest size in which racing can be regularly carried on about the coast, and at the same time large enough for all purposes of practical experiment at a much lower cost than the expensive 46-footer.

From all accounts, the schooner Atlantic has fully realized the pre-

dictions made at the time Mayflower's trip across the Atlantic was under consideration. As it has happened, Atlantic is the first of the so-called "Big Sloops" to go out of sight of land, and in a gale which she encountered, those on board this modern combination of beam and low lead were tossed about like so many dried peas in a bladder, unable to find rest even on the floor.

The purchase of Volunteer by Com. J. Malcolm Forbes, Eastern Y. C., reported last week, proves to be a fact, and the yacht will later be changed to a single-sticker, the original rig being restored. Com. Forbes is reported as saying that he purchased the yacht (only for cruising, but he is likely to gratify the general desire to see her beside the new boats, even though her length should prevent her final selection to meet Valkyrie.

Mrs. CARROLL has had Navahoe constantly under way, her board being shipped and the boat finally turned over by her builders. The schooner Iroquois, 80ft. l.w.l., has been about Bristol and Newport, and the two have sailed together, and circumstantial reports of their races have appeared in the daily papers. The truth is that only those directly connected with Navahoe are in a position to know whether she has yet come up to expectations, and whether the report is true that she will have more lead added outside her iron bottom. Both of the other Herreshoff boats, the two Cup defenders, will have their lead keels bolted on as in a wooden yacht, a very unusual proceeding in a metal ship.

It would undoubtedly be a satisfaction to all yachtsmen who desire to see the prizes lost or won on the merit of the sailing, rather than to retain possession by unfair conditions or some favorable circumstance, if the challenger in each case could be picked from the fleet at the end of the season, after defeating her fellows, but no practicable means of attaining this end has yet been suggested.

In an article which we reprint in another column, the Field comments on the chances of Navahoe and Valkyrie in their respective ventures, and expresses an opinion with which we agree, that each is likely to be defeated by the home fleet. The chances must always be against the one yacht which goes from her home waters and strongly in favor of the several opponents she must usually meet. This holds true when it is merely a matter of a few hundred miles, as has been proved repeatedly in contests between New York and Boston, and the case is emphasized when an Atlantic voyage enters as a factor. Such instances as Madge in 1881, or Minerva, crossing the Atlantic and defeating the whole home fleet for two seasons, or of Wenonah and Wee Win on the Clyde and Solent last year, are more exception and are likely to occur only in the case of a small yacht that at the start attracts little attention. When a yacht is deliberately built to challenge for an important prize efforts are at once put forth to beat her, and usually with success. It is quite within the bounds of possibility that Navahoe may be decidedly superior to her opponents and may repeat the performances of Wenonah; but in our opinion the large yachts on each side will be much on an equality in actual merit of design, and the controlling factors will be their special adaptability to local conditions and the added opportunities over the visitor for "tuning up" by means of trial races.

Corinthian Mosquito Fleet.

THE Corinthian Mosquito Fleet was organized in 1888, at a time when the racing of yachts from 30ft. upward engrossed the attention of all clubs, and when the growing field of small craft was receiving little attention save from those directly interested in canoes, canoe-yachts and single-hand cruising. The intention of the founders was to form an organization that should be general rather than local, following the scheme of the American Canoe Association rather than being modeled after the ordinary yacht club. In accordance with this plan the work of the fleet was limited to no one place, members were enrolled from various localities, and the different races were held at points convenient to different sets among the members, on the Sound and about New York Bay.

The fleet was successful from the start in securing and holding a good membership; but it has always had to contend with a serious difficulty in the lack of a definite policy for the encouragement of the craft to which it proposed to devote itself. The boats enrolled in its ranks were of many different types, and the fleet was organized with all sizes, models and varieties of racing and cruising craft between. Many of the boats did not race at all, others wished to race under some cruising restrictions, while others again were fitted only for racing under the fewest possible limitations.

The earlier races were patronized by the majority of the fleet, but of late the entries have been reduced to the recognized racing craft of the local yacht clubs, and a contract has been made for a desirable fleet of cruising craft, such as the first idea contemplated.

Within the past three years a great change has taken place in yacht racing, the 40ft. and 30ft. class having disappeared to be replaced mainly by much smaller boats, so that the larger clubs have been glad to devote themselves to the 35ft. sailing length class and other small craft. This has to a certain extent interfered with our function of the fleet, and of late has made it a serious question as to the future policy of that organization. Not a few of the members have favored the scheme of a permanent station which would place the organization on much the same basis as the regular yacht clubs; while others have opposed the idea as foreign to the first purpose for which the fleet was organized.

As will be seen from the following circular just sent out by Com. Grant, the new plan has been adopted and will at once be put into execution, with every prospect of success. The fleet will still be devoted to the interests of the smaller class of yachts and cruisers, and thus will appeal directly to the owners of these craft as including men of similar taste and owning boats of no greater size. There are many good sailors in small boats who are averse to parade their craft in such tiny craft in a yacht club whose fleet is made up of nothing under 40 feet waterline, and all of these will find congenial fellowship in such a club as the Corinthian Mosquito Fleet. Com. Grant's circular is as follows:

New York, May 1.—To the Members of the Corinthian Mosquito Fleet, Greeting: It gives your commodore much pleasure to announce that the Corinthian Mosquito Fleet has secured for itself a safe harbor and harbor. Heretofore, as you are aware, the fleet has had no local habitation, and, though always received by its larger sister clubs with hearty welcome and uniform courtesy, it has sadly missed a club house of its own, where hospitalities might be extended to all and where its members might find their own folks living over their own domain. A site has been secured on beautiful Echo Bay in the "Cove" near the New Rochelle Rowing Club, and a contract has been made for the erection of a modest but comfortable club house, which is expected, will be thrown open for a house-warming on or before Decoration Day. The executive committee is pleased to report that the money now in the hands of the treasurer is sufficient to meet one year's rent of grounds and the cost of the buildings. For the care of the club house and maintenance of the same during the season, dependence must be placed upon prompt payment by our members of their annual dues. Therefore, the time for the payment of dues has been extended to June 1, after which date any delinquent member, upon the treasurer's report, will be dropped from the rolls without further notice. Address of the treasurer, J. A. Stow, Mills Building, New York City.

In the possession of a home and harbor, there is every reason to look for a substantial increase in the membership from the single-handed class, to whom this organization extends a hearty invitation. We would respectfully request from each member that he will make special efforts to secure new candidates for the fleet, and without delay report the same to our secretary in order that nominations may be acted upon at the May meeting of the executive committee. In compliance with our constitution, Article 7, Section 2, the following gentlemen are now thrice coming up for membership at that meeting: Wm. Kirk, Glen Cove; Daniel K. Hall, Jr., Glen Cove; F. S. Dorius, 20 Nassau street, proposed by Thos. D. Tabor, Vice-Commodore; Harold V. Cleaver, 20 Broadway; J. Douglas Sparkman, 60 Broadway; Phelix Duffy, Mutual Life Insurance Co.; Ferris Currier, New Rochelle, and William L. Ballard, 32 Nassau street, proposed by the commodore. To make success permanent, and to keep ourselves within the limits of the funds in the treasury, the intention of the executive committee, but, without the encouragement and support of every member, its efforts will be in vain. Very truly yours,

FRANK S. GRANT, Commodore.

The old Studio Building on West Tenth street, New York, is really the cradle of race designing in this country, at least there that is where Cary Smith was located, following his profession of a marine painter in company with other artists, where he made the design on paper for the cutter Vindex, in 1871. The stir which this new model and new method created grew into a furious battle a few years later, and when Intrepid was designed for Mr. Lloyd Phoenix in 1878, the yachtsmen were divided into two factions, the local and the progressive men who upheld the designer, and the great body of yacht owners and "prominent yachtsmen" who still swore by the builder at his wooden model. It was by slow degrees that the tide was turned by such yachts as Mischief, Fortuna, Valkyr, Cinderella and on down to Froquois and Yampa, all designed in the same dingy and dreamy way, and the studio building has been the scene of the most famous room for models and drawing boards, both growing larger as Mr. Smith has progressed from yachts to the largest passenger steam-

boats. The incongruity between the atmosphere and surroundings of the Studio Building and the work of modern designing and marine engineering has become more and more marked, until one day a couple of weeks ago Mr. Sturges, in his modest way, laid down in 1884, and made sail for a new anchorage up on top of the big Havemeyer Building on Cortlandt street, with plenty of light and air and a view of half the harbor. His work at present is mainly in the line of larger passenger steamers, and the continued success of the R. J. Peck is likely to keep the new office busy.

Mr. Paul Butler, the present owner of the famous America, will keep the old schooner in commission this year.

The new flagship of the New York Y. C., Com. Morgan's steam yacht May, will probably sail this week from England for New York.

The Rogers cutter Colonia is nearly ready for the water, and will probably be put over on the high tides next week. The Morgan-Iselin boat is now plating up, the entire plating, save a wide sheer strake, being of Tobin bronze.

We have received from Mr. Chas. G. Yale, of San Francisco, a little pamphlet giving the season's programme of the local clubs, the Pacific, San Francisco Corinthian and Euclid yacht clubs, the Oakland C. C. and Oakland Navy, a total of nearly a hundred races, cruises and such special frolics as the Pacific yachtsmen are noted for.

Emerald, the schooner designed by H. C. Wintringham for J. Roger Maxwell, was launched at the Messrs. Moore's Crescent Ship Yard, Elizabeth, N. J., on May 10.

The St. Lawrence River Y. C., of Montreal, has arranged the following series of fixtures for the season: May 24, cruiser; June 3, A class (over 30ft.); 30ft. and 21ft. class; June 10, 25ft. class 18ft. and skiffs; June 17, A class, 30ft. and 21ft. class; June 24, 25ft. class, 18ft. and skiffs; July 1, Sir Donald A. Smith \$500 challenge cup in morning; steam yachts in afternoon; July 8, A class, 30ft. and 21ft.; July 15, 25ft., 18ft. and skiffs.

Iris, steam yacht, has been sold by Com. A. J. Poole, Chelsea Y. C., to Vice-Com. J. A. Proctor, Kennebec Y. C. The yacht has been fitted during the winter with a new cabin.

Aquila has been chosen for the 104ft. composite steam yacht which the Lawley Co. is building for Mr. Arnold Thayer, of Brooklyn.

Lapping, cutter, built by Lawley in 1882, for Mr. Forbes, has been sold to Arthur Almy, of Providence. Lapping is of the old Itchen length class type.

The wreck of the fast launch Yankee Doodle has been located by divers after a search of two weeks, and she has been raised and taken to Philadelphia, where she will be rebuilt or a new hull will be built for the same boiler and engines, which are still serviceable, though badly rusted. The wreck was found in 20ft. of water, covered by a scow load of mud dumped on it, and about 600ft. below where she was burned last fall.

Audax, yawl, designed by John Hyslop for H. W. Eaton, was launched at Read Bros.'s yard, Mill River, on May 2. She is 43ft. over all, 30ft. l.w., 10ft. beam and 6ft. 6in. draft.

Wasp, Mr. Rogers's 40-footer, has been chartered to E. R. Coleman, of the Philadelphia Corinthian Y. C., who is fitting her out and will race her this season.

Wood & Son some time since shipped to Chicago the two life boats for the U. S. Government, and Mr. Frank Wood has lately been in Chicago looking after the proper display of the exhibit at the Fair.

We have received from the author, Mr. George Terrell, a copy of the Thames Yachting Almanac for 1898, published by Horace Cox, London, giving a list and a brief history of the various yacht and sailing clubs on the Thames, and a calendar of all the races scheduled for the coming season, with charts of the up-river courses. The river boasts in all of twenty clubs.

According to a brief note in the *Field* the 40-rater Queen Mab has had her centerboard removed and other alterations made at Cowes. So far as it goes, this is a confirmation of the current report that the centerboard, after being tested last season, was found to be of little or no use.

Vendetta, Admiral Montague's new 40, will have her lead in the form of a bulb keel, though she is not a fin-keel in model or construction.

Barracouta, Mr. Willoughby Weston's steam yacht, was launched at White & Son's, Cowes, on April 17, and made a trial trip on the following day.

The Massachusetts Y. C. will open its summer quarters on Rowe's Wharf, Boston, on May 15 in the evening. The new club house at Harrison Square will be opened on the same day. The winter quarters at 15 Hayward place, Boston, closed on May 8.

On May 1 the small schooner *Elsie*, owned by P. W. Merchant, was stolen from Marston Harbor, being picked up two days later by the Greaves by some Swampscott fishermen. She had been abandoned with sails partly set and anchor down.

The sailing committee of the Royal Hamilton Y. C., Capt. Grant, E. H. Ambrose, J. H. Fernside, T. W. Lester and W. H. A. Wallace, has arranged the following programme of club races: May 24, 21 and 25-footers; June 10, 30 and 40-footers; June 24, 21 and 25-footers; July 1, cruising handicap race; July 8, L. Y. R. A. regatta; July 22, 30 and 40-footers; Aug. 5, White Wings cup, all classes; Aug. 12, cruising handicap race; Aug. 19, Marguerite cup, 25 and 40-footers; and the 21-footers cup; Sept. 2, Monck cup, 40-footers; Sept. 16, 21 and 25-footers; Sept. 30, 30 and 40-footers. In addition to the cash prizes a flag will be presented to the boat making the best average in the different classes, except in the cruising handicap; the Jarvis anchor will be given to the boat making the best average in the 30ft. class, and the Dufferin de la Motte 25ft. class. All prizes will be sailed in the bay except the Monck cup, which will be sailed off the pier.

The two yacht clubs of Lake Minnetonka, the Minnetonka Y. C. and the Excelsior Y. C., have amended their respective measurement rules as follows: Minnetonka Y. C.—1893: Measurement Rule—Length shall be taken 3in. above the water line. The water line shall be determined by ballasting the boat to her usual trim when the crew are not on board, with no less than 2lbs. of ballast for each square foot of mainsail. The inside ballast to be placed as directed by the measurer, who shall keep a list of the weight of the ballast. The ballast shall be ballasted in any race as to make her classified length more or less than the extreme limits of her class, when the crew are not on board. Time Allowance—(b) The sailing length of a boat shall be the square root of its sail area. Exception—(1) It shall not be computed at less than the minimum length of its class. Number of Crew—Rule IX.—Crew—(a) A cat-rigger boat may carry any number of men, provided their aggregate weight does not exceed 140lbs. for 20-footers and 160lbs. for 21-footers. (b) A boat of any other rig may carry any number of men, providing their aggregate weight does not exceed 140lbs. for each square foot of total sail area. Excelsior Y. C. measurement rule.—Owners shall mark the load water-line length of their yachts on both sides of the bow and stern in such manner as the official measurer may direct, which marks shall be used in determining the sailing length for immersion when the yacht is lying in smooth water in her usual racing trim, including racing crew on board at and about the mid-over-all length. Time Allowance—(b) The sailing length of a boat shall be the water-line length added to the square root of sail area, the sum divided by two. Number of Crew—Boats may carry one man for every 5ft. or fraction thereof of sailing length.

Capt. Bixby, United States Army, has returned from a week's visit to Vineyard Island Sound and vicinity, where he has contractors engaged in removing several wrecks which have been obstructions to navigation. The principal of these is the yacht *Alva*, and the captain regrets to report this craft yet intact and practically in as good condition as she was when the wreckers left her two or three months ago. The sea appears to have little effect on the hull, and dynamite is little more destructive. The contractors have, in the past month, detonated nearly 1,000lbs. of dynamite, most of it upon the *Alva*, the damage thus far done is to punch a few small holes in her deck and sides, the two coal barges *Storm King* and *Zulu*, which collided with the yacht and then sank, are distributed about the bottom of the sound, so that they form no obstacle to other than crabs and flounders. The work upon the *Alva* will be continued as weather permits.—*Providence Journal*.

The Toronto Sailing Skiff Club has removed into its new quarters at the foot of Main street. The club house is an excellent building with a main room 30x24, which is at present the second largest club room on the bay front. There are also board and dressing rooms, each 10x12. There is a dressing and locker room on the ground floor for the use of the members, and also a large space for boats. The balcony leading from the main room extends the whole length of the building, being 45ft. long and 13ft. wide, and from it can be had a command view of the harbor. Above this, in the centre of the building is an officers' lookout 12x12. This is built for the convenience of race officials. The entrance to the club will be both from the east and west. The platform on to the water is 55ft. long, which will give ample accommodation for steamers to tie up. Mr. Sautter, the builder, who is a member of the club, is to be complimented for the fine and handsome structure he has erected on such short notice. The following fixtures have been arranged for the season: Saturday, May 27, handicap race, open to all club boats under 25ft. corrected length. Races for first class skiffs, 19 to 17ft. waterline, will be sailed on the following Saturdays: June 10, July 15, Aug. 5 (World cup), Sept. 2. For second class skiffs, under 17ft. waterline, June 24, July 29, Aug. 9 (World cup), Sept. 9. For special classes, 25ft. and under corrected length, June 24, Aug. 12, Sept. 9. Open races—Handicap, open to all comers under 25ft. corrected length, June 17, Sept. 16. Cruising races—Saturday July 1. There will also be two

other cruising races, the dates to be named later. The classification for skiffs will be water-line length measurement, corrected length. There will be three prizes for each race in each class, besides a flag which will be presented to the three first boats in each race. The membership of the club has been rapidly increasing since March 1, there being at present nearly one hundred members on the roll.—*Toronto Mail*.

The business heretofore carried on by Messrs. Gardner & Mosher has been formed into a stock company which will undertake all work in connection with the designing and building of yachts.

Rifle Range and Gallery.

Zettler Rifle Club.

The Zettler Rifle Club held its regular monthly meeting on Tuesday night, May 2. As this was the time set for the distribution of the prizes from the winter season shoot the attendance was somewhat larger than usual. After the prizes had been distributed there was a general inclination to do a little shooting. A team match was thought to be a good scheme, and Messrs. Dorrier and Ross were induced to act as captains, and two teams were made up. The first match resulted in a victory for Capt. Ross's team. The second match went in favor of Capt. Dorrier's team. At the close of the second match the hour was so late that it was decided to postpone the shooting off of the ties until the next meeting. The scores of the competing teams are appended, 5 shots per man, possible 125:

First Match.	
F O Ross, Captain.....	121
D Walther.....	122
H Holges.....	121
G W Plaisted.....	121
R Busse.....	117
A J Christian.....	114
F Fekking.....	119-839
F Fabarius.....	106-814
Second Match.	
M Dorrier, Captain.....	121
D Walther.....	119
H Holges.....	121
C G Zettler.....	120
G W Plaisted.....	118
Gus Novak.....	118
R Busse.....	119
A J Christian.....	114
F Fekking.....	118
F Fabarius.....	113-827
M B Engel.....	120-826

The members of the club met in Wissel's Cypress Hills Park on the 7th inst. for their third practice shoot. The weather conditions were just such as the rifle crank delights in—a good clear light and wind sufficient to sweep away the smoke.

There was a goodly number of shooters present and many good scores made. Geo. Joiner, one of the old-time Creedmoor shooters, was out and tried his hand with an old muzzleloader. Judging by the score, Mr. Joiner is inclined to believe that he has lost too much of a combination of age in man and gun. Barney Zettler surprised all hands, himself included, in his shooting to-day. He has of late got into such a habit of making ordinary scores that his friends had come to the conclusion that Barney had become *passé*. His shooting, however, shows that he has a little reserved shooting force left yet. B. Walther, the president of the club, was out too, but his gun was out of order. The Hollander left his gun and another veteran rifleman, David Miller, of Hoboken, came out to the park in order to get his rifle sighted and ready for the prize shoot, which comes off here on the 14th and 15th inst.

In the competition to-day Messrs. Ross and B. Zettler tied for the highest individual score. The scores of the members will be found appended, 10-shot scores, three scores to count:

F O Ross.....	20 25 24 20 21 25 20 23 24 22-222
B Zettler.....	20 25 24 20 21 25 24 23 21 22-222
Richard Harmann.....	20 19 23 22 21 21 25 24 23 21-228

Marten vs. Libinger.

For two years past Messrs. Ignatz Marten, president of the Long Island Real Estate Exchange, and Philip Libinger, the brewer, both of whom are well known and prominent among the Eastern District business men of Brooklyn, have had a match on hand to shoot for a diamond trophy. Various circumstances have come up from time to time to prevent the two shooters from coming together to shoot off the match.

Wednesday, May 3, was finally agreed upon as the date upon which the match should be shot off, and Decker's new Schutzen Park in Coney Island, L. I., the place where it should take place. Invitations were sent out to all the prominent riflemen in and about New York to be present and witness the contest. Under ordinary circumstances there would have been a large delegation of shooters present, but as the weather clerk had not been consulted in the matter, he took it into his head to make things very uncomfortable for those who had any desire for travel on that particular day. A few intimate friends of the gentlemen engaged in the contest braved a heavy northeast storm and went out to the park, hoping that the weather would clear before the time set for the match should arrive. It was decreed otherwise, however, and the few devotees of the rifle who ventured out to the park in question had to do at the expense of wet feet and various other disagreeable features.

The two contestants in their shooting abilities are very evenly matched, and it was thought that the contest would be both close and interesting. The second round in the match, however, was the rock that wrecked the hopes of Libinger and his friends.

Libinger's cartridges were loaded with the bullets seated well into the shell and hard crimped, and the consequence was that on Libinger's second shot one-half of the shell went out with the bullet. The same thing happened in the third shot, giving him two misses in three shots. While Marten's shooting was anything but brilliant, Libinger's misfortunes and consequent poor holding gave Marten such a lead that it was out of the question to make up the lost ground. The conditions were 25 shots per man, German 25-ring target, distance 300yds. The totals are as follows: Ignatz Marten 460, Philip Libinger 326.

Excelsior Rifle Club.

The first official outdoor shoot of the Excelsior Club came off at the Greenville (N. J.) Schutzen Park on Friday afternoon, May 5.

The competition between Messrs. Boynton Hughes, Hanson and Speicher was very close and exciting. When the last shot of the quartette had been fired and the totals counted up it was found that the honors were divided between Messrs. Speicher and Hanson, with 210 to the credit of each. The scores of the members in the competition are appended: 10 shots, possible 250, distance 250yds.: P. P. Hanson 210, J. Speicher 210, J. Hughes 205, C. Thomas 203, O. C. Boyce 202, William Weber 179, M. Ryer 99.

Greenville Rifle Club Gallery Shoot.

The Greenville Club held its first weekly gallery shoot in the new club house on Friday evening, May 5. To say that the members were pleased with their new quarters hardly expresses their feelings. Fifteen members were on hand to compete for the club trophies. The scores are appended: W. H. Robedoux 247, M. Dorrier 246, George Purkiss 245, F. C. Ross 243, W. C. Collins 239, C. Boag 239, H. Chavaut 236, G. W. Plaisted 236, C. Schelein 236, J. Boag 235, J. Kaiser 233, J. Spahn 227, J. Hill 226, W. Pfeiffer 214, A. Lembeck 212.

RIFLE NOTES.

The Zettler Club's two days' prize shoot opens in Wissel's Cypress Hills Park, May 14. The programme shows a liberal outlay of cash prizes. The ring target contains 20 prizes from \$40 down to \$1. The main target 15 prizes from \$20 to \$2. The bullseye target 18 prizes from \$20 down to \$1.

The Empire Club offers any shooter visiting its range, No. 12 St. Mark's place, on the regular shooting nights, the following cash prizes: \$10 for a score of 250, \$8 for a score of 248, \$5 for a score of 246, and \$2 for a score of 244. The entrance fee is 25 cents per score. This ought to give some of the gallery experts an opportunity to earn a little pin money.

The friends of Messrs. Marten and Libinger would be pleased to see the two gentlemen come together again in a rifle match. Mr. Libinger certainly can make a good average score when the conditions are normal. He is not satisfied with the last shoot, and so far as Mr. Marten is concerned, it seems to be a case of "Barkis is willin'." We therefore see no reason why the friends of the two gentlemen should not have their wishes gratified in the near future.

The Eastern Shooting Association or Schutzen Bund will meet on Friday night, May 11. The sub-committees from the nomination committee have been hustling for candidates for the permanent board of officers, and it is to be hoped that they have been successful.

Speaking of fake targets, we were very much interested in an anecdote we heard Barney Zettler relate one day last week of how he in the presence of witnesses pretended to make a full score of 10 shots. Barney said that every one of the witnesses would swear that they saw the target shot, and yet it was a case of optical illusion.

I met in my travels last week a rifle crank, a man who in business matters has a good reputation for truth and veracity. He averred that a few days before, at a distance of 23yds., on a machine rest, he put 50 consecutive shots in a 2in. circle. I reminded him of that old, old story of the boy and the hatchet, but the look of injured innocence that he cast at me made me feel weary.

Chicago Rifles.

DEATH OF MR. SCHOTTE.

Chicago, Ill., May 4.—The interests of rifle shooting in Chicago and in the country at large, suffered a great loss in the death of Mr. C. Schotte, controller of the Chicago Schutzen Verein, and secretary of the International rifle tournament to be held in Chicago this summer. Mr. Schotte died last Friday, April 28. He had been ill for some time, but died at last suddenly and unexpectedly while up and clothed, and in the attempt at carrying on his daily affairs. He was a large-hearted man, and one of large abilities. His mastering of details had done much toward pushing the World's Fair rifle shoot to success, and his strong influence will be sadly missed. His funeral was marked by a large concourse of mourning friends.

A GOOD RIFLEMAN GONE.

Mr. A. McBean, once of St. Louis, but lately of Chicago, one of the best of the riflemen of either city, and a gentleman who has taken great interest in rifle shooting and rifle matters here, leaves Chicago this week and returns to St. Louis, where he may make his home for a time at least. Mr. McBean hopes to be on hand for the shooting in the World's Fair rifle tournament, in whose interests he has been a very useful factor. E. Houghton.

The Hudson Rifle Club.

Score of Hudson Rifle Club shot on range at Marion, N. J., Monday, May 1, distance 25yds. Regular weekly competition:

H L Hansen.....	25 25 25 25 25 25 24 24 23 23-244
J Rehban.....	25 25 25 25 25 25 24 24 23 23-243
A W Steuber.....	25 25 25 25 25 25 24 24 24 24-242
C E Bird.....	25 25 25 24 24 24 23 23 23 23-238
H Mahlenbrook.....	25 25 25 24 24 24 23 23 23 23-238
F Sessman.....	25 24 24 24 24 24 23 23 23 23-234
C Staderman.....	25 25 24 24 23 23 23 23 23 23-233
J Buch.....	25 24 24 23 23 23 22 22 21 19-227
S Middleton.....	25 24 24 23 23 23 21 21 20 20-220

It is expected that the Hudson Rifle Club will have their new uniform by June 1 and appear in full uniform at all the outdoor prize shooting festivals which will be held during the summer months.

PLAISTED.

Cincinnati Rifle Association.

CINCINNATI, May 7.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day. Conditions, 300yds., off-hand, at the standard target. The shooting was below the average on account of a strong, fluctuating wind.

Gindele.....	82	80	83	Martin.....	61	58	56
Weinheimer.....	69	69	65	Randall.....	72	75	75
Wellinger.....	50	63	77	McClung.....	26	43	34

Boumback.....	76	68	62	Puthoff.....	58	63	64
Payne.....	81	79	79				

Turtle Bay Rifle Club.

The first official outdoor medal shoot of the Turtle Bay Club was held at Woodside, L. I., on May 7. Five members participated in the competition, five scores of 10 shots each to count, distance 50yds., 25cal. rifle. The scores are appended:

Geo E Janzer.....	223	230	224	231	225-1138
J Gels, Jr.....	211	221	215	212	221-1082
H Walter.....	203	208	218	229	215-1073
J Krampert.....	219	202	204	213	205-1056
J Oberle.....	204	197	204	203	200-1008

Greenville Rifle Club.

The season shoot for 1893 of the Greenville Rifle Club, Greenville, N. J., opened in Armbruster's Park, on Saturday, the 6th inst. The club has just got settled in its new club house, and the members are enthusiastic about rifle shooting. The scores of the members present in the outdoor practice are appended: 10 shots, possible 250, distance 200 yards: F. C. Ross 222, C. Boag 220, H. Chavaut 214, J. Boag 213, W. Robidoux 206, C. Schelein 198, J. Hill 190, M. Becker 182.

Turtle Bay Rifle Club.

At the meeting of the Turtle Bay Club on Thursday night last, the men indulged in a two men team match for the refreshments for the members present. The result of the contest was that Geo. E. Janzer and his partner had to do the honors for the evening. The satisfaction of the opposing team was expressed in a manner usual to such affairs. The conditions were three scores to each shooter, the aggregate of the whole to count:

H Walter.....	240	242	240-722
J Krampert.....	239	231	243-703-1425
J Oberle.....	233	230	229-691-1423

Trap-Shooting.

Communications for publication relating to business should be addressed to the *Forest and Stream* Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

May 15-20.—Missouri State Game and Fish Protective Association tournament, Independence, Mo.
May 16-17.—Manufacturers' Trap-Shooting Association, Lansing, Mich.
May 16-17.—Herron Hill Gun Club tournament, Pittsburgh, Pa.
May 16-19.—Michigan Trap-Shooters' League tournament, at Lansing, Mich.
May 17-18.—West Newburg Gun and Rifle Association spring tournament, at Newburg, N. Y.
May 18-19.—Charlotte Gun Club tournament, at Charlotte, N. C.: \$25 added money.
May 19-20.—Interstate Manufacturers' and Dealers' Association target tournament, at Passaic, N. J.
May 19-20.—Glen Echo Gun Club tournament, at Washington, D. C.
May 20-21.—Anaconda (Mont.) Rod and Gun Club tournament.

May 19-21.—Anaconda Rod and Gun Club tournament, Anaconda, Mont. Open to all comers. Howard Rockefeller, Sec'y.
May 23-25.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added to prizes. Also valuable merchandise prizes.
May 23-25.—Minneapolis (Minn.) Gun Club tournament.
May 23-25.—Nebraska State Sportsmen's Association, Omaha, Neb. F. O. Parnell, Sec'y.
May 23-26.—Kansas State Sportsmen's Association tournament, McPherson, Kansas.
May 24-25.—Sunnyvale (Pa.) Gun Club tournament.
May 25-26.—Putney (Vt.) Rod and Gun Club tournament.
May 26-27.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
May 30.—Maplewood vs. Union Gun Clubs, team contest at live birds, at Springfield, N. J.
May 30.—White Plains (N. Y.) tournament.
May 30.—Highland Gun Club tournament, at Moline, O.
May 30.—Muskegon (Mich.) Gun Club tournament.
May 30.—Sportsmen's Gun Club tournament, at Wilkesburg, Pa.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June.—Sportsmen's Association of the Northwest, annual tournament at Victoria, B. C.
June 1-2.—Penn Gun Club, of Norristown, Pa., second tournament.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester, N. Y. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
June 20-22.—South Dakota State Sportsmen's Association tournament, at Vermillion, S. D.
June 21-22.—Interstate Manufacturers' and Dealers' Association second annual tournament, Wapconong Park, Altoona, Pa.
June 27-28.—Oregon State Sportsmen's Association tournament, at Salem, Oregon.
May 28-30.—Summer tournament of the Peekskill Gun Club, Peekskill, N. Y. H. B. Wygant, President, Peekskill, N. Y.

DRIVERS AND TWISTERS.

The Salt Lake Gun Club, of Salt Lake City, Utah, has 30 members, all of whom are enthusiasts. The club shoots every Friday afternoon for a medal. Their officers are John Sharp, President; W. H. Treman, Vice-President; D. E. Brockback, Secretary and Treasurer; William Christy, Captain; John M. Sharp, First Lieutenant; W. B. Margetts, Second Lieutenant.
We are advised by Geo. S. Atwater that the tournament of the Glen Echo Gun Club, of Washington, will begin on May 18, instead of the 16th, as before announced.
This will make the dates 18, 19 and 20. The programme has been arranged so as to conform as nearly as possible to the Knoxville programme, so that those who stop at Washington en route to the Knoxville shoot will have good practice at the same styles of shooting they will have to do in Tennessee. The Glen Echoes have secured fifty merchandise prizes from local business men.
The Springfield (Ohio) Gun Club has elected the following officers: President, Chas. Young; First Vice-Pres., John Strong; Second Vice-Pres., Joseph Beck; Treasurer, Richard Hughes; Secretary, John A. Reid; Executive Committee, J. S. Sackman, Ben Downs, Frank Hutchins and R. S. Black. Messrs. S. Van Bird, Joe Beck and J. A. Reid were appointed an auditing committee to audit the secretary's and the treasurer's books. Chas. Young and John Strong were elected delegates to the State tournament and Ben Downs and J. Sackman alternates.
The Catawissa (Pa.) Gun Club has moved to W. G. Yetter's field above North street. The club shoots every Thursday.
The members of the Missouri State Fish and Game Protective Association will have a surfeit of shooting during their sixteenth annual tournament, to be held at Washington Park, Independence, Mo., on May 15 to 20, inclusive. The annual convention will be held on the 15th, at 8 P. M., when officers will be elected and the enforcement of the game laws discussed. The programme for the tournament was given last week. The Midland Hotel will be the shooters' headquarters.
The Putney (Vt.) Rod and Gun Club announces a programme of ten events each day for their target tournament, on May 24 and 25. The events are at 5, 10, 15 and 20 singles, 5 pairs and 6 singles, and 2 pairs. The entries run from 30 cents up to \$1.25. There will be two events each day with \$10 added in each.
The following has been received anent the coming tournament of the New York State Sportsmen's Association at Rochester, June 13 to 16 inclusive. The programme for our tournament is about completed and will be ready for mailing about the 20th inst. We have arranged for the week \$5,000, the prizes (merchandise and cash) aggregating for the week \$5,000, the guarantee footing up \$3,000 and the merchandise \$2,000. An outline of the programme for each day is appended: Monday, sweepstake shooting all day; Tuesday, first event, \$500 guaranteed, entrance \$5; second event, merchandise contest, entrance \$5; third event, \$500 guaranteed, entrance \$5. Wednesday, first event, \$500 guaranteed, entrance \$5; second event, \$100 miss and out, entrance \$2.50; third event, \$400 guaranteed, entrance \$4. Thursday, first event, \$500 guaranteed, entrance \$5; second event, free merchandise contest, no entrance; third event, \$400 guaranteed, entrance \$4. Friday, the championship team race, Lefever diamond medal and Dean Richmond trophy contests. In the merchandise event on Tuesday there will be \$1,500 worth of prizes, including two Parker hammerless guns, a Lefever hammerless, an L. C. Smith hammerless, a fine cabinet Wheeler & Wilson sewing machine; also one of the Singer Sewing Machine Co.'s best machines, and other valuable prizes. In the free merchandise contest there will be many valuable prizes, aggregating about \$500. The price of targets will be 3 cents each.—H. M. STEWART.
No better-natured or more modest, unassuming man can be found in the ranks of trap-shooters than he who is known to those who attended the Wilmington shoot as Harry "Hire-a-bill" Hartlove. Mr. Hartlove is a good shot at either targets or live birds, from a trap or on any kind of field game, although he never pretends to be above the average skill. Every man, however, has his one conceit and in Harry's case it relates to his ability (?) to shoot "crap," at which game he considers himself a master, while his friends declare that he does not know a little bit about "shooting the game." Billy Fieles says that until he and H. A. Penrose took Harry to Staunton, Va., the latter will never understand the game.
Parties who have live pigeons for sale would do well to correspond with H. M. Stewart, 412 Ellwanger & Barry Buildings, Rochester, N. Y. Mr. Stewart is corresponding secretary of the New York State Association and wants to secure a big lot of birds for the June tournament.
Programmes have been received for the ninth annual tournament of the Sportsmen's Association of the Northwest, to be held at Victoria, B. C., June 14 to 17, inclusive. The annual convention will be held on June 14, at the Briard Hotel. The shoot will be held at the Victoria Driving Park, blue rock targets, expert traps and electric pulls to be used. On the first day the events will be two at 10 singles, \$1.50 entry

\$40 added in each; 15 singles, \$2.50 entry, \$50 added; 20 singles, \$3.50 entry, for the individual championship \$350 badge; teams of two, 10 singles each, \$6 entry, \$50 added. The average prizes will be \$20, \$15, and \$10, in events 1, 2 and 4. On the second day, two 15-target events, \$2.50 entry, \$50 added in each; 10 single live birds, \$5 entry (ties at 15 singles), for the Globe championship trophy of gold with diamond setting, value \$350; 10 singles and 3 pairs, entrance \$2.50, \$50 added. A \$50 gold medal, \$15 and \$10 cash will be average prizes for the two days. Third day, 10 singles, \$1.50 entry, \$40 added; 15 singles, \$2.50 entry, \$50 added; trophy team contest (teams of three), 20 singles each, \$6 entry, for a \$350 solid silver tankard; 5 singles and three pairs, \$2 entry, \$30 added. There will be ten average prizes for the three days, running from \$25 down to \$5. Fourth day, club team contest (teams of 6), 20 singles each, \$30 entry, first prize \$120, second prize \$80, guaranteed if four teams or more enter; 10 single live birds, British Columbia gold badge, value \$100, entry \$5. On this day there will also be a special event, open to provincial clubs for the 1893 medal presented by the Hamilton, Ont., Powder Company, 50 singles, entry price of birds. During the four days the added moneys and average prizes will aggregate over \$700.
BALTIMORE, Md., May 3.—The Pimlico Gun Club has been organized, and the following officers have been elected: Roderick D. Coe, President; Major Wm. D. Robinson, Vice-President; Dr. Lewis F. Fry, Secretary; Dr. Heber Smith, Treasurer, and E. B. Coe, Field Captain. There are seventeen members. The club has secured shooting grounds near the rear of the bicycle track, on Pimlico avenue. The members will practice at target-shooting on Thursdays and Saturdays. It is their purpose to give a live pigeon-shooting match on the first Thursday of each month. Members claim that there will be no violation of the law against cruelty to animals, and they state that the secretary of the Maryland Society for the Prevention of Cruelty to Animals will be invited to witness the first shoot. They state that should a bird escape instant death, it will be pursued and killed as soon as possible, so as to prevent wounded birds from suffering.
All shooters are invited to take part in the Decoration Day shoot of the White Plains (N. Y.) Gun Club to be held on the fair grounds at White Plains. The members of the club will contest for a gold medal, and there will be a series of live bird and target events open to all.
Glen Echo, on the Potomac River, almost five miles from Washington, is said to be one of the attractive places within reach of the capital, and George Atwater says the Glen Echo Gun Club's shooting quarters are the finest in the world. The club house, or more properly speaking the hotel, stands on the brow of a cliff between the edge of which and the house is a platform 100ft. long and 75ft. wide, which overhangs the water, being supported on piles formed of tree trunks. On the edge of this platform are the traps. The background for the

We publish herewith an excellent half tone cut showing the genial faces of a number of prominent shooters of the Greensboro (N. C.) Gun Club. This club is one of the strongest in the State, and that its members are popular sportsmen is shown by the attendance at the recent tournament held there by the Manufacturers' Trap Shooting Association. The leading spirits in the club are E. L. Gilmer and J. F. Jordan, who not only unite their sporting interests, but who are connected in business as well under the firm name of Jordan & Gilmer, wholesale dealers in fine leaf tobaccos. J. L. Fonda, another prominent member, is Southern representative of the Clark "O. N. T." Thread Company. Garland Daniels knows something about the art of target smashing, as is shown by his winning the North Carolina championship at the Manufacturers' tournament. All the others are able to hold up their ends of a contest, despite the fact that some of them appear youthful. The club will be represented by a strong team during the Knoxville tournament.
The Anaconda (Wyo.) Rod and Gun Club will give a tournament, open to all, May 19, 20 and 21. The secretary is Howard Rockefeller. The tournament will be conducted for live bird shooting under revised American Association rules; also for targets, except the rise for all bores of guns will be 17yds. Bluerock targets will be used; and all shooting from 5 known traps, unknown angles, and on the rapid-firing system.
The Muskegon (Mich.) Gun Club will hold a target tournament on Decoration Day.
The Binghamton (N. Y.) Gun Club will hold a tournament next month.
At the monthly shoot of the Brunswick Gun Club, of New Brunswick, N. J., on April 29, Dr. Harvey Tredell won the medal on 18 breaks out of 20 targets shot at.
The Celestial City Gun Club, of Pekin, O., have elected Henry Brandes, President; George Smith, Secretary, and Philip Arnold, Treasurer. This is a new organization which starts out with an active membership of 16.
The Ottawa Shooting Club has elected Col. Louis Smithnight, President; Directors, A. L. Moses, Dr. J. E. Cutler, N. P. McKean, C. J. Sheffield, C. W. Bingham and J. N. Henderson.
The Highland Gun Club, of Moline, Ia., will hold a tournament shoot on Decoration Day.
The third tournament of the Connecticut Trap Shooters' League will be held on the grounds of the Machinodous Gun Club, at Moodus, on Tuesday, May 23.
The Penn Gun Club, of Norristown, Pa., will hold a target tournament, on June 1 and 2, at Globe Park. The main event will be at 100 bluerock targets each, \$10 entrance, to run during the two days. The management expect sixty entries when there would be seventeen cash prizes, ranging from \$70 down to \$5. Each day there will also be two 10-target, one 15-target and one 20-target event. Other events to suit the shooters. Entries for the 100-target event, accompanied by \$2.50 forfeit may be sent to Jonas U. Cassell, Norristown, Pa., on or before June 1.
Committees in charge of tournaments and members of trap clubs in general are usually willing to acknowledge that the success of their shoots are due largely to the "booming" they receive from the sportsmen's journals. Some of them, however, do not seem to be aware of the fact that these journals can say little if anything in support of a shoot unless they are first apprised of the nature of said shoot. In a number of instances we have received notices that a certain date was claimed for the tournament of a certain club, and after inserting the same in our list of Trap Fixtures, would hear no more from the club until too late to help them "boom" their shoot. For instance, our last issue went to press at 3 P. M. on May 3. On the same day we received a copy of the programme of the Ohio Trap Shooters' League, whose annual tournament, began on May 9 and closes to-day. On the same day we received a programme of a shoot to take place in California on May 7. Both of these were too late for use, and these are only a pair of many like occurrences. We are willing to help along all clubs at all times, and if they wish to help us to help them, they must remember to send us programmes so they will reach us at least two weeks before their shoot takes place. Oblige us in this respect and we will be liberal in our "puffing."
The Reading Shooting Association will have a tournament at Matz's Three-Mile House, Shillington, Pa., on Decoration Day. C. H. TOWNSEND.
Colt Medal Shoot.
HARTFORD, May 6.—Following are the scores made by the Colt Gun Club at their medal shoot, 25 Keystone targets:

Fountain Gun Club.
OWNS to the stormy weather the members of the Fountain Gun Club did not turn out very strong on Wednesday, May 3, at Woodlawn Park, Gravesend, L. I. Only five were present to make the best averages for the annual class prizes. Each shot at 10 birds, 25yds. rise, modified Hurlingham rules. H. W. Blattmacher was the best with 9. Dr. Wynn and A. Eddy being tied for second with 8. Some good sweepstake shooting followed. Blattmacher and Dr. Wynn divided the money in the first for the best two scores. Dr. Wynn won first in the second and left Dr. Wynn and J. E. Lake to shoot their tie out for second money. It took 13 more birds to settle it, Dr. Wynn winning. The score:
Dr. Wynn.....1001211212—8 1311—5 32011—4
A. Eddy.....111011230—8 11109—34
W. Lafr.....112000101—6 01230—3 0123—4

GREENSBORO GUN CLUB SHOOTERS.

targets is the sky. During the tournament on May 19 and 20, the shooters will be accommodated at Cabin John Bridge Hotel.
The Charlotte Gun Club, of Charlotte, N. C., should have a good attendance during its shoot on May 18 and 19. All the Greensboro, Staunton and Lynchburg shooters will stop there en route to the great Knoxville tournament of the following week.
The spring tournament of the West Newburg Gun and Rifle Association to be held at Newburg, N. Y., on May 17 and 18, will be an attraction for New York and other shooters. At last fall's tournament of this club the management was first-class, and the comfort of the guests was carefully looked after. The grounds are situated in an attractive location with a good background for either live bird or target events.
The Interstate Manufacturers' and Dealers' target tournament at Passaic, N. J., on May 19 and 20, should draw all the shooters of the New Jersey State League. The Passaic grounds are splendid ones, and the members of the club are well known as first-class enter-tainers.
No less than seventy days' tournament shooting has been scheduled for this month. These represent twenty-nine separate tournaments.
The Wilmington (Del.) News of May 1 published a history of the Wilmington Rod and Gun Club, embellished with a portrait of President Chas. Fehrenbach.
The Bath (Me.) Gun Club has elected Geo. E. Thompson President; Chas. Furber, Vice-President; J. C. Higgins, Secretary and Treasurer, and A. S. Merrill, Captain.
On the night of April 24 thieves entered the telegraph office of M. S. Anderson, secretary of the White House Gun Club, and stole his L. C. Smith hammerless 12-gauge gun, No. 30,879, and a Maynard rifle, 25-cal.; also all his reloading tools, etc. Mr. Anderson offers a suitable reward for any trace of them.
The Wauregan Gun Club will hold its monthly live bird shoot at Pelhamville to-morrow.
The Myrtle Avenue Gun Club of Irvington, N. J., has secured new grounds on Elmwood avenue.
A kingbird shoot will be held at the Syracuse Gun Club grounds next Tuesday, May 16. Birds two cents, included in entrance. Rapid fire, unknown angles. Events Nos. 4, 6 and 8, Jack Rabbit system. Other events divided 40, 30, 20 and 10 per cent. Take Crouse avenue cars. Shooting commences at 10 A. M. H. R. Becker, Manager.
William R. Hobart has severed his connection with the American Field.
The East End Gun Club, of Richmond, Va., has elected Capt. Jas. R. Sheppard, President; E. L. Ford, Vice-President; John J. McDowell, Secretary and Treasurer.

CHICAGO TRAPS.

[By a Staff Correspondent.]

CHICAGO, Ill., May 6.—Mr. W. A. Alderson and his friend, Mr. Knight, both of Kansas City, were in Montgomery Ward & Co.'s when I happened to call there last Wednesday. Mr. Alderson was prominently identified with field trial matters in the West a few years ago. *En passant*, it is a pleasure to mention that he still owns good dogs and intends breeding more. But his anecdote about some trap shooting is what will be most interesting to the reader. It was something after this fashion. A man who lived near Wichita, Kans., kept about 200 carrier pigeons. They became very offensive to the neighbors. He had determined to get rid of them. It so happened that a St. Louis gun club, which shall be nameless, became their purchaser. The pigeons were intended to meet sudden death from the deadly aim of the club members at the traps. In a few days about 150 of the pigeons returned to the original owner. Thus is a new field opened for the use of carrier pigeons, if they can be sold an indefinite number of times to the same club to shoot.

The following is an interesting account of heavy shooting taken from the *Daily Evening Post* (Pekin, Ill.): "Among the strangers attending the shooting tournament in this city is a man named Edwards, weighing 200 lbs., and one Courtney, who tips the beam at 278. They are a jolly pair and afforded a great deal of amusement for those present at the shoot yesterday. They took part in nearly every shoot, and after the programme great many special shoots were held. Near the close of the afternoon one of the gentlemen suggested getting up a heavy-weight team, as there were several large men present. No sooner was the matter spoken of when the team was made up, six men being entered. Their combined weight was 1,588 lbs., distributed as follows: Edwards 291, White, the ex-saloonkeeper, 295, Courtney 278, Hindert 278, Sheriff Friederich 235, J. B. Irwin 232. The men selected their guns and stripping off their coats stepped forward to the mark. Edwards shot first and broke his bird. Then came White, who has done very little shooting. He leveled his gun for the bird, gave the signal and the trap was sprung, but the gun failed to explode, he having pulled the wrong trigger. He was given another trial and when the trap was sprung fired away with both eyes shut. Several feet below the bird a contestant was given 10 birds, and at nearly every shot some amusing incident would occur that would call forth a loud cheer, and during this event the people enjoyed themselves more than they had during the entire day. Irwin has also done very little shooting with a shotgun and never before over traps, but he handled the gun in very good style. For some cause or other he did not succeed in getting the birds and the making was clean. A score as White up to the ninth shot, when he hit the bird square in the center, breaking it into a hundred pieces. For this work he was greeted with tremendous applause. At the close of the contest the score stood as follows: Edwards 7, White 0, Hindert 5, Courtney 10, Friederich 5, Irwin 11.

The Los Angeles Wing-Shooting Club elected the following list of officers: President, E. E. White; Sec.-Treas., J. B. Winston; Directors, E. Unger, E. B. Tufts and Dr. W. R. Bird. The club held its first shoot this season April 23. The scores were small.

The programme of the Jack Rabbit Tournament of the Janesville Shooting Club is now ready for distribution, and can be obtained of the secretary, H. H. McKinney, Janesville, Wis. The tournament will be held on May 30 and 31.

THE PROGRAMME OF THE ILLINOIS STATE SPORTSMEN'S ASSOCIATION.

The programme of the nineteenth annual tournament of the Illinois State Sportsmen's Association is arranged with many novel and improving features. It is concisely written and shows original thought. It shows also that shooting matters are developing, and that the Association is up to that development. It keeps up the old tradition that Chicago shooting is a contest of skill. It breaks up the mechanical features of the shooting, and while it makes the shooting hard it gives the amateur a chance in it. Useless old ideas are discarded.

The merchandise prizes are no part of it. The Association is a dignified, self-supporting organization. Trap-shooting has long since outgrown the evolutionary stage where charitable gifts are necessary to give it life.

The burst walk-around, rapid-fire system has no encouragement in this programme. With known traps and known angles, it made clean scores a certainty to those who could get sufficient practice to acquire the mechanical skill which that style of shooting admits.

Dropping for place is energetically discountenanced and penalized. The management reserves the right to bar objectionable entries. Each shoot is so arranged that there is no cinch for the rounders. There is no jack rabbit shoot for the experimenters. In short, the management has thrown every possible safeguard around the competition, which will bring it within the realm of true sport.

The nineteenth annual convention will be held at the Sherman House, at 8 P. M., June 5. Beginning on that day, the tournament will be held at Watson's Park, Burnside. The World's Fair shoot will begin at the close of the State tournament. The events are as follows:

First contest, Board of Trade diamond badge, value \$500, and \$100, \$75 and \$50.
Second contest, L. C. Smith cup, value \$500, and \$75, \$50 and \$25.
Third contest, the Club Team Championship, open to teams of four men from any club, a member of the State Association; ten live birds; entrance, prize, cash \$100; first prize, sterling silver cup, value \$100; second prize, cash \$75; third prize, cash \$50; fourth prize, cash \$50; special prize, four opera glasses, one to each member of the winning team.

WORLD'S FAIR SHOOT, SWEEPSTAKES TOURNAMENT, OPEN TO ALL.

Under the auspices of the Illinois State Sportsmen's Association. (The management reserves the right to bar objectionable entries, but no reputable man of any rank or any nationality will be barred.)

Rules.—All live bird contests in the following programme will be shot under the new Illinois State Rules.
Dropping for place.—Any shooter found dropping for place in any event shall be debarrd from all further interest in that event in case of the first offense. Upon detection a second time in a similar offense, he shall be ruled off the grounds.
First contest, Death of the Monotone System, open to the world, at 20 bluebirds, \$5, four moneys, everything known, walk around.
Second contest, at 20 live birds, \$20, birds included, four moneys.
Third contest, at 15 bluebirds, \$5, 5 unknown traps, known angles, four moneys.
Fourth contest, at 15 bluebirds, 9 singles and 3 pairs, \$4, four moneys.
Fifth contest, at 7 live birds, \$7.50, birds included, three moneys.
Sixth contest, at 15 bluebirds, \$5, walk around, 5 known traps, unknown angles, 4 moneys.
Seventh contest, at 10 bluebirds, \$3, 3 moneys, each class tie to be shot down to 3 men.
Eighth contest, at 12 live birds, \$10, birds included, 4 moneys.
Ninth contest, at 15 bluebirds, \$9, birds included, 3 traps, unknown angles, 4 moneys.
Tenth contest, "Jack rabbit shoot," 15 bluebirds.

Should time offer at the close of the above programme, further contests will be arranged to suit the convenience of the gentlemen on the grounds.

THE DOUGLAS GUN CLUB.

The Douglas Gun Club of Chicago, held its first shoot this season on Wednesday, May 3. The principal event was the shoot for the club medal, or medals, there being three of them, first, second and third, one each for the three members making respectively the ten best scores of the season.

The afternoon was most unfavorable for good work with the gun. The weather was raw and damp. A solid mass of black clouds obscured the sky, and a light fog added to the badness of the light. A spark ignited the roof of the club house, which was of inflammable material. Fortunately the fire was quickly extinguished, the interior of the roof through a crack and thus was discovered before it had a chance to spread. It was quickly extinguished.

The club held a meeting after the shoot was ended. Mr. C. Lansdon was elected captain in place of Mr. J. Morton, who resigned. Mr. B. Waters was elected an honorary member. The next shoot takes place Saturday, May 7, at Burnside, at 10 o'clock.

The club is an active one and the weekly shoots are well attended. All the shoots, except the club medal shoots, were light sweepstakes. No. 1, practice shoot, 10 bluebirds; Lansdon 8, Church 6, Barto 7, Johnson 5, Morton 1, Bingham 10, Patterson 7, Lamphere 5, Stabford 5, Harris 5.
No. 2, club shoot, 25 bluebirds; Bingham 20, Harris 11, Barto 12, Church 20, Stabford 11, Lansdon 18, Johnson 10, Morton 12, Patterson 13, Lamphere 15. First, Church; second, Lansdon; third, Harris.
No. 3, 10 bluebirds; Lansdon 9, Church 5, Barto 6, Johnson 7, Morton 2, Bingham 5, Patterson 6, Lamphere 4, Stabford 8, Harris 5.
No. 4, 10 bluebirds; Lansdon 8, Church 7, Barto 8, Bingham 9, Johnson 5, Morton 3, Patterson 7, Stabford 5, Lamphere 7, Harris 6.
No. 5, Lansdon 8, Church 9, Barto 4, Bingham 9, Johnson 3, Morton 5, Patterson 5, Stabford 6, Lamphere 6, Harris 5.
No. 6, 10 bluebirds; Lansdon 9, Church 7, Barto 4, Bingham 6, Johnson 7, Morton 5, Patterson 7, Stabford 6, Lamphere 5, Harris 1.
No. 7, 10 bluebirds; Lansdon 9, Barto 6, Bingham 9, Johnson 5, Morton 3, Patterson 8, Stabford 5, Harris 7.

THE GARFIELD GUN CLUB.

This popular club held its first shoot this season on Saturday, May 6. There was a remarkably large attendance. There is an *esprit de corps* in this organization which insures keen competition, good fel-

lowship and the presence of a large number of members at each shoot.

Messrs. F. E. Adams and R. S. Mott were elected to membership at a meeting held toward the close of the shoot.

The weather was clear, though the shooting was made a bit difficult by the wind, which was strong enough to make the targets fly irregularly at times. Known traps and unknown angles were the conditions in each shoot, except double birds.

No. 1, sweepstake, 15 bluebirds; O'Neil 10, Burgess 5, Drake 5, Patterson 8, Hicks 10, Palmer 13, Pilz 9, Blatherwick 6, Baird 9, Ackerman 6, Adams 11, Mott 4, Lauterbach 10, Hodson 9, Northcott 8, Richards 9, Pond 0, Tefft 10, Bowers 10, McColligott 7, Bortree 9, Smith 6.

No. 2, sweepstake, 10 bluebirds; O'Neil 8, Burgess 6, Drake 7, Patterson 8, Hicks 4, Palmer 7, Pilz 9, Blatherwick 3, Baird 5, Ackerman 4, Adams 7, Mott 2, Lauterbach 6, Hodson 5, Northcott 6, Robbins 7, Coppennoll 9, Scott 5.

No. 3, club medal shoot, three medals, three classes, A, B and C, 25 bluebirds; O'Neil 23, Drake 14, Patterson 19, Hicks 18, Palmer 18, Pilz 17, Northcott 19, Ackerman 13, Adams 20, Baird 14, Mott 18, Lauterbach 20, Hodson 10, Robbins 20, Coppennoll 19, Richards 18, Smith 17, Tefft 22, Bowers 14, McColligott 5, Bortree 15, Young 13, Cruver 11.

No. 4, sweepstake, 15 bluebirds; O'Neil 10, Burgess 11, Drake 8, Patterson 9, Hicks 11, Palmer 12, Pilz 9, Eich 11, Ackerman 7, Adams 9, Mott 9, Lauterbach 7, Hodson 10, Northcott 9, Robbins 11, Coppennoll 9, Scott 8.

No. 5, sweepstake, 15 bluebirds; O'Neil 7, Burgess 9, Drake 9, Patterson 22, Hicks 13, Palmer 11, Pilz 13, Ackerman 11, Adams 9, Mott 8, Lauterbach 10, Northcott 3, Robbins 9, Coppennoll 8, Scott 4, Richards 1, Pond 4, Tefft 10, Bowers 8, McColligott 4, Bortree 11, Smith 6, Skinner 4, Eich 12.

No. 6, sweepstake, three moneys, 50, 30 and 20 per cent., 10 singles and 5 pairs; O'Neil 17, Drake 9, Patterson 16, Hicks 13, Palmer 13, Pilz 13, Ackerman 10, Adams 10, Baird 13, Northcott 14, Robbins 11, Coppennoll 16, Richards 13, Taft 15, Bortree 8, McColligott 11, Bowers 14, Young 9, Cruder 3, Scott 7, Skinner 17, Eich 17. First, Skinner, Eich, O'Neil; second, Patterson, Coppennoll; third, Taft.

B. WATERS.

The Tournament at Independence.

INDEPENDENCE, Ia., May 3.—The tournament of the Independence Gun Club, held in this city May 2 and 3, was not very well attended, owing to the rainy weather. Rain has fallen in this locality twelve out of the last fourteen days, and the roads are almost impassable. What shooters were in attendance had a first-class time and went home well pleased. Among those in attendance were C. M. Grim, Clear Lake; G. P. Hughes and Ed Chigren, of Fond du Lac; J. B. Irwin, of Van Shaff and Staghey, of Waverly; McBride, of Victor; McGoolge, of St. Paul, Minn., and Budd, of Des Moines. The targets were thrown about 60 yds., and the shooting was very difficult and but few straight scores were made.

First Day, May 2.

White Plains Scores.

WHITE PLAINS, N. Y., April 29.—We herewith inclose you the scores of our shoot on the 27th inst. Owing to the day being stormy the attendance was small and the shooting poor. No. 1, 10 bluebirds, \$1 entrance; Platt 7, Lee 8, Sutton 8, Gray 7.

No. 2, same: Platt 7, Lee 9, Sutton 9, Gray 6.

No. 3, same: Lee 6, C. Sutton 8, Platt 5, Betti 6, Halpin 3, Odell 5, G. Sutton 4, Ward 8, Gray 7.

No. 4, same: Lee 7, C. Sutton 8, Platt 7, Betti 1, Halpin 7, Odell 7, G. Sutton 6, Ward 6, Gray 4.

No. 5, 15 bluebirds, entrance \$1.50: Ward 14, Gray 7, C. Sutton 9, Platt 8, Odell 8, Lee 13, Halpin 11, C. Sutton 11, Betti 5.

No. 6, 10 bluebirds, expert rules, entrance \$1: Halpin 4, Lee 4, Gray 2, E. Ward 5, G. Sutton 6, Lord 1, C. Sutton 5, Platt 8, T. Ward 0, Rowley 6, Betti 4.

No. 7, 10 singles and 5 pairs, entrance \$2: Lee 11, Platt 7, Halpin 9, Ward 11, G. Sutton 9, E. Ward 16, T. Ward 12, Lord 10, Gray 10, Odell 12, Betti 11, Loease 11, Huff 4.

No. 8, 10 bluebirds, entrance \$1: C. Sutton 7, Lee 7, Halpin 8, W. Ward 6, Platt 4, Huff 4, T. Ward 8, Rowley 9, E. Ward 4, Lord 7, Betti 2, G. Sutton 0, Odell 5.

No. 9, same: Paulding 5, E. Halpin 7, Rowley 7, T. Ward 8, Platt 4, E. Ward 6, W. Ward 9, C. Sutton 7, Odell 2.

No. 10, same: C. Sutton 7, Halpin 8, T. Ward 6, Rowley 7, Platt 5, Odell 6, Huff 5, E. Ward 4, Paulding 3, W. Ward 7.

No. 11, 5 live birds, entrance \$5: Halpin.....1111-4
Paulding.....1100-2
Platt.....0010-2
E. Ward.....0010-2
Odell.....1010-2
Lord.....1111-5
T. Ward.....1110-3

No. 12, 25 bluebirds (expert rules) for gold medal:
W. Ward.....10011010110111111111-18
Halpin.....10110111111111111111-19
Sutton.....00110111111111111111-15

Paulding.....0111101010011111111111-9
E. Ward.....1101111011111111111111-18

On the shoot off for the tie Halpin got 8 and Sutton 7.

L. C. PLATT, Sec'y.

Second Day, May 20, \$250 guaranteed.—No. 1, 10 targets, entrance \$1.50, \$25 guaranteed; No. 2, 10 targets, entrance \$1.50, \$25 guaranteed; No. 3, 15 targets, entrance \$2, \$40 guaranteed; No. 4, 10 targets, entrance \$1.50, \$25 guaranteed; No. 5, 25 targets, 3-man team race, entrance \$5; No. 6, 10 targets, entrance \$1.50, \$25 guaranteed; No. 7, 10 targets, entrance \$1.50, \$25 guaranteed; No. 8, 15 targets, entrance \$2, \$35 guaranteed; No. 9, 10 targets, entrance \$1.50, \$25 guaranteed; No. 10, 10 targets, entrance \$1.50, \$25 guaranteed.

All surplus money divided as follows: 55 per cent. added to purses; 10 per cent. to first and 5 per cent. to second for best average in Class A to those shooting in Events 3 to 10 inclusive; 10 per cent. to first and 5 per cent. to second for best average in Class B to those shooting in Events 3 to 10 inclusive; 10 per cent. to first and 5 per cent. to second for best average in Class C to those shooting in Events 3 to 10 inclusive.

All averages paid each night.

Target money to be deducted from purses when entries will allow.

RULES.

The Interstate Manufacturers' and Dealers' Association rules will govern all tournaments given by the Association. All events will be shot under the Novely rule.

Novely Rule.—Five traps will be used in a straight line, 5 yds. apart, placed 14 yds. from the score, with 3 traps in a straight line, 10

THE WILLIAMSPORT TOURNAMENT.

TAKING the Philadelphia & Reading R. R. from their new depot at Twelfth and Market streets, Philadelphia, on Monday, May 1, your correspondent had a beautiful ride up the Schuylkill Valley to the headwaters of the Delaware river at Tamaqua, where we were joined by Mr. Rene Clayton and John Rehrey. If any one wants a ride through the mountains will just take this road they will see from Port Clinton to Tamaqua a line that must have taxed severely the brain of the engineer that laid the road out. The distance is just twenty miles and it has 115 curves in that distance. After leaving Tamaqua we begin to climb the hills, among which on every side can be seen the great arched coal breakers with their immense piles of culm, which show what large quantities of coal have been taken from the hills, and one would think from the looks of things that the hills must be all hollow. Winding in and out through these coal dumps you strike the Susquehanna River at Sunbury and then you are in the wood district. Along the shores of this river you will see immense logs and rafts, and it makes one think to see them that it will only be a short time before our forests will be all gone and we will have to find something to take the place of lumber.

At Williamsport there is one boom and the logs in some places are piled up at least twenty feet high. This same boom is seven miles long and makes the river look as if it was all wood instead of water. Arriving at Williamsport at 10:50 P. M., we took the coach to the Bark Hotel, where we were welcomed by Mr. Chas. Duffey, who since the death of his father, Col. Chas. Duffey, of Tamaqua, Pa., has been in charge of the hotel here. Here E. D. Miller, of Springfield, N. J.; Wm. H. Wolstencroft, of J. Hane, of Philadelphia; J. O. H. Denney, of Pittsburg and Harry Thurman and wife, of Germantown, Pa. A number of other shooters are at the City Hotel, with Walter Shooter, and they all speak well of the new place. At 9 o'clock we all started for the Athletic Park, where we found Mr. N. Hughes, the major domo of shooting affairs of the place, and everything ready for the day's sport, but one mistake was made, and that was in trying to run live bird events and target events at the same time; the two will not go together as was demonstrated to-day; for while the live bird shooting was going on the target traps were almost idle. The rain of Monday night had made everything soft, but Hughes had a couple of loads of sawdust on hand, and with this and a lot of boards the shooters were kept dry.

The regular target was six in number, two of 10 birds and two of 15 birds, and a set of 30 birds each, the price of the targets deducted from the purses was 8 cts. each, and 1/2 cts. each was given for the best 3 averages for the regular events. The averages for to-day were won by Wm. H. Wolstencroft first; E. D. Miller second; H. Thurman third. Among the shooters here are Gus. Grief, of New York; Thomas Ely, of Wilkesbarre, Pa., the champion pheasant shooter of the state; M. McMillan, of Mahanoy City, Pa.; Ruff Clayton, of Tamaqua, Pa.; J. O. Denney, of Pittsburg, Pa.; John Duffey, of Harrisburg, Pa.; J. H. Vetter and H. Harman, of Catawissa; E. D. Miller, Springfield, N. J.; Wm. H. Wolstencroft, and Harry Thurman, of Phila.; John Raehny, of Weissport, Pa.; Robert Clayton, Luzernborough; H. M. Pettibone and W. S. Pettibone, of Kingston; Ed. Boone, Chas. Lutz, Frank Quick, J. H. Mercer, of Bloomsburg; Wm. Edgar, Catawissa; J. F. Torbert, of Jersey Shore; E. T. Heman, Shenandoah; W. C. Smith and G. F. Zetler, of Altoona; and of the club members on the grounds are: N. A. Hughes, A. Smith, W. Armstrong, F. R. Weed, Major Lucas, who is cashier, Geo. Post, assistant, Boyd Rothrock and Walter Shooter. The first event started at 9:30 A. M., and the shooting was kept until 6 o'clock P. M. Although cloudy all day no rain fell. All ties were decided.

The second day opened as the first one, cloudy, and about 3 o'clock the rain began to come down, too hard for comfort; so, as the prospect for the third day were very gloomy, it was agreed among the shooters to postpone that day's shoot until more favorable weather. Among the new shooters to-day are: John Shaaber, J. Smack and H. Melot, of Reading. First average to-day was won by E. D. Miller, second and third by J. Rohrbach and Gus. Grief. Out of the 6 averages for the two days American wood powder won 5, E. C. powder 1.

First Day's Scores.

The Eureka Gun Club.

CHICAGO, Ill., May 1.—The following scores were made at the shoot of the Eureka Gun Club on Saturday. A. G. Courtney and D. F. Fride were among the visitors. Mr. Courtney representing the Eureka gun, which he says is "the best on earth." The weather was disagreeable, with a heavy wind and rain. The club will soon have their new house finished and will then do all in their power to entertain visitors to the city.

Pacific Coast Shots.

SAN FRANCISCO, May 1.—Editor Forest and Stream: The first tournament given by Messrs. Clabrough, Golcher & Co., at the Oakland race track yesterday, was well attended. Shooting was under A. A. rules, rapid firing system. Both attendance and entry list were much larger than at any previous shoot ever given here. The shoot commenced promptly at 10 o'clock and continued until dark. The traps were perfect and the scores, although not large, were, in the majority, good, taking into consideration that many of the men faced the traps for the first time and that the grounds are the most difficult in the State.

First event, 10 singles, 50, 30 and 20 per cent.; the ties on ten were divided:	
Quinton.....	1111111111-10

MEMBERSHIP SHARES
IN THE
Triton Fish and Game Club,
CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 102,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 6 lbs. (*Salmo fontinalis* only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment. Intending purchasers should carefully examine Sec. 4 of constitution, also pages 12 and 24 of by-laws about membership certificates, agents, membership cards, route and mode of payments.

For Prospectus, By-Laws, Maps, etc., and full information address

Messrs. TOWNSEND & HOWARD,
928 TEMPLE COURT, NEW YORK CITY,
AND THIS PAPER.

TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

SUNAPEE LAKE, N. H.

1,200 feet above the sea; dry climate; bracing air; no malarial influences; refreshing sleep in the oozes of hemlocks and balsams; exceptional opportunities for rest and recreation. Superb land-locked salmon, trout and black bass fishing. Safe boating for ladies and children. Refined society. Very accessible from New York and Boston. For sale and to lease in Soo-Nipi-Side Park, 1 1/2 miles on lake shore; restricted for 50 years. For prospectus, etc., address THEODORE R. SHEAR, Attorney and Counsellor at Law, No. 29 Wall st., New York, or HENRY C. WILSON, 53 State st., Boston, Mass. 21

FOR SALE-CHEAP.
PARADISE FOR SPORTSMEN.
CEDAR ISLAND, Virginia.

Atlantic coast, just above Hog Island, where President Cleveland has been shooting. It is easy of access, and contains about 3,000 acres, high land. Waters abound in fish, oysters, clams, etc. Splendid sea and bay sailing. Four miles of ocean front. The best shooting ground for duck and wildfowl on that coast. For full particulars apply to Wm. FINDLAY BROWN, Attorney at Law, 411 Walnut street, Philadelphia, Pa. 19

FOR SALE OR TO LET.

RIPPO LODGE, superbly located on Highland Lake, Bridgeport, Conn. Best of bass fishing. About 20 acres of woodland. A new cottage house of 11 rooms completely furnished for summer use. Open fire place; wood in abundance. Ice house filled. Place well adapted for a family or club. For full particulars address C. H. LOOMIS, Medford, Mass. 20

SALMON FISHING.—AN EXPERIENCED

Angler will take charge of two gentlemen for first-class salmon and trout fishing about 25th July on one of the best salmon rivers in Canada. Complete outfit provided. Address ANGLER, P. O. Box 400, Fredericton, New Brunswick, Canada. 20

A FEW OF THE PRINCIPAL RESORTS.

ANDROSOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For uananiehe, trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascalouge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalouge, pike.

MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.).—For black bass, pickerel, deer, partridge, bear, otter, etc.

LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Warton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

N. J. POWER, General Passenger Agent,

L. J. SEARGEANT, General Manager.

A BLANK DAY.

BUT IT WAS NOT ON THE

ILLINOIS CENTRAL RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe

shooting of the South is such as the Northern hunter never dreamed of. A gentle climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

A. H. HANSON,

Gen. Pass. Agent, Illinois Central R. R., Chicago.

Rome, Watertown & Ogdensburg

Railroad.

N. Y. C. & H. R. R. R. CO., Lessee.

The Rome, Watertown & Ogdensburg Railroad is the route to the best fishing grounds in New York State and Canada. Through cars are run from New York City, Chicago, Detroit, Buffalo, Niagara Falls, Suspension Bridge, Utica, Syracuse and Rochester, to Cape Vincent, Clayton, St. Lawrence River, Massena Springs, Ogdensburg, and all principal places on Lake Ontario, and to Norway for all points in the White Mountains and Maritime Provinces.

This line reaches the best and most famous fishing grounds in America for salmon, uananiehe, muscalouge, black bass, brook trout, lake trout, white fish, pickerel, perch and other fish. Information in regard to the fishing grounds and how to reach them will be cheerfully furnished upon application to

THEO. BUTTERFIELD,

General Passenger Agent, Syracuse, N. Y.

FISHING AND HUNTING

IN

Labrador, Greenland & Newfoundland

A trip for a limited number for fishing and hunting in the Far North. The great salmon and sea trout rivers of Labrador and Newfoundland will be visited. Caribou and Arctic game, bear, walrus, etc.; northern waterfowl. Guides for hunting and boats for fishing provided. The party leave Boston July 10, and occupy about three months. Earlier return will be afforded by the Northern British Mail Steamer. Address CAPT. JAMES A. FARQUHAR, 33 South st., Halifax, N. S. Refers by permission to Mr. R. J. Myers, 237 Broadway, New York City. 21

Routes for Sportsmen.

Opening of the Chicoutimi Extension, 1st July, 1898. The new route to the far-famed Saguenay and the only rail route to the delightful summer resorts north of Quebec, through the

CANADIAN ADIRONDACKS. Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate. Hotel, 1000 val. Lake St. John, best class accommodation for 300 guests, and is run in connection with the "Island House" at Grand Discharge of Lake St. John, in the center of the "Uananiehe" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels. After 1st July trains will connect daily at Chicoutimi with Saguenay steamers for Quebec. Day-light trip. A beautifully illustrated guide book free on application. For information as to hotels, apply to hotel managers; for folders and guide books to ticket agents of all principal cities.

ALEX. HARDY, Gen. P. & P. Agt. J. G. SCOTT, Sec'y & Manager. Quebec, Canada.

Alive with Game.

IF YOU WANT GOOD SPORT, PLENTY OF IT AND NO BLANK DAYS, SEND FOR THE CANADIAN PACIFIC RAILWAY COMPANY'S PAMPHLET.

Fishing and Shooting.

Hotels for Sportsmen.

Snipe Shooting

PRINCESS ANNE HOTEL,

Virginia Beach, Va.

OPEN JANUARY TO SEPTEMBER

Mr. S. E. CRITTENDEN, the proprietor, takes pleasure in informing sportsmen that he has recently obtained the control of 1,360 acres of the finest snipe grounds. Every accommodation is provided for sportsmen in connection with the hotel.

At the New Fishing and Hunting Resort

ATTEAN LAKE

You can get more game and larger trout than anywhere else in northern Maine. No stage or buck-boring. First-class table, new camps, boats and canoes. Only 19 hours from New York; 15 hours from Boston. Write for circular giving rates, etc., to

ITHAMAR HOWE, Prop., Moose, River, Me.

CAMP PHENIX

At Garden of Eden, Nova Scotia,

will be open for sportsmen and hunters from May 1 till end of season. No better trout fishing or moose hunting dry be found in Canada. Forty lakes with finest of trout fishing within a radius of five miles of the camp. Write for circulars.

M. SJOSTEDT, Garden of Eden, Nova Scotia.

SOO-NIPI-PARK LODGE.

Sunapee Lake, New Hampshire.

Re-opens May 1 for the accommodation of parties desirous of spending the blossom season in the mountains, and of gentlemen wishing to profit by the early surface fishing for Saibling, Brook Trout and Land-locked Salmon during May and June. Superior guides and angling facilities. Home comforts. FRANK H. DAVIS, New London, N. H.

Attention Bass Fishermen!

Gill House, Henderson Harbor, is the place you have been looking for for years. This is a place where you can take your families and have all the pleasures of country life and get the best black bass fishing in New York. For circulars address H. H. GILL, Proprietor, Henderson Harbor, N. Y. 23

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

FIRST CLASS TROUT FISHING,

in my beautiful large spring water pond. Boats supplied. For terms apply to EDWARD KANE, Proprietor, Stony Brook, Suffolk County, L. I., N. Y.

On Lake Champlain.

THE FOREST AND STREAM has a much larger circulation than any other journal in this country in a corresponding field. Its subscription list is for the most part made up of permanent subscribers—men who read the paper year after year. Established twenty years ago as a paper for the sportsman in his home, this journal has been and is fulfilling precisely that purpose. To-day it is read by the sons of the first generation of its readers, being handed down and maintained as a cherished family institution. Never in its history has the FOREST AND STREAM been a medium of more solid value to advertisers than it is in this present year, 1893. No one feature reflects and demonstrates more clearly the solid and dignified position occupied by the paper than does the solid and dignified character of its advertising pages.

ABOUT NATURAL RIGHTS.

SINCE the close season sale of trout is for the present a dead issue in the Massachusetts Legislature, it would be hardly worth while to prolong discussion of the principles involved; and it will be time enough to consider our Cape Cod correspondent's scheme of tagging artificially reared fish, when the trout industry shall have assumed greater importance than it appears likely to acquire for years to come.

The wisdom and justice of the law forbidding the sale of trout in close season are not to be determined, however, by a consideration of what our correspondent terms the trout culturist's "individual right." The statute has its basis in public policy; and the interest of the community must be held paramount with respect to fish and game in precisely the same way as it is with respect to other subjects of legislation.

It is a curious fact that an individual will submit to restrictions upon the use of his various possessions and never whimper; but when limitations of a similar character are put upon his use of game and fish, he cries out that his "natural rights" have been invaded. Men talk about their natural rights to fish and shoot as if these particular natural rights were more sacred and more inviolable than any other natural rights, for instance the privilege of nudity enjoyed by Adam and Eve. In an earlier stage of social development, it was man's natural right to strut abroad stark naked; but the crank who should insist upon prancing around in exercise of that natural right to-day would very quickly find himself in jail or the lunatic asylum.

In fact natural rights, and property rights, and individual rights are modified, limited, narrowed and restricted in a thousand and one particulars; and with respect to lands and houses, and horses and cows and calves, quite as much as with respect to quail and partridges and trout and bass. The land owner who resents statutory interference with his use of the trout reared in his ponds, proclaiming his natural or individual right to do as he will with his own, forgets that he is subject to law in the enjoyment of all the rest of his property. His grain he owns, yet he may not convert it into whisky. If a dairyman, he may not feed his own cows on swill, nor put water from his own well into milk from his own

cows; the calves of his own cows he may not peddle for veal under a prescribed age. If his cows or horses fall sick of certain maladies, though the stock is his own, he is compelled by law to destroy it. All these and more regulations are enforced upon the individual, and whether they are complied with gladly or grudgingly, no one ever dreams of holding out against them on the strength of "natural," or "individual" or "property" rights. It is only when game or fish is concerned, that we hear anything of rights. Yet in principle, foundation and operation these statutes are all alike; they are within the "police power" of the State, a system admirably described by Judge Cooley in these words:

"The police power of a State, in a comprehensive sense, embraces its system of internal regulation, by which it is sought, not only to preserve the public order and to prevent offences against the State, but also to establish, for the intercourse of citizen with citizen, those rules of good manners and good neighborhood which are calculated to prevent a conflict of rights and to insure to each the enjoyment of his own, so far as is reasonably consistent with a like enjoyment by others."

In its application to game and fish the police power prescribes that the individual may do with them what he will, but only so far as the common interests shall permit. If it be against public policy to market trout in close time, the individual must forego his own personal interests for those of the community. He may not set up any plea of a natural right to do otherwise.

DELMONICO DAINTIES.

NINETY-SEVEN times out of a hundred, when FOREST AND STREAM writers wish to make it understood that the hotel or camp cook served good food, they tell us that "it would have done credit to Delmonico," "Delmonico was nowhere," or the happy partakers "had never tasted a better dish even in Delmonico's." The conventional Delmonico standard of culinary and gustable excellence appears to have been given vogue a quarter-century ago; similar allusions to it may be found in the *Spirit of the Times* sketches of that period, and so generally has it been adopted that it is commonly appealed to even by many who in all their lives have never been within five hundred miles of the famous restaurant. As a matter of fact it is said by the initiated that there are a dozen or more places in New York where one may find better cooking than at Delmonico's; but it is probable that for another quarter-century to come the meal which proves so appetizing because eaten with woods zest will be heralded as worthy of Delmonico's.

There is another side of this, of which we know less, but that is only because we have not the gift of reading men's hearts. In the wilderness Delmonico's stands for a paragon of good cookery; in town it is often the woodland meal that holds the exalted place in one's estimation. Who may doubt that, if we might read the thoughts of him who vainly strives to coax a relish for city restaurant delicacies, we should discover him sighing for the savor of those robust viands which appeased the appetite of that October night, when one heavy foot was dragged after the other, until the fire glow gladdened his eyes and the savory odor of the venison greeted his nostrils.

SNAP SHOTS.

Now that the United States Supreme Court has sustained the validity of the Anti-Chinese Act, we would like to have a ruling from some competent body on the constitutional aspects of the non-resident tag law made by the Supervisors of Yates county, N. Y. This enactment declares that it shall be unlawful for any non-resident of Yates county to shoot game in the county without having obtained from some justice of the peace a \$10 license "for the privilege of so doing." The penalty is \$25, and the Yates county folks are even less generous than the Dorchester county, Md., people, for there is no such concession to aliens who have married into the tribe; you have to pay the \$10 even if your wife was a Yates county girl.

In a brief note accompanying a reproduction of our cut of the moose in harness, the English *Land and Water* says that this is the first time it has ever heard of a moose in shafts. The statement, of course, springs from a confusion of names, the moose of America being the elk of Europe. It is sufficiently well known that centuries ago the elk was quite commonly used for driving in Norway and Sweden. So common was its use, in fact, that a law was at length made forbidding under heavy penalties the

use of this animal for driving. Such a law was deemed necessary because the escape of criminals was often accomplished by their being driven beyond the border in moose sledges. In our own country, for the last hundred years, moose have been occasionally used for driving, and in the Western States of late years it has been quite common to see a moose at a county fair trotting a match against a horse. Not very long ago such an exhibition was given at one of the Nebraska fairs. The night before the trotting there had been a heavy rain storm, and the day following was sultry and extremely hot. The moose and the horse trotted one heat, the former coming in a little bit ahead, animals, drivers and wagons being splashed to the eyes with mud. At the close of the second heat, the horse was seen trotting nobly toward the judge's stand, but the moose did not appear at the turn, and it was discovered a little later that on coming to a pool of water on the track about half way around the circle, it had refused to go further and had lain down and wallowed in the mud. Of late years tame moose have become so common that it seems that there should be no difficulty in getting up a team for driving purposes if any one desired to try the experiment.

The American counsel before the Bering Sea Tribunal of arbitration have presented a novel contention respecting the property rights of the United States in the seals of the Pribiloff Islands. They argue that the seals breed on American territory; that when they leave this territory and wander away hundreds of miles upon the high seas, they have always an *animus revertendi*, a "disposition to return" to the breeding grounds; that because of this tendency to come home again they are the property of the United States; and that as such property they may be defended against capture the world over, even when outside of the recognized jurisdiction of this government. This is ingenious reasoning; but if it were accepted as sound, it would upset our game and fish laws and turn things topsy-turvy. Under such a ruling, for instance, the wild ducks bred in Canada and migrating south in the autumn, but always with an *animus revertendi*, a disposition to return to Canada in the spring, would be the property of the Canadians; and if a gunner down in Virginia or North Carolina should shoot any of them on their way down or back, Canada would promptly demand reparation; and for every Canadian duck killed on Currituck we should have an international incident on our hands. We would all rejoice to see the Pribiloff seals put under United States protection, on land or on the high seas, but when it comes to applying such logic to ducks, the opposition would poll a large and enthusiastic vote.

If we were to accuse Messrs. Lawrence, Butler & Benham (fur dealers of Columbus, O.) of having stolen bodily, hoof, hide, hair, horns and hump, our White Goat, from the illustrated supplement of Feb. 2 last, they would perhaps retort that they had not committed theft, since there can be no larceny of wild game. Nevertheless we venture to say to Messrs. Lawrence, Butler & Benham that, having appropriated our goat illustration for use in their advertisements in the May magazines, they have shown themselves decidedly unpatriotic in labeling it a "Japanese Angolia." The white goat may not be a phantom of beauty, but all ugly as he is, we cherish him as a true-blue American institution, peculiar to the crags and peaks of our own wild and wooly West. There is nothing Japanese about him, not even his pose; and no good citizen, unless having an invoice of furs to work off under a fancy name, would shear his own land of the white goat's glory to give it to the heathen.

A correspondent who relates that he went into the mountains from Ovando, Mont., and near Fish Lake within a day and a half slew a doe, a buck, another doe and her fawn, and two cow elk, then refrained from shooting any of the two dozen deer subsequently encountered, because he was "glutted by the sport"—and did not care to kill more than he could give away. Let us be thankful that some line is drawn, even by the gluttons who must be glutted; and that, as Charles Kingsley might have phrased it, of butchering big game as of all other carnal pleasures there cometh satiety at the end.

As an adjective "doggy" is quite bad enough, but "dogly" is worse. In due time we shall have "pugly" and "Skyely."

DANVIS FOLKS.—V.

The Country Post Office.

THANKSGIVING festivities were over and Uncle Lisha had been several days among his old neighbors, yet in deference to them, as in turn they were his entertainers and guests, and to himself as a returned traveler, he continued to wear his best clothes with heroic endurance of discomfort.

"I ben dressed up so long I begin to feel like a minister," he said, as he rapped the ashes from his pipe on Sam's stove hearth one morning when he had finished his after-breakfast smoke. "Ef I don't shuck myself auten my t'other clo'es putty soon, I shall be a-preachin' er duin' suthin' onbecomin'."

"Sho, Lisher, no you won't nuther," said his wife, casting an admiring glance upon him and then fluttering across to remove a speck of lint from his trousers with a moistened forefinger. "But you have got to take 'em off, Lisher Peggs. There's a gret grease spot half way t' yer knee. That's some o' Mi's Pur'n-ton's Thanksgivin' turkey's gravy. An' you got a gaub o' punkin pie on your weskit. It's a massy you didn't hev yer cut on, er you'd ha' spilt it."

"Ketch me a-tacklin' Thanksgivin' wi' my cut on. But I be goin' to shuck my high duck clo'es jest as soon 's I go to Solern's an' Joel Bartlett's an' daown t' the store. I'll du that fust I du du, but fust of all I got to seddaown an' write George a letter. Hev you got s'm ink an' a sheet o' writin' paper an' a pen, Huldah?"

Diligent search was rewarded by the discovery of a sheet of foolscap, the great freestone inkstand was taken down from the mantle and its half-dried contents diluted with water, and the quill pen made last winter by the school-master was brought from its long rest and sucked into amenity of possible use. When the breakfast table was cleared to give Uncle Lisha an ample place for operations, he drew his chair to it, hooked his toes inside the front legs, set his elbows wide apart on the table, and fencing in the paper with his arms, glared down upon it as if he would compel the words or his message to appear on the blank surface.

Except the little baby and the hound, each member of the little audience had at infrequent intervals suffered the pain of letter-writing, and they awaited in sympathetic silence the first throes of the old man's self-imposed torture, wherein hand and brain bore equal part. Aunt Jerusha's needle clicked almost inaudibly, scarcely a clatter of the dishes in the pan denoted Huldah's occupation, while Timothy Lovel performed the usually noisy operation of feeding the fire without a sound and Sam as silently drew the slide to get a coal for his pipe.

When Uncle Lisha had reckoned the day of the month on his fingers, he probed the depths of the inkstand with his pen and entered with cautious determination upon his labor. Except for the slower movement, the sound of his pen-strokes was much like that of his flote when he scraped the pegs from the inside of a boot, and as he painfully fashioned each letter, his tongue went about his rounded mouth, and he emphasized the down strokes with a corresponding movement of his head. Holding the first line for inspection half way in its straggling formation, he roared out in vexation.

"Good airth an' seas. Ef I haint gone an' writ Danvis the 24th."

"You haint," cried Aunt Jerusha, darting from her seat like a frightened hen and fluttering over to his side, where she adjusted her spectacles and scrutinized his work. "Why, that haint nothin', Lisher, you jest write, 'of November' arter 24 or jest Nove, for short. An' that's a turrible harnsome D, most like print."

Mollified by this comment, Lisha set about rectifying his mistake, while Aunt Jerusha went back to her rocking chair. When the old man was fairly settled down to his work, Sam and his father went to their husking in the barn, and Huldah having finished her dishes, sat down to sewing and a whispered conversation with Aunt Jerusha, their guarded voices and the buzzing of the last blue bottle fly of the season in the sunny window, quite overborne by the slow scratching of the pen and the vexed ejaculations of the writer when there was an uncommonly vicious splutter of his complaining implement.

"There," he cried at last, with a great sigh of relief, "I've got to the end o' the dumb'd turkey tracks. They look 's ef someb'dy 'd ben shootin' at 'em wi' a shotgun all the way along," he commented as he scowled upon the sheet from various points of view. "Here, Jerushy, read it over, but don't ye read it aout loud, an' then see ef you c'n du it up. Women 's handier at duin' up 'n what men be. They're uster duin' up sheets an' clo's ev'ry week's 'nin'."

"It's just like printin', 'Lisher Peggs, an' I c'n read it right through," as she slowly followed the lines to the end, "an' I do know no way tu better it 'thout you spelt Thanksgivin' wi' a big T, an' I do know but a big G on 'count of us bein' so thankf' tu git back."

Envelopes were not known in Danvis, and it needed the united endeavors of the old couple and Huldah to properly fold the letter and to tuck it into itself. Then Uncle Lisha lost the only available wafer in a back corner of his mouth whence it was not rescued until it had become a shapeless pulp, and there was nothing for it but to seal the missive with a lump of spruce gum which was stamped with the handle of a pegging awl. The super-scription was written and carefully dried over the stove. Then Uncle Lisha laid the letter into the crown of his beaver hat, wadded it in place with his bandanna, put the hat on his head, struggled into his high-collared, tight-sleeved blue coat and set forth toward the office with the dignity due to his important mission.

Though his feet were incased in his tight best boots, the familiar path was pleasant to him as to his eyes were all the wayside objects, the old wall paring with its gray lines, the sumach thickets now stripped of all their autumnal glory but the enduring scarlet of the bobs, the rail fence zigzagging among rank golden rods whose riches were taking flight on white wings. A red squirrel tacked along the top rails in alternate nearer and further attendance upon him, yet keeping continually abreast till he came to a great butternut tree, and scrambling up its grooved bark, began jeering at his wayfaring comrade as impudently as his forebears had, in bygone years. His gibes did not disturb the old man's equanimity as they might have ruffled the boy's. He smiled up at him amusedly, and turned the squirrel's mockery to anger by picking up a brown nut and cracking it on the big rock that stood, as such are sure to do, the convenient adjunct of

the butternut tree, and having cracked it, ate it under the very eyes of the self-assumed owner of all the nuts in Danvis.

The kernel had not the sweetness of those that Lisha had hopelessly stained his youthful hands to get sixty years before, yet it had something of the sweetness of the stolen meat and he assured himself:

"A Danvis but'nut was better'n one o' them Westcon-stant shagbacks, that, big as they was, cracked disapp'intin', like airthenware, an' was more disapp'intin' when you come tu eat 'em."

There was a well-remembered beech, whose unshed golden brown leaves were beginning to bleach to a pale tint wherein a flock of silently industrious jays displayed brief glimpses of bright color. The spread of its wide branches and the girth of its huge trunk seemed scarcely increased by fifty years of lusty growth since he carved the letters "E. P." and "J. C." entwined in a love knot on the smooth bark, yet initials and emblem and date of the dead old year, were moss-grown scars. The old man smiled in kindly pity on the half-forgotten folly of the youthful lover, and then looking about to see that no one saw him got out his knife and scraped the moss from the letters and love knot.

Then he stumped briskly forward, brushing the frost-blackened Mayweeds with hasty footsteps till he was startled by a vagrant partridge that burst from a clump of weeds close beside him and sailed on set wings away to the woods.

"Good airth an' seas," he exclaimed, as he watched the bird's arrowy flight, curving down to cover at the roadside, "ye might 's well kill me as skeer me tu death. Oh, if you'd stop still an' I'd seen you an' hed me a gun, I'd ha' got you. An' I druther hev you 'n tew peratree chickens."

Crossing a little bridge, he presently came to the home-stand of the Goves, on whom he called and found a warm welcome. After Mrs. Gove had bustled about to seat the visitor in the most comfortable chair and to send the youngest girl to call her father from the barn she sat down opposite her old neighbor and devoted a few moments to a careful consideration of his appearance.

"Wal, Uncle Lisher," she said, with an exhalation of satisfaction, "lookin' at you, an' not lookin' back, it don't seem 's 'ough you'd ben gone six month's. You haint altered a mite. An' is Aunt Jerushy as chirk as you be? I wanter know, well, the Western kentry has agreed wi' you, uncommon."

"It 'greed wi' aour health better'n what it did wi' aour feelin's, we toughed it aout 's long 's we could stan' it an' back we come tu bother aour o' neighbors endurin' the rest o' aour days." His eyes came down from roving along the limp skeins of pumpkin hung to dry upon poles above the stove and settled with an inquiring look upon her face.

"You haint never bothered nob'dy an' you won't never," she said heartily, and then bustling toward the door. "I wonder what's a keepin' Levi; finishing a bundle, probably, but I'll go an' git him."

"No, don't ye. I can't stop but a minute, an' I'll jest g'waout an' say haow de du. Fact on't is," he said impressively, "I ben writin' a letter 'n I'm a kerryin' of it tu the pos'-office. But where's Peltier?" he turned at the door to ask.

A troubled look overcast Mrs. Gove's cheerful face. "I do know where Peltier is. Mebby he's gone lookin' at his mink traps an' mebby he's over tu—the village. Peltier's in a mis'able, mopin' way, Uncle Lisher. He's ben dis'pinted. Expectin' tu marry a gal, even so fur's tu go tu git merried, an' she was gone wi' another feller, an' it's nigh about ondone him. He mopes an' he goes tu Hamner's, an' I'm afeared he drinks. I wish't you'd talk tu him, Uncle Lisher, he allers sot so much by ye, mebby, your talkin' 'ould mount tu suthin'. Me 'n his father an' Sam's don't take no holt on him."

"Peltier was allus one o' my boys," the old man said, "I made him his fust boots an' showed him haow tu ketch his fust traout, an' he'd hear to me. I will talk tu him, Mi's Gove."

Levi Gove was too industriously inclined to quit labor for visiting, and after a brief but loud interchange of greetings, carried on amid the rustle of cornstalks, the old man went on his way to the store.

There he found the merchant and postmaster, as lank, alert and clean shaven as ever and as constantly saying "yes" in varied inflections of assent or query, and he was effusive in the cordiality of his welcome.

The contents of the store were so unchanged that it seemed to the returned wanderer as if trade must have been dull during the three years of his absence. There were the bunches of whip-lashes, the home-made hickory stock and the finer ones covered with leather or braided linen, the two strings of globular Boston bells still vainly inviting customers with the immovable smile of their brazen lips, the dusty, fly-specked tinware, the placards advertising Sherman's lozenges which it was declared that worm-affected children cried for, and Hive Syrup, Down's Elixir and Spavin Cure, all displayed in the dusty windows just as he had left them when he had no expectation of ever seeing them again.

The whole interior was almost as unchanged. The cracks in the rusty sides of the great box stove had lengthened a little, the service of another crippled chair, prolonged by nailing a strip of shoebox cover athwart its legs, the incrustation of dust a little thicker on the floor, the polish of the counters a trifle heightened by the elbows and posteriors of customers and loungers and the marks of their heels worn deeper on the sides, but the shelves bore the same illuminated rolls of calicos, ginghams, jeans, hard times and cotton, and at the top, above them, out of danger of breakage, were rows of blue-edged plates and figured tea-sets, paper boxes of spool thread and bundles of leather and yarn mittens. A few loaves of sugar in dark purple paper wrappings hung from a beam overhead, beside dust-pans, brushes, brooms, mopsticks and washboards, each in its familiar place.

"Glad to see you, Mr. Peggs. Haow's everything an' everybody aout West, Mr. Peggs? All a-gettin' rich, I p'sume to say? Yes? A great kentry, but you didn't feel tu hum. We won't go back on o' V'mont, will we, Mr. Peggs? Leastways, I won't, for all I've ben tu New York city an' clean into the weste'n part of York State, I won't go back on my natyve State."

Uncle Lisha sympathized so fully in this allegiance that he was treated to a glass of frothy mead, and then with a sudden recollection of his most important business, he carefully took off his hat and drew forth the letter.

"There's a letter," handing it to the postmaster, "I wanter hev go tu my son, George Peggs, in Wesconstant. I suppose it will go all right, won't it, Mr. Clapham?"

The postmaster held it at arm's length above the level of his eyes and scrutinized it from that point for a while, then laid it on the counter and leaning over it on his elbows as intently scrutinized it from above.

"Yes, Mr. Peggs," he said confidently, "that letter'll go tu its destination, without a doubt. Yes, wonderful tu think on, haint it?" as he slowly wrote the post mark on the corner of the letter, "haow a message can go from home to the far distant West in ten days or a fortnit. Yes, eighteen and three-quarter cents is the postage your son'll hafta pay, which he won't begretch it, for hearin' from his ven'able parents."

"It's a dumbd sight more'n its wuth to read, but I would n't ha' writ if for that. I' ruther tap tew pair o' boots."

When the letter was safely deposited in the drawer devoted to outgoing mail matter, Uncle Lisha readjusted his spectacles and inspected the contents of the showcase that stood on the end of the counter, flanked by a wooden bowl of flints that still held their place against the invading percussion caps. The glass-covered treasures were as of old, several pairs of yellow wooden pocket combs, shutting into each other, jewsharps on three-cornered wooden blocks, an array of jack-knives with checked bone handles, half a dozen razors, a tin shaving cup with a square compartment built out one side, some cakes of perfumed soap, bundles of fish line, a box of very much mixed hooks, and paper boxes of caps, emblazoned with the letters "G. D." and an inscription said to be in French, which some doubted, for Antoine could not translate it when it was read to him. Beside these still lay the spring-top copper powder flask, a little more worn by the handling of impecunious admirers, and its companion in unsaleableness, the wonderful shot pouch with a brass charger, both too expensive for the Danvis market. There was an exhibition of the choicest candy of the establishment, sticks with red and white spiral bands, bullseyes of like variegation, and sugar hearts so big and sweet that they might be hoped to soften the heart of any maiden.

"See anything you'd like to purchase, Mr. Peggs?" and Clapham sidled behind the counter and examined the contents of the show case as interestedly as if he had just discovered it, "them razors, now, is just chop. I've used one o' em four year an' it's as good as 't was the fust day. Yes? Wore out yourn a-travelin'?" and while speaking he took out a razor and combing his scanty locks with his fingers and having selected a hair from the harvest thus secured, succeeded in splitting it after several efforts. "It's keen as a brier. Yourn all right? Yes? I p'sume to say the one 't I sold you. Them's about the best combs 't I ever hed in my store. They kinder coax aout snarls 'thout pullin'. Yes, shavin' brushes. That shavin' soap 'll make fater 'at a cat 'll eat for cream an' never know the dif-funce till she's troubled wi' wind on her stomerk."

"I guess I don't want none. It's too high duck parfume tu go with the smell o' sole luther. What's these ere sugar hearts wuth?" he asked, tapping the glass above them with his forefinger.

"Them's a cent apiece, heow many shell I put ye up?" "I guess I'll git one on 'em fer Samwill's boy an' I guess I'll git a cent's wuth o' snuff fer Jerushy, an' lemme see, a snuff bean, she lost hern a comin' hum."

While the storekeeper wrapped the articles in frugal bits of newspaper, Uncle Lisha's roving eyes alighted upon a bundle of furs dangling from a nail in the back part of the room, and being of the fraternity of hunters, his interest was at once aroused.

"Buyin' some furs, be ye?" he asked, going over to the peltry and handlings skin after skin of muskrat, mink, raccoon and fox and parting the fur of each with his breath.

"Wal, not to no great extent yet," said Clapham, coming to him with the parcels. "Fur haint none tu prime yet, but I take it off folks hands jest tu 'commerdate. But there's one remarkable fine skin, Mr. Peggs, remarkable and uncommon," and he drew out a dark gray skin and displayed it with great pride while Uncle Lisha readjusted his spectacles for a close inspection.

"That is a mighty harnsome coon skin, I do know 's ever I see a darker one."

"Coon skin, Mr. Peggs? I'm s'prised that a man of your experience an' judgment should call that a coon. It's a gray fox, sir, and I paid the vally of half a dozen coon skins for it."

"Mebbe, but I never seen a fox wi' rings on his tail."

"It's a peculiarity o' the gray fox," insisted Clapham.

Uncle Lisha only snorted his disbelief as he replaced his glasses in their steel case and shut it with an emphatic snap.

A bloomer off duty at the forge came lounging in, and to him the merchant appealed for some admiration of his late acquisition.

"It's a poaty fair kind of a coon skin," said the bloomer, helping himself to a handful of chestnuts from a half bushel that stood on the counter.

"It's a gray fox, I bought it for a gray fox, an' that's what it is," Clapham said severely.

An amused grin spread across the unwonted cleanliness of the bloomer's face. "Bought it fer a gray fox," and his brawny form doubled over the counter in a fit of laughter out of which he ejaculated, "O, by Jeems Price, if that haint a good one."

The sound of his laughter brought in others alert for anything to break the monotony of life, and as they stared from one to another, searching for the cause of mirth, their faces assumed a blankness of expectancy ready to be illumined with a laugh.

"Look at the gray fox skin that Clapham's ben a-buyin'," cried the bloomer, pointing at the skin which its owner, though no longer proud of, stood by in sullen defiance.

"Du you pertend tu call that a fox, Mr. Clapham?" inquired one, and getting no answer appealed to the bloomer, who nodded assent. "Why, good land o' massy, 'taint nothin' but a darned old dog coon." With a universal assent to this verdict the company broke into a boisterous laugh. At the first lull of merriment Clapham snatched down the questionable peltry and said with savage solemnity, "It's a gray fox, gentlemen, but it's makin' altogether too much talk an' I aint goin' to keep it on exhibition no longer," and throwing it spitefully up the stairway to the chamber, he slammed the door and shut off further inspection.

Amid a renewed burst of merriment Uncle Lisha withdrew quietly and took his way homeward.

FERRISBURGH, Vt.

ROWLAND E. ROBINSON.

Natural History.

ONE OF NATURE'S TRAGEDIES.

THE rattling *chur-r-r* of a kingfisher as he flies past my boat to light on his favorite perch, the top rail of an old worm fence that extends out into the water, wakes me from a half doze I have been indulging in, and raising up to look at my watch I find it is after eleven o'clock, nearly time to move out and give the bass their mid-day lunch. It is a hot day in July and I am lying in a boat whose bow is pulled up on the sand under a tree that gave me shade an hour ago, but now the sun has crept up to my waist and my wading boots are uncomfortably hot. I was out this morning before the sun showed himself over the hills, a mile away, ready to offer a frog to the early bass, and five nice ones that are swimming sullenly in the water at the stern of the boat are the results.

The lake surface is as smooth as a forest pool. The dragon flies skim lazily over it, darting down to touch the water, then up again. They even indulge in free fights and drop struggling on to the water with impunity, and this tells me "my time is not yet," for no bass during his feeding time will allow that. So I fill my pipe and send the smoke up toward the blue above and lazily listen to the voices about me.

A green grasshopper is sawing away, and the shrill *zing* of his cousin sits the hot air. The *che-wink, che-wink* of a restless ground robin in the brush heap back of me answers the *put-wut, put-wut* of a tip-up that has come up the sand so close that I can see the sparkle of his bead black eyes as he nods and bows to the water at his feet. All nature seems to me in a lazy, good-natured mood, and there is no fitting prelude to the little tragedy that is shortly enacted before me.

A small brown sparrow comes from the brush and lights on an overhanging bush with a *chip-chip-chip* to his mate. It is not a mournful note of farewell, but seemingly an invitation to come and join him in a "wee drop." He hops down to a limb that projects over the water, takes a little in his bill, then raises his head to let it trickle down his throat, and before taking another sip he preens his feathers jauntily. Then he stoops again—to meet an ugly open mouth that breaks from the water with a rush that carries its owner a foot in air, and as he comes back with a splash, I realize that I have witnessed one short act from "nature's tragedies."

But did the villain get his just desserts in the next act? Well, no. I knew that that bass was satisfied for the time being, for he was not a large one, and odd as it may seem, I did not even try for him—not that day, but the next time I came out I took out a 2lb. 10oz. bass from in front of that bush, and the chances are that he was the villain.

AMPHIBIAN.

EL PINOLILLO.

EVER since "Podgers" made his "defy" some time ago for anybody to trot out an animal that he could not enlighten us about, I have intended to try him with this Mexican product. He is having such an interesting time now studying the California trout hog that I fear he will not be able to give me proper attention. About a year ago I wrote in a somewhat slighting tone about this terror of the *tierra caliente*. I hereby take it all back. I was not aware that he read FOREST AND STREAM, or I should have been more careful. I hope that if the editor finds anything in this screed that might give offense he will kindly pass a blue pencil through it, or throw the whole thing into the waste-basket.

In the course of human events I went to Micos again. I don't think I was to blame for that, considering the fun I had the first time. Two other fellows went with me, and walked right into the ambush that had been in preparation for a year. We killed two deer, four or five turkeys, some pheasants and a lot of smaller stuff. The woods are full of game. I am sorry to say too, that we were forced to annihilate in strict self-defense a few millions of our friends the enemy, but we are willing to apologize for this, if they will let us off easy the next time.

The uninitiated would suppose, as I did last year, that the pinolillo is just a tick. He certainly has that appearance; in fact, he seems to be a very small tick. But he has a red hot, double-gear, electric-touch-the-button boring attachment that shows him to be in the very front rank of tickdom. The following reputed facts in his evolution are respectfully submitted to "Podgers" and other scientific observers. Pinolillo No. 1 grows old and corpulent, and when other animals would expect to die, he simply climbs a bush. He sits there in profound meditation a while, then quietly humps his back till the skin cracks. Then, instead of coming forth all made over, like so many other bugs do, but still just plain No. 1, he walks forth numbering about 200,000, all fresh as a daisy and uncommonly hungry. These enterprising youths, endowed with all the full-bloom faculties of No. 1, including the above-mentioned borer, climb out on a branch overhanging a convenient woods path, where they do the great monkey bridge act with variations. One grips the limb and the rest hang on to him, swinging merrily in the breeze. About this time Mr. Hunter comes along. The whole line gets into a fine regular vibration, and as he comes below the tail man yells, "Let go above," and they land gracefully and unanimously upon his ducking trousers.

If he is not in a hurry he brushes them off, but it doesn't make any difference, and he will strike a bigger and a hungrier lot before he has gone ten steps. Along with taking the sporting papers and engaging in other enterprises, they have made a careful study of the modern hunting dress. They know exactly where to find the handiest opening to the juicy hunter within. He feels a nip under his wristband or in the region where shirt and trousers join, and claws his enemy loose. Mr. Pinolillo smiles aloud and says "Oh, that's all right; much obliged. That place was getting a little dry anyhow." Then he begins to prospect for the tip end of another nerve. When his victim gets into camp he rolls up his sleeves and scratches. If he has not been carefully brought up he uses strong language. He strips and rubs himself down with petroleum, ammonia or aguardiente. If his hunt is over he throws away his clothes, puts on others and takes the first train for home. He thinks that is all, but it isn't. The subject of our sketch was not learned to write, but he makes a round red spot which unmistakably means

"his mark." The hunter's arms and legs look like turkey eggs for a week. Some of the spots if rubbed a little too much, will remain months.

The Texas cowboys used to tell me that the coyotes would not eat the body of a "greaser," because it was always so strong with red pepper. It seems likely that the beast of prey under consideration has so long had a diet of greaser flesh that he has acquired the strict *chile* flavor himself, and has special facilities for communicating it in injections. I submit this as a working hypothesis, at any rate.

One incident of my trip should go on record, though I fear it would go against me if this piece should be printed and get into the hot country. Wilson, who was with me, killed a deer one afternoon. He came to the station to get a man to help him bring it in, but managed to lose his bearings. So we all had to turn out and hunt that deer. It was in a thicket of palms and undergrowth, the night was warm and the pinolillos were in all their glory. On getting back to the station where we were camped I found my clothes absolutely brown with them. In order to avoid any controversy with them that night, I slipped out of my trousers and hung them on a picket. Next morning we went for the turkeys before day, and I made no discoveries. On my return about 9 o'clock the agent took me in to see the show. On the top of that stake where my overalls had hung was a nob, somewhat larger than an egg, of frantic pinolillos, each one punching his neighbor's head and remarking in classic phrase, "Where is he at?" A pair of pantaloons without a man inside was a little disconcerting. Before I knew it the unfeeling mozo had given them a douse of coal oil. This is one of the few substances that give the pinolillo that tired feeling. I am sorry. They were having a lot of fun. And besides I knew where they were. But I think there were enough left for scientific purposes.

AZTEC.

SAN LUIS POTOSI, Mexico, April 11.

A Habit of the Horned Toad.

RIVERSIDE, Cal.—Last winter I was much interested in the discussion in your paper as to whether the rattlesnake spit or not. I have killed several and have never seen one spit, but I have heard many people assert that they do. But here is a question which I submit to your readers, hoping that some of them can solve it. To-day I caught three horned toads, and during the afternoon, when I was fooling with them, one of them suddenly bled profusely from one eye, at least so it seemed to me; and ten minutes later I was sure of it, for as I was standing up straight, teasing him with my foot, I saw one eyelid close and then suddenly a stream of red fluid (I call it blood for want of another name) spurted straight at my face, and some of it struck my hat, which made the throw surely six feet high. Later in the day he did it again, but not so high that time. Now, what is this red fluid? Is it blood or poison, or neither? I hope that some of your readers can answer this. I am told that it is a common thing, but nobody knows what it is.

A. H. H.

[The habit is not unknown. As far back as 1871 it was noticed in the proceedings of the Zoological Society of London, for at one of the meetings Mr. A. R. Wallace read extracts from letters of Mr. John Wallace, of Stockton, Cal., in which he says: "Under certain circumstances, apparently as a means of defense, this creature squirts out from one of its eyes a jet of bright red liquid, very much like blood. This I have observed three times from three different individuals, although I have caught many that did not do it. They do not generally use this defense when first captured, although I caught one a few days ago which squirted the liquid a distance of 6in. over the back of my hand, and another ejected it when I flourished a bright knife before its eyes."

In the proceedings of the U. S. National Museum, Vol. XV., pp. 375 to 378, Dr. O. P. Hay has a brief paper "On the Ejection of Blood from the Eyes of the Horned Toads." He details a number of cases in which he has seen this ejection take place, and by a microscopic examination of this red fluid, learned that it was really blood. The fluid appears to be thrown out when the animal is teased or greatly frightened. Mr. S. F. Denton, of Washington, had a stream of blood thrown into his eye with such force that some pain was produced, and he estimated the quantity of blood thrown out as between a teaspoonful and tablespoonful. No serious result to the eye followed. The Mexicans are said to call these animals sacred toads "because they weep tears of blood."

The object of this habit appears to be defensive, but it has not been satisfactorily explained.]

Catch Basins Excavated By Fire.

Editor Forest and Stream:

The discovery of the true cause of the mysterious smoke in Pinhook swamp, Taylor county, Fla., near the Gulf coast, which has for so many years puzzled the curious and stimulated repeated attempts to investigate, is not only a matter for congratulation, as all correct solutions are, but it has important scientific value, because it affords ocular demonstration of the manner in which those numerous water-holes and shallow lakes in eastern North Carolina and Virginia have been formed, and of which aboriginal tradition has hitherto been the sole testimony.

Of these Drummond Lake in the Dismal Swamp, Virginia; Lake Phelps, in Tyrrell county, and Mattamuskeet Lake, in Hyde county, North Carolina, are the largest. The latter is twelve miles long by five feet deep. The Indians have always maintained that these basins were excavated by fire, and abundant evidence of this fact is afforded by the presence of large areas of burnt and charred wood buried several feet deep in the soil adjacent to their borders, showing where insidious fires have gradually worked through the muck, moss and mold down to the substratum of white sand which underlies it. It is quite possible, however, that the depressions were formed long before the occurrence of the fires, though at a period not geologically remote, when all this coastwise country was merely a succession of sand dunes formed by the wind and waves. Fires which occurred after these areas were forested or covered with rooted and moss-grown swamp or marsh would have left some debris or sediment on the lake floors, whereas their bottoms are composed wholly of clean, white sand except in spots, and are not miry, as might be expected.

CHARLES HALLOCK.

WASHINGTON, D. C., May 15.

Some Feathered Scalawags.

Editor Forest and Stream:

I write to make a few remarks on feathered scalawags. Of course the butcherbird stands "first and foremost" of all the feathered villains, but I have lately discovered that the bluejay is entitled to a place in the same category.

When I took up my abode in the "land of flowers" and democrats I felt inclined to treat the hook-nosed butcherbird with lenience and respect, but I very soon found I was entertaining devils unawares. They had a nest in one of my orange trees, and although I noticed that the mockingbirds seemed to have a horror of them it was some time before I realized their cussedness. I one day saw a great commotion and fluttering on the ground and discovered that a butcherbird had dragged a dove from the nest when nearly fledged and was killing it, while the mother dove was vainly interfering.

I at once tore down the nest and shot the villains, and this vicinity has never been wholesome for them since.

Another time I saw one of them flying from the lower limb of an orange tree to the ground and back repeatedly and found he was killing a young chicken nearly as large as himself. But his chief employment is robbing the nests of other birds. Only a few days ago I saw one go to a mockingbirds' nest in spite of all they could do to prevent him, but as he took nothing away with him I presume he had taken all the young birds before. The rascal ought to have a mark set upon him that any one finding him shall slay him, for no bird can safely try to raise a brood in his vicinity.

But not until a few days ago have I known the bluejay was a rascal of the same stripe. One of my tenants heard a screaming and saw a jay in great excitement hammering away at something on the ground, and on going to see what the matter was she found a young dove that he was killing. Her brother, a very intelligent and observing man, who has a place in the country, says the bluejay is almost as bad a nest robber as the butcherbird.

The well known trick of the latter—impaling grubs and young birds on a thorn—is very common here; but I never knew that the hawk was so considerate till I saw an instance of it with my own wide open eyes.

A pigeon-hawk pounced upon a dove and carried it into a row of oleanders near the house, and I got my gun—as Johnny did—and followed him, and when he sailed out I stopped him. I then heard a faint fluttering where he came from and found the dove at its last gasp, hanging with its head neatly inserted in a fork of the tree, with a horizontal limb about six inches below the fork. It was as nice an arrangement for pulling the bird to pieces comfortably as could have been found, and I believe the whole business had been prearranged, for such another place could hardly be found in a day's hunt. DIDYMUS.

ST. AUGUSTINE, May 6.

A Wearied Migrant.

BOSTON, Mass., May 9.—Editor Forest and Stream: A very strange thing happened here to-day. A bird was found by a member of our family sitting on our backyard fence. I was called to identify it and you may imagine my surprise to find an oven bird (*Sturnus auricapillus*).

It was evidently an adult as the birds have only just come and also because the golden streak on the crown was very brilliant and the streaks on the breast were very distinct. Probably the bird was tired with its long trip from the land of the tarpon and canvasback and was resting, for I approached within 3ft. of it before it flew. When I scared it, it flew away heavily. A laundress who was hanging out clothes in the next yard tossed a piece of cloth within 6in. of it, and it "never moved." Where he sat was not more than 6ft. from a window where people were continually passing.

Let us hear from other friends of nature, about birds that have been found in strange places, as if exhausted by their migration. TWELVE-BORE.

Description of a New Prairie Hen.

Tympanuchus attwateri.—SOUTHERN PRAIRIE HEN.

Diagnosis.—Similar to *Tympanuchus americanus*, but tarsus feathered only on the upper two-thirds or less; upper surface considerably lighter colored, head and neck of males including the neck-tufts strongly suffused with cinnamon rufous. Size smaller.

Geographical Range.—Gulf coast of Texas and Louisiana.

Type Adult Male.—U. S. National Museum, No. 128,480, Refugio Co., Texas, March 27, 1893. Dimensions: Length, 15.00; wing, 8.10; tail, 3.00; bill from nasal groove, 0.50; tarsus, 2.15; middle toe without claw 1.75in.

Type Adult Female.—U. S. National Museum, No. 128,481, Aransas Co., Texas, April 25, 1893. Dimensions: Length, 13.75; wing, 8.00; tail, 2.95; bill from nasal groove, 0.48; tarsus, 2.00; middle toe without claw, 1.65in.

Collector.—H. P. Attwater, after whom I have named the species. CHAS. E. BENDIRE.

The Name Jaguar.

SEWARD, Neb., May 7.—Editor Forest and Stream: In reply to "Aztec's" inquiry in the FOREST AND STREAM of April 27, I beg to say that the jaguar is the Europeanized form of the Guarani word *yaguaret*, which means big dog (or big wolf). The *Canis azarac* is called *yaguaragazu* in Guarani. The word came to us through the Spanish missionaries to the Upper Parana country. All Spanish-Americans call the jaguar *tigre*, as also the puma *leone*, a pardonable vanity, for has not every country also its "Switzerland." AUGUST ROGY.

It was a Celebrated Case.

THE New York game protector, Mr. Willett Kidd, and the FOREST AND STREAM periodical are to be congratulated on the successful result of their endeavors to enforce the game protection law of the State against the restaurateur Delmonico, of New York city. For having in his possession eighteen woodcock killed out of season Delmonico has been compelled to pay a fine of \$35 apiece—total, \$450. This result was only attained after persevering efforts, prolonged through many months. The delay was due to the culpable neglect of Prosecuting-Attorney Nicoll, of New York, who would have permitted the culprit to escape had it not been for the interest of Judge McCarthy, who took up the case himself. We trust that the game and fish laws of all the States may be enforced as effectually, and a great deal more promptly.—American Naturalist for May.

AMONG the "Nesmuk" fund credits that of Mr. John W. Hutchinson should have assigned that gentleman to Brooklyn, N. Y., not to Brookline, Mass.

WINTER HOME OF GAME.

LAKE BARROWS, April 18.—*Editor Forest and Stream:* It is generally believed that the higher the altitude in the mountains the more snow there will be in the winter and the more severe the weather. I have camped for the greater part of two winters above what is called the Big Bend of Green River, near its headwaters. Between the bend—up the river—and the first lake there is a strip of open country on or near the river which is 10 or 12 miles long and from 3 to 5 wide. Here large game, such as elk and deer, remains every winter—and this season a small bunch of antelope had the impudence to try it—while from the bend down the river, for 20 or 25 miles, it is almost impossible for any animals to remain on account of snow. At the lake the altitude is 8,000ft., and when the snow is from 15 to 18in. deep on the ground there it is from 3 to 3½ft. deep 18 or 20 miles below.

When you stand at the lake you can look up and plainly see the country above timber line on three sides of your position. That country you can reach in one or two hours good climbing, though it may take you a little longer if the day is warm. Now, how is it that a locality so high up in the mountains is so much more favorable to game in winter than neighboring sections which are lower down?

In order to prove that game has not suffered for want of feed this winter, I shot and killed a mountain sheep on March 10. Its kidneys were entirely covered with tallow, and its hams and ribs were fat enough for any one to eat.

The sheep range above timber line most of the time, but some days when I am out I see, feeding near together and low down, elk, deer and sheep. They look full and contented.

One day last February I worked my way on snowshoes above timber line and found there a bunch of about fifty elk, cows and calves. I was greatly surprised to see them, and they seemed equally so at my appearance. The mountains near by were quite bald, and the wind blows great gusts most of the time and sweeps the snow off acres of ground, leaving a short, thick grass exposed. The elk appear to think that the sheep were not going to get all of this. If the climate satisfied them, it did not me, and I was not long in coming down from these heights.

I have been waiting for the bear to wake up, but April has been pretty cold so far, and they seem to be over-sleeping themselves. This locality is a few miles north of where Mr. Ira Dodge had his bear fight last November, of which he gave an account some time after in *FOREST AND STREAM*. I saw in one of the March issues of *FOREST AND STREAM* that Mr. Dodge refers to his fight again, and threatens to retaliate on the grizzly kings of the mountains; but when he claims that he will do it with that little 6-pound gun he left standing against the fir tree, I am afraid he will himself get left at a fir tree or some other tree. The gun that would serve me such a trick as that I would have no further use for. Fighting a grizzly in reality is not much fun sometimes. You have to do some tall thinking when he comes your way with blood in his eye, and you have to do it quickly. MOUNTAINEER.

[It is not easy to explain why the snow lies deeper in one place than it does in the other. The exposure, the width of the valley, its direction or a dozen other conditions might cause the snow to accumulate lower down. Our correspondent himself states that the high bald hills are swept bare by the winds. This snow must go somewhere. Is it piled up in the valley lower down the stream?]

ON A SYCAMORE ROOT.

I WONDER if readers of *FOREST AND STREAM* ever think of the Indian Territory as a game country. The best part for hunters of all kinds of game is the central portion. Oklahoma on the west, settling up so rapidly, has driven the game back east toward the M. K. & T. R. R., thus making the western part of the Creek Nation a capital region for shooters of fowl and larger game. Shall I tell you of the great bags of prairie chicken, quail, ducks and turkeys? No. I will speak of them some other time, and instead will tell you of a panther hunt which occurred not long ago.

One evening I went after quail in the little glades and brush patches on a large creek, a tributary of the Canadian River. I had fairly good sport and had quite a large bag (quail being in abundance here) when the sun began to sink in the distant treetops, but being like all other shooters, I suppose, I could not go so long as it was light enough to shoot.

I was standing in a little glade, with my gun in readiness, while my dog (a large English pointer) was beating out the edges of the brush for scattered quail. Just as the dog was passing on the lower side of the glade, which was between me and the dense heavy timber of a deep bottom beyond, I heard a screech or yell over in the bottom, not 200yds. away, which I would have taken to be the hoot of a great owl had it not been for the dog. He was hunting intently when he heard the outcry but stopped short, with his hindquarters dropping down in the grass and head raised, snuffing the air as if in doubt whence the sound came. Again that peculiar cry came on the still evening air, re-echoing through the bottom and glades. That settled it for the dog. He left that side of the glade and came creeping toward me, turning his head from side to side to sniff and look back. When he got to where I stood he turned about and sat down, looking first into the bottom and then up into my face as if to ask an explanation. I reached down and patted him and spoke to him, which seemed to re-assure him somewhat, but he did not offer to move out again.

Slipping a heavy charge of buckshot in the left barrel alongside a charge of eights in the other barrel, I went into another glade higher up to see if I might not get another bird. But it was of no use. That dog would not go six feet away from me, although he is a keen hunter. Shouldering my gun, I started for the ranch house, and the dog, walking a little in advance, kept continually looking behind us.

I never like to be the first to start a panther scare, so I

said nothing to the folks at the house about my adventure until one of the boys, who had been turkey hunting, reported panther tracks in the bottom not a half-mile from the house. Then I told them of my adventure, and just as we were speculating concerning it, an Indian came in and said he had seen a "posee lonnee" (big yellow cat) as he came through the bottom.

A hunt was immediately planned, and Winchester, six-shooters and shotguns were put in good working trim. A hog was killed and dressed, the liver and lights carefully wrapped up and put by till evening.

After a hearty supper that evening men, dogs and horses were gathered at the ford of the creek. After a consultation it was agreed to send two Indians about a mile up the creek with the hog liver and drag it down the bottom to a point about two miles below the ford. The hunters were stationed along the track or line where the liver was to be dragged to watch for the big cat, which, when he got a scent of the bloody liver, would very naturally follow the track of it. The dogs and mounted men were stationed on a point about midway of the drag to be in readiness to charge to the signal at any point along the line. It was understood that when the beast was sighted it was to be fired upon and the Muskegee war-whoop sounded, and that would be the signal for a charge by the mounted men, dogs and hunters to that point.

I had first choice of positions because I had been the first to discover the presence of the panther in the vicinity, so selecting a point where the creek ran near the bluff I seated myself as comfortably as possible and prepared to watch. Pretty soon the Indians came past my stand dragging the bait or liver.

As soon as the rustle of their feet in the dry leaves died away in the distance down the bottom a feeling of loneliness and an indescribable dread took possession of me, and I almost wished I had not selected so good a place to see a panther. The stars shone over the top of the cliff with a cold metallic glitter, the advancing night grew colder, and with every sense painfully on the alert, the stillness, unbroken save by the sounds common in a deep bottom on a still, frosty night, became horribly oppressive.

Sitting there, at the roof of a huge sycamore, with gun across knee, I began while the time away by imagining all sorts of shadowy, indistinct forms in the bottom around me. While thus engaged I bethought myself to look back on my right when, ugh, there was a great yellowish bulk crouching not ten yards away!

How in the world such a large creature could creep up so near without so much as cracking a twig or stirring a leaf is more than I can tell.

All my blood seemed to settle right down and stop. But for a fleeting moment only. With a convulsive movement gun came to shoulder, and both barrels of the heavy piece went with a lurid blaze in the darkness, and a crashing report which reverberated, echoed and rebounded along the beetling cliffs for miles up and down the deep bottom.

Springing to my feet I let a yell out of me that, stimulated by fear and triumph all at once, would have done credit to any Indian in the territory. It brought the rest of the hunt about me, almost before I had time to reload my gun and examine my victim.

But when the dogs and the rest of the party came up there was nothing more to be done. I had by a lucky shot literally blown the head off the savage midnight prowler.

BAR LOCK.

NOTABLE SHOTS.—XI.

EASTON, Md.—Several years ago my neighbor, Capt. M., and I were shooting partridges (quail). We had flushed a covey that scattered along the edge of a wood. There was a thicket of saplings and undergrowth along the field before coming to the large timber, and the birds had pitched in this undergrowth. We approached the edge some 40yds. apart, following different birds we had marked down. My dogs overran a bird in front of me that rose out of shot and flew to my left along the top of the undergrowth. An instant after, Capt. M., who was on my left, flushed a bird that flew straight from him toward the large timber. This bird he shot at but missed and, without knowing it, killed the bird that rose in front of me. His dog did not retrieve, so I walked up to him and ordered my dog to "fetch dead." M. remarked, "You need not send your dog in for I missed that bird." I replied, "I know you did, but nevertheless you killed a bird." He had to believe it as the dog soon brought the bird to me, but he could not understand how it happened until I explained that the bird that rose in front of me had intersected the line of flight of his bird almost at right angles at the moment he fired. Taking all the circumstances of the case it was the most remarkable shot I can remember in a long experience in shooting.

SINK-BOAT.

LINDENVILLE, O., May 3.—In reading under "Notable Shots" in *FOREST AND STREAM* of April 6, I see an account of two deer being killed at one shot. That reminds me of a shot I made in Otsego county, Mich., in '87. After crossing a cedar swamp one day I sat down on a log to watch a runway. After sitting about five minutes I heard a noise back of me, and on turning around saw three deer about 100yds. off coming toward me. When they were about 50yds. from me a large doe which was in the lead stopped, and the second, which was a yearling doe, walked up on the opposite side of the first and stopped when its head was about the middle of the first one's neck. The third deer, a fawn, stopped about three rods behind the first two. I raised my .45 Winchester to my shoulder and shot. The bullet struck the first in the neck—breaking it, and then striking the second went through its shoulders and down they both went without making a jump. Throwing in another cartridge I held it on the two that were down for fear one or both might jump up. While in this position the third came running in between us, and I think I could have shot that if I tried. After waiting a few moments I went up to them and found them both dead.

K. D.

MANCHESTER, Iowa.—Speaking of notable shots, one day out duck shooting this spring, and when I was going round a large marshy pond, I flushed three jack snipe in very heavy grass. I fired one barrel, and to my surprise dropped all three snipe. I had three drams of Schultze powder and one ounce of No. 8 shot.

H. S. T.

VENTURA, Cal., April 27.—Speaking of notable shots, I

was hunting deer in the foothills several years ago. While resting on my way to camp I noticed a flock of California quail feeding in an open spot of loose gravel some 200yds. down the trail. Thinking to give them a fright I fired a ball from my rifle into the midst of them. Three of the birds were left fluttering on the ground, and upon picking them up I found that not one of them had been hit by the ball. Evidently they all had died from a sudden attack of "gravel."

A. J. C.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Between Seasons.

CHICAGO, Ill., May 6.—There is some slight indication that a thaw may set in here by August if we have luck, but the unfavorable weather has kept every one indoors for the past week. Two weeks more and the fishing for '93 should begin. The waters all over this section continue very high. We are between the seasons now.

One of the most fortunate of our snipe shooters this season was Mr. Frank E. Lawrence, who bagged eighty jacks at Wilcox's, four miles this side of Koutts. This, however, was earlier. The birds are gone now, or so far along in their mating that few would care to shoot them so late.

One Does Not Equal Three.

Gradually I have personally come to believe that one ought not to shoot ducks in the spring. That is also the belief of *FOREST AND STREAM*, though that paper is catholic, and not rabidly intolerant in its positions. For that erratic, depraved and unprincipled bird, the jacksnipe, I confess my sympathy is more reluctant, but when you come to figure it all out, the principle of shooting snipe in the spring is much the same as that of shooting ducks in the spring—indeed, Warden Bortree thinks it is exactly the same. On the whole, I believe I will not go out after snipe next spring. Some one else can have my snipe, and if it be true, as the great American logicians have it, that some one will kill anyhow all the birds I don't kill. The truth or reasonableness of this supposition I really cannot see, but whether it be true or not, I'm going to chance it, and let my birds go for my logical friends to kill.

Of course, everybody really knows that it is all nonsense to say that "Some one else will kill them if we don't." Everybody knows it is nonsense. There is a crooked streak in human nature, whereby a fellow loves wondrous to try to fool himself—he can't really fool himself and it would be the poorest business in the world for him if he could, but he loves to try to fool himself and finds, oh! so easily, excuses for doing just what he wants to do. Now let us see. Suppose I stop shooting ducks and snipe in the spring and say so out loud. My voice is no more important than any one's else and I don't know any more about these things than anybody else. Yet it is almost a certainty that somewhere, among my acquaintances or out of my circle, either to my knowledge or without my knowledge, there will be some one person who will follow an example even so humble and unpretentious as my own. There will be some one, out of all the world full of men, who will stop shooting in the spring because I do.

Now, this unknown friend of mine, who after a while is going to come and stand by my side, has just as many friends as I have, and probably a good many more. Out of all his friends there will be one who will come up and stand by his side. I beg my first friend, the great American logician, to note that there are three of us now and not one. By the terms of his proposition, he must kill not only all the snipe I don't kill, but all those which all three of us don't kill. I don't believe he's going to do it. I don't believe that one is equal to three or to the multiples of three, to which an intelligent movement might finally amount. I don't believe the great American logician is going to believe, either, that one is the equal of three, and I just take this method of trying to make it harder for him to fool himself, as he does when he says that the way to keep birds alive is to shoot them.

But, it may be said, there is no certainty that my convert is going to materialize. Oh, yes, he is. He will appear. I know how this is, by my own case. For a long time I have had an uneasy conscience about shooting in the spring. Since I have been connected with *FOREST AND STREAM* I have shot ducks in the spring, though not for a long time now. I never knowingly have violated a State law, but even this spring I have broken down the belief of my own conscience as to natural law, and have gone gunning after that ancient enemy, the jacksnipe, killing in all about a dozen, I believe. In short, although a widening knowledge of the game supply of the country taught me that the game birds of all kinds are passing swiftly away forever, and although I presume I am as open to conviction as the average man, I never did yield to the bare logic and plain good sense of the situation, and let go of my gun very reluctantly. Of course, I wouldn't shoot snipe and try to cover up the fact, and I wouldn't do one thing and pretend to do another. That seems to me a very unmanly form of spring shooting, or of any other delinquency. On the whole, though I knew the facts well enough, I don't, but I would have shot some snipe next spring, if I had luck, had I not received a personal letter, directed not against my actual shortcomings, but those of my friends. A little thing sometimes sets one thinking. This letter happened to come from Mr. Thos. Johnson, of Winnipeg, Manitoba. For the purposes here, it doesn't make any difference who it came from, or might have come from. It reads as follows:

MAY 2, 1893.—My Dear Sir: I first intended to bluntly leave out any friendly heading and say "Hough, I am ashamed of you!" This remark would have been occasioned by reading your "heavy flight" story in the issue of *FOREST AND STREAM* of April 27. You are bewailing the fate of some friends of yours who could not keep on slaughtering snipe, in consequence of heavy weather. If I had the power I would express a Manitoba blizzard to you every day to protect the snipe from the spring shooter. "Wretched blizzard," you say. "Glorious blizzard," say I. I have only one wish, and it is this: Whenever the spring shooter goes out after any kind of game birds that are just preparing to multiply, I hope a blizzard will appear and make his fingers so numb that they cannot pull the trigger.

I'll forgive you this time, but for the sake of true sportsmanship, never again uphold spring shooting.

There are two ways of taking a letter like that. I could receive as many will receive this open letter of mine, and say: "It is none of your blame business, Mr. Johnson, you lemme alone;" or I could sit down and do a little thinking of a sort more direct than that inspired by the generalities of right, and logic and good sense. I preferred to take that letter in the latter way. The same choice offers to any reader of this letter, which I

have written solely because I got the other. Most of the readers will say, "It is none of your business;" but I reason by analogy that, as I put up my spring gun on account of a letter, at least one of my friends is going to put up his gun on account of my letter, and in turn, one of his friends is going to do the same thing.

Let my friend, the great American logician, take note that there are now not three of us, but four. We don't think we know it all, and we don't insist on recruits, but we don't believe our friend is going to kill 100 snipe just because we refrain from killing 20 each. He can't kill all our birds, that's nonsense. Some few of them will wiggle through and get north, and breed and increase and come back with families.

This army grew from one to four since I sat down to write. I know it, I am sure of it. Even though it be a silent army, why should we not wish and hope to see it grow, fourfold, and again fourfold, and many times fourfold? Let us be honest, let us remember that the most pitiful of all dishonesty is when a fellow tries to fool himself. Now, what we know is this: It does not protect a bird to kill it, and some one else is not going to kill the birds that we don't kill.

An Interesting Suit.

May 12.—The Chicago *Inter-Ocean*, of May 10, has the following telegram in reference to the Tolleston Club, one of the wealthiest and best known sportsmen's organizations of Chicago:

CROWN POINT, Ind., May 9.—Green B. Smith, Attorney General of Indiana, and Thomas S. Wood, a prominent attorney of this city, have begun a suit against the Tolleston Club of Chicago, and divers other parties, to recover about 4,000 acres of land on the Little Calumet River, in Lake county. The State claims that it has never sold this land, while the defendants claim the land as riparian proprietors. The case was set down for trial yesterday and the State was ready for trial, but the defendants obtained a change of venue, and the case will be pressed for trial by the State's attorneys for the June term of the Porter county Circuit Court.

The Tolleston is a Chicago club, with holdings in Indiana. In this it is in the same category with such clubs as the Mak-saw-ba, English Lake and others. Should this case go against the Tollestons, similar suits could be brought against the other clubs located on what are known as the meandered lands, and the title of the latter could be sent meandering. The Tolleston Club, however, is a hard fighter, and usually knows what it is about. The lower Indiana clubs need have no uneasiness for a while yet at least. The Tolleston Club has won more hard legal battles as to the rights of sportsmen and sporting preserves than all the other clubs of Chicago together. It will win this one, or go far with it. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Three and Five Year Close Times.

HUNTINGTON, W. Va.—*Editor Forest and Stream*: I have just read the correspondence of "Juniata" in your April 27 number, which expresses the opinion I have long held in regard to prohibiting the pursuit of game, especially quail, for a successive number of years. I have just heard that Ohio has passed a law preventing shooting quail for five years. The cold winter, doubtless, furnished an excuse for a certain class who do not care to shoot and who do not want any one else to, to have a law as mentioned above. Last fall quail were scarce here, owing, I really believe, to the excessive heat of the previous summer, which destroyed the germ of the egg. But, notwithstanding the severe winter we have had, I would be willing to wager a ten dollar bill if I were a betting man, that there will be more quail next fall than there were last season if the coming summer should not be excessively hot. I saw a vigorous covey of quail lately just outside the city. People seem to be wonderfully scared about the mortality of birds as a result of cold weather, but really their imagination has more to do with the matter than their observation or their reason.

Now, particularly, about the laws of which "Juniata" speaks, I assert that prohibition of shooting quail for a number of years in succession is not only unreasonable but an imposition. Suppose by the prohibition that quail should become five times as numerous, what then? At the end of that time all the hunters would be at fever heat, and as a result of their long pent-up enthusiasm there would be a slaughter of the birds commensurate with the long delay the sportsmen had necessarily suffered, and the number of birds would be brought down to where it was before. Law makers, put this fact in your pipes and smoke it. If, as the laws were in Pennsylvania and Ohio, there was any likelihood whatever that quail would become extinct, there might be an excuse for prohibiting shooting for a successive number of years, but with the shooting season short and the laws regarded it is foolishness to suppose the prolific quail will be "played out" if shooting is allowed once every year. Let there be game associations to prevent trapping and shooting out of season, and let the people be educated to righteous principles so that men will scorn to pull a trigger or cast a line unlawfully; then no man could complain of an insufficient amount of game from year to year. One great decimator of the quail is the mowing machine. I close by reiterating that the three and five year law is not only unnecessary, but most unreasonable. Those who make that law think they know, but they don't know. N. D. E.

Snap Shooting in Cover.

OGONTZ, O.—I am an old man, and my shooting days are nearly done. I keep two guns, one a full choke and the other a cylinder. If I could combine the good qualities as occasion demands in mixed shooting the gun so secured would be a prodigy. I am a snap shot when the occasion demands, and am as sure of my game as though I had any amount of time to sight. However, that is an acquisition that comes to one with many years of practice. In a 12-gauge open shooter I use 3½ drs. powder and a scant ounce of shot, No. 8 or 9, and if a bird gets up I shoot if I see him without looking at my gun unless I have time to do so. In cover shooting we see our game at close range or not at all. It is perhaps no great performance, but in my last eight shots at ruffed grouse I got 7. I think sportsmen would get better results with good open shooting guns and less ammunition than is to-day practicable with their full chokes and so much waste of powder and shot and so much hard kicking. I have shot all sorts of charges and all kinds of shoulder guns, and must admit that enough is enough and too much is superfluous. I fear the quail were greatly decimated by the extreme cold weather in this vicinity. M. M. B.

The Colorado "Good" Food Law.

DENVER, Col., May 8.—*Editor Forest and Stream*: I notice in your issue of April 27 reference to a change of the word "food" to "good" in the new game law of Colorado. Such an error is unfortunate, for it may occasion contention, although I do not think it possible to destroy the efficiency of the statute by such a change. The section is as follows:

Section 12. No person shall kill, wound, ensnare, trap or have in possession any deer, elk or antelope or parts thereof within this State for any purpose whatever at any time, except that those deer, antelope and elk which have horns may be killed and had in possession between Aug. 1 and Nov. 1 of the same year for good purposes only, and then when necessary for immediate use, governed in amount and quality by the reasonable necessity of the person or persons killing the same. * * *

The section prohibits the killing of deer, elk and antelope, or the having the same in possession. Then an exception is made. That is that those animals having horns (that is, adult males) may be killed and had in possession between Aug. 1 and Nov. 1 of the same year for "good" purposes only. Undoubtedly the intention was to confine such killing and possession to the personal use (for food) of the party killing the same, and I do not think the substitution of the word "good" for "food" can materially change the meaning of the statute, for all parts of the section must be considered in connection with the word "good." It is apparent from what follows the word "good" that it was only intended to except from the general prohibition against killing enough game of a certain character to meet the personal wants of the parties killing the same.

Public sentiment will not tolerate the slaughter of game in Colorado, and if the pot-hunters spent their time and money and got nothing better than a substitution of the word "good" for "food," I am confident that their money and time was illy spent, and I am confident that game will receive reasonable protection under the new law. H. M. TELLER.

A Small-Bore Cartridge.

NEW HAVEN, Conn.—I believe the time has come to introduce a new small-bore cartridge which will more effectively bring out the possibilities to be attained by such an arm. It is generally conceded that the bottle-shaped cartridge has no advantages whatever over the straight shell, while it possesses many positive disadvantages to the practical rifleman who wishes to use a combination of bullets and charges in the same shell.

With this end in view I have just completed a model .25cal. shell which I believe will be the most powerful and satisfactory cartridge of that caliber yet made in this country, and inclose a scale drawing and description of same. It is intended to supersede the 20grs. bottle shell, which is the only one now in use of that charge.

It will have a proportion of about 1 to 3½ and 4 accord-

The new cal. .25-25-100 c. f. cartridge, made expressly for the rifle. Shell 2½ in. long, straight, using the 56grs. and 96grs. bullet (ideal molds) and 25grs. Fg. Hazard powder (ideal charges). Also a round ball with light charge. Specially adapted to both hunting and target practice.

ing to the bullet used. The heavier bullet will be a very steady-shooting one at long range, while the lighter one will give a high velocity and exceedingly low trajectory for hunting purposes.

I understand that it was originally intended to have the .25cal. shell made straight, and that it was changed to bottle-shape for the convenience of the manufacturers and not because such was desired by rifleman.

I have been told that it is no use for a cartridge company to make this new shell because there are no rifles to use it. This is quite true. But what rifle company will now be the first to chamber their .25cal. arms for this shell? W. L. CARPENTER.

It Is the Law in Some States.

EASTON, Md.—*Editor Forest and Stream*: Why would it not be a good amendment to our laws setting a close time for upland game to add a provision that if any one is found in the woods or field with dog and gun, or with gun alone, going through the motions of hunting, that it shall be *prima-facie* evidence that he was violating the game law in regard to close time.

In this section, although a good deal of shooting is done in violation of law, it is exceedingly hard to get evidence to convict. One may see a person hunting for partridges with dog in field and all the paraphernalia for bird shooting, but if you do not see him shoot or shoot at a bird you can do nothing. Now if the above proposed section, or something like it, were in force, you would be enabled to get out a warrant and make the party prove that he was not violating the close law. The mere fact of the power to arrest would act as a preventive.

I hope that you will not let the non-resident law subject drop. SINK BOAT.

Quail in Northern New York.

PORT HENRY, N. Y., May 8.—We have seen three large bevs this spring of the quail left over from last fall, being some hatched out last year from those that I turned down a year ago. Have not looked for them, so there may be more that have withstood the rigors of the northern climate. This is quite remarkable, when one sees the account of so many quail being winter-killed in the South, and stranger still one of these bevs I did not know about, and they hustled for themselves for food. W. C. W.

Massachusetts Quail.

MR. J. A. EWELL, of Centre Marshfield, informs his friend and gunning mate, Mr. L. W. DePass, assistant secretary of the Boston Chamber of Commerce, that he has seen five coveys of quail since the snow went off this spring. The biggest one seen had some eighteen birds in it. SPECIAL.

Vermont Deer, Pheasant and Quail.

RUTLAND, Vt., May 9.—Three deer were recently seen in the town of Lincoln near the village. The law protecting them until 1900 promises to stock the State very

thoroughly, as they appear to be increasing very rapidly and are reported to be very tame. Some of the quail mentioned in your paper last fall as being seen near the town of Bristol survived the extreme winter and are still seen in that vicinity.

The pheasant which were introduced by Dr. Webb at Shelburne have become quite common about Bristol. There is a close season on these birds for three years.

The new fish and game law seems to be very acceptable to most every one, although an occasional objection is raised to the close season on black bass, which was extended to June 15. Those who know the habits of the bass, however, are pleased with the new law. WHEELOCK.

Wants to Know What He Is.

I AM a comparatively poor man financially and have to work hard to earn my living. During the fall of the year when it is possible for me to get away from work for a day, I take a gun and go out for a shot at a partridge or woodcock. I have no dog; can't afford one. Now, what I want to know is this: Am I sportsman, sport or pot-hunter? Probably on account of my not being overstocked with this world's goods and having to flush my own birds, the cry will again be—pot-hunter. STRAWBERRY BANK.

The End of the Capercailzie.

WESTERLY, R. I., May 14.—*Editor Forest and Stream*: The pair of capercailzie received last week by Hon. D. F. Stillman have died, and on examination the birds were found in very poor condition and completely covered with lice. The male weighed 6½ lbs. and female 3½ lbs. Rather a discouraging ending of so commendable a project, and I hope the gentleman will not be so discouraged as to abandon the idea of introducing this wonderful bird. L.

Sea and River Fishing.

PROPERTY RIGHTS IN TROUT.

Editor Forest and Stream:

We are much interested in the trout question down here on Cape Cod, although thus far the fastidious fellows for the most part refuse to be interviewed on the ridiculous plea of high water and cold weather. We are interested, I say in the question of allowing breeders to sell their bred during the close season for wild trout. Your arguments against any concessions are all sound, and for the time being in the interest alike of trout and trouters.

In considering the question, however, it is essential to have an eye to the future. Trout breeding establishments are rare in the country at large. Probably Long Island is the most densely populated of any neighborhood in that respect. They are, however, destined to increase in numbers as time goes on, and eventually there will be enough breeders interested to create a lobby and bring influence to bear. In other words, there is a question of individual right in this matter that will sooner or later make itself heard.

The argument of the artificial breeders is not without force. If I dig a pond in my dooryard and breed trout therein they are just as much private live stock as are the problematical chickens in my wife's prospective hen house. I am strongly of the opinion that should I carry the case to the United States Supreme Court it would decide that I have a constitutional right to sell whenever my pupils are in a marketable condition (my friend, the school teacher, says that this use of "pupils" is incorrect, but I hold it to be right, inferentially at least, else why do all the dictionaries give "school of fish" as good idiomatic English?)

Now had not we better take time by the forelock and contrive a plan whereby artificially raised trout may be marketed whenever they are "in condition," rather than fight what may very likely prove a losing battle in the end.

Close seasons are very properly defined, with a wide margin in favor of the game to be protected. If people would fish with some degree of moderation, the open season for trout might be extended in both directions. But they won't! The artificial breeder, on the contrary, is bound by his own interests not to abuse his privileges. He will kill only as many trout as can be spared without curtailing the natural increase, and it certainly seems rather hard if he may not do what he will with his own. Furthermore, if a plan can be devised for the marketing of artificially raised trout before the open season begins, there would be less inducement perhaps for the pot fisherman to make a clean sweep of the streams for market purposes after the season opens.

I would suggest some such plan as this: Let the State place a light stamp duty upon all trout sold during the close season. The stamps could be sold in sheets like postage and revenue stamps, and affixed as wanted to tags bearing the breeder's name and address. Each stamp could be canceled by the breeder's signature or rubber stamp, with date and hour if desired. The tag could be wired to the trout as soon as taken from the water or as soon thereafter as seemed good to the breeder.

Poachers could of course have tags printed and buy stamps if they choose to do so, but they would not choose to any great extent, and if they did would be extremely likely to come to grief in short order.

Now, Mr. Editor, if you know your business you will be able to point out the weak points in this scheme. I have purposely left a few for you to exercise your ingenuity upon. My object is to suggest a possible way of reconciling what seems a legitimate and reasonable property right with the true interests of sportsmen.

SANDWICH, MASS., April 21.

CHAS. LEDYARD NORTON.

Wisconsin Muscallonge.

THREE LAKES, Wis., May 9.—I caught on May 8 two muscallonge, weight 1½ lbs. and 27½ lbs., and seventy-nine pike, weight of largest 8½ lbs. Fishing will be good from this out; water high, but lowering fast. F. R. F.

FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

II.

Exhibit of the U. S. Fish Commission.

THIS minute description of the fish exhibit of the United States Fish Commission is from personal observation. Much care and thought have been exercised in getting all the details correct.

Therewith was some anxiety of a personal nature caused by the immemorial prejudice which the public displays toward those who are not considered experts in any specialty involving publicity. Fishermen are particularly opposed to those who by force of arms as it were, break into their time-honored guild or its literature. It is particularly distasteful to them when a writer on dogs suddenly switches off to writing on fish, without any shadow cast before to herald the coming event. This prejudice, however, is most inconsiderate and unjust—inconsiderate since it is absurd to assume that because a man writes a long time about one thing he can not write a short time about some other thing; and unjust, since it bars a man in a manner from participating in the practical and ideal pleasures of the sport. Because a man is a sailor, must he perforce know nothing of dry land? Because a writer is eternally sounding the praises of the peaceful and harmonious fraternity of dog fanciers and dogs, does that bar a knowledge of fish? Yet the caste lines—if I may so use the term—are nowhere drawn sharper than about the noble society of fishermen, who are supposed to be the soul of *bonhomie* and altruistic tendency.

To narrow all this now to a personal application to my own case, at some risk of crossing the boundary of tolerated egotism, I have the honor of having been accused of being a dog man, or kennel writer, and a few times I have been playfully referred to as a kennel editor, but nevertheless I have some knowledge of fish—yes, more, I have caught fish; big ones they were too; caught in the conventional high-art, rod-and-reel manner, although some spectator said, in moments of persiflage, that my style of fishing is remarkably *sui generis*. My success, the result of skill, has always been ascribed to luck. This brief explanation is intended to set the wise reader aright at the outset.

The U. S. exhibit is in a pavilion close to the main Fisheries Building and connected therewith by a piece of airy architecture. In the pavilion there are two rows of tanks, one following in the inner circle of the wall, the other forming by itself an inside circle of tanks, a roomy passageway between the two affording room for spectators. In the middle of the building in the space inclosed by the inner circle of tanks is a fountain. The exhibit is said to be one of the best, if not the best one of fresh-water fish ever shown in this country. To the public, it is a most interesting attraction. The pavilion is constantly crowded with enthusiastic ladies and gentlemen, from morn till night.

The clear plate glass which forms the sides of the tanks renders visible the domestic and work-a-day life of the fish. Gravel bottoms, rough rocks here and there loosely thrown together, and artificial caverns make resting and hiding places for the fish, imitating in a manner their homes in their native waters.

Air is injected, or projected or forced into the water through pipes to aerate it. It is not commonly known that water is full of wind. The fish, by their peculiar manner of breathing, that is by sifting the water through their gills, thus separating the air from it, leave it oxygenless, which then is fatal to fish life.

Many of the fish had a false membrane growing on their heads and sides, which I heard a fisherman say was technically called mildew, a sort of fungus which comes from dampness and darkness. But this fungus is rapidly disappearing, and the fish will all be soon in good coat.

There was variety enough to please a Waltonian Munchausen. Croakers, spotfish, lady-crabfish, white perch-fish, swellfish, toadfish, lobsterfish, king-crabfish, burfish, tomcod, tautog, rock sturgeon, shovel-nosed sturgeon, paddlefish, lake trout, rainbow trout, black croppie, yellow perch, brook trout, tench, large and small-mouth black bass, white bass, red-eyed bream, burbot, eel, long-nosed gar, catfish, mountain trout, sucker, pike, river carp, dogfish, pickerel, goldfish, sand pike, pike-perch, sheephead, golden ide, blue sunfish, Van Behr trout, Loch Leven trout, scale carp, mirror carp, etc., were in abundance.

A brief description of a few of the most prominent classes will be interesting to those who are deprived of the happiness of gazing on them. Nearly all the classes were well filled. To the right of the main entrance in the first stall, or, as it is called, tank, were some sea anemones. A gentleman who was explaining matters to a lovely lady who accompanied him, told her very earnestly, as they admired these fish flowers, that they were an-e-mones.

The next tank, according to the label thereon, contained spot, and which, by the same token, are found from Cape Cod to Texas. Found presumably in the water. In size, they closely approximate to common inland fish. In color, they have a delicate tinge of corn-green, set off with delicate zebra markings, which I presume gave rise to the name of spot.

One tank was empty, I thought it could have been profitably utilized by placing therein some finnin haddie. It would thus have been an object lesson. This strong fish in his native element has no peer. It is remarkable

what little knowledge of this fish is possessed by fishermen. I never heard of anybody catching one. I asked a friend to tell me where the finnin haddie habitated, and he said the finnin haddie was found in Finland. I presume this is so, for their diet is foreign and gives them a very smoky flavor when they are cooked.

The croakers had a stall to themselves, excepting the presence of some rheumatic crabs which walked uncertainly on the bottom. I was not quite sure of the classification of the croaker, so I asked the Deacon what kind of fish it was. He promptly replied: "It's a low down, half bred sort 'r fish; 'taint much good." That settles the croakers.

The white perch were a sorry class. All lacked depth of chest, and are cobby in build. They are intensely gregarious. They inhabit certain districts, while other districts are not inhabited by them. In Chicago restaur-

DR. JAMES A. HENSHALL.

In Charge Angling Pavilion, Fisheries Building.

rants they fill a long felt want. A light loin and short, thick neck are grave faults, and should be bred out as soon as possible.

A big fish, about a 4-pounder, easily good for a 10-pounder if caught by hook and line, was labeled a small fish. He was probably in the challenge class and had a walkover. He was out of coat, loaded in the shoulders and carried a low nose.

Some toadfish and round clams occupied one tank. Their animation was about alike. However, the toadfish has a most benign expression, though the face is heavily wrinkled and careworn. The face, moreover, is too cheeky for beauty, and the head is set on the body without any intervention of neck. The back is very short, and the body is hardly large enough to furnish nourishment to so large a head. Some of these fish had a rough, undressed skin which would be greatly benefitted by some of the mange cures advertised in our columns.

One stall furnished a home for some unhealthy lobsters. They were active enough and had a most truculent expression, but their color was a bilious green, and not at all like the bright red of the lobster in good health. There were some precarious crabs watching the lobsters with unpleasant eye.

One tank was alive with dozens of beautiful lake trout two years old. They appeared to be from 6 to 10 in. in length. The class was a sorry one of speckled butes. The skin was neatly fitted to the person of each and covered evenly with polka dots. A time-honored fable of the trout's shyness was there refuted. Trout are not at all shy. Those trout would, dozens at a time, place their noses against the glass and gaze at the public much in the same manner as a crowd of polite American citizens will swarm around a strange Arab, on a street of Chicago, and gaze at him in wild-eyed wonder. A tank full of puppy trout, tiny fellows, showed that they would in time be larger.

But the beautiful bur fish, the cobby fellow in black and gold stripes, the pug dog of the fish family, the greyhound of the ocean. Sharp-lined bars of yellow and blue run bias around his finely curved bust and waist. The skin has a loosely-woven silk yarn finish, with cater-

pillar spines sticking about its person as it happeneth. Two large black spots placed back of the shoulders and on the flank relieve it from being spotless. The flatness of chest is offset by great spring of ribs back of the shoulders. The nose is short, skull full without any excessive occipital development, and there is no throatiness. Head not well chiseled under eye. The eyes are set wide apart, show some haw and have a watery look. The mouth is not ornamental. This class appears to be in the toy division. It was deficient in tan markings. The shoulder fins and rib fins were well carried.

Yellow perch were well represented. They have been frequently described in previous reports.

The tench has a most repellent expression, due to a preponderance of head, which is occupied largely by a curved mouth. Of course, a smaller head could not hold so large a mouth, thus nature shows it never makes a mistake. This fish has three sets of rowers or fins in a row on each side. These fins are technically called the epigastric fins, the hypogastric fins and the umbilical fins. The steering fin is placed on the end of the spinal column. Each fish are eligible to listing in *Kennel Gazette* on payment of twenty-five cents.

One tank or stall contained large and small-mouthed black bass and bream. Some of them looked mangy. To classify a fish by the size of its mouth is both inelegant and unskilful. Who ever heard of large-mouthed St. Bernards, or small-mouthed mastiffs? Or big-footed pugs, or shovel-nosed setters? Or red-eyed beagles, or long-billed bulldogs? The nomenclature needs revision. As I gazed upon the beautiful black bass I could hardly realize the belligerent nature of these fish from their dignified deportment. I would, moreover, hardly believe that 50,000 or 60,000 different kinds, colors and shapes of bogus flies were necessary to catch them in a proper manner. But the flies in quantities are necessary. You see, the bass knows the kind of flies he wants. You keep on offering him a different fly till you find a shape and color which suits his taste, the color always harmonizing with foliage and sky colors, and there you are. The bass will bite worms, and grasshoppers and frogs and things, but civilization bars these because there is no more skill in getting fish to bite a worm than there is in getting a dinner with a \$20 gold piece. Civilization and high art require that you fool the fish and catch him, too. Civilization is a great thing. So is art. Then the battles these fish have fought! How they swirled and sprung angrily from the water, and shook their heads in bold defiance, and how the reel sung, and the rod bent, and how he gave him the butt, and how the resilient tip resilient, and—the line broke and—what a big fish was lost! And there you are again. The primitive man would throw the bass a worm with a hook therein encased. A simple consecutiveness of line and pole established the medium. Action was gotten up without any lost motion. The bass bit, he was yanked instantly in mid air, there was a dull thud and all was over. But this is a digression. To return to our mutton.

The croppies were all in one class. Good temper was visible in every feature, although each fish had his back up. The body tapers quickly to a very narrow loin and cat hips. Nose retrousse, eyes set on side of head, and this fish can gaze for hours without winking. Ribs flat, chest deep, shoulders sloping, has a kind of rolling gait.

But the catfish and dogfish! The fish of the people. The bullhead was there in all his meekness, the same noble fish of our boyhood days. The mouth with the same fixed amiability. The eyes full of mournful forgiveness for generations of oppression. Withal it was the same stiff-necked, assertive biter of worms which delighted to be caught, murmuring only a musical murmur in protest.

The dogfish, however, is the fish for your money. He is the game terrier of the water. He persists in being caught to give his mouth and fins exercise. He is a fighter, too. One, when caught on light tackle, is equal to his big-mouth relative, the bass. He is not noted as a table fish any more than the dog proper, but he gives a run for your money. Not exclusive in his habits like the pickerel, nor whimsical and finicky like the trout, if the bait is but thrown within his reach, he can be depended on to do his part every time like man's best friend. May his shadow never grow thinner.

B. WATERS.

Over in the Fisheries Building the FOREST AND STREAM exhibit has become, so they tell me, to be a very pretty affair. Not all the material is yet in place, and no limit of time or material is to be set. The exhibit is improved, but not finished, and it simply must be kept improving until in its class it leads all the rest, because that is the kind of an Abou Ben Adhem FOREST AND STREAM is. The other day, finding a need of some additional sporting material for decorative purposes, I went into the house of A. G. Spalding & Bros. and interviewed Mr. Hirth, the head of the retail tackle department—a man who, I firmly believe, has the largest heart of any man on earth. When I emerged I had an armful of angling paraphernalia, Spalding's big 10lb. bass, three fine cases of dead game, and everything else I wouldn't refuse absolutely to carry away. I think if I had proposed to move the whole store down Mr. Hirth would have agreed, and so would the firm. I don't know but I will do that next week. Thanks to these courtesies—which, by the rules of red tapedom cannot be acknowledged by card in the exhibit itself—the FOREST AND STREAM corner is brighter and better. A big sea trout will join the record tarpon and the vast bass next week, and the genuine Saurey Camp will also then sit below the Gloriana yacht model. All of these things it takes time and closer looking than a general glance to see, and the friends of FOREST AND STREAM will not have pleased it fully until they have obeyed the due injunction to "step inside."

E. HOUGH.

"FOREST AND STREAM'S" WORLD'S FAIR BUREAU.

THE "KINGFISHERS" IN CANADA.—I.

Big Basswood Lake.

It will not be the purpose of this article to give a detailed history of our camp in Canada last summer, with all the happenings, "categories" and "episodes" that fell to our lot; I am only going to tell where we went, how we got there, and of the great bass fishing we found—all this for the benefit of any of the brethren who may take a notion to pay a visit to the best "bass pocket" we have found in a good many years.

We were put on the trail by a friend living in Traverse City, Mich., who, with three others, had made a canoe trip in the summer of 1890 along the shore of the North Channel as far east as the mouth of the Missisaga River, a matter of sixty or seventy miles from the "Soo," and thence up this river fifty miles or more, making a detour on the way up Mud River into Mud Lake, a portage of half a mile or a little more across to Big Basswood Lake, and from the foot of this lake another portage of a couple of miles back to the Missisaga River, several miles above where they had left it. He gave a glowing account of the bass fishing in Big Basswood, and advised us to go there and make our summer camp on its banks. We went.

In order to go into the country in good shape and with our eyes open, I had some correspondence with Mr. Henry Plummer, the Collector of Customs at Sault St. Marie, Canada, relative to what would be required in the matter of customs duties on supplies taken across the border, camping outfit, etc., and was informed that I would be required to make duplicate lists of the outfit—tents, mess chests, canvas boats, etc., together with the guns, rods and tackle belonging to the party, with estimated values of all on the lists. This last item I lumped together as "rods, tackle and other camping sundries." One of the lists would be retained by the train collector at the "Soo," the other, receipted by him, would be retained by the party. On all this a duty, or rather a deposit, of 30 per cent. would be required, which, however, would be refunded to us if we returned and crossed the border inside of sixty days. On supplies, "side meat," coffee, sugar "and such," the duty would average about the same, which would not be refunded, and this decided us to take along but coffee, good coffee, for we knew the average coffee to be had all over upper Michigan and Canada was not worth its weight in blue beans. Everything else needed we could buy over there as cheap as at home, and save the duty.

A call brought the Kingfishers from Kentucky, Old Sam, Charley and his son Owen, a youngster on his first trip, and on July 15, at 8:50 A. M., we left Cincinnati over the Pan Handle & Grand Rapids and Indiana Railways for Thessalon, Ontario, Canada, a station on the Canada Pacific R. R., forty-six miles east by south of the Soo.

The Colonel was there, and Harry Foulds and Old Hickory, and Ed Gooder had gone ahead to Omena, Mich., to look after the affairs of the Omena Hotel Association, of which he is president, but would join us in camp in a few days. Our old cook, Barney, could not get off to go with us, which was a source of regret from the day we started till we broke camp.

At Petoskey next morning the old "Nessmuk" of northern Michigan, "Kelpie," got on the train with his "calamities," his usual deliberation and a through ticket to the Soo, shook hands all around with hearty vigor and deliberation, and our cup of happiness was full, for every one of us keeps a corner in his heart warm for "Kelpie."

At Mackinaw City we swapped trains for one on the Duluth & South Shore R. R., which is ferried across the Straits on a big ferryboat to St. Ignace.

We had bought round trip tickets for the Soo at Mackinaw, via Trout Lake Junction, a station where the Minneapolis, St. Paul & Sault St. Marie road crosses the Duluth & South Shore, but "Kelpie's" ticket took him several miles further up the road, to "Soo Junction." However, our train on the Minn., St. P. & Soo road was a couple of hours late, and we arrived at the Soo only a few minutes behind him. All's well that ends well.

Trout Lake is the better place to make the change, as the baggage car of the Minn., St. P. & Soo train goes on into Canada, saving the work and annoyance of a transfer at the Soo. The coaches are replaced by Canada coaches on the American side of the river, and the train goes on its way across the big iron bridge at the head of the rapids under the control of a Canadian crew of trainmen.

The train going in from Soo Junction stops on the American side, making a transfer of baggage necessary; for the information of any one going into Canada from the south, via the Soo.

While crossing the bridge, the train collector, Mr. W. H. Hill, came in the baggage car where some of us were looking out the door at the rapids, and when he got his eye on the word "Kingfisher," painted on the box in which the "ironclad" was packed, remarked as he turned to us, "Gentlemen, this must be the Kingfisher party from the States; Mr. Plummer told me you would be along to-day and to look out for you." I handed him the lists I had made out and he soon had the number of pieces checked off, the duty figured out, which was paid him, and a receipted list handed back. We also paid \$2.14 on 18lbs. of coffee and a case of soups—chicken, oxtail, mock turtle, "bullington" (as our cook afterward called it), etc.—which case of soups our friend Snider, who had received

an invitation to join us on the trip, had insisted on bringing along at the last minute as a donation. I asked if it would be necessary to open out our mess boxes, tent bags, trunks, grips, etc., for inspection—which is usually required—and he replied, "Oh, no; you're all right; Mr. Plummer is satisfied that you are a party of square sportsmen, after sport only, and so am I. All I want to know is that a party is not trying to sneak things through to sell without paying the duty, and this deposit of 30 per cent. on your outfit is required as a matter of protection against this kind of smuggling. No, you won't have to unlock or open a thing." And then he suggested that if he found time he might run in on us some day.

We thanked him for his courtesy and assured him the latch string would be out for him at any and all times, and everything wide open for a post-prandial inspection—even to old Sam's gripsack. We left the train when we pulled down to the station at the Canada Soo, and we saw no more of the genial and gentlemanly train inspector till we came out on our way home.

Just here I don't know but it would be the right thing to thank him over again through FOREST AND STREAM—him and the collector of customs, Mr. Henry Plummer, for the kindness and courtesies received at their hands, not forgetting that prince of good fellows, conductor George Cavanaugh and his baggage man, whose name I cannot now recall. In fact we have never been treated better anywhere in our wanderings after sport than by the Canadians. They took our American money, silver,

so and turned off to the left, taking another road that our driver said was a better and shorter one, and less hilly than the one leading through the town.

A few miles out we crossed a very beautiful little stream which the driver informed us was an excellent trout stream—"a little further up"—and here we got out for a drink out of a very cold spring coming out of the hill side near the road.

Before we were half over the road darkness had come on, and soon after, and for near an hour, we were treated to the most magnificent and wonderful display of northern lights, quivering and shooting in broad belts across the sky, that it has ever been our good fortune to witness.

It had turned so cold, too, that we were chilled to the bone, and most of us got out and walked, and ran, and cut up shines and antics along the road to keep warm. We got a view of a part of Little Basswood Lake at one point, lying down below us to the right, shimmering in the dim light of the stars, and shortly after turned a square corner in the road near which was a big frame house which our mine of information—the driver—announced as the post office and town of Sowerby, with the additional information that we were about three miles from our camping place.

This was welcome news, for we were tired, and cold, and hungry, but the chances for anything to eat before morning were exceedingly slim.

Our pace was slow, as the wagons ahead were well loaded, and we in the rear had to gang their gait, but at last we rattled down a "long slim hill and across a bridge spanning a noisy little stream," which "our mine" said was the outlet of Big Basswood Lake. Here was a little hamlet of five or six houses called Day Mills, but there was no sign of life about except for the vociferous barking of two or three dogs that were aroused by the rattle of the wagons at this unseemly hour of the night.

We followed the leading wagon along the road for eighty rods or so, when it turned sharply to the left up a steep, rocky hill, along which the main road led, and we got out to help our tired horses to the top by a united push from the rear.

At the summit, after a hard scramble, a drive of a few rods took us out of the woods into an open, level common of twenty or twenty-five acres—we guessed it that in the dark—surrounded on all sides by woods as near as we could make out in the gloom, which we afterward learned had been laid out for a town site in anticipation of the C. P. R. R. coming that way, but it didn't. We followed an old dim road straight across the open, going nearly due north, as indicated by the pointers of the big dipper, till we came to the woods on the further side, when we got out to determine our next move. Through an opening in the woods to the left of the wagons we could see the dim outlines of a house against the sky, and following a path four or five rods were soon pounding at the front door and a side window to rouse the old bear, or (John) Bull, rather, out of his lair.

At last after we had nearly rattled the house down over his head he gave signs of life with, "Hey there! what's wanted?" followed by some growls and grunts and mutterings in a "deep sot granulated voice," as old Sam made it out, and soon a light appeared inside and the door fronting the lake was unlocked and opened with, "Ah, good evening, gentlemen, the Kingfisher party, I suppose, walk in; I looked for you earlier in the evening, but gave you up at last and went to bed; walk in, walk in and make yourselves at home." All this in that "deep sot, granulated voice" that had impressed old Sam. But there was no time to waste in walking in, as it was after 11 o'clock and the wagons to unload and a place fixed in which to get a few winks of sleep before morning. After a very brief introduction he came out with a light and piloted the teams over an old wagon road, around through a little strip of woods, dark as a pocket except for the feeble flicker of the light, and into an open level space at the east side of the house, where he said the camp was to be made.

While unloading the wagons Dyer suggested that instead of spending time in putting up the tents in the dark we get out our blankets and bedding and make shake-downs on the floor in his house, and the vote on it being unanimous, we were soon scattered around in three rooms on the uncarpeted floors, and it was not long till a vigorous snoring match was going on, with the Colonel slightly in the lead.

KINGFISHER.

New Hampshire Trout.

OUR correspondent Von W. tells us that he was misled by erroneous information respecting the New Hampshire trout season. No change was made by the last Legislature, the opening date being still April 15. A Lebanon correspondent, C. D. S., writes: "If the genial Colonel had said that there was a law (this year at least) of God that no trout could be caught before May 1 (or even then for that matter) I should fully agree with him. I think that Von W. will back me in saying that I can catch trout if there are any, but I have been out twice and caught only three trout. In my humble belief, the small brooks are ruined for this year at least. A great many of them froze solid and killed about every trout. Two years ago I caught over 2,000 trout and made happy lots of my friends who could not get away from business by giving away some 1,400 of them; but from the outlook now I shall be happy if I catch 500."

THE HAUNT OF THE PICKEREL.

Forest and Stream Amateur Photography Competition.

Photo by Mr. Henry Allender.

gold or paper at its face value wherever presented, and the Canada Pacific Railway carries all kinds of sportsman's outfits free; guns, dogs, tackle, etc., and even boats and canoes not exceeding 20 feet in length.

What more could "the Joneses" ask?

We arrived at Thessalon station (the town is about a mile and a half from the railroad) still a couple of hours late, 6 P. M. standard time, or 7 Eastern time, by which the C. P. runs its trains, but some previous correspondence with Mr. James B. Dabie, postmaster at Thessalon, had resulted in three teams being in waiting at the station to haul us and the calamities out to Big Basswood Lake, where the camp was to be made, and there was some tall hustling to load the wagons, as we had fourteen miles to drive, and not a great deal of daylight left.

Mr. Dobie keeps a good general store, too, and we had sent him an order for some supplies, which were in one of the wagons in the shape of a sack of flour, a couple of big hams, salt pork, beans, canned fruit, ship biscuit, etc., and some rough pine boards for a table, all of which are mighty handy to have about a camp. He had also secured us an alleged cook, an exceedingly fresh young fellow, who had graduated in a lumber camp and knew just enough about cooking to remind us every day and meal of the absence of our old cook Barney; but Barney could not afford to leave a good job to go with us, and we were treated to a style of cookery that "the Joneses wasn't used to," albeit the Joneses never was used to the very best.

Brother Dobie is, in addition to merchant and postmaster, an enthusiastic old angler, and he had written us much valuable information about Big Basswood Lake and the region round about, with which he is thoroughly acquainted.

We had also corresponded with Mr. Geo. F. Dyer, living on the banks of big Basswood near the outlet, and from him had received all kinds of information about the five lakes lying within a radius of 12 or 15 miles; big and little Basswood lakes, Clear Lake, Loon Lake and Mud Lake, and among other items, he had selected a camping place for us right near his house—which savored somewhat of an axe to grind.

We followed the road leading to town a half mile or

ON THE NORTH SHORE.—IV.

The Return Trip.—IV.

[Continued from page 403.]

NED awoke early the next morning and observed a regular mass of ragged-edged and dark, dirty-looking clouds, that were driving rapidly across the heavenly highway, making the lake appear with an ominous storm tinge on its surface. The boatmen kept watching the riotous rage above as they were preparing the meal, expecting every minute to see an approaching squall strike us. About 6 o'clock it came and with a violence that threatened to sweep the canvas into the lake. Ned and I grabbed hold of the front of the tent, where the fury of the gale attacked it, and then hallooing for the boys they came climbing up the hill in a hurry, with their hair streaming in the wind and their faces ablaze with excitement. They were soon in position, holding down the fluttering structure with a herculean strength. There we stood for fully twenty minutes, striving with all our might and main to keep the tent secure. "Hold her, hold her," was the cry, as the wind rattled and played a lively tune on the flapping canvas and the strained cordage. "Here she goes," cried Ned, as the tent raised from the ground like an inflated balloon and threatened to carry us off, but we held with a tenacity born of desperation. It, however, soon played out, as all summer squalls do, but it was a high old frolic old Boreas made for us for a brief time. "What I tell you," said the astronomer, as he released his hold on the canvas, perfectly delighted with the realizing of his forecast. "You believe me when I tell you," he continued, and then he strode around like a Delphic Oracle, and exploited relative to his great knowledge of where gales, hurricanes and cyclones are born, and how, when and where they travel; and then with a parting warning of "More come by and by," hurried down the granite hill to participate in preparing the breakfast hash.

"Let the old sage (?) enjoy his present triumph," says Ned, "for out of all his observations during the trip no two in succession ever realized and seven out of ten were flat failures."

The blow was followed by heavy thunder and vivid lightning on the heels of which rain in torrents fell for near an hour, then in rumbling murmurs the storm fretted itself away, and the sky took on a roseate hue; but for a few moments only, as sombre clouds again began to darken the heavens.

Notwithstanding the unpropitious appearance of the weather, we started for our old fishing grounds soon after breakfast, and within a few minutes after arriving caught one trout and hooked and lost another. A gale of wind and rain was unmistakably apparent, as the bleak gray stole over the frothing sea, and turned ashen the curve of every surge. A flash of lightning now painted itself in fiery forks upon the inky clouds, and at once we ceased the sport and made lively times for our quarters, in hopes of escaping the threatened rain, for the black-winged legions of the tempest were rapidly concentrating their hosts for a formidable attack. We failed to reach our destination by about one hundred yards, where we were struck with a terrific wind and heavy rain, that was so scythe-like in its terrible sweep as to give us exceedingly hard work to even cover the little space that intervened between us and the harbor. The boys tugged at the oars with the strength of giants, and by a maneuver of Peter in giving the boat a quarter swing, we gained the landing. The rain came down in beads like buckshot, and fell upon us with a stinging force that was really painful.

The boatmen, when they had reached camp, were as soaked as if they had fallen into the lake, while, thanks to our rubbers and "sou'westers," we escaped with a slight sprinkle. On going to our quarters we found the tents flooded and the ridge-pole of the fly broken, with the canvas flapping itself into shreds. The squall lasted about fifteen minutes, and then the storm king departed, satisfied with the passing courtesy he had paid the "Twin Sisters."

The camp was again put in order, and things began to look cheerful once more. The old prophet, who lingered around us while straightening matters in the tent, said, "More storm soon," and we thought so too, for there was a low rumble of thunder overhead, a dazzling play of fiery tapestry in the western horizon, and a hard, cold look on the water that satisfied us we were to have another attack of the unruly elements. It came a little after dinner and with such a terrific force that it required all hands to keep our white-winged abode erect, and then we had to take the flies down in order to save them. Both the boys' and the dining tent, however, fell before the wrathful wind.

A minute or two after the squall had passed a fog bank of tremendous proportions, that seemed to reach from the waters to the azure blue, came rolling from the west with such a formidable and appalling front as to amaze us. It advanced with the circling motion of a rapidly revolving cylinder, as if it were really absorbing everything as it progressed. Ned held up his hands in horror as he saw its awful approach, asserting that it was backed by another cyclonic blow which would sweep the island of all movable things; but it passed south of us, disclosing in its rear such volumes of black, ragged clouds behind, with lightning, as to threaten a "tempest dropping fire." Though we admired it as a grand, majestic storm-painting of the invisible pencil, as it stood vividly outlined in its sombrous and inky masses of surcharged vapor, we felt awed in its presence, realizing fully the invisible power within its compacted confines:

"Who shall face
The blast that makes the fury of the sea."

It seemed unwise, with such a day of storm as we had had and still threatening, to again venture upon the lake, yet an hour before supper-time we were on the way to our old fishing grounds. Arriving there we whipped the waters, and succeeded in making one double catch, a three and a two-pounder, and then started for camp with the growling of the thunder of the still distant storm.

That evening was a wild scene of troubled, running, foaming waters, that surged and beat the shores with a dismal violence which foretold a furious sea before morning. The gloom stole gradually into darkness, as though some giant hand was warily drawing a sable curtain around us. In the extreme west there was an incessant play of lightning all about, like a mad dancing of stars of piercing brilliance; this enlarged into dense masses of

dark vapor, streaked as sand is ribbed by the surf, then a vast array of clouds twisted into the aspect of whirlpools, and in their brooding motionlessness resembling vortices suddenly arrested when most madly gyrating. Words cannot express the effect upon the mind of the contrast of the several shades of color, all combining to fill the lake with a malignant line, and the keen throbbing of the lightning low down, the stooping soot of the vaporous clouds overhead only waiting, as it seemed, for some storm-signal to start every one of them into a very madness of revolution boiling out into a fearful tempest. "These soon formed into one great cloud of indigo tint, ridged with layers of black vapor, and blackening into very midnight in the west where the lightning was shooting."

We all sat around the tent watching the heavenly pyrotechnics which were in constant play. You could see where the mountain tops lost themselves in the black masses, and when a vale obtruded it stood out like a pleasing picture in this great tumult of the elements. Your eye would range along the shore expecting to take in miles of towering cliffs and ragged rocks, when the light would suddenly drop you into dense darkness, and thus rob you of the completeness and enjoyment of the scene.

The astronomer went deeply into mathematics and figured out that before morning the storm, which he estimated at over 200 miles distant, would travel some 40 miles an hour and reach us about midnight, with a heavy squall of thunder, lightning and rain. This solving of the storm problem made him additional work, for we advised him and Peter to take the necessary precautions looking to the security of our endangered quarters. This they did in a masterly manner, by piling huge stones upon the saplings that held our frail tenement. We now felt secure, for a gale that would wreck that tent would assuredly send us over the declivitous rock into the lake, where further proceedings would interest us no more.

We retired that night after the exciting storms of the day, with a hope that the worst had passed, and that the mutter and moan of thunder, the red glare in the heavens, and the dismal bank of blackness would pass away without disturbing our slumbers. It developed that such serenity was not to be ours, for about 2 o'clock in the morning a heavy squall of wind and rain, with an introductory of Jove's artillery, came sweeping over the island with an appalling force that abruptly awakened us. Ned at once jumped into his pantaloons, while I sprang for the front flaps of the tent to keep out the flooding waters as well as aid in holding it down. Ned soon joined me, and there for fully fifteen minutes we held like "grim death" to that rattling canvas which fluttered as if it would either go to rags, or take its final adieu from the island. The rain came down in great round drops, with as deafening and terrific force as if a tornado had enveloped us. I don't think I ever before put as much vitality into my muscles as I did during the time I held on to that tensioned cordage, and am confident Ned equally exerted himself. It was well the gale was of short duration, for every minute the cords were being so severely strained that it would have been utterly impossible for them to have held out much longer.

It was to blanket again, with the cessation of the terrible turbulence, and so exhausted were we that sweet and refreshing slumber came o'er us quite suddenly. After a storm a calm, and that was the revelation of the dawn. It disclosed the great archway in regal splendor, the lake in rippling streaks of frothing silver, an atmosphere so exhilarating as to make you feel as if you had taken great draughts of pure champagne. The opening of the golden gates of that morn was one the loveliness of which no language can portray:

"Mighty nature bounds as from her birth,
The sun is in the heavens, and life on earth;
Flowers in the valley, splendor in the beam.
Health in the gale and freshness in the stream."

Ned concluded while dressing to have a look at his bruised limb which he had so freely anointed with a liniment procured from the Hudson Bay agent. He found it healing rapidly, and thought ere he reached the "Soo" that he would be able to show a clean bill of health. His hydropathic treatment he was positive was an irritation, but it took him a long time to arrive at that conclusion. The trouble was that he had douched it about every half hour with the icy water, surely enough to create inflammation of a severe character. He practically felt that he had advanced a round or two in memorabilia if not in medicine, and will hereafter know how to treat a battered limb.

For the past two days we had heard the barking of a dog on the main shore opposite, and when fishing there had seen him frantically racing up and down the rocks and into the forest, as if looking for his master, from whom he had undoubtedly strayed. We tried to induce him to come to the boat, as we desired to give him a trout or two for his breakfast, knowing full well that he must be ravenously hungry, but away he would scamper when he saw us, as if fearful of capture. We concluded, however, that morning to take a lot of our broken food as well as a few fish and leave them on the beach for him. Peter thought he was a wild dog, and Emery a mad one, but we were positive he had been left behind by some Indian hunter.

As the weather was all that could be desired for trouting, we started immediately after satisfying our rapacious maws, for the home of the tempting beauties, and succeeded in capturing four in a brief time, and then the grand loveliness of nature, which had so delighted us, began to hide her beautiful favors in a dense fog that spread her misty wings o'er land and sea. The inauguration of this vaporous mass caused a prompt return to the island, where we had expected to find the Hudson Bay agent and his family, who were to have feasted with us, but they were *non est*. This was a great disappointment to Peter, but since that statuesque pose of beauty and beans on a wave-washed rock had flitted through my mind in various forms of humorous imagery, I cared little for the realization of the banquet. Caesar had his Brutus, Charles the First his Cromwell, but to Peter it was given to have Beauty and Beans on a wave-washed rock. Shades of Praxitiles, drowse the glim! The barking and bewildered dog we had so liberally provided for, could not be found that morning, but we left the food we had taken along all the same.

In the afternoon it cleared up sufficiently to permit us to again pursue our pastime. To the main shore it was,

but to unexplored waters which no fly had as yet kissed. No sooner had we reached the locality than a young mink was seen racing o'er one of the shore rocks, where, doubtless, his black, sleeked parents had within its confines their summer quarters. It showed great fear of us, for the minute we approached it accelerated its speed and soon disappeared in some crevice.

Having an abundance of trout in camp, we concluded it wanton waste to capture more, so those we caught, some four or five, were liberated, not one of which had received a fatal wound. The trip was simply an adjunct for wasting time, and as the sky cleared the glad waters rippled, the wild flowers nodded and the birds sang sweetly in the golden glow. We felt as if we were in a land of enchantment, where fairy elves in fringing forests revel to the sounding shells of the Tritons. It was delightful, this slipping o'er the silken ripples to the tinkling dip of the bright blades, by cliff and crag, bay and river, nook and niche, until we became the veriest idlers and dreamers, with our souls

"A lordly pleasure house
Wherein at ease for aye to dwell."

The sun began to pale and sink in great banks of orange and opal, scarlet and purple, that flowed in streams of pink and crimson, so richly edged and delicately woven into shreds of beauty that an artist would ever dream over, and attempt in vain to transfer to his canvas.

"Touched by a light that hath no name,
A glory never sung,
Aloft on sky and mountain wall
Are God's great pictures hung.
How changed the summits vast and old!
No longer granite-browed,
They melt in rosy mist; the rock
Is softer than the cloud;
The valley holds its breath; no leaf
Of all its elms is twirled:
The silence of eternity
Seems falling on the world."

We reach camp in an elysium of delight, and after enjoying a delicious meal, take our camp-chairs and seek the apex of the great rock, where the white wings of the tent are casting quiet shadows adown the declivity in the rear. The heavens are

"Bespangled with those isles of light
So wildly, spiritually bright."

The Pleiades and Orion sparkle in boundless magnificence, the mariners' heavenly chart, that points to the radiating diamond of the North, is also in illustrious pomp, while the ten thousand other suns that light us deep into the Deity, dazzle with twinkling loveliness as they pay homage to Hesperus and the red planet Mars. The full-orbed moon, in her mantle of silver, sheds her beauty and deep softness o'er the whole, sending a shaft of light along the rippling lake that seems to sink into unmeasured depths.

"The night is calm and cloudless,
And still as still can be,
And the stars come forth to listen
To the music of the sea."

As we watched the jeweled heavens and the shimmer of the murmuring sea, the love and faith in immortal life came uppermost in Ned's mind, who arising as he looked out in the night's luxury, and gracefully extending an arm exclaimed in solemn tone, "By night an atheist half believes a God," and then sought his bed in deep silence, fervently impressed with the sable goddess.

ALEX. STARBUCK.

[TO BE CONTINUED.]

THE MAINE ICE.

THE ice cleared from the lakes and ponds controlled by the Inglewood Club in New Brunswick on the 9th of May, several days later than last year. The members of the club, largely composed of Boston professional and business men, are preparing for their spring fishing. The first party of the season left Boston on Friday evening. It was made up of Col. C. A. Hopkins, resident manager of the New York Mutual Life Insurance Co.; ex-Railroad Commissioner Crocker, J. P. Bates, of Cobb, Bates & Yerxa, and one or two others. A very large party will leave Boston on the evening of the 26th, and FOREST AND STREAM shall have the names of the happy fishermen in due season.

The L. Dana Chapman party, to Sebago, mentioned last week, was fairly successful with landlocked salmon, the smallest weighing 3½ lbs. and the largest 7 lbs. The weather was very cold and the fishermen did nothing till the third day after the ice went out, the next to the last day of their stay. Another Boston party, quick to follow, was composed of Mr. John G. Wright, Mr. E. A. Adams, Mr. Kilham and Charlie Robinson, of South Windham, Me. Reports say that these gentlemen are having good sport.

The ice has cleared from Lake Winnepesaukee, in New Hampshire, but it went out over twenty days later than last year. Hearing that the ice was out several sportsmen started from Boston on Thursday. They will troll for lake trout.

Reports are very dubious concerning the clearing of the great trout lakes in Maine. At the time of this writing the ice is thick and solid. A special dispatch to the Boston Herald on Friday, from Rangeley, said that the ice in that lake was very solid. It might go out as early as the 20th, but good judges believe that it will hold till the 25th. Capt. Fred C. Barker, of The Birchies and of Camp Beamis, on Moosehucmaguntic Lake, suggests fully as late a clearing of that lake. Reports from Andover, Me., suggest that Richardson Lake can scarcely be clear of ice before the 20th, and more likely the 25th. But so late a clearing is almost unheard of, and it is more likely that these lakes will be clear as early as the 20th. The lateness of the season is dampening the ardor of the fishermen a good deal, and there is a complaint in the tackle stores that the trade is very poor. Mr. A. S. Foster of Lamkin & Foster, a veteran fisherman at the Rangeleys, has reports from Mr. Rich, at Kennebago, which say that on May 7 there were 26 in. of solid, blue ice on that lake, and that teams were hauling goods over the ice.

Reports from Moosehead are just as discouraging, and it is very doubtful if that lake clears more than a couple of days earlier than the Rangeleys. But the enthusiasm of some of the Boston trout fishermen gets the better of their judgment, and they start off, believing that the ice

will have departed by the time they reach the fishing grounds. Two old hands at the sport have already got tired of waiting and started for Rangeley last week. One of them was in full belief that the ice would be out by Friday, the day he would arrive. At last accounts he was "up there waiting." A Mr. Hunnewell, a gentleman who has fished Moosehead early for several seasons, started for that point on Saturday. Some of his friends laughed at him, and suggested that the ice was not out. He replied that he was aware of that, but that the ice could not last more than a day or two longer, and that the next day he "should be sailing up Moosehead."

The Foster party, with Mr. A. S. Foster, mentioned above, at the head, will not visit the Rangeleys as a party this season. This party has visited Mooseheadmagantic for so many years in succession that it has become one of the best and most favorably known in that region, and it will be greatly missed. Mr. Foster, with Mr. J. F. Henry, another veteran of the party, and Mr. James Reed, of Willimantic, Conn., will go to Kennebec about the 5th of June. After fishing at Kennebec for a few days they will follow the upper waters of that section, and fish through the streams to Seven Ponds. It is possible that one or two other friends may accompany them. The sickness of Mr. Field casts something of a damper over the enthusiasm of the others of the Foster party.

The Governor Russell party is not likely to be just the same as usual this year, though doubtless the Governor, with Mr. John E. Thayer, Mr. J. Otis Wetherbee, Mr. Herbert Leeds and Senator John Simpkins will visit the New Oxford Club camps at B. Pond, and also Mr. Bayard Thayer's beautiful Birch Lodge, at the head of Richardson Lake. But Mr. Bayard Thayer himself is at present in Japan.

Mr. N. T. Thayer, who has visited the Maine fishing lakes with Mrs. Thayer for many seasons in succession, will not be on hand this year. They will fish in Canadian waters. But Mr. J. W. Hobart, Mrs. Thayer's father, who has visited the Rangeleys for about as many years as any sportsman on the list, is having his rods fixed, and, with his friend, Mr. Reed, will doubtless again be welcomed at the Rangeleys.

Mr. C. Z. Basset, of Appleton & Bassett, with his old-time friend, Mr. G. N. Smally, will go to the Rangeleys as usual. They expect to again take 4½ lbs. trout on the fly in the middle of Cuscutup Lake in May. They did this last year and greatly surprised all the other fishermen. They also hope to have Mr. W. C. Thairwall and Dr. S. W. Langmaid accompany them. These four gentlemen are old-time gunning friends, and Messrs. Basset and Smally desire to initiate the other gentlemen into the mysteries of trout fishing at the Rangeleys.

Mr. R. W. Reece, steward of the Megantic Club, started for the club's preserve on Monday to prepare for the season. He has charge of the tables and the providing there. He does not expect to find the ice out of the lakes, but there is work enough at hand.

Mr. Henry Thatcher, of Hyanis, sent up a very handsome trout, weighing 3½ lbs., to Mr. L. Dana Chapman, last week. It would have been displayed in Dame, Stoddard & Kendall's window as a beautiful specimen of the brook trout of the Cape, only it arrived a little too late, or rather Mr. Chapman had scarcely got back from his landlocked salmon fishing.

Governor Russell has made another trip to Sandwich for trout fishing. He was at Sagamore on Friday, the guest of John P. Knowlton, with his friends Col. Wheelwright and A. H. Wood. They were to try the streams on Saturday and return to Boston in the evening. A couple more Rangeley fishermen have got impatient for the ice to leave. They could wait no longer, and left Boston on Tuesday, hoping that the ice might be out on their arrival. They are Mr. W. H. Fox and Mr. Loude of New York. Mr. Fox has fished at the Rangeleys for several seasons, usually in the company of Mr. G. W. M. Guild. But Mr. Guild will scarcely visit his old fishing grounds this year, for the reason that he is interested in the Macdavic Club, in New Brunswick, and will visit the new fishing grounds of that club. Mr. Guild has a record of a 10 lbs. trout in the narrows of Richardson Lake some years since. But he hopes for better fishing in New Brunswick. The above mentioned club (I am not certain about the spelling of the name) has several lakes and ponds under control, with prospects of a salmon river, if the salmon continue to run further and further up as they have been doing for two or three years past.

SPECIAL.

Lewistown Reservoir Bass.

HUNTSVILLE, O.—*Editor Forest and Stream:* Referring to Mr. Magill and his inquiry as to bass larger than 7 lbs. let me say that I do not know anything about those in the St. Mary's reservoir, but many of my customers (I drive a hack from the Lewistown reservoir) have had no trouble getting larger bass in the Lewistown reservoir. Mr. M. E. Archer here will qualify to having caught one 7 lbs. 14 oz. Frank Sanders, Lakeview, O., in company with a friend, in less than an hour and less than an acre of water caught four that tipped the beam at quite 28 lbs. Lot Ireland, Columbus, and Wm. T. McLain, secretary Board of Public Works, Columbus, O., will testify to an 8 lbs. bass each. H. Young and John Bush, Sydney, O., will do likewise. Mr. Bush has his stuffed and it is still on exhibition in his store window. J. W. Hague, 96 Diamond street, Pittsburgh, Pa., secured one 6 lbs., one 6½ lbs. and sent a 7½ lbs. one to C. B. Martin, Big Four offices, Cincinnati, O. Judge Ivor Hughes, Columbus, O., will go them all one better and be only too glad of an opportunity to testify enthusiastically to the securing of an 8 lbs. 3 oz. bass for the finish of his string and the day.

By the way, it would make excellent reading if you could secure the Judge's account of this catch. I believe the rest of the string contained several 7s, a half dozen 4s and three 4s. But probably the heaviest string was that of Mr. Wm. Pratchett, of New York, now of Dayton, O., whose twenty-five had a combined weight of and as he will tell it to you, "a trifle over 100 lbs."

DICK FLOYD.

Death from a Pickerel Bite.

The Kansas City *Journal* of May 4 recorded the death of Mr. T. Ed. Campbell, county clerk of Buchanan county, Mo., resulting from a bite on a finger by a pickerel. Mr. Campbell was removing the fish from his hook while fishing at the Big Stone Lake, Iowa, about eight months ago. All efforts to counteract the poisonous effects of the fish's bite proved ineffective.

BOOKS IN RUNNING BROOKS.

THE balmy zephyrs of spring breathe o'er the land and bud and blossom are responsive. The humming-bird and butterfly disturb the trellis and dislodge the gem from the petal of the morning glory, its mirrored rainbows dashed to earth and lost to human ken. Destroyed it is not, but unheard and unobserved it joins its fellows and leaves its birth-place on the summit in laughing ripples and winding rivulets and sings ever onward, onward until lost in the ocean beyond.

Obstacles and rebuffs are encountered only to be surmounted and overcome, and growing broader, deeper and more sparkling as it journeys, it flashes back the rays of the morning sun, and the schoolboy carries by its side to gather glistening pebbles. Bobolink and daffodil taste its sweets, and fragrant fern and pungent mint give it welcome embrace. The timid hare in the copse shrinks from its mirrored form, and modest violets are hidden by mossy stones where the silver thread of our idyllic brook meanders through fertile field and luxuriant meadow.

The freshness and loveliness of early life abounds, and kindly nature offers tribute of foliage, bud and blossom as if fully in touch and appreciative of the enchanting season. The miniature cascades grow in volume, pools deepen, and the current cuts away the bank by the bend. Here Piscator comes in early spring and drops his tempting lure, and the voracious trout impaled upon the cruel steel no longer dwells in his crystal home. Piscator's discerning eye sees new beauty in the renewed landscape; his ear attuned to the symphonies of life, is gladdened by the love notes of his feathered companions, and the undying melody of the rippling brook; his system thrills with exultation as he contemplates the beautiful scene while he journeys down the brook, adding to the contents of his creel, which to him is the minor and less valued part.

The sun is at zenith and he betakes himself to the well known spreading elm to eat his noonday lunch. 'Tis an ideal

"Lover's trysting place,
And brooding o'er it does the (un)wise man sit,
Letting life's joys go by."

Not so Piscator—to him each varied scene in the kaleidoscopic panorama is instinct with pleasure and added joy. Crumbs from his lunch are shared with a pair of robins that have been industriously at work putting the finishing touches to their new home in an adjoining tree, and a brown thrush flits from stem to stem in the bushy undergrowth, not daring to venture into the presence of man. He is fatigued by the unusual tramp, and with crossed legs and rod and reel by his side he leans back against the tree for a little rest and quiet enjoyment, but the mind cannot be disciplined like the body and it refuses to suspend its functions. Without mental effort he sees in his morning's experience an epitome of life itself—beginnings the most humble and helpless, children multiplying and adding strength to the family name and household even as the rivulets to the brook; obstacles and hindrances in the way to be overcome and surmounted; life's pathway now turbulent and precipitous and anon without agitation or ripple; now with bud and blossom to cheer and please and again encountering the boulders and thorns of opposition and difficulty; now in sunshine and calm and again with darkening cloud and forked lightning as if to cast down, crush and annihilate; now moving along in quietness and alone, even as Piscator himself; now prolific and useful and now seeming barren and useless; now turning the wheels of industry mid the noise, grime and turmoil in centers of population, and anon bearing the burdens of commerce out to and losing itself in the boundless ocean, even as does restless and resistless time transport the human family out upon the measureless ocean of eternity.

The hour of noon had grown to unusual length before our gentle fisherman resumed his pleasant tramp. Not without success did he tempt the wary trout, and the shadows of evening found him in happy mood but with an unfilled creel. Before returning home his steps sought the house of a convalescent friend who shared more than half its contents, and who rejoiced and gave thanks that he numbered the unselfish fisherman among his friends.

GEO. MCALEER.

WORCESTER, MASS.

Lewistown Reservoir.

HUNTSVILLE, O.—The recent breaking of the waste weir at the Lewistown Reservoir did not cause the disaster anticipated by the daily papers. The water simply spread out like a thin veil over the filled channels of the immense area of flat and already inundated country. Thus agreeably passes away one of the bugaboos of this country, and the reservoir may break again, as it will, and no one will be disturbed thereby.

Piscatorially there will be no change except perhaps for the best as the thousand and one watchers at the gateway of the raging flood were electrified by seeing hundreds and hundreds of all qualities and kinds of fish come up from the lower waters and make their way in the face of this raging torrent up into the reservoir. Thus, instead of any going out with the waters, more got up into the reservoir by this means than ever had a chance to before.

The waste weir being on naturally high ground, the break lowered the waters about as visitors find it here in the fall, and may not be quite so low, as the natural lakes with which the waters abound, notably Otter, Bear, Indian, are not yet distinguishable from the main body.

W. E. CLARKE.

Tacoma Trout.

TACOMA, Wash., May 4.—A local item reports that G. W. Fife and George J. Brechter have earned an enviable reputation as successful anglers for brook trout. All the spare time they have they devote to the rod along the numerous brooks and streams in the immediate vicinity of Tacoma. On Friday they returned from a day's fishing on Chambers's Creek, having together a string of 42 trout that fairly glistened with speckled spots. One trout weighed 3½ lbs., and 8 of them tipped the scales at 19 lbs. These anglers have the reputation of making the largest catches of the year. Chambers's Creek is 8 miles by electric car; fare for round trip, 30 cents.

J. A. B.

Trout in Delaware County.

WALTON, N. Y., May 8.—In answer to yours received, the fishing season has just commenced and in two or three weeks will be at its best. There have not been any very large catches yet.

J. G. W.

Forest and Stream's Fishing Postals.

"DROP US A LINE" ON A POSTAL CARD.

Fishing News, Place to Catch Fish, Fish Caught,
Fishing Incidents.

CHARLESTOWN, N. H., May 13.—No trout fishing here yet. Tried a small spring brook near the village Thursday and caught 4, of which 2 had to be thrown back to grow. Brook full and water very cold, just right for drinking, but not for angling. Thermometer at 100 in the sun, and half a mile along the meadow was all I wanted.

VON W.

ASBURY PARK, N. J., May 13.—Fishing at this point is yet very slow, nothing worthy the angler's attention save pickerel. Report reached me yesterday of the capture of 3 striped bass in the surf, but I have been unable to verify the same or get the weights. The pounds are catching considerable numbers of weakfish and kingfish, this being unusually early, so our season promises good sport, as our rivers and Barnegat Bay have been cleared of pounds, weirs and fykes.

L. H.

GRAHAMSVILLE, Sullivan County, May 13.—Trout are now being caught in the streams of this vicinity. Myron Jaeger caught 70 this afternoon, largest 10 in. long. Streams have been swollen and water too cold heretofore. Prospects for next week good.

E. A. C.

SWIFTWATER, Pa., May 14.—Trout fishing is now in full swing here and promises to continue. The high waters following the rain of week before last have subsided, and the fish are greedy for the fly. Over 400 fine fish have been taken in our stream during the past week, and visiting sportsmen declare themselves thoroughly satisfied with the sport.

R. I.

A South Dakota Record.

MITCHELL, S. D., May 12.—The following is the record of fish caught by two gentlemen who started out for a day's sport up the "Jim" River one day last week: Between 1,200 and 1,800, 900 of which were pickerel; the rest were bass, buffalo, perch and lesser varieties. Nothing was said by them how they were caught or killed. Modern inventions and discoveries are only too readily taken hold of by the unscrupulous for their own base use, and it is a question with me if the injury done is not greater than the benefit conferred. There can hardly be, it would seem, a true sportsman throughout our broad land who would intentionally raise a hand to bar your noble efforts for the salvation of the courting hare, feathered and finny tribes. Much is done thoughtlessly, the perpetrator of many an outrage being innocent of any evil-doing through ignorance. I say ignorance, because one must be enlightened by reading the FOREST AND STREAM, and understand why there is such a line drawn between sporting and butchery. Its editor has much to accomplish, and doubtless has a slight failure of the heart at times. But the good he and such writers as our friend Judge S. H. Greene, of Portland, Ore., have accomplished here will live after them, and their present efforts will redound to their future glorification.

H. G. N.

Tarpon and Other Texas Fish.

VELASCO, Texas, May 12.—Though there has been cooler weather this spring than usual on the Brazoria coast, caused, it is said, by central and north Texas storms, and the Gulf has been rough with very high tides, tarpon are appearing in schools earlier than for many years past and Northern visitors are preparing for a long season of sport with the lordly "silver king."

The tide water lakes near the mouths of the Brazos and San Bernard rivers, and the fourteen or fifteen hundred square miles of Chocolate, Christmas, Oyster, West, Bastrop and Matagorda bays, are literally swarming with redfish, croakers, sea trout, rockfish, flounders and Spanish mackerel, that are being hooked by wagon loads.

The Velasco Sporting Club has leased and inclosed several large fresh water lakes near the city, that are from 50 to 80 acres in extent and from 30 to 60 ft. deep, and will in future systematically protect the black bass and trout therein from dynamiters and seiners, who would, if they had their way, soon destroy these and all other fish in our landlocked waters.

TEX.

Pennsylvania Fish Protective Association.

PHILADELPHIA, May 13.—The regular monthly meeting of the Pennsylvania Fish Protective Association was held on Saturday evening, May 13, at their rooms, 1020 Arch street, Philadelphia. A special committee reported having forwarded a resolution to the Legislature condemning the provisions of the act authorizing the placing of a dam in the Delaware River below Easton.

Numerous communications were read from different counties of the State, which were acted upon. The intelligence that certain waters were being subjected to pollution, endangering the supply of fish therein, provoked a lengthy consideration, and it was ultimately resolved at once to bring the attention of the Fish Commission to the matter, and render all possible assistance in effectually suppressing it.

M. G. SELLERS, Sec'y.

Colorado Waters.

DENVER, Col., May 12.—State Game Warden and Fish Commissioner Callicotte has completed arrangements for a new fish hatchery at Durango. It will have a capacity of 1,000,000 fish. Active work has begun and the buildings will be finished before winter.

The fishermen are getting out their tackle and putting everything in readiness for the trout season. Fish stories are floating around and the sporting goods stores are making a grand display of fishing paraphernalia. The rivers do not get in good fishing shape until about July 1, as previous to that time they are usually too high for successful work by the ordinary fisherman, though an expert can generally fill his creel any time after the first of June.

TESEEBY.

From England.

CHICAGO, Ill., May 13.—Mr. Wm. Senior ("Red Spinner"), angling editor of the *London Field*, is at the Fair in the interests of his paper and of the *Daily Telegram*. Naturally he finds much of interest in the exhibits of American fishes and fishing tackle.

Sir Edward Birbeck, president of the Anglers' Association of London, and one of the noted English anglers, was this week busily engaged in exploiting the wonders and curiosities of the Fisheries Building and of the United States Commission's great display.

E. HOUGH.

"FOREST AND STREAM'S" WORLD'S FAIR BUREAU.

Texas Bass Fishing.

VELASCO, Texas, May 7.—Col. Abner Taylor, of Chicago, W. M. D. Lee, of Leavenworth, Kan.; M. P. Morrissey, general manager of the Velasco Terminal Railway, and President J. M. Moore, of the Velasco National Bank, yesterday caught with trolls and flies during six hours 122 black bass from Chubb Lake, near Velasco; 92 of the fish weighed from 3 to 5½ lbs. each; the others were smaller and were returned to the water. The above is the best catch this spring. The party also brought in a number of trout weighing from 2 to 3½ lbs. and a fine string of "goggle-eyed" perch.

R. M. C.

Skaneateles Trout.

CORTLAND, N. Y.—District Attorney Squires and S. H. Strowbridge ran over to Glen Haven May 1 to assist in the opening of the trout season on Skaneateles Lake, but owing to a furious rainstorm didn't get a chance to drop a line until the morning of the 2d. In two hours' fishing they landed four trout, the four weighing 9½ lbs. The trout were taken on 7oz. split-bamboo rods. Messrs. Squires and Strowbridge seriously affirm that had they prolonged their angling two hours longer they could have caused a resounding slump in the Cortland fish market.

M. C. H.

Bass Fishing for New Yorkers.

WHITE MILLS, Pa., April 24.—I think your readers could get some good fishing in the Delaware River and be within easy distance of New York. There is a good hotel at Lackawaxen, Pike county, Pa., only three hours from New York by the Erie R. R. The fishing is good all along the river, and a great many city people spend the summer months at the small towns along the river; so that one would always find good companions and have a good time.

C. H. D.

Arkansas Bass and Croppie.

LITTLE ROCK, Ark., May 8.—Have just returned from Old River, twelve miles out, where with live bait I landed a beautiful lot of black and rock bass and some very large croppies. The high water prevails all over the State just now, but our fishing will be excellent in ten days more.

J. W. I.

Fly-Fishing for Bass.

THERE is excellent fly-fishing for small-mouthed black bass along the Grand River, above and below Lansing, Mich. This point and other good ones reached by the Chicago & Grand Trunk Railway. W. E. Davis, General Passenger Agent, Rialto Building, Chicago.—*Adv.*

CONGRATULATORY.

PORTLAND, Oregon.—The sportsmen all over the country owe FOREST AND STREAM a deep debt of gratitude for forcing Delmonico to "walk up to the capturing's office and settle."

S. H. GREENE.

PUTNEY, Vt.—Allow me to congratulate the FOREST AND STREAM for the successful termination of the Delmonico woodcock case, for without the assistance of that paper I do not think the case would have been tried. Success to the FOREST AND STREAM for all such undertakings.

AYER.

LEBANON, N. H., May 4.—With others I congratulate you on your backbone and bulldog tenacity with which you followed up that Delmonico woodcock case.

C. D. S.

PHILADELPHIA, Pa., May 2.—Although rather late, I too, wish to congratulate you upon your persistency, pluck and good management which finally brought Delmonico to the front with his fine. This case would still be pending, except for you keeping the matter continually astir.

C. H. C.

"Danvis Folks."

Editor Forest and Stream:

No reader of FOREST AND STREAM can have a heartier welcome for Uncle Lisha and Aunt Jerusha than myself; and the story of their return and greeting by their old friends and neighbors is eagerly sought and read as each week's paper comes to hand.

I speak for the family, too, in wishing for a long continuance of the series, and when they are published in book form they shall have an honored place with "Uncle Lisha's Shop" and "Sam Lovel's Camps," which are the most prized and most read of all the books in my library, for they so vividly delineate the life and characters of the little village where, as a boy, I passed the happiest days of my life.

We, too, had an Uncle Lisha, Sam Lovel and Solon Briggs, and I sometimes imagine that I was something like Pelatiah Cove.

Uncertain Joseph Hill was represented by an individual whose lack of promptitude was the cause of disastrous consequence to one member of the community.

One night he walked into the village store, where a dozen men were congregated, smoking and resting after their day's work, stood fully five minutes by the stove listening to the desultory conversation, and then drew, "Say, men, I guess there's a fire up the road; anyhow, I see smoke a-comin' through Mort Bentley's roof when I come past, 'n' I hurried down to get help."

When the crowd rushed out they found the roof ablaze, and all their efforts to save the house were of no avail.

A long life to Mr. Robinson. His stories are happy reminders of bygone days and will serve to make life pleasanter when "Ah'm gat hol."

J. H. B.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, *rdB, Portraits for the Young* (the price of which is \$3).

The Kennel.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

May 30 to June 2.—American Pet Dog Club, Lexox Lyceum, New York. Marion E. Bannister, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 15.—American Field Trial Club trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Don't forget that entries close for the Pet Dog Show May 22, with Miss M. E. Bannister, Lenox Lyceum, Fifty-ninth street and Madison avenue, New York.

TORONTO DOG SHOW.

(Special Report).

THE Toronto Kennel Club are to be congratulated on the grand turn out at their show held May 12 and 13. The entries totaled 265, which, considering no money prizes were put up, was unprecedented, and shows that at any rate some breeders here are not in it for any financial gain. The building, the Granite Rink, was suitable in every way, large, well lighted and ventilated, and at no time was the faintest ill smell noticeable. The aisles were wide, the benching new for the occasion and sawdust and straw plentiful and good. Dr. Mole, the club's veterinarian, looked well after his part of the work, and the secretary, Mr. W. P. Fraser, proved to be exactly the right man in exactly the right place. The building was ready for the dogs and just as soon as they arrived they were well bedded down and watered. Spratts biscuits were fed dry. The show was opened on Friday by His Honor Lieutenant-Governor Kirkpatrick and Mrs. Kirkpatrick, who were received by the president, Mr. J. F. Kirk, vice-president J. S. Williams and the members of the committee. Mrs. Kirkpatrick was presented by little Miss Kirk, the daughter of the president, with a beautiful bouquet of sweet peas, and both His Honor and Mrs. Kirkpatrick took a lively interest in the exhibit.

The officers and executive committee were attentive to exhibitors and exhibits, and every one seemed greatly pleased with the arrangements made.

A pleasant little informal dinner was given at the Granite Club on Friday evening, at which we noticed among others the president, Mr. Kirk, Messrs. J. S. Williams, C. A. Stone, G. B. Sweetnam, H. P. Thompson, J. J. Bennett, F. L. Mabel, Geo. Bell, A. D. Stewart, John Maughan, E. Tinsley, Dr. W. Mole, J. G. Mitchener, J. A. Spracklin (familiarily known as "Old Sprack"), the FOREST AND STREAM representative and others. An hour was spent in discussing the good things on the table and in social chat, and that bugbear of such gatherings, formal speechifying, was left severely alone.

Mr. Bell went about his work coolly and methodically, taking plenty of time in giving his decisions and finished up a hard day's work as calmly as when he began. Mr. Stewart ran his classes off in good shape, and his awards were extremely well received. The other judges, Messrs. Linsley and Maughan (both well up in years), went into the ring like old veterans. The awarding of some of the specials was tedious, but caused a good deal of fun, especially that offered for the best dog exhibited by a lady, the competition for which was keen, and finally dwindled down to two, the Great Dane Casino, a very good one and shown in grand condition, and the Japanese pug (?) Jap, handled by Mrs. A. J. Rattray. The latter was eventually handed the prize, a beautiful basket of roses. The special for the best terrier brought several really good ones into the ring, including the bull-terriers Principio and Vesper Belle, the wire-hair fox-terrier bitch Bonnet, the Irish terrier the Canadian Ambassador, the black and tan Black Earl, and among these, which had all won in good company, the decision lay. Principio, after a hard tussle, came out in front. Vesper Belle was shown very fat and her skin red in spots. She afterward had to give way to Mr. Brodie's recent importation, the wire-hair bitch Bonnet, for the best terrier bitch.

H. B. DONOVAN.

MASTIFFS.—Dogs came first on the list, the winner turning up in Minting Minor, a very fair dog failing a little in head properties. The only entry in mastiff bitches failed to put in an appearance.

GREAT DANES.—A young dog of exceptional merit won easily from the well known Don Caesar, Jr. and Bismark, at present he is rather timid, but if again exhibited is sure to render a good account of himself. In bitches, Ruth, a nice blue, secured the award. The winners in both puppy classes are hardly up to first class show form.

ROUGH-COATED ST. BERNARDS dogs made a good show, although nothing of importance turned up; the winner, Kenmore, is a fine big, upstanding dog, good in legs, feet, bone and body; his chief fault is his muzzle, which is not quite square enough, his skull is fair and his expression good. Laddie, second, also fails in muzzle and expression good. The winner in bitches is just fair, rather on the small side and not quite good in head properties. The winner in the puppy dog class is a fairly well developed youngster, but it is doubtful if he will ever make a flyer; he afterwards won the special for the best St. Bernard in the show.

NEWFOUNDLANDS brought out a really good one in Rover, in fact one of the best yet seen in this country. Major, the second prize winner, is too weak in head and he was not shown in the best condition. Turk's coat is his worst fault. Topsy, the winner in the bitch class, is just fair.

GREYHOUNDS proved one of the best classes in the show both in regard to quality and numbers. Johnny Stringer, the winner, is a fine, big, upstanding dog, exceptionally deep in chest, with good legs and feet, although the latter might be a bit closer; he would be improved if his neck were a trifle longer and cleaner. I considered Common, who was sent out of the ring without mention, quite as good as anything in the class, and he should certainly have been second, which award went to Mr. Sinclair's fawn dog Skinny. In bitches Erminie won easily from Elsie II. and Topsy, both fair longtails.

BEAGLES.—The Albion Kennels supplied most of the winners, and the way in which the dogs were turned out reflects the greatest credit on their owner, some exceptionally promising young stock putting in their first appearance.

POINTER classes brought out some very good ones, and the awards seemed to give the utmost satisfaction.

ENGLISH SETTERS.—Dogs saw the well-known Sultan at the head of affairs. He was, however, closely pressed for

this position by a coming youngster in Forest Rex, one with very few faults, and for which we predict a bright future; he afterwards won in the puppy class. In bitches the Forest Kennels again supplied the winners.

IRISH SETTERS.—In dogs it must have been a close thing between Larry Lisburn and Toronto Sport, the former winning in style and general symmetry, the latter excelling in head properties and color. Hero is a fair dog shown in bad condition. Rex is too light in eye and color.

IRISH WATER AND CLUMBER SPANIELS were very moderate specimens.

FIELD SPANIELS.—In dogs, champion Samson added another bracket to his already long list, a good one in Rosedale Teaser coming second. Footpath and Nap are also fair ones. Bitches saw a grand one in Rosedale Romp to the front; she certainly had a hot rival in Mr. Spracklin's Grace, while Rosedale Princess and Empress are both above the average.

COLLIES made a grand show and the quality on the whole was much better than we expected to find. Finsbury Dude, a much improved dog, won handsily from Scotsman, a showy black and white, his head is long, but is not quite correct in formation, stop too pronounced, which spoils his expression, and was shown very short of coat, he also gets his tail too high up; Dude, on the other hand, is a fairly good-headed dog and possesses a grand coat of correct texture, while his bone is first-class. Macduff is a young dog that should again be heard of; he carries a magnificent coat and his head is above the average, he also possesses all the requisite points that go to make up a good collie. Mr. Williamson's unnamed entry is also a grand coated black and tan. Bitches brought out a first-class one in Nora; at present she is not in the best of coat, but when in form should be able to hold her own in any competition. Strathroy, a youngster of quality, won in the puppy class; it is doubtful if he will ever be big enough for open class competition.

BULL-TERRIERS turned out in great numbers, some good specimens being exhibited. Principio not only secured the award in this class, but afterward won the special for the best terrier in the show. A nice little dog is the unmentioned Bendigo, Jr.; his forelegs might be a bit straighter, but as this is his only fault it was too bad to penalize him so much for it. The Duke of Wellington, second, is completely gone behind, while Chatham Bob is entirely wrong in formation of head. The others are all fair specimens; but not good enough to win in this class. Bitches saw the New York winner, Vesper Belle; to the front. This is probably the best bull-terrier bitch we have in this country. Kathleen Mavourneen is another good one. She is evidently suffering from a severe cold, and it was a mistake to exhibit her in her present condition. Snowflake is by no means a bad one, and may do better where there is less competition.

FOX-TERRIERS proved the best classes in the show both in point of quality and numbers, quite a number of noted dogs meeting to do battle once again. In challenge dogs champion Blemton Trump had no opponent, he is looking remarkably well and looks as if he had taken a new lease of life; we are glad to see so many of his descendants in the show, and feel sure that if he only gets a chance his success at stud is but beginning. Smooth dogs, open class (17 entries), first, Tom Tom, is a beautiful-fronted dog, whose expression is spoiled by a light eye. Belvoir Huntsman, second, should have given place to Calchas, a grand-bodied terrier, just a trifle full in cheek; he is one of the most showy terriers we have seen, and had he even been placed first few could have grumbled. Several good dogs had to be passed over in this class without mention. The bitch class brought out a good one in Belvoir Becky; her head and ears are fair, her front about perfect, while in other respects she is far above the average. Stardale Belle should certainly have come next in order, however, the award went to Tambourine; Belle beats her in nearly every point, and were her eyes a shade smaller she would take a lot of beating by the very best. Puppy dogs saw a lot of promising youngsters that must some day make their mark. Thorne, the winner, is a flyer spoiled by having had one of his forelegs broken and it has not been properly set. Teetotaller is another good one. In puppy bitches it must have been a stiff job to separate the winners; however, Mr. Stewart eventually landed about right. The third prize one, Vixie, was far too young to show, but she is certain to render a good account of herself ere long.

WIRE HAIRS.—Dark Eye although entered did not arrive in time from England to show up; not a few of the fanciers felt disappointed at not seeing this grand terrier make his debut in this country, we, however, expect him to arrive in the course of a few days. In bitches, Bonnet was the only competitor, owing to the special for the best fox-terrier in the show being presented by her owner, she did not compete for it, but she afterwards proved her superiority by winning the special for the best terrier bitch of any variety in the show.

IRISH TERRIERS.—The Canadian Ambassador had no opponent. He afterwards won the special for the best Irish terrier in the show. We certainly prefer the second prize bitch Peggy to her daughter Killarney Girl in their present form. Peggy is a beautiful headed bitch with a perfect front. She is also in grand coat just now, but she is shown in a far too obese condition. Killarney Girl's expression is spoiled by a light eye, and she is at present entirely devoid of coat. When in condition she is without doubt a really grand terrier.

SKYE AND YORKSHIRE TERRIERS were just passable.

SCOTTISH TERRIERS brought out two new ones, both bred by Secretary Fraser. Jock, the winner, is fit to take a very high place in the very strongest competition. Rob Roy is a grand black brindle, whose future chances are marred by a crooked front. Lovat is a grand terrier, but too big for exhibition. In bitches, Mr. Fraser's recently imported Braw Lass, a grand little terrier, rather timid at present, won easily from Thistle and Highland Lassie.

IN BLACK AND TAN TERRIERS there was nothing good enough to stop the upward career of the Black Earl. He is looking well after his first winter here. Mr. Farrow's Sambo is a well marked dog that should come to the front yet, while Rochelle Scott begins to show age. In bitches, the neat little Dina had no opponent.

BEDLINGTON TERRIERS were very poor and contained nothing worthy of mention.

Four good Airedales were exhibited and we are glad to see this useful breed making some headway in this country.

MISCELLANEOUS CLASS contained nothing startling unless it was the nondescript called a Japanese spaniel; this dog looks as if it was a cross between a toy spaniel and a Pomeranian. The selling class was a large one and contained quite a number of dogs well worth their catalogue price. Several good toy spaniels were shown, especially the first and second bitches.

W. BRODIE.

LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, J. Massey's Minting Minor.

GREAT DANES.—Dogs: 1st, Miss Mulock's Casino; 2d, S. Stewart's Don Caesar; 3d, A. M. Howard, Jr.'s Bismark. Bitches: 1st, H. P. Breay's Ruth; PUPPIES.—Dogs: 2d, A. M. Howard's Bismark; 3d, Bitches: 1st, A. M. Howard Jr.'s Miss Bismark.

ST. BERNARDS.—ROUGH.—Dogs: 1st, E. E. Starr's Kenmore; 2d, Miss E. Pellatt's Laddie; 3d, J. C. Aikens's Kaiser. Reserve, H. M. Pellatt's Bruno. Very high com., W. H. B. Aikens's Otto. Bitches: 1st, S. L. Peters's Cleopatra; 2d, E. E. Starr's Queen Starr; 3d, C. A. Pearson's Luna. Com., H. Lyon's Jenny. PUPPIES: 1st, J. G. Wort's Captain. Very high com., J. A. Cleave's Colonel.

NEWFOUNDLANDS.—Dogs: 1st, L. D. Frazee's Rover; 2d, T. Langton's Major; 3d, F. Habart's Turk. Bitches: 1st, J. Campbell's Topsy.

GREYHOUNDS.—Dogs: Equal 1st, Walker & Hynes's Johnny Stringer and Clover Hill Kennels's Holly Fright; 2d, Bob Sinclair's

SKINNY 3d, William J. Tulk's Master Memnon. Reserve, J. C. Gibson's Jack. Very high com., Ed. Alberti's Frank, Fred. Habart's Misterton and Bart. Hulse's Common. High com., S. W. Matthews's Misterton II. and Miss Minnie Murphy's Beach. Bitches: 1st, J. L. Sheedy's Emerald; 2d, Dr. J. T. Fotheringham's Elsie II.; 3d, Ed. Alberti's Topsy. Very high com., A. E. Verano's Gip. Puppies: 1st, A. R. Gordon's Fly.

AMERICAN FOXHOUNDS.—Dogs: 1st, Fred. Habart's Bango; 2d, W. N. Wade's Grip; 3d, Bart. Hulse's Bruce.

ENGLISH FOXHOUNDS.—Dogs: 1st, G. W. Wilby's Spartan; 2d, G. Witchall's Rattler; 3d, Ernest Cooper's Bugle. Bitches: 1st, Bart. Hulse's Sport.

DACHSHUNDS.—Dogs: 1st, J. F. Hynes's Spico; 2d, Miss Mary Reid's Fritz. Bitches: 1st, T. C. Blogg's Lena; 2d, J. C. Morgan's Queen Hilda.

BEAGLES (over 13in.).—Dogs: 1st, 2d, 3d, very high com. and high com., Albion Kennels, Duster, Rallywood II., Wiseman, Sapper and Samson. Bitches: 1st, A. Scholes's Pipelo; 2d, 3d, very high com. and high com., Albion Kennels' Governor, Famous, Rally and Wishful.

BEAGLES.—Dogs (under 13in.): 1st, Wm. Briggs's True Boy. Bitches: 1st, 2d, 3d and very high com., Albion Beagle Kennels' Periwinkles, Bustle, Trusty and Graceful.

POINTERS.—Dogs: (55lbs. and over): 1st, Robert Sewell's Prince Graphic; 2d, Wm. Sanderson's Ranger. Bitches: (50lbs. and over): 1st, Forest Kennels' Phantom.—Under 50lbs.—1st, G. H. Briggs's Jessie; 2d, John Smillie's Jessie Croxteth.

ENGLISH SETTERS.—Dogs: 1st and 2d, Forest Kennels' The Sultan and Forest Rex; 3d, John Ayre's Ponto. High com., Geo. Evans's Rex. Bitches: 1st, Forest Kennels' Forest Nia. Puppies: 1st, Forest Kennels' Forest Rex.

IRISH SETTERS.—Dogs: 1st, M. Currey's Larry Lisburn; 2d, J. A. Mills's Toronto Sport; 3d, ——— Hero. High com., B. B. Bull's Rex.

GORDON SETTERS.—Dogs: 1st, W. P. Moss's Black Prince; 2d, Miss E. E. Bethune's Jeff.

CLUMBER SPANIELS.—Dogs: 1st, C. H. Wallace's Johnnie, Jr.

FIELD SPANIELS.—Dogs: 1st and very high com., Typical Kennel's champion Samson and Nap; 2d and very high com., J. F. Kirk's Rosedale Teaser and Shadygrove; 3d, Bart. Hulse's Footpath. High com., Miss Maud H. Douglas's Billy. Bitches: 1st, J. F. Kirk's Rosedale Romp; 2d, A. Spacklin's Grace; 3d, W. L. Crawford's Rosedale Princess. Reserve, Typical Kennel's Empress.

COCKER SPANIELS.—Black.—Dogs: 1st and 3d, J. F. Kirk's Rosedale Bramble and Rosedale Nigger; 2d, W. W. Vickers' Curlew. High com., Geo. B. Sweetman's Nip and Tuck and Typical Kennel's Roger. Bitches: 1st and com., J. F. Kirk's Rosedale Duchess and Rosedale Jet; 2d, David H. Loughhead's May B; 3d, Robert Jardine's Pattie. Com., Typical Kennel's Blossom.—Puppies.—Bitches: 1st, David H. Loughhead's May B.—OTHER THAN BLACK.—Bitches: 1st, J. G. Mitchell's Raylan Russet; 2d, Allan Trebilcock's Ruby; 3d, Typical Kennel's Ginger.

COLLIES.—Dogs: 1st, Saunders & Mighton's Finsbury Dude; 2d and 3d, McEwen & Gibson's Scotsman and Macduff. Very high com., G. B. Stevenson's Hermit and Henry Wright's Strathroy.—Puppies.—Dogs: 1st, Henry Wright's Strathroy. Bitches: 1st, Saunders & Mighton's Nora; 2d, McEwen & Gibson's Fussie.

KING CHARLES SPANIELS.—1st, Allan Trebilcock's Royal Duke; 2d, R. G. Wilkie's LeROI.

BULL-TERRIERS.—Dogs: 1st, Wentworth Kennels' champion Principio; 2d and very high com., R. Wright's Duke of Wellington and Dom Pedro; 3d, John McCormack's Chatham Bob. Reserve, Brodie & Lyndon's John L. Sullivan. Bitches: 1st, Wm. Hamall's Vesper; 2d, Wentworth Kennels' Kathleen; 3d, R. Wright's Snowflake. Very high com., Bart. Hulse's Glendon Fan.—Puppies.—Dogs: 1st, Wentworth Kennels' Wentworth Benson. Bitches: 1st, Wentworth Kennels' Wentworth Brenda.

PUGS.—3d, Mrs. John Webster's Trixie.

POODLES.—1st, Lillias Piper's Challenge Ball.

FOX-TERRIERS.—SMOOTH.—CHALLENGE.—1st, A. A. Macdonald's Blanton Trump.—OPES.—Dogs: 1st, Clover Hill Kennels' Tom Tom; 2d, Richard Gibson's Belvoir Huntsman; 3d, A. A. Macdonald's Cashas. Very high com. reserve, John O. Bennett's Stardale Colonel. High com., Bruff Garrett's British Pawnbroker. Com., A. McLean Howard, Jr.'s Teddy, Fred F. Nasmith's Rattler and J. D. G. Shaw's Taffy. Bitches: 1st, Richard Gibson's Belvoir Becky; 2d and com., Clover Hill Kennels' Tambourine and Timbal; 3d, John O. Bennett's Stardale Belle. Reserve, A. A. Macdonald's Joacote. High com., Capt. Lloyd's Lady Cotswood Daisy.—Puppies.—Dogs: 1st, G. Hanson's Thorne; 2d, Clover Hill Kennels' Teetotaler. Very high com., A. A. Macdonald's Vito and Charles Macdonald's Oxford Spite. High com., George Taunt's Rhino. Bitches: 1st, Clover Hill Kennels' Tantrums; 2d, A. McKinnon's Marjorie; 3d, A. A. Macdonald's Vixi.—WIRE-HAIRED.—Bitches: 1st, Brodie & Lyndon's Bonnet. Puppies: 1st, Brodie & Lyndon's Bonnet.

IRISH TERRIERS.—Dogs: 1st, Capt. J. B. McLean's The Canadian Ambassador. Bitches: 1st and 2d, Phil Brown's Peggy and Killarney Girl. Puppies: 1st, Lieut.-Col. Davidson's Little Brick.

SKYE TERRIERS.—1st, Miss Susie Smyth's Rags; 2d, R. Wright's Donald.

YORKSHIRE TERRIERS.—Dogs: 1st, John Jones's Tiney Jones. Bitches: 1st, J. Thompson's Miss Jumbo.

SCOTTISH TERRIERS.—Dogs: 1st, A. C. Gibson's Jock; 3d, Cassels & Fraser's Lovat. Bitches: Equal 1st, Cassels & Fraser's Braw Lass and Thistle.

TOY TERRIERS (under 7lbs., other than Yorkshire).—Bitches: 1st, Miss A. Myers's Trixie.

BLACK AND TAN TERRIERS.—Dogs: 1st, Capt. Rennie's The Black Giant; 2d, C. Farrow's Sambo; 3d, R. Wright's Rochelle Scott. Bitches: 1st, Miss A. Farrow's Dina.

DEDLINGTON TERRIERS.—Dogs: 1st, W. Kingdon's Jack; 2d, P. J. Mulqueen's Blucher; 3d, S. Ritchie's Dash. Bitches: 1st, A. Trebilcock's Polly.

AIREDALE TERRIERS.—Dogs: 1st, B. R. McConkey's Bootles; 2d, J. B. Hooper's Worrie; 3d, S. E. Moyer's Jack Medd. Bitches: 1st, J. B. Hooper's Bessie.

MISCELLANEOUS.—Dogs: Equal 1st, A. Trebilcock's Jumbo and Mrs. A. J. Rattray's Jap.

TOY SPANIELS.—Dogs: 1st and 2d, A. Trebilcock's Romeo and Jack. Bitches: 1st, A. Trebilcock's May.

SELLING CLASS (\$20 or under).—1st and 2d, Clover Hill Kennels' Tally-Ho and Trickster; 3d, A. D. Stewart's Vic.

SPECIALS.

Best of any breed owned by a member of T. C. C. Forest Kennels' The Sultan. Best St. Bernard, J. G. Wort's. Best dog exhibited by a lady, Mrs. A. J. Rattray's Jap. Best foxhound or beagle, Albion Kennels' Periwinkles. Best exhibit other than pointers and setters, Wentworth Kennels' bull-terriers. Best sporting dog in the show, J. F. Kirk's Rosedale Duchess. Best dog sporting dog, Wentworth Kennels' Principio. Best English setter dog, Forest Kennels' The Sultan. Best English setter bitch, Forest Kennels' Forest Nia. Best pointer bitch, G. H. Briggs's Bessie. Best English setter puppy, Forest Kennels' Forest Rex. Best pointer dog or bitch, G. H. Briggs's Bessie. Best Irish setter, M. Currey's Larry Lisburn. Best terrier, any variety, Wentworth Kennels' Principio. Best Irish terrier, Capt. McLean's The Canadian Ambassador. Best fox-terrier, A. A. Macdonald's Blanton Trump. Best terrier bitch in show, any variety, Brodie & Lyndon's Bonnet. Best red cocker bitch, J. G. Mitchener's Raylan Russet.

How the Tail Wagged the Dog.

"This here thing of the tail waggin' the dog is founded on fact," said the man with the ginger beard. "Leastwise, I've seen it did." The shoe drummer from "town" opened his mouth to utter a mild protest, but the grocer gave him so violent a nudge in the short ribs that he failed to make an articulate sound, and the man with the ginger beard continued: "It happened like this: You see, down in Mexico they is a wasp with a stinger that is full two inches long and chuck up with pizen from pint to root. One day one of 'em socked his old prod right into the tip end of the tail of a pointer dog I had with me down there. Mebbe you won't believe it, but in less'n two minutes that tail had swelled up so that it was anyhow four pounds heavier than the dog. He was layin' there moanin', and I commenced sayin' pore feller and all that sort of thing, and he tried to wag his tail. Natural result: The tail bein' so much heavier, it jist bodily wagged the dog off his feet. I don't think I never saw a pathetic sight in all my life."—Brooklyn Eagle.

We have forwarded the above to the Stock-Keeper, Eng., which has a column reserved for such tales.

SAN FRANCISCO DOG SHOW.

(Special Report.)

THE bench show which closed to-night is by far the most successful event ever held west of Chicago. The entry, 862, is just 102 more than were ever before brought together on this coast. There doubtless was never a more surprised man than Mr. Raper was at the size and quality of the show. The success of the show is due to the untiring labors of the bench show committee, Messrs. G. J. Watson, C. A. Haigh, J. B. Martin, Thos. Higgs and E. P. Schell. Mr. J. D. Sinclair proved an efficient assistant secretary, Mr. E. H. Williams kept the show in the neatest possible condition and gave very general satisfaction. Dr. F. W. Skafie proved an efficient veterinary.

The fanciers here are very much pleased with Mr. Raper as a judge. There are always a few disgruntled exhibitors at every show, but on the whole he gave very good satisfaction. We find cause to differ with him in only one decision, and think that that one must have been an oversight. He is thorough in his work, quick, yet careful. The show was held in the spacious Mechanics' Pavilion, a building that could accommodate on the ground floor at least 2,000 dogs. The weather was delightful, as it always is in this city in May, and the gate receipts were very good. The club will clear from \$750 to \$1,000. But two accidents occurred to mar the perfect success of the show. Mrs. Gracie's little toy Yorkshire bolted from its attendant's lap, ran out of the open door after its mistress and was run over by the electric car that passes the door, killing it instantly. As the dog was not provided with collar and chain the club are not responsible, and Mrs. Gracie has only herself to blame. Mr. J. B. Martin's fox-terrier Blanton Reefer had a large piece of his ear bitten off by the terrier benched next to him. Prof. Norris entertained a large audience every evening with his excellent troupe of 30 performing dogs. Prof. Parker will find in this young debutant a rival of no mean merit.

The classes numbered as follows (absentees 7): Mastiffs 15, great Danes 12, St. Bernards 27, Newfoundland 10, greyhounds 17, deerhounds 6, American foxhounds 13, English foxhounds 2, bloodhounds 1, pointers 51, English setters 29, Gordon 6, Irish setters 14, Irish water spaniels 5, retrievers 2, Chesapeake Bay dogs 3, collies 13, cocker spaniels 27, dachshunds 5, beagles—, Dalmatians 2, bulldogs 4, bull-terriers 8, fox-terriers 49, black and tan terriers 1, Skyes 3, Yorkshires 2, Scotch 2, toy terriers 5, Boston terriers 4, Japanese spaniels 3, English pugs 5, poodles 4, spitz 4, Eskimo 1, miscellaneous 7.

The judging commenced shortly after 1 o'clock and proceeded very rapidly. The ring was as well served as we have ever seen in the East.

MASTIFFS.—The mastiff dog class would not be excelled in the smaller Eastern shows. The bitches, however, are a weedy lot. Ingleside Crown Prince won again in open dog class, not shown in the best condition, but his vastly superior head and excellent bone and body made him an easy winner. He shows too much throatiness and wrinkle, but his skull and width, length and depth of muzzle leave but little to be desired. He moves very well for so heavy a dog. Lion, second, occupied the same position last year. His coat was in very bad condition; he too, is much too throaty and his ears are poorly carried. He was rightly placed. He is better than Chino, third, whom he beats in head, muzzle and hind legs. Chino has a very fair head but his ears hang poorly and he is not a good mover. He was shown in good condition and has good bone. Bishop, vhc., has a fair skull, well hung ears and is a good mover, but he is too long in muzzle and too leggy. Rex and Leon, given c. cards, are only fair. Lomita Minting, first in open bitch class, is an excellent puppy, shown in the pink of condition. She is at present too light in head and stands too high behind but is grand in body and limbs. Venus, second, is too long in muzzle and too short in skull. Lomita Caution won in dog puppy class. He is pinched in nostrils and light in skull and muzzle, but good in body and limbs. Lewis, second, is fair in skull and muzzle, but has a very bad coarse coat. Lomita Minting won again in bitch puppies. Queen, vhc., might well have been unnoticed. She is much too light in head, has poor expression and badly carried ears.

GREAT DANES.—Titan, first in open dogs, is a dog of the proper type. We have stated for the past two years that the class of great Danes bred on the coast were too heavy in build, too much on the English mastiff order, and we are pleased to see some of the proper type at last. Titan has the best head in the class and is of the proper type and carriage all over. He is a good mover but is slightly handicapped by wretchedly cut ears. Ribaud, second, is of the proper type, with grand character and carriage, good head and neck, good shoulders and front, but straight in stifles. Lop, third, is of the right type of head but is a bit too thick in skull and carries his ears badly. Myers's Hector, vhc., is the most active, best-moving dog in the class, and about the soundest, but is of the wrong type, being heavy in head and shoulders. Caesar, c., we thought worthy of better mention. Though straight in stifles, he has a very fair head and front. Morn, first in bitches, is of splendid head and type, and shown in elegant condition; would not have won so easily had the Harlequin bitch Mirtha, winner of second, been shown thinner in flesh. Her obesity made her appear wide in front and short in neck. Her head is of the right type and she moves well. Hagar, third, is a well put up bitch of right type but fairly beaten. Belle, vhc., is too short and squat, otherwise good. Dog puppies had only one entry, Ko-Ko, given third. He is short and thick in head, with no character and a very bad coat.

ST. BERNARDS (Rough-Coats).—The open dog class had 14 entries, two of them not for competition. California Bernardo again beat California Alton and we think rightly so. Alton beats Bernardo in girth of skull by at least an inch or two, in muzzle both in width and depth, in bone, markings and carriage of ears. Bernardo beats Alton in length of body and height at shoulder. He is the more symmetrical of the two, and is by far the best mover. Alton moved his hind legs very badly in the ring, and we think Mr. Raper fully justified in putting him back on that account. Bernardo is too dark in face, short in blaze and nose band, has fair bone in front but a little light behind. Alton has the best blaze and best shadings, but is a little short in couplings and not quite right in ankles. Reglov, third, is an excellent puppy, constantly improving. He is of good size, good body, good bone and good type of head. Given age he will prove hard to beat. He only lacks in the massiveness of skull and muzzle, which time alone can give him. Duke of Wellington, reserve, has improved wonderfully during the past year. His coat is about the best in the show. His body is very good, skull fair, muzzle hardly in proportion to his size, and legs all wrong. Given shadings and straight limbs, he would have been very near the top. Grand Chancellor, vhc., is tall but a little too long in back and flat in ribs. He has good skull but is too long in back muzzle. Columbus, vhc., is a very promising seven months' puppy with nice skull and muzzle, nice shadings and good markings, good coat and good bone. Don M. unnoticed, is a magnificent dog with good bone and size, but is a light fawn in color without white markings, and looks too much like a Leonberg. The open bitch class did not equal the dogs in quality. Fernwood Inez, the winner, completely outclassed the balance. She is a bitch that the best Eastern ones would find it hard to beat. She is built on very massive lines, with good white markings, light shadings, well hung ears, good skull, fair muzzle, good coat, very good bone. She afterward won the special for best St. Bernard in the show. Lady Delight, second, is prettily marked and shaded, has good coat and shows good character, but is light in head. As she is only 14 months old she may

be expected to develop a great deal yet in head and body. Victoria, third, was shown too fat and with litter. She has good skull and good bone, but is rather light in muzzle. She is proving herself a splendid brood bitch, however. Lady Sylvia, reserve, is too small, and light in head; otherwise she is good. Reglov won in dog puppies with Columbus second; both previously mentioned. Jumbo, hc., has fair head and good bone; a woolly puppy coat. He is a very good sized puppy, but fairly beaten. Monk, hc., has just recovered from a severe illness, but he will never equal his brother, Columbus. Lady Grace, first in bitch puppies, is a wonder. For a seven months' puppy her size, bone, body, skull and muzzle are away above the ordinary. We shall expect to hear good reports of her in the open class in another year.

NEWFOUNDLANDS were a nondescript lot and not worthy of mention.

GREYHOUNDS.—Peter Jackson, the winner in open dogs, had no difficulty in disposing of the rest of the class. He is better in neck, back, loin and front, well let down in hocks and well in stifles. Donard, second, has good head, neck and front, but might be better in stifles and second thighs. John W., third, is a good free mover with good length of neck, good shoulders, well arched loin and good length of back. Examiner, reserve, might well have exchanged places with John W. He is a splendid muscled dog, good all round, but not as good a mover. Flea, vhc., is too light in muzzle, well arched, but light in loin, good length of neck, but too straight in stifles. Open bitches brought out several good ones. It was a close thing between Lady H. Glendyne, the winner, and Valley Queen, second. Both are grand bitches. Lady is a very clean-headed bitch, with beautiful neck, good shoulders, well arched loin, but not wide enough in same, she is better let down in hocks and shown in better coat. Valley Queen is much the best in depth of chest, ribs and thighs, but showed very poorly and carries her legs too much under her. She is very hard to beat in head, neck, shoulders, front and body. Cleverness, third, is a beautiful headed bitch, with good loin and back, well bent and good in hocks. A very neat bitch. Lady Oda, reserve, is a good all round bitch, beaten but slightly by Cleverness. Maid of the Valley, vhc., is good, but short in couplings. Lillie W., vhc., is a fair bitch, but sucking puppy and out of form. Stamboul, first in dog puppies, beat Euxia Pale, second, in stifles and shoulders, but has a broken toe on one of his hindfeet, which certainly will not improve his running. Eureka, first in bitch puppies, is a very promising bitch, she has good length of head, fair skull and promising jaw, carries her ears poorly, but is good in legs, feet, shoulders, ribs, loin and back. Stamboul Queen, second, is a nice brindle, a bit weak in jaw, overshot, but otherwise good. Yreka, third, has a good head and neck, but not as good as Eureka in muzzle and flat in loin.

DEERHOUNDS.—Stag, first in open dog class, is of good type, but is a wretchedly bad mover and should have been placed lower on that account. A deerhound that cannot run is of but little value. Leo, second, is of good type, has a very promising jaw, good shoulders and moves well, but is slightly off in one knee. Scott, third, we preferred more for premier honors; he is good in skull, muzzle, neck, shoulders, body, limbs and coat, and a good, free mover. Lance, reserve, is weak in jaw, small and straight in stifles. Lassie, first in open bitches, is the best deerhound in the show, a very good type. Lufra, vhc., is only fair. Other prizes withheld.

FOXHOUNDS.—Paddy, first in open dogs, has now won his third first in San Francisco; his excellent ears and character, combined with general all-round excellence, placed him in the front rank. His best competitor, Carlo, given second place, is equal to the winner in muzzle and body, but is not as good in feet, pasterns and skull. Jack, third, is short in ears and light in thighs, otherwise good. Rover, reserve, is in poor condition, a little straight behind and too long coupled. Commander, vhc., is a good type of hound, but too prominent just over the eyes and slightly wrong in pasterns. Prince, vhc., is light in muzzle. Julie, first in bitches, is a good all-round bitch, rightly placed.

Landlord and Landress, first in English foxhound dog class and first in bitches are two quite typical hounds. Landress afterward won the special for best foxhound in the show.

BLOODHOUNDS.—Premier IV., the only entry in bloodhounds is a fair hound, but too long and leggy, lacking in wrinkle and dome of skull.

Criticism of the remaining classes received too late for this issue.

Flaps from the Beaver's Tail.

TORONTO, Can.—Mr. W. M. Andrews, transportation agent for the Dominion Government, is about to send out circulars to exhibitors of dogs at the World's Fair, and a compliance with the regulations expressed therein is imperative. Mr. Stewart has mailed a circular in connection with this, urging exhibitors to attend to all the regulations necessary for proper shipment.

Mr. T. Mackay Robertson, Kingston, has, I hear, just received from Wales a pair of cockers which have done some winning. No further particulars have reached me other than they are "long and low," the dog a black and the bitch a liver.

Mr. T. A. Carson, also of Kingston, has written Mr. Farrow giving him a commission to buy a brace of Irish water spaniels to add to his kennel of this breed.

A meeting of the Canadian Fox-Terrier Club was held in the rooms of the Granite Club on Saturday afternoon, President A. D. Stewart in the chair. The specials of the club will be offered this year at Toronto. It is expected that the association will offer as much money as is put up for the larger breeds, and that sexes will be divided in all classes, including puppy and novice, and the smooth and wire-hair divisions separate in all cases. The club will also submit the names of three club judges for the consideration of the committee. Since last meeting the following specials have been offered: Silver cup by Mr. J. E. Thayer, souvenir breastpin by Mr. G. W. Price and \$10 cash by Mr. Robert Davies, Toronto.

The Bowmanville St. Bernard kennels have closed with a breeder in England for a good rough-coated stud dog, which is to be shipped at once. He was bred by Mr. Norris-Elye, is three years old and the sire of several winners.

Messrs. Saunders & Mighton, Harriston, who imported a few good collies last year, are getting over another, the rich sable and white bitch Invercauld Beauty, by Langley (champion Wolf—Hazel), out of Invercauld Sable Queen (Gladiolus—Bazaar Lassie). He was placed third at Dundee last year, is two years old and was bred by Mr. Thow, Jr., Craithie, Scotland.

Mr. William Brodie has formed a partnership with Mr. Charles Wyndon of this city.

I had a long business meeting to-day with Mr. Stewart in connection with World's Fair business. Canadian entries are now all quite ready to send in, but we are in a fog as to the classification. Correspondence as to this, even with Mr. Buchanan, is quite contradictory. All the hard work—and it has been hard work—expended here in getting the Canadian entry in shape in good time seems to have been expended to no good purpose owing to the undecided state of things in Chicago. For heaven's sake stick a pin in somebody.

H. B. DONOVAN.

World's Fair Dog Show.

WORLD'S COLUMBIAN COMMISSION, Department of Live Stock, Chicago, May 10.—*Editor Forest and Stream:* I deem it best to call the attention of those interested in the kennel exhibit of the exposition to the fact that the committee on awards of the National Commission under the general plan do not desire to make precedent that might be injurious to other exhibitors by naming the judges for the kennel exhibit in advance of receiving entries. They appreciate fully the force of custom and their desire in common with the breeders, and this department, is for the best show possible. I can heartily indorse their interest and can assure exhibitors that the judges for this exhibit will be persons whose ability, integrity and prominence are such as will render them acceptable to exhibitors. I have waited until this late date for such a decision, hoping that I would be able to print a revised premium list containing some additional classes and corrections, with a list of judges. The late date at which this decision reached me renders it inadvisable to do this, consequently no edition of the premium list for the kennel exhibit will be issued other than the one now in force, until near June 1, when a new edition of the entire live stock premium list will be issued containing all corrections up to June 1. Copies of the present list with entry blanks can be had by addressing the undersigned. I deem it important to state that the date for closing entries in the kennel exhibit has been extended from May 20 to June 1, and in addition to state that the department of live stock has authority to create such additional classes in any division as in its judgment will add to the interest of the exhibit, and that this course will be pursued in the kennel division. Wherever a sufficient number of entries (ten) in any breed not mentioned in the printed premium list is offered, an additional class will be created with such premiums as seem proper.

Breeders and owners of dogs will, I trust, appreciate the earnestness and desire of this department to make the kennel exhibit one worthy of the kennel interests of this country, and I assure them I will do whatever lies in my power, either in the creation of separate classes or in any other way to make the kennel exhibit an unequalled success.

Mr. James Mortimer, superintendent of the exhibit, can be addressed on and after the 15th day of this month at Chicago.

I sincerely trust we shall have the continued encouragement and aid of all clubs, and take this manner of thanking the clubs who have generously offered special premiums and trophies, and who have so frequently taken opportunity to show their interest and support of this feature of the Live Stock Department.

Any information desired by those interested will be gladly furnished by this department. W. I. BUCHANAN, Chief Dept. of Agriculture (in charge Dept. of Live Stock).

The Latest News.

FOREST AND STREAM OFFICE, Chicago, May 17.—*Special to Forest and Stream:* Nothing startling in World's Fair dog show. Only fifteen entries so far and ten exhibitors. Of course it is far too early yet for many entries. The Canadian entries are all expected in a lump. Thos. Johnson, of Winnipeg, will enter two pointers and three setters. Mr. E. Edmond, of Yarmouth, England, cables to know whether or not his entry has been received. He enters the crack great Dane Earl of Warwick. No other European entries heard from at this date. The time for entrance having been extended till June 1, the great crush of entries will naturally be about June 1 to June 3. E. HOUGH.

Spaniels in Hot Countries.

Editor Forest and Stream:

My own experience leads me to fully indorse all that your correspondent says, in FOREST AND STREAM of March 23, about the merits of the old breed of cocker spaniels. Their small size makes them less objectionable in a house than setters or pointers, and so if allowed to live indoors with their owners, their intellects can be cultivated to a degree that is difficult with dogs which are always kept in kennels outside. While pointers or setters are certainly better than other breeds for special kinds of sport, the little cocker spaniel is like a pocket rifle, a constant companion, always at hand and ready to do his best at anything. The breed has been neglected in England during the last thirty or forty years, in consequence of the battue system having been extended to woodcock shooting. In many or most of the large coverts these birds are put up by lines of beaters, a method preferred by those sportsmen whose chief pleasure consists in making large bags. On the other hand, those who care for well trained spaniels derive half their pleasure from seeing the intelligence and intense enjoyment displayed by their little companions while searching.

I am acquainted with no European breed equal to the cocker for working well in a tropical climate. I never heard how the Southern States of America agree with dogs, but imagine that the heat must have the same effect there as in South Africa and India, when nearly all those of foreign breed are so liable to various diseases, especially of the liver and skin, that they rarely survive many years. If they do live they often become listless and useless. This is particularly the case with foxhounds, pointers, curly-haired retrievers and in perhaps a less degree, with setters; but the small breeds of spaniels, and above all cockers, can be kept in good health and full of energy for field work without difficulty. One of my friends in India owned a short-legged and not very heavy spaniel which, besides finding and retrieving winged game, would follow the tracks of a deer and hang on to its throat if it tried to escape.

I had a highly bred cocker of a deep orange red color, in the plains of India for seven years, during which time she was never ill for an hour and never lost her enthusiasm for sport. I bought her when a puppy, and the knowledge of field work was hereditary in her to such a degree, that the first time I took her out with the gun, at the age of about eight months, she quartered the ground during a whole afternoon like an old trained dog, keeping well within range. She would put up quail, partridge, hare or snipe, and retrieve ducks from water. (This last accomplishment is, however, hardly desirable in many hot countries, on account of the danger from alligators.)

The little dog had one peculiarity that I never saw in any other spaniel. Occasionally when scenting a snipe hidden in a tuft of grass, or a quail in a thick bush, she used to stand with one foreleg raised, exactly like a pointer.

Many sportsmen prefer large spaniels because their weight enables them to push through heavy cover with less fatigue than smaller ones; but a cocker spaniel can glide through many places where a large dog cannot force his way. In England rabbits often hide inside the thorn hedges which grow on the tops of banks dividing fields, or else in dense clumps of gorse, the spines of which touch the grass on every side. One of my cocker spaniels used to drive them out of the gorse by dropping flat on her stomach and crawling underneath. When I was searching for them along the hedge-rows she used to push her way between the stems of the thorn bushes and drive them down into the fields.

Not infrequently a rabbit would keep a short distance ahead and refuse to leave the cover. In that case the spaniel would come outside, gallop forward 50 or 60 yds., re-enter the hedge and drive back toward me, so as to force out the rabbit between us.

She gave tongue for rabbits in a different manner to that used for other game, so that I always knew when to expect a shot at the former.

While almost every animal can be managed more easily by kindness than by severity, this is pre-eminently the rule

with the cocker spaniel. He has a very excitable and affectionate disposition, so is apt to lose his head if flogged; but only make him thoroughly love you and he becomes eager to oblige you, and if he makes a mistake it is through his over eagerness preventing his waiting till he exactly understands your wishes. Even wilful disobedience I have found less easily cured by beating than by speaking in a serious tone and emphasizing each sentence by a tap on the nose with a finger.

As wild animals are very liable to sneak away on hearing a man's voice, I have always trained my dogs, as much as possible, to work by signs alone; to come to heel, for instance, when a hand is waved backwards, or to range for game when it is waved forward. The spaniel mentioned at the beginning of this letter understood signs so completely that she would go a considerable distance to and search any particular bush at which I pointed a finger. If necessary to attract a dog's attention to a sign I give a low whistle instead of speaking.

From your correspondent's description of the cockers at dog shows in America, they seem to me to be crossed with the Blenheim or King Charles breed. Without professing to be a very good judge, I may say that the cockers I have known have had noses inclined to be sharp, ears rounded and not very long, and a coat rather short without curls, or long tangled hairs to catch in thorns. Eyesight extremely fine, the eyes being neither sunken nor very prominent.

During the last few months there has been some correspondence in your paper about the treatment of gunshyness, so I will describe a method which was quite successful in curing the only dog I ever possessed with that failing. The friend from whom I bought her warned me that she was useless, invariably bolting at the first shot and never stopping till she reached home. I employed a man to lead her with a strong cord so that she could not escape, when I was out shooting, and carried a quantity of sweet cake in my pocket. After each shot I stroked and spoke soothingly to her, gave her a piece of cake and allowed her to mouth the bird if one were killed. In a little more than a week she lost all fear of a gun, and soon began to be wild with delight if I took up one while in the house. J. J. MEYRICK.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

World's Fair Bench Show.

CHICAGO, May 13.—By some mischance a telegram I sent to FOREST AND STREAM on May 9 miscarried, and the latest news concerning a judges' list, etc., did not appear last week. Mr. Buchanan informed me that a revised premium list would not be published.

In FOREST AND STREAM of May 4 I wrote: "It is rumored that Mr. Buchanan will accept Canadian entries regardless of any action of the Canadian clubs or exhibitors." This rumor is misleading. Mr. Thos. Johnson, of Winnipeg, Man., very kindly inclosed me information on the subject, which he received direct from Mr. Buchanan. I quote such parts as are pertinent to the subject, as follows:

"I have to advise you that under the rules of the Exposition all foreign exhibits are under control of the Commissioners representing the several countries, and of course no individual exhibits of dogs can be made from your province except through them."

"Understanding that the Canadian authorities place the number of dogs from the Dominion at about two hundred, which I understand to be entirely satisfactory, I am not disposed to interfere with such internal arrangements in the selections of these as the Commissioners deem best to make, and must therefore respectfully decline to receive dogs except through that medium."

A Possibility.

There is now an earnest movement with a formidable support, it is more than rumored, toward establishing a new organization of clubs in the West, with a policy which will be more in sympathy with the people. This, however, as I understand it, is not the impelling force of the movement. The multiplication of bench show organizations, the geographical features of this country as they affect bench show circuits, and the natural pressure which the wide growth of canine interests gives are the most important reasons for the contemplated movement. I hope to be able to give more specific information next week.

The Mongolian Pheasant.

This new game bird is growing in popular favor and its cultivation is receiving more attention. On the northern part of the Pacific coast they are well established, probably permanently so. In Illinois they have been introduced and there are most favorable reports that they will thrive. Dr. M. F. Rogers, of New Albany, Miss., made an attempt to raise some from eggs imported from the Northwest, but failed on account of bad weather, I believe, although I am not positive. Mr. N. Wallace, Farmington, Conn., has had excellent success in cultivating them. They will be a most valuable addition to the game birds of America, but it will be many years before they become common enough to afford sport to the shooters in general.

In a pleasant letter, Mr. L. F. Bartels writes me that the St. Patrick Kennels have about concluded to send Monk Bishop and the Pearl of Pekin to the World's Fair show. He also mentions that Mr. I. N. Porter, formerly of Denver, has moved to Salt Lake City to engage in music business. He intends to indulge in greyhounds, as soon as he is properly located, and will try some coursing on Utah jack rabbits. Mr. Porter is noted an admirer of coursing and famous in Denver as a most successful wolf hunter.

Mr. W. J. Beck, Columbus, Ohio, has sold the setter dog Ightfield Rhwllas to Mr. B. H. Whitely, Springfield, Ohio, for \$200. The price was incorrectly given in a contemporary as being \$400.

Entries to the Northwestern Field Trial Club's Derby close on June 15. Entry blanks can be obtained of the secretary-treasurer, Mr. Thos. Johnson, Winnipeg, Manitoba.

Mr. J. E. Isgrigg, of Montgomery Ward & Co.'s efficient staff of experts, has some ideas in respect to the formation of a sportsmen's club which are worthy of consideration. The fishing, shooting and bench show clubs, he thinks, could unite and furnish a club house, which would be a place where all could meet, where all the sporting journals would be kept on file, and where better acquaintance and good fellowship would be promoted, and where visiting sportsmen could meet the celebrities of sportsmanship. It does seem strange that Chicago has no club house of the kind mentioned. Other cities of far less pretensions have developed to that stage of sportsmanship. B. WATERS.

909 SECURITY BUILDING, Chicago.

Sam W. Vidler, steward of the Cheyenne Mountain Club of Colorado Springs, Col., has taken up greyhounds. Among those already acquired by him are Buenero (Norwegian-Bueniritiro), Comedy (Lord Neversett—Partera) and Bob Up Serenely (Dingwall—Miss Kitten). Buenero is a litter sister to Flying Fancy, the runner up at the recent Huron (S. D.) meet. Comedy was bred by H. C. Lowe, of Lawrence, Kan. Bob Up Serenely comes from the St. Patrick Kennels of Denver, Col. Dingwall, his sire, and Miss Kitten, his dam, are two of the dogs presented by Col. North to "Buffalo Bill."

United States Field Trials.

Editor Forest and Stream:

It is with complete satisfaction mingled with pardonable pride that the management of the United States Field Trials Club, calls attention to its third annual trials, believing that, as in the past, its efforts toward placing field trials of bird dogs on a higher plane of legitimate sport, worthy the support and countenance of the better class, will be fully recognized. The stone wall of prejudice that was wont to encircle field trials, has, under enlightened, advanced and honorable methods, crumbled away until to-day field trial contests of bird dogs stand for all that is honorable and refined in the field of sport. Thousands of dollars are invested all over the land in the breeding and developing of the pointer and setter. The United States Field Trials Club decided to give two meetings this season instead of one, the first to be held at Bicknell, Ind., beginning Nov. 6, and the second to be held at Grand Junction, Tenn. next February, thereby giving a fall and a spring meeting. The club in giving two meetings assumes a responsibility of over \$5,000, as \$2,400 in prizes will be given at each meeting.

The United States Field Trials Club, believing that the field is the only test wherein the merits of bird dogs can be correctly determined, was not conceived in the spirit of money-getting. No dividends are paid, all surplus goes back to the club's patrons through betterments and increased purses in future trials. Its aim is the advancement of the bird dog and the offering to the public (free of admission fee) a refined and elevating sport, free from all objectionable features, and surrounded with all the safe guards due society, and where busy lives may taste the fragrant air, and in the fiery contests forget all toil and care. The grounds at Bicknell and Grand Junction, made memorable through many contests (that are now matters of history), need no eulogy on our part, it is sufficient to say that they are a poet's dream, and rarely will one find a spot of nature's handiwork rivaling the beauty of these two preserves, the hills and plains, forest and prairie, make scenes worthy the admiration of any artist in the land. Having in view the comfort, convenience and accommodations of its patrons, the club has decided to extend the time of closing the entries to the Bicknell Derby to June 1. They have also arranged with Mr. J. M. Freeman of Bicknell, who is one of the board of governors, to secure locations for each and every handler who wishes to prepare his dogs in the vicinity of Becknell. Mr. Freeman will take pleasure in favoring all who may need his services. The hotel and livery accommodations at both Bicknell and Grand Junction will be first-class at second-class prices. The liberality on the part of the club it is hoped will be met in a like spirit by the dogmen of the country, and the number and quality of the entries in both trials such as to insure the best of battles and the premier meetings in the annals of field trials. The club stands at the head of the field trial organizations, and always being mindful of the comfort and full enjoyment of her patrons and guests, she now in the full fruition of her exalted sphere, hopes for an indorsement of here forth. P. T. MADISON, Sec'y-Treas.

INDIANAPOLIS, Ind.

The American Kennel Club.

It is doubtful if the American Kennel Club has ever passed through a more momentous period than the present. Not that there is much sound of dissension or discontent on the surface, but there is a strong under-current of feeling which the officials of the A. K. C. must take heed of and that will probably be brought home to them at to-day's meeting. There is a feeling of great discontent in the West, and the kennel interests there have become so important in recent years that the time has come when breeders and exhibitors feel that their voices must be heard not through proxies of New York men, but by men who are thoroughly in touch with them and their ideas. There is an old saying that you can catch more flies with molasses than with vinegar; the A. K. C. in its curt and rather arbitrary manner of treating some correspondents, should remember this homely truism. That Western exhibitors have an idea of starting a Western club is an open secret. We scarcely think that two clubs would be advisable. The A. K. C., however, must spread out; it has a lot of vigorous chicks to cover now and it would seem as if the least that could be done would be to have one important meeting held in a Western city once a year. Do away with the advisory committee, let all business be done by the executive committee in open session and full accounts be published at least in the official *Kennel Gazette*. Keep an eye on the clubs and allow no dog-in-the-manger acts, but bow to progress. Utilize that fast-increasing surplus to promote the breeding interests of the country, by giving good cash specials for the best American-bred dogs, taking one or two breeds at a time, show held under A. K. C. rules; treat all alike—they all pay \$10; then would the dogmen feel that the A. K. C. had ideas beyond grabbing up the spare dollars and quarters of the fancy. Clubs should elect men as delegates who are unbiased and who are sufficient in touch with both passing and past kennel interests, that they can be depended upon not to be led away from their real wishes by any one's glib tongue. Cut the registration fee in two. These suggestions are probably sufficient for the present. The meeting to-day, we believe, will be an important one and more than one proposition that we have touched upon above will be brought forward.

Bedlington Terriers.

Editor Forest and Stream:

It is with pleasure that I note an article on Bedlington terriers in your columns, but doubt very much if there exists a real live Bedlington fancier on this continent. At our best shows the class is filled with a mediocre, soft-looking lot of dogs that resemble poodles. Competition is also dull, where as in the olden times it waxed warm. The only reason that can be assigned for the unpopularity of Bedlingtons lies in the fact that they are too hard mouthed and rather quarrelsome, but apart from this they are the gamest and most dare-devil terrier in existence, and their appearance certainly merits as much approval as the more popular Irish and other terriers that I might mention. Besides this they require no docking, are hardy (I mean the old stamp), and prolific breeders.

Of those shown recently I cannot speak authoritatively, but their appearances are against them and they have a soft listless expression, though several of the best appeared to be bad-tempered brutes.

I know that there are Bedlingtons (of the blood of the old champions whom you mention) in the hands of people who only require to be livened up some and take more interest in the breed, and I think no better suggestion could be made than the formation of a Bedlington terrier club during the World's Fair dog show. The existence and influence of such a body should interest others in the breed also.

Why not reclaim some of the old timers, such as Messrs. Wm. Jackson, J. F. Scholes, etc. Surely they still have a love for the Bedlington terrier. TYNESIDER.

Massachusetts Kennel Club.

At the annual meeting for the election of officers of the Massachusetts Kennel Club, Lynn, Mass., which was held at the Revere House, Lynn, on Tuesday evening, May 9, the following gentlemen were elected to fill the various offices: Robert Leslie, Pres.; Geo. W. Glazier, Vice-Pres.; John F. Williams, Sec'y; A. M. Babb, Treas. Bench Show Committee—D. A. Williams, E. B. Eames, C. N. Symonds, W. B. Phinney and Rudolph Weiner.

DOG CHAT.

American Pet Dog Club Show.

Unfortunately we were unable to review the premium list of the American Pet Dog Club's coming show in our last issue owing to its late arrival. There is, however, plenty of time to enter yet. The list, we feel sure, will be a surprise to many exhibitors, for it is certainly a surprisingly good one. Its classification seems to cover every desire in the breeds the club will have on exhibition; in all 182 classes are provided. Cocker spaniels are given two challenge classes and so are bulldogs, beagles, fox-terriers and pugs; in other breeds the sexes compete together. The prizes in every class are \$10 and \$5, which one can imagine mounts up to a tidy sum, something like \$2,730, and quite a heavy responsibility for a specialty club to assume. Open, novice and puppy classes are provided in every breed. To enhance the appearance of the show the club will give \$10, \$5 and \$2 for the best decorated cages or benches, and this should prove a very gay competition and give rise to lots of unhappy *quarrels d'honneur* to the unlucky judge of the millinery outfits, whoever he or she may be. We should deem it the wisest course to allow one of the fair sex to adjudicate on this difficult matter. The show will be put up in the finest manner and so of course Spratts Co. have been entrusted with this part of the business; they will also feed. Lawford's Thymo-Cresol is announced as the disinfectant to be used. The judges will be Dr. M. H. Cryer, Philadelphia, Pa., for Skye terriers, Schipperkes, Mexican hairless, Yorkshire terriers, Chihuahua, Maltese terriers. German Hopkins, Hempstead, L. I., for fox-terriers (smooth and wire), Irish terriers. Harry Lacy, New York, N. Y., for beagles. Charles H. Mason, New York, N. Y., for cocker spaniels, dachshunds, Scotch, bull and black and tan terriers, Blenheim and Ruby spaniels, Italian greyhounds. E. H. Morris, Hackensack, N. J., for poodles, white English terriers, whippets. James Mortimer, Hempstead, L. I., for bulldogs, Basset hounds, Dandie Dinmont, Bedlington, Boston, Welsh and Clydesdale terriers, Pomeranians, pugs, King Charles, Prince Charles, and Japanese spaniels, miscellaneous. The club reserves the right to appoint other judges. Dr. James S. Cattanaugh will be the veterinarian. Entries close May 22 with Miss Marion E. Bannister, Lenox Lyceum, Fifty-ninth street and Madison avenue, New York. The fee is \$3. We have already published a list of the breeds provided for and there is little doubt that a good entry will be forthcoming. The club deserves it and we feel sure that the efforts of the club in giving such prominence to their pets will surely be followed by an increased interest in pet dogs at future bench shows. The show will open May 30 and continue till June 2.

World's Fair Show.

Mr. Buchanan's letter in another column explains the situation regarding the World's Fair show pretty accurately. The revised premium list is not to be issued yet, and the old one of July, 1892, has again been forwarded to exhibitors, but with this note pasted on the front: "Entries close June 1 instead of May 20. Classes for dogs other than those mentioned in premium list will be provided, if a sufficient number of entries (10) are received to justify it. Judges will not be announced by the committee on awards until entries are in. They will be selected with the greatest care, and will be skilled experts of unquestioned integrity." This in itself is a complete refutation of the "fake list" of cheerful memory. The entries, as exclusively announced in FOREST AND STREAM would likely be the case, will be received to June 1. Of course, it is no use for FOREST AND STREAM to go into hysterics over the announcement that judges' names will not be made public until entries are in and to take the Committee of Awards over the coals, as we have been desired to do. The men who have this affair in hand do not know our dog show customs, and it is evidently useless to try to make them understand. The same procedure prevails in all the other departments. Foreign exhibitors of materials are expected to enter and send their goods before they know who the Jury of Awards will consist of. The dog men are in the same boat. In view of Mr. Buchanan's circular letter, why not urge him to postpone the World's Fair till September or October. The weather will be cooler, the rush of entering after revised list comes out will be avoided and there will be plenty of time to settle on those judges, without creating precedents. There may be exhibitors enough, willing to risk their dogs on such a journey and for so long a time (five days), and then have their merits adjudicated upon by an unknown quantity, to result in a respectable show, but that the World's Fair show will be the gathering of canines, such as it should have been, is very doubtful, and what is more, it does not deserve to be. The whole arrangements throughout have been blunderingly managed, but at whose door the fault lies we are not prepared to say, the result alone is apparent.

Great Danes.

We have received another letter taking Mr. Maenner to task about Mr. Arnold and great Dane judging. It is scarcely necessary to publish it, as we do not wish this wrangling to go any further, especially as we fail to see in the letters hitherto written, anything that may be construed into a benefit to the great Dane breed. In view, however, of the unsettled idea of the standard for great Danes and the somewhat factional spirit that is just now rampant, we think it would be well, if our breeders, putting self-interests to one side for a while, would try, by friendly discussion, to bring about a better conception of this standard. FOREST AND STREAM is willing to devote space to this end and has called on one well known great Dane "exponent" to give his views, his reasons and examples, by illustrations, of what sort of a head and body a modern *fin-de-siècle* great Dane should be like, about legs and feet there seems to be but one sensible opinion. We will take care, should a controversy arise, that it will not contain personalities nor reflections as to the capability of this or that judge. Abuse is not argument. We believe that only by general discussion can something tangible be evolved. Showing the dogs does not do it. For one dog may win to-day and a dog altogether different in type may win under another judge to-morrow, and so it would go on indefinitely and the breed will naturally suffer. Although our, say, mastiff judges may differ as to the relative standing of certain lights of this breed, they have a settled idea of what is required by the standard, and their only difference of opinion lies in the value they attach to certain points in one dog over another, that in judging the whole accounts for the placing of the dogs. So we want it in the great Danes. Agree on some type of dog, then breed and judge up to it. Because the English fanciers have their ideas as to what a German dog should be, it is not necessary that we should follow their "evolved" type, if such it is. If the majority want a dog of that type let us have that type, if it is found that this German idea of the dog is the best let us stick to that—and only by discussion and gentle reasoning, aided by illustration, can this be done.

Scottish Terriers.

"Red Lichtie," a correspondent to the *Scottish Fancier*, in a letter on the size of Scottish terriers, says that the terriers of his younger days were leggy, after the style of the present day Irish terrier, but not so stoutly built, had a somewhat softer coat, and had ears mostly of the drooping tendency. Modern Scottish terriers are as far from the ancient animal

as "a Yankee is from a red Indian." He says this from past experience personally gained from his acquaintance with the older breeders, and from fanciers who yet live and who have noticed the great change which has come over the national breed within the last few years. He does not say this by way of fault finding, for he considers the modern terrier a nice animal in many ways.

Spring Litters.

Our breeders are building wisely these days, and news of spring litters come from every part. Mr. Manice has several litters of dachshunds, one out of Sister (Pterodactyl—Janet), by Jay; another of five, four weeks old out of Jessie Victoria by Superbus II. Janet is in whelp to Jay and Princess is in whelp to Windrush Rioter, and Jargonelle will be bred shortly to Don Quixote II. He also has a litter of Bassets out of Bet. So it will be seen that for a man who has nothing to do Mr. Manice has his hands full. Mr. Manice has sold the winning Boston youngster Plethysomus—should not that be Plethysomus—a Western party.

International Coursing Meeting.

The Mitchell, S. D. Kennel Club forwarded May 1 a certified check of \$800 to Dr. Rowe, Chicago, to be cashed on condition that the international coursing meet will be held at Mitchell next October.

Lexington Dog Show.

The Blue Grass Kennel Club have arranged with Mr. Geo. Hill, the well known superintendent, to conduct their show in August next. As they wish to get out their premium list early they would like exhibitors who have any requests or suggestions to offer as to classes, etc., to do so at once.

Lonely.

Mr. Kreuder is in ecstasies now, for Lonely has presented the kennel with a litter, four of which are dogs. Of course they are the grandest beagles that ever were, and champion Frank Forest is the sire.

International Field Trials.

The entries for the International Field Trial Derby close June 1. The purse is 40% of entrance money, second 20%, third 15%, fourth 10%. First forfeit \$2.50, second payable Sept. 1, \$2.50, and \$5 to start. The trials will be held, as usual, at Chatham, Ont., Nov. 7. Mr. W. B. Wells, Chatham, Ont., is the secretary.

A Show at Germantown.

Just as we go to press the following dispatch was received: Wissahickon Heights Kennel Club will give an open-air dog show June 6 to 9. Two thousand dollars given in prize money. Messrs. Mason and Davidson are the judges. Nothing will be spared to make a grand success. Premium lists now ready.—L. C. SAUVÉUR, Sec'y, pro tem (Wissahickon Heights, Pa.).

Field trial men should read the American Field Trial Club's advertisement this week for information in regard to stakes. Derby entries close June 1 with W. J. Beck, Columbus, O.

Mr. Dager, of Toledo, O., has, it is stated, purchased the English setter Monk of Furness from Mr. Paul Gotzian.

Among the new special advertisements this week we find that W. H. Pierce offers well bred pointer dog, also a choicely bred English setter; D. Sullivan, Irish setter Goldsmith Boy; C. A. Paetzel, pointer field trial winner Nutwood; Chas. Dean, English setter bitch; A. D. Fiske, well bred beagle pups; 603, two puppies and badger; Avondale Kennels, blue blood pointers; J. Hope, pair of pointers. We also draw attention to Rinada Pointer Kennels' advertisement of good pointers for sale. In the stud a new list of dogs owned by Mr. E. A. Manice. Breeders should note the New York St. Bernard Kennels' change of address. Wants—Riverside Kennels, few more dogs to train, and W. England, a position as kennelman. Our readers' attention is also drawn to the new book, "Lee's Modern Dogs," which will well repay perusal.

The Toons & Symonds combination, which indulges in a little of everything canine, and is under George Thomas' far-seeing optic, moved to their new quarters at Northcroft last Saturday. No doubt the dogs will enjoy the change from confined quarters as much as the owners. Messrs. Toons & Symonds were instrumental in getting St. Augustine over for the Western fancier, and this dog will arrive at Boston on the steamship Bostonian about next Wednesday. We shall then probably be allowed to divulge the name of the new owner.

Our Philadelphia contemporary, *Fanciers' Journal*, is looking quite sprightly in its new spring costume, and for the sake of those who are providing the material we wish it every success. Of course we must not be too hard on it at first, and such a little *faux pas* as quoting a newspaper dispatch that stated that the American Kennel Club would make no entries at the World's Fair show, if the judges were not announced at once, etc., etc., as an original news item must be attributed to the nervousness of the editor's novitiate. FOREST AND STREAM last week reached Philadelphia in ample time on Thursday morning for this to have been remedied and Mr. Vredenburg's denial quoted.

Mr. J. C. Weekes of Baltimore, although a new exhibitor, has had an unlucky time of it. He showed a nice young fox-terrier bitch at Baltimore show named House, which took distemper and died soon after. He also showed another fairly good dog, in Spring Hill Pirate, at Elmira, which took second and vhc., but this died too after arriving home. Mr. Weekes, however, is not disheartened and has now purchased Seacroft Otilia, from Seacroft Kennels, in whelp to their Bourbon, and expects by crossing the Dominie and D'Orsay blood to get something that will console him for his losses.

An instance of the intelligence a well-bred hunting dog will acquire through constant association with human beings comes to us from Iowa in a letter, from which the following is an extract: "I must tell you what a wonderful dog Rex is making. The other night we were all in the sitting room and he wanted a drink. As no one paid attention to him he went into the kitchen and got the tin cup off the table by the water pail, and brought it in his mouth and made Nell go with him, and he took the cup back to the pail and got his drink all right. He will not drink out of the water pail, but we dip the water with a tin cup and let him drink out of a pail. He worked out that problem of getting a drink without any previous teaching. So if a dog does not think and even invent ways what do you call this act of his? He is a real treasure to the family."

The *Scottish Fancier* is offering a bound volume of "Dogs of Scotland" for the best description of a collie's head.

Land and Water gives a notice in a recent issue that a first rate field trial breaker is wanted to take charge of an American kennel. Is the tide turning toward the English style of handling and breaking?

H. M. Wormington, recently a prominent courser of Cali,

fornia, has removed to Denver, Col. He took with him his dog Chief, sired by Al Farrow, the Merced winner. As soon as he gets properly located he will send on for some more of his California dogs.

The Bell-Watson Incident.

BALTIMORE, May 12.—*Editor Forest and Stream:* I should feel obliged if you would give publicity to the following apology and retraction which I have accepted from Mr. Geo. Bell of Toronto, on behalf of Mr. James Watson, who judged spaniels at the late Maryland Kennel Club show.

W. STEWART DIFFENDERFER, Sec. Maryland K. C.

[COPY.]

BOSTON, Mass., April 4.—*W. Stewart Diffenderfer, Esq., Sec. Maryland K. C.:* Mr. Watson having agreed to accept my public apology I now tender him, through you, such apology. I regret that in the heat of temper I so far forgot what was due a judge as to demand a change of awards under threats of exposure of his past misdeeds. I state unreservedly that I know nothing against Mr. Watson which warranted me in saying that I would expose him. In regard to statements I made to others as to what passed between Mr. Watson and myself as to what I said I called him, I state unreservedly that no words passed between Mr. Watson and myself other than the matter of changing the awards as stated above. You are at liberty to publish this apology in the sporting press. Yours truly, G. BELL.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Lady Cleveland. By D. C. Luse, Great Bend, Kan., for greyhound bitch, whelped Dec. 25, by Norwegian (Jester—Bit of Fashion) out of Clara (Greentick—Znone).

BRED.

Prepared Blanks sent free on application.

Rideau Reine—Black Duke. Andrew Laidlaw's (Galt) cocker bitch Rideau Reine (Obo Jr.—Rideau Flossie) to Luckwell & Douglas's Black Duke (Obo II.—Woodland Queen), May 3.

Frisk—Holster. P. P. Plant's (Washington, D. C.) fox-terrier bitch Frisk (Belvoir Trap—Vexation) to R. G. Stewart's Holster (Kermicham Lancer—Qui Vive), May 3.

Hillside Freedom—Holster. R. G. Stewart's (Washington, D. C.) fox-terrier bitch Hillside Freedom (Russley Joker—Freya) to his Holster (Kermicham Lancer—Qui Vive), March 31.

Polly Harmon—Black Duke. Phil Harmon's (Woodstock) cocker bitch Polly Harmon (Cherry Boy—Lady Stanley) to Luckwell & Douglas's Black Duke (Obo II.—Woodland Queen), Feb. 17.

Bessey Warner—Black Duke. Ed. Warner's (Woodstock) cocker bitch Bessey Warner (Cherry Boy—Lady Stanley) to Luckwell & Douglas's Black Duke (Obo II.—Woodland Queen), Feb. 18.

Romp—Black Duke. J. F. Kirk's (Toronto) cocker bitch Romp (Bob Obo—Jest) to Luckwell & Douglas's Black Duke (Obo II.—Woodland Queen), Feb. 19.

Woodland—Polly—Black Duke. Geo. Douglas's (Woodstock) cocker bitch Woodland Polly (Cherry Boy—Lady Stanley) to Luckwell & Douglas's Black Duke (Obo II.—Woodland Queen), March 14.

WHELPS.

Prepared Blanks sent free on application.

Fennmont. Smith Bros.'s (Deep River, Conn.) Gordon setter bitch Fennmont (Beaumont—Belle Stephens), April 29, nine (seven dogs), by Inwood Kennels' Count Noble (Ben—Belle).

Midget Nellie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Midget Nellie, May 5, four (two dogs), by their Happy Toby (Spokane—Nellie T.).

Nettlefield. D. C. Luse's (Great Bend, Kan.) white and black greyhound Nettlefield (Dick Day—Bamborne), May 1, six (one dog), by E. H. Mulcaster's Miller's Rab (Waterford—Nancy McPherson).

Leddersdale III. T. C. Baldwin's (Detroit, Mich.) English setter bitch Leddersdale III. (Obo II.—Jester—Canadian Lillian), May, six (three dogs), by his Toledo Bee (Toledo Blade—Maggie Bee).

Fan C. T. W. Clelland's (McAlester, I. T.) pointer bitch Fan C. April 18, nine (five dogs), by G. W. Stephenson's Count Vernon.

Dolly Tester. J. H. Matthews's (New York), bulldog bitch Dolly Tester, April 18, three (one dog), by his Bathos.

Gromar's Vic. Dr. Blodgett's bulldog bitch Gromar's Vic, April 15, five, by J. H. Matthews's Bathos.

Terry. T. J. River's (Bridgeport, Conn.) pointer bitch Terry (champion Tammany—Erie), April 20, eleven (seven dogs) by Westminster Kennel Club's King of Kent.

Victoria. J. H. LeMoyné's (Denver, Col.) greyhound bitch Victoria (Brabazon—Verdure Clad), April 15, nine dogs, by his Pepper (Lord Neversettle—Partera).

SALES.

Prepared Blanks sent free on application.

Goldie. Silver fawn pug bitch, by John Bull out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Bellone Kennels, Newport, Ky.

Staley B. Silver fawn pug bitch, by John Bull out of Lady Thelma, by Eberhart Pug Kennels, Cincinnati, O., to Bellone Kennels, Newport, Ky.

Sir Douglass. Silver fawn pug dog, whelped October, 1891, by Douglass II. out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Bellone Kennels, Newport, Ky.

Tuxedo. Fawn pug dog, whelped Feb. 15, 1892, by Eberhart's Cashier out of Pansy Judy, by Eberhart Pug Kennels, Cincinnati, O., to Paul F. Ireland, Cleveland, O.

Gripsack. Silver fawn pug, whelped Oct. 21, 1892, by Patsy Bolivar out of Midget Nellie, by Eberhart Pug Kennels, Cincinnati, O., to Paul F. Ireland, Cleveland, O.

Dachting.

In connection with the modern fin keel, it is interesting to note that as long ago as 1872, at a time when there was some interest in model yachting at New Brunswick, N. J., the late Dr. Clifford Morrough, an eminent physician and owner of the schooner yacht Siren, fitted out a common wooden bread tray, of oval shape, with a metal loaded with lead on the lower edge, and a suit of sails, the result being a very fast sailing model.

The rather unfortunate experience with Navahoe serves as a practical illustration of the working of the late lamented "dimension clause;" a point that we have frequently commented on, but which has been persistently avoided by all those who were once so ardent in defense of the new deed.

Suppose that the America's Cup was now held abroad, and that Mr. Carroll had challenged for it under the new deed of gift, giving last November those dimensions which it is now claimed mean nothing, and were only demanded out of regard for the challenger.

Now that his yacht is afloat, it proves on trial that she is not only two or three inches below her lines, but that she is so deficient in stability that a very troublesome and expensive alteration of her ballast plan is imperative.

The extra immersion at once increased three of her dimensions beyond the figures specified in the challenge; she is longer on the waterline by a material amount, she is a little wider on the waterline, and also deeper. As she stands then, she is not the yacht nominated in the challenge, but a different and larger vessel, just as Thistle was claimed to be; and at the same time it is clear that she is lacking in that stability which alone can give her speed.

In such a case, under a literal construction of the new deed, Navahoe's owner would have two alternatives, he could withdraw his challenge or he could make his yacht conform to the registered dimensions,

"which shall not be exceeded," by removing ballast and cutting down sail; thus throwing away before he started all hope of winning.

What is now being done to Navahoe, the transfer of lead from inside to outside, will make her still deeper; while it is unlikely that her actual draft can be reduced to the limit of the original design. Very fortunately for Mr. Carroll, there is nothing in the conditions of the Royal Victoria Cup which resembles the "dimension clause" of the new deed, and he is at liberty to increase both draft and beam at will.

American and British Designers.

Our friend of *Town Topics*, in answer to our comments of last week, sounds the familiar slogan of "Anglomania," and then proceeds to overwhelm us with some musty and irrelevant facts concerning Com. Stevens's experiments made half a century ago. We profess to know a little of ancient history; we have seen proof that the Ark had the characteristic bow of the Clapham Bouncer, and we know that the Phoenician galleys carried their shrouds to the masthead instead of the hounds, and set them up with turnbuckles instead of deadeyes, but at the same time we willingly yield the palm in matters archaic to our friend, recognizing as fully as he does that there are few recent inventions in yachting that have not been experimented with in the past. Where we differ with him is in his efforts of late to prove that the whole knowledge of yacht designing is confined to Uncle Sam's dominions, and that "Furrin" designers are sitting quietly by waiting to see what Mr. Herreshoff will do next, in readiness to copy him.

In our opinion the modern yacht designers, whether American, Scotch, French or English, are a specially bright lot of men, who are working hard in a fair and generous competition, in which one or another is ahead in turn for a short season.

Without going back to the Ark, or even to Com. Stevens's Arkhaye, the proof of this may be found in the evolution of racing yachts in America since 1880. The keel sloop of that day, found only about Boston, was essentially of the national centerboard model, wide, shoal in body with straight futtocks, moderate deadrise and hard bilge, in fact often built from the moulds of a centerboard boat, her keel being a deep slab of deadwood loaded with iron.

In 1882 the cutter *Wasp*, built by Wm. B. Lawrence from a design imported from England of an Ithen length class boat of that period; the same time Lawrence built the *Mona*, from the published designs of a wide 10-tonner and *Vayu* from his own designs, and from this time on a large number of wide cutters were built in Boston and New York, all modeled closely on the Ithen length class boats, one of which, *Daisy*, was brought out here.

The Ithen boats themselves underwent considerable change in form between 1882 and 1886, but when Pappoose, the first of the modern American keel boats, misnamed sloops, was designed by Mr. Burgess in 1887, she showed a very close resemblance to the later boats. In many points of model she was superior, and her modified cutter rig, with laced mainsail, was decidedly better than the morfyrdite sloop rig of *Lil*, *Cursey* and *Eclipse*, the Southampton racers, but she was not only like them in general form and proportions, but distinctly unlike any American yachts.

Pappoose was followed by *Baboon*, *Xara*, *Mariguita*, *Tomahawk* and many similar models of 20ft. and 40ft. length, the "meat chopper" sheer plan, taken from the Ithen boats, finding its extreme development in *Mariguita* and *Tomahawk* in 1889. By this time the Ithen length class had passed out of existence, and the British designers were busy on a distinctly different type under the new rule, the under water sheer plan now assuming the deep triangle of *Minerva*, a marked advance on the American 40-footers. Under the stress of hard racing, this in time gave way in a new class of Ithen craft to the wide shoal body and deep fin of all modern craft.

In this course of evolution and adaptation Mr. Burgess has impressed his influence in a combination of lead and depth with beam, and in a greatly improved form of cutter rig. Mr. Herreshoff has made a radical step in adopting a form of waterline never before attempted by yacht designers, and in carrying the fin principle to an extreme by concentrating the weight in a lead bulb. The fin itself, coupled with the modern vine-glass section, originated with Mr. Payne, as we have shown. The keel outline, now familiar through the *Wasp* and the new Herreshoff boats, was suggested a success over ten years ago by the late Lieut. Sæfrow, the brilliant German amateur, and was described by him in print, though, under then existing conditions, its advantages were not appreciated by other designers.

Just now there is a general mixture of "freak" and other novel features, and the discovery of one designer is soon the property of all, so that it is very difficult in many cases to give credit where it is due. A close and intelligent study of the work of the designers of the past ten years will show that the two great yachting nations travel closely together, now one in advance and now the other, neither party being able to claim a monopoly of the entire art and science of designing.

New Yachts.

The result of a good deal of sailing during the last three weeks, during which time the centerboard has been shipped and the sails have been worked into better shape, is to show that Navahoe is still unable to carry her sail properly, while at the same time she is from two to three inches below her designed waterline. Arrangements have consequently been made to haul her up in the drydock at Providence and remove some twenty tons of lead, which will be replaced by a lead keel bolted outside the regular steel skin. The details of the work have been carefully provided for in advance, the lead being cast, in twelve pieces, by the firm of Thos. Phillips & Co., of Providence. It was expected that the yacht would be docked on Sunday night, but the dock was engaged and the date was postponed to Wednesday. The new keel has been cast by Phillips & Co.'s foundry, and will be taken to the drydock on a tug. After the yacht is hauled out, each piece will in turn be jacked into place. Templates have been made showing the location of every frame, and from these holes will be drilled in the lead keel while still in the shop. When once in place under the yacht, a portable drill operated by a flexible shaft will be set up underneath, and the holes will be drilled through the keel plate, avoiding all frames, and up to the remaining inside lead. The holes will then be tapped and special tap bolts screwed in.

The exact amount of lead to be removed is not known, nor the amount which will be replaced on the keel, but the probabilities are that about twenty tons will represent both amounts, and that while the yacht will be stiffer she will still be on the wrong side of her designed waterline.

The yacht will sail from Newport about the end of this month, and once on the other side will refit and take part in the Clyde regattas early in July.

The shops at Bristol are well emptied, the Austrian and Southampton boats have been shipped and on May 19, a new Alpha, named *Kite*, was sent away to Lake Minnetonka, leaving one similar boat in the shop. The *Kite* is some 28ft. over all, 22ft. l.w.l. and 8ft. beam, with a Tobin bronze keel and a rudder under the forward deck. She is very lightly built, the outer skin of mahogany, with a canvased deck. She has a balance rudder and two travelers, one on the after side of the transom or counter.

The first syndicate boat *Colonia* was launched on May 15, the launch being private, as in the case of Navahoe. A view of the yacht prior to the launch showed a body very similar to *Wasp*, last year's 40-footer, but finer, her keel is in and out, plated the steel work, being very good. Outside of the hull proper is a lead keel some 2ft. deep and widened into a perceptible bulb shape. The placing of an outside lead keel on a steel boat is so very unusual as to awaken much comment, and opinions differ as to whether this was a part of the original plan, or was an after thought, consequent on the lack of stability which *Navahoe* has shown. The reason given by Mr. N. G. Herreshoff that the lead is to be removed and placed inside, thus lessening the draft when the yacht is finally turned into an ex-racer, is perfectly plausible, and it may be that the lead keel was a part of the original design.

At any rate the addition of the lead has upset the calculations of certain parties who have during the winter been in possession of secret sources of information as to the large yachts. This information it is believed has been obtained from a spy regularly employed in the shops, and who have had access to the scribe boards on which the frames are laid down. The measurements published have been correct in many cases, but the spies were thrown out on the draft of this yacht and the Morgan-Iselin yacht.

Colonia is completely decked and can now be completed, her spars being ready. She, like the others, will steer with a wheel. Her deck presents an immense area, broken forward by two very large gunwales. Her beam is so great that the gallery on the south side of the ship has been partly cut away. She has five chain plates for main and topmast shrouds. The hull is painted white above and green below.

The Morgan-Iselin boat lies in the north shop formerly devoted to the small work, which it completely fills; in fact each of these large craft fits so closely into its house that it is very difficult at a first view to form a true idea of their size, beam or draft. The plating is now completed, and a pile driver was at work last week setting the ways

for the launch. The Tobin bronze makes a beautiful bottom, the plates having a polished surface from the start.

The sternpost is a bronze casting, hollowed in the after side so as to allow of space for riveting the plates, its cross section being similar to a half beam. The lugs for the rudder gudgeons are cast solid, and the heel of the post runs down below the line of keel in a way which indicates that in this yacht, at least, the outside lead is not an afterthought. The keel is some 43in. wide on the bottom and perfectly flat across; the centerboard slot being 4 or 5in. wide, a confirmation of the report that unlike Navahoe's board, which is of 1½in. solid steel plate, this yacht will have a hollow steel board, filled partly with lead.

At Saunders's yard, Bristol, the large yawl has been completed and delivered, and the complete frame for a 30-footer has been received from Fife's yard at Fairlie. The yacht, which is for J. B. Mills, of New York, will be a keel boat, 40ft. over all, 20ft. l.w.l., 9ft. 5in. beam and 6ft. 6in. draft, with some five tons of lead on keel. The entire frame has been set up and marked, so that it will go together. The frames are of oak, and all parts have been varnished.

At Lawrence's yard the 40-footer *Gormita* is about ready for launching, while the plating of the *Paine* boat is completed and the fin is partly built. The fore centerboard trunk is a small aperture about 3ft. 6in. long fore and aft. The White steamer *Varuna* was launched on May 16, and the Thayer steamer *Aquila* is nearly completed. One of the handsomest small boats we have yet seen, both in model and build, is the double skin 21-footer built by Lawlers from Stewart & Binney's designs, a fin-keel of about 6ft. draft. Unlike the Herreshoff fins, she has the ordinary rudder hung on a small triangular fin, the same plan being used in the *Paine* boat.

The schooner yacht designed by Winttingham and built by S. L. Moore & Son for J. Roger Maxwell was launched successfully on May 10 at Elizabethport, being christened by Miss Maxwell, a niece of the owner. The launch of Com. B. F. Sutton's schooner *Loyal* at Follon's yard will take place to-day.

The Seabury Works at Nyack.

THOUGH comparatively a young concern, the firm of Charles L. Seabury & Co., of Nyack-on-the-Hudson, has built up a reputation for the best of work in all branches of steam yacht building, and their yachts are now met with in all parts of the country. In designing the firm has been successful in turning out a number of excellent models, both for high speed and cruising; the engines and boiler of the yachts are of its own design, and in construction the large and well equipped shops are equal to all requirements of hull, boiler and engine building. During the winter the shops have been busy, and much of the work is now nearing completion. This week they will launch a small yacht of novel design, the *Anemone*, a twin screw launch of 43ft. length, 8ft. 6in. beam, 4ft. depth and 2½ draft, designed by them for L. B. Crocker, of Buffalo, N. Y. The hull is of the best material throughout. Keel is of white oak, also frames and floor timbers, stem of hackmatack, natural crook. Planking of selected white cedar, copper fastened and riveted to timbers; sister keelsons running full length of boat on either side (inside) of yellow pine, carrying the main weight of boiler and engines, the decks are of white pine, laid in narrow strips. The interior is finished in ash and oak, with lockers under all seats and locker under forward deck. Collision bulkhead at bow, and bulkhead fore and aft of machinery. The hull is painted white outside to waterline, below waterline a copper composition paint is used. There is also

a gold stripe around hull below guard moulding. All upper works and inside of boat are varnished, natural color of the wood. The machinery consists of two fore and aft compound engines, Seabury design, with belt and flywheels, the same style as the Government Seabury patent safety water tube type. In addition to feed pump on engines, two auxiliary duplex steam pumps are supplied. The engine room floor and the coal bunkers are of sheet steel. The engines and boiler are both of the most approved pattern. The model of the boat is of the best, and in designing great care has been taken to secure seaworthiness and comfort, with a good roomy cockpit and cabin on a light draft. The stern is square, the same style as the Government launches. The speed will be about twelve miles per hour. The saloon is aft, 13ft. long, fitted with plate glass windows arranged to raise or lower. In the forward part of the saloon is fitted a buffet, with glass racks, small ice box, etc. Lockers are on each side and wide enough to allow comfortable sleeping on same. The bulkhead forward of saloon is fitted with a sliding glass door. In the after part of saloon, with partition separating from saloon proper, a toilet room is arranged with w. c., wash basin, etc. There is an entrance to saloon from forward deck by door and sliding companionway. The front part of forward cockpit at steering wheel is inclosed with plate glass windows for storm use, which extend to first stanchion supporting roof. Canvas side or storm curtains are fitted in forward cockpit to roll down and fasten on coaming. There are also brass rails on decks fore and aft. The yacht is lighted by electricity throughout, and is without doubt the most complete and modern twin screw steam launch of her size afloat. She will be used by her owner on Lake Erie and vicinity, and her first trip will be to Buffalo from Nyack.

Messrs. Seabury & Co. are also building an 80-foot high speed steam yacht, which is to run 18 to 20 miles per hour. She will be fitted with a Seabury triple expansion engine and a Seabury patent safety water tube boiler.

The auxiliary twin screw schooner-rigged yacht *Alma* has just returned from the South and is now at the works, where she will be fitted with two fore and aft compound engines and a Seabury patent safety water tube boiler, to replace the oil engines now in her. She is in charge of Capt. Thos. I. Miller.

The steam yacht *Strat*, Mr. Thomas A. McIntyre, N. Y. Y. C., has just returned from Jacksonville, Fla., and other Southern points, where she has been cruising during the past five or six months, and is now at the yards fitting out again for summer cruising. Capt. Geo. D. Purdy is in command.

The steam yacht *Embla*, now building for Mr. John H. Hama, is nearing completion very rapidly and will be ready for launching in a short time. The interior cabinet work is advancing, the deck houses are on, and the machinery and boiler work is well along. Capt. Wm. E. Torrey will have charge of the *Embla* and Wm. B. Thompson will be chief engineer.

The steam yacht *Zayda*, also built by Seabury & Co., has been purchased by Dr. H. A. Mauville and is now being put in commission at the yard.

The steam launch *Imp*, owned by Mr. Howard S. Jaffrey, was put in commission a few days ago, as was the steam yacht *Adze*, N. Y. Y. C., Mr. A. Loring owner. She is in charge of Capt. D. C. Packard. The steam yacht *Allegre*, owned by Col. S. V. R. Cruger, N. Y. Y. C., was launched from the yard just before the naval parade. Seabury & Co. are also building a very fine 35ft. steam launch for the Delaware & Hudson Canal Co., to be fitted with one of their fore and aft compound engines and a Seabury safety water tube boiler. She will be used by the paymaster and is nearly completed.

The Kill von Kull Y. C., of Port Richmond, Staten Island, will hold an open regatta on May 30, the classes being: Class B, cabin sloops, 30 feet to 22 feet; C, open sloops, 28 feet to 22 feet; D, open sloops, 22 feet to 18 feet; E, open sloops, 18 feet to 15 feet; F, cabin cats, 30 feet and under; G, open cats, 28 feet to 22 feet; H, open cats, 22 feet to 18 feet; J, open cats, under 18 feet, and K, open cats, under 16 feet.

Vivienne, steam yacht, has been sold by J. H. Hutchinson to D. D. Evans, of Boston.

South Boston Y. C.

The regatta committee of the South Boston Y. C. has been vigorously at work for some time to make a success of the eighteenth open regatta, to be held off City Point on May 30. The continued wet weather has so interfered with the work of fitting out and launching that the racing fleet will hardly be ready by that time, but with favorable weather for the next ten days a good list of starters is probable. The conditions of the race are as follows:

Open to yachts of 35ft. and not less than 15ft. sailing length, enrolled in any yacht club, and all boats under 15ft. sailing length, whether or not belonging to any yacht club. The prizes, classifications and measurements are as follows:

First Class—All yachts 25ft. and not over 35ft. sailing length. First prize \$30, second prize \$15.

Second Class—All jib and mainsail yachts under 21ft. w.l. First prize \$30, second prize \$10.

Third Class—All yachts 20ft. and less than 25ft. sailing length. First prize \$25, second prize \$15, third prize \$10, fourth prize \$5.

Fourth Class—All yachts 15ft. and less than 20ft. sailing length. First prize \$15, second prize \$10, third prize \$5.

Fifth Class—All yachts measuring under 15ft. First prize \$8, second prize \$5, third prize \$3.

One-half of first prize will be awarded for a walkover. No second prize will be awarded unless three or more yachts compete. No fourth prize will be awarded unless five or more yachts compete. Measurement will be waterline plus one-fifth forward and after overhang equals sailing length, which will be the basis of time allowance for all classes according to the Herreshoff table of allowances. Schooners will sail at seven-eighths of their sailing length.

The courses are as follows: The starting point will be an imaginary line drawn between judges' yacht and flag boat.

First Class—From starting point to Red Spar Buoy No. 2 off Thompson's, leaving it on the starboard down the west way, leaving Thompson's and Rainsford's islands on the starboard, Long and George's islands and Point Alorton Black Buoy No. 3 on the port; returning, leaving Wilson's Rock Buoy No. 1 on the port to Wreck Island, Buoy off Nut Island, leaving it on the starboard. Long and Spectacle Islands on the starboard to Red Buoy No. 2 off Thompson's, leaving it on the port to Black Buoy No. 1 off west end of Thompson's, leaving it on the starboard to finishing point. Distance, 15 miles.

Special and Second Classes—From starting point to Cow Pasture Red Buoy No. 6, leaving it on the port to Black Buoy No. 7 off Port Independence, leaving it on the starboard to barrel marked S. B. Y. C. off Long Island north wharf, leaving it on the starboard to Sculpin Ledge Buoy, leaving it on the starboard to Black Buoy No. 7 off Port Independence, leaving it on the port to Cow Pasture Red Buoy No. 6, leaving it on the starboard to finishing point. Distance, 11 miles.

Third Class—From starting point to Black Buoy No. 7 off Port Independence, leaving it on the starboard, Spectacle Island on port to Sculpin Ledge Buoy, leaving it on the starboard to flag boat off Marine Pier, leaving it on the port to Cow Pasture Red Buoy No. 6, leaving it on the starboard to finishing point. Distance, 7 miles.

Fourth Class—From starting point to flag mark of L street bath house to Red Spar Buoy No. 4, to flag boat off Marine Pier, to flag mark off L street bath house to Red Spar Buoy No. 4 to finishing point, all turning marks to be left on the port. Distance, 4 miles.

The finishing point will be an imaginary line drawn between the judge's yacht and stakeboat, and all yachts must cross this line at finish. The 21-footers will sail as a special class, the club having no 21ft. limit in its regular classification.

New British Yachts.

AS USUAL the new British yachts are further advanced by about a month than is common in this country, and the new racers have already made their trial trips. The racing season begins a week from to-day, in fact, races will be sailed on May 20 and 23. The trial trips of *Britannia*, *Valkyrie*, and the others so far as reported have proved successful. The *Field* has the following information in regard to the various new boats: The *Calluna* was launched on May 1 from the building yard of Messrs. A. and J. Inglis, Partick, Glasgow, and is being rapidly fitted out. As previously mentioned, this cutter has just been built to the order of a syndicate of Glasgow merchants, of which Mr. Peter Donaldson is the representative owner. Mr. Donaldson previously owned the 10-raters *Yvonne*, *Yseult*, and other racing boats, and has made his mark as an amateur yachtsman and a spirited sportsman. The *Calluna* has been designed by Mr. Wm. Fife, jun., of Fairlie, and while she is about the same length—55ft. on the load waterline—as the *Britannia* and *Valkyrie*, designed by Mr. Watson, she varies considerably from those cutters, and from any large cutter built in this country. Of course, none of her dimensions are accurately known, but the guesses made represent her to be about 19ft. over all, with 25ft. beam, or about 17½ tons by the old rule. Her draught at the keel looks about 15ft. The counter looks about 30ft. long, that is, outside a perpendicular sternpost. Since the sternpost is excessively raked, the counter may be longer. From the foot of the sternpost the keel and stem make a continuous and flat curve to the sternhead, which gives the stem a very sharp look, and quite different from the more rounded stem Mr. Watson has introduced. With her great beam the cutter shows a high bilge, with a sharp floor and very hollow run. The *Calluna* seems to be a small displacement cutter, but will show a long-side when she lays down in a breeze. Her beam is carried well into her counter, and she will, of course, gather power with every plank submerged. She looks a cutter that will be very fast off the wind, and with a long bowsprit, it seems intended that reaching should be her point of sailing. Her beam is not to be on such extreme length as the *Valkyrie*'s, which means a smaller mainsail, and a less powerful build than Mr. Watson's cutter. For reaching in light winds the *Calluna* promises to be very fast; but, with some 70 tons of lead in her keel, she is bound to keep her feet in any weather. The lead keel at the sternpost is thinned down to fit the keel, and gets thicker and runs off to nothing about the mast. At the sternpost it looks about 2½ft. deep, but gets narrower further forward. The under edge is thickest, but it is not a bulk keel. The cutter has a very smart look, and her lines have all the sweet look peculiar to Fairlie yachts.

The deck fittings, of mahogany, occupy little space. The ironwork is exceptionally heavy. The cutter, being composite with steel frames and elm and mahogany planking, has plenty of room and accommodation below. She is not to be encumbered with heavy fittings below. Here are the cabins and state rooms are in polished yellow pine, with teak beading. There is plenty of lead room below. The cutter is painted black with a gilt stripe, and, with about 5in. of rail will show a low side. Capt. Hogarth and his Clyde crew of twenty-eight men have the rigging of the cutter in hand. The builders have great credit in the workmanship of the yacht, and the designer has achieved his difficult task with the well-known ability of his family. The success of the *Calluna* will be a triumph to all concerned. The name signifies white heather.

The three new first-class cutters, *Britannia* (for the Prince of Wales), *Valkyrie* and *Calluna*, are all fitting out in the mouth of the Kelvin River, where it enters the Clyde, and Clyde yachtsmen are naturally enthusiastic over the sight. Capt. Carter and his English crew are busy with the *Britannia*, and Capt. William Cranfield and his Wivenhoe crew the *Calluna* up to the *Valkyrie*.

Lord Dunraven's 30-rater, the *Deirdre*, built by Messrs. Reid & Co.,

A NUMBER of marksmen from the Hoboken Corps and the Miller Club met in the Schutzenhaus on Wednesday afternoon, Feb. 20, 1890, to take the competition for the Meyer's trophy. E. I. Berckman, a prominent Hoboken rifleman, set the pace for his competitors and finally won the medal with the score of 208 points. The scores are appended, 10 shots, possible 250, distance 200yds.: Geo. Schlicht 237, Aug. Meyers 217, E. Fisher 215, E. Berckman 208, G. Fredericks 190, C. Schutzen 170, H. Schutzen 168, H. Meyer 167, H. Miller 151, P. Leib 146. Schlicht and Meyers did not compete for medal.

RIFLE NOTES.

The Newark Shooting Society have decided to hold an opening shoot in the Newark Schuetzen Park, South Orange avenue, on Monday, the 22d inst. Visitors to the park will find a great improvement in the transportation to and from the park. The running time has been reduced nearly one-half since the electric cars were put on the road.

The Heidenreich Rifle Club will hold a festival and prize shoot in Lion Park on Friday, the 19th inst. The prize list contains 18 prizes, ranging from \$35 down to \$1. The Zettler brothers have charge of the shooting house, which is a guarantee that all riflemen participating in the shooting will receive proper attention.

The Italian societies will hold a festival and prize shoot in Jones's Wood, Sixty-ninth street, on Thursday, the 18th inst. The officers and men of the Italian naval vessels will be entertained in the park during the day.

At the monthly meeting of the Greenville Rifle Club on Monday night Capt. Wm. Zimmerman, one of Jersey City's oldest riflemen, was elected a member. J. C. Boyce was also elected a member of the club.

The Greenville Schuetzen Club is occupied two days in the week now for rifle practice. The Excelsior Club shoot on Friday and the Greenville Club on Saturday. Visiting riflemen will be received by either club, and shooting privileges extended to all who desire to participate.

United Eastern Shooting Association Meeting.

The headquarters of the German-American Shooting Society on Friday night was the scene of a lively meeting of delegates representing the various societies organized under the title of the Oetlicher Schuetzen Bund, or United Eastern Shooting Association. At the last meeting in April two committees were appointed, one (the constitution) to draft a constitution and by-laws and the other (nomination) to go out into the byways of the city to look for desirable candidates for prominent officers for the association, Friday night being the date set for the delegates to assemble to hear the report of the two committees. For several days past there had been rumors flying about that the nomination committee was not having the best of success in its hunt for candidates and as the hour for the meeting drew near the association hall began to fill with delegates.

When the chairman, Capt. Fred Cook, called the meeting to order nearly all of the societies were represented. The constitution committee reported the draft of a constitution based pretty much upon that of the Bund of 1878. The schedule fixed for the taxation or initiation fee, of each corps or club coming in to the Bund started a lively argument, the old adage of "Many men, many minds," being truly exemplified. As the argument progressed there proved to be a wide difference of opinion upon the subject. Upon a vote being called for to settle the vexed question it was found that a number of the delegates had not been alerted by their respective societies with full power to act and as a consequence the meeting found itself in a dilemma, and until these delegates could come in to the meeting with full powers to act for their societies there could be no further advance made toward perfecting the organization of the Bund.

It was then voted that the delegates should submit the schedule to their respective societies and also to secure full powers to act in the further organization of the Bund.

The second Friday in June was set for the next meeting of the delegates.

The nomination committee reported that it had interviewed a number of gentlemen in reference to presenting their names as candidates for official position in the Bund but that no one would accept the honors.

Further discussion of the matter elicited the fact that if the committee could approach the candidates with the Bund organized on some basis that would show what was behind it there would probably be no dearth of candidates. So after a two months existence the O. S. B. is still in embryo.

The tax schedule is appended: The tax, or initiation fee, on societies with a membership of 25 or less is \$30, to 50 is \$40, to 75 is \$50, to 100 is \$60, to 125 is \$60, to 150 is \$70, to 175 is \$80, to 200 is \$90, to 225 is \$100, to 250 is \$110, to 275 is \$120, to 300 is \$130, to 325 is \$140, to 350 is \$150, to 375 is \$160, to 400 is \$170, 400 to 600 is \$200, and over \$250.

New York Central Corps.

The N. Y. Central Schuetzen Corps, under the command of Capt. A. Richter, held its monthly shoot in Washington Park, on Thursday, the 12th inst. There was a fairly good attendance of the members, and there were some good scores put up. Gus Zimmerman, as usual, was on top with the best scores to his credit. H. A. Fiecke made the high score of 73 out of a possible 75. With only one score to count Fiecke would have been high on the ring target, but as it required two scores to count and his next best being only 50, he was obliged to take the fifth place. However, as he is a novice in rifle work, he was probably the proudest man in the park over his ticket of 72.

The champion medal was won by Gus Zimmerman for the most red flags. The first class medal, Robert Flierl. Second class medal Fred Baumann. Third class medal, Imel Berckman. Fourth class medal, W. Schoenweis.

Ring target, 3 shot scores, two scores to count: Gus Zimmerman 128, M. Young 129, M. Fiecke 127, H. Rohde 122, H. A. Fiecke 122, H. D. Muller 119, F. G. Gennrich 115, P. Luthers 113, E. Baumann 110, J. Jordan 110, Imel Berckman 108, W. Bergey 108, W. Eysen 107, R. Flierl 104, E. Holsten 92, J. Jutgens 84, W. Teschmacher 76, J. W. Wiebold 75, A. Lubeck 76.

Man target, 3 shot scores, possible 60: Gus Zimmerman 58, F. Schraeder 57, F. Schmidt 54, C. F. Gennrich 51, M. Fiecke 51, R. Flierl 50, H. D. Muller 49, M. Eisenhardt 49, Imel Berckmann 48, F. Baumann 47, J. Jordan 45, A. Rosen 39.

Turtle Bay Rifle Club.

The members of the Turtle Bay Club had a fine evening's sport on Friday night at the expense of Capt. Geo. E. Jantzer and his team partners. For several weeks there has been a brisk rivalry between two teams composed of club members. There have been several matches shot both in the headquarters range, and on the outdoor range at Woodside, L. I., the scores have been that close that two or three points change in the totals would carry victory to the team getting them. The last match was pulled off at the club range in Forty-second street, and Capt. Jantzer was so sure that his team would win that he gave the club's chief a quiet tip to put in a few extras, for the other fellows would have to pay for it. The match was shot and Capt. Jantzer has since then been very busy reading his finances. The scores are appended, 30 shots per man, 25-ring target:

J. Ochs, Jr., Capt. 241 246 243—69 E. Jantzer, Capt. 247 243 239—723 J. Krauppert 237 236 629 H. Walter 230 236 230—714 C. H. Plate 238 238 239—700 J. Oberle 228 232 224—684

2196

Brooklyn Schuetzen Corps.

The Brooklyn Schuetzen Corps, under the leadership of Capt. Fred Witter, assembled in the New Park at Glendale, L. I., on Thursday afternoon for monthly practice for class medals. Some 50 members turned out, many of them of curiosity to see what the New Park rather than for shooting. The range is well and favorably located for good shooting, and the shooting houses well arranged for the convenience of the shooters. The winners of the class medals are appended as follows: First Class—1st, R. Hurnman 67; 2d, W. Holvold 67. Second Class—1st, Wm. Bohn 67; 2d, M. Walters 55. Third Class—1st, John Behrmann 60; 2d, John H. Rathjen 45. Fourth Class—1st, Gus Bohn 53; 2d, H. Allen 53. The scores of the members participating in the shoot are appended: 3 shots; possible 75: R. Hurnman 71, Wm. Bohn 67, Wm. F. Holvold 67, Henry Monsees 65, George Monsees 64, E. Hilmer 64, H. G. Meyer 63, Gus Bohn 62, J. H. Behrmann 61, Henry Wehnen 60, Henry Paulson 60, J. M. Allsgood 59, H. Allen 58, M. Walters 57, M. Mensing 57, Gus Hooke 51, J. Kraut 50, D. L. Graw 50, J. Strolsal 46.

Greenville Rifle Club.

The weekly gallery shoot of the Greenville Club, of Greenville, N. J., was held on Friday night in the new club house. The scores are appended, 10 shots, possible 250, distance 75 feet: C. Boag 241, J. Boag 238, W. H. H. Allen 237, W. C. Hor 237, Geo. Purkess 235, C. Scheele 228. At the practice in the Schuetzen Park on Saturday, quite a number were on hand, prominent among which were Messrs. Dorrier and Ross, lining up their rifles and preparing themselves for the Zettler shoot which comes off on the 14th and 15th inst. The following scores were shot: H. Chevaunt 212, C. Boag 211, J. Boag 204, W. H. Rohdoux 204, W. C. Collins 201, C. Scheele 201, Geo. Purkess 200, John Hill 190.

Excelsior Rifle Club.

ONLY four members of the Excelsior Club turned out at the weekly practice shoot in Ambruster's Park, on Friday, the 12th inst. The scores are appended, 10 shots, possible 250, 200 yds.: Wm. Weber 211, L. P. Hanson 204, J. Speicher 200, J. Hughes 177.

A Pocket Rifle Target.

The target reproduced herewith illustrates in a forcible way the possibilities of the pocket rifle—an arm which is too often regarded as a toy, but which is capable of wonderful accuracy in the hands of

one who knows how to use it. This score was made by Mr. Sevére Dorion, of the Syracuse Indoor Shooting Club, with a Stevens pocket rifle, measuring but 12 in. in the barrel. The conditions were 10 shots off-hand on the German ring target, 2 in. black, at a distance of 25 yds. The grouping is worthy of a higher count than 250, which is that credited to the target.

Revolver Competitions for Bisley.

The Walsrode Smokeless Powder Company are giving two sets of prizes of the value of a hundred dollars each for scores made with their powder in revolvers, one at a stationary target at 50 yds., and the other at a target which is in sight for only twelve seconds at 20 yds. As there is a similar competition for black powder already offered at Bisley, it will be interesting to compare the scores made, the chief difficulty with black powder being the smoke obscuring the target after the first few shots.

Miller Rifle Club.

The weekly gallery shoot of the Miller Club for the Fisher medal was held at headquarters, 423 Washington street, Hoboken, on Wednesday night the 10th inst. David Miller won the medal again on the score of 241 points. The scores of the competing members are appended, 10 shots, possible 250: David Miller 241, E. Fisher 241, August Meyers 240, J. Kruss 239, F. Sohl 239, H. Hencken 235, J. C. Boyce 235, F. Laudolt 236, M. Holster 232, G. Caragher 230, W. Murphy 229.

Excelsior Rifle Club.

The Excelsior Club held its weekly gallery shoot for medals at headquarters in Jersey City on Thursday night. The scores are appended, 10 shots; possible 250; distance 75 feet: W. J. Hennessy 245, J. C. Boyce 244, J. Speicher 237, Thos. Hughes 235, Chas. Thomas 233, J. Binns 232, Jas. Hughes 228, R. H. Duff 219.

Trap-Shooting.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

May 19-20.—Interstate Manufacturers' and Dealers' Association target tournament, at Passaic, N. J.
May 19-20.—Glen Echo Gun Club tournament, at Washington, D. C.
May 20-21.—Anaconda (Mont.) Rod and Gun Club tournament.
May 19-21.—Anaconda Rod and Gun Club tournament, Anaconda, Mont. Open to all comers. Howard Rockefeller, Sec'y.
May 23-25.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.

September.—Manufacturers' Trap Shooting Association tournament, at Columbus, Ohio.
Oct. 19-20.—West Newburg Gun and Rifle Association fall tournament, at Newburg.
October.—Manufacturers' Trap-Shooting Association tournament, at Baltimore, Md.

DRIVERS AND TWISTERS.

The Canajoharie Gun Club announces the following programme for its prize tournament on Decoration Day. Four 10-target events, three at 15 targets, two at 20 targets and one at 50 targets. All rapid fire. Four events will be at known traps, unknown angles, and will be shot under the "Jack Rabbit" system. The entry for the 50-target event will be \$5, five moneys. There will be \$15 and 200 nitro shells divided among those making the best seven averages, and 45th Peter shells for those making the lowest five averages.

The following is from the Kansas City Times, a recent news sheeting Park: "Kansas City has graduated in the line of trap-shooting facilities, and can now boast of possessing the best-equipped and best-located park for trap shooting in the whole country. The park has there certainly are that possess attractions not to be despised, but not one of them is 'in it' with the new Washington shooting park just being completed near this city. This park is located on a ten-acre plat of ground on the Independence Dummy line, just north of Washington Park. The entrance to the grounds is about 100 yds. from the depot, and immediately inside of the 8 ft. board fence which surrounds the grounds is the club house, a building 28x50 ft., with a glass front overlooking the traps and a wide veranda extending along its entire front. The interior of the club house is fitted with seats capable of accommodating 150 persons and fully 100 more can be seated on the veranda. The club house is located on a mound which extends around the shooting ground in a semicircle, forming a natural amphitheater, from which spectators by the thousands sit and view the sport. Immediately in front of the club house the ground slopes away to the score, and then stretches on to the farther fence in a levelward. A cement walk extends from the club-house to the squad house. In this squad house will be located the referee, scorer and trap-puller. Thirty yards from the score are the 5 bird traps—W. T. Best's latest patent operated by automatic pull, all wires buried. The traps are of the latest pattern. The old style traps in use in this city are opened and closed by hand. The ball lies in the traps and this causes a large percentage of the liberated birds to be incomers. In the new style in operation at the park, the trap opens on the side and the ball rolls outward, causing the birds to be nearly all drivers. An expert shooter will readily see the advantage of this arrangement. Outside the fence is the pigeon house, large and commodious, with facilities for keeping birds stored in good condition for trap work."

ROCHESTER, N. Y., May 13.—Everything points to a very successful meeting of the thirty-fifth annual of the State Association. The large guaranteed purses offered certainly ought to warrant a large attendance. The guaranteed events will be shot rapid-firing system, known traps, unknown angles, as per the New York State revised rules. Crittenden & Card's kingbirds and North's expert traps and electric pull will be used exclusively. Two sets of traps for sweepstakes shooting will be in operation, one set known traps and known angles entrance each event \$1 to \$1.50, 10 and 15 singles; the other known traps and unknown angles, entrance \$1 to \$2.60, 10 to 20 birds each event. Both open to the world, birds included in entrance at rate of 3 cents each. There will be two sets of traps for the State events, thus insuring the completion of each day as laid out in the programme. The programme will be carried out regardless of the weather, as the shooters will be amply protected both overhead and underfoot. The main event traps face to the north, thus having good light and good background. Rochester is particularly favored with first-class hotels and their prices are exceedingly low.

The Livingston has been secured as Association headquarters, and as only a limited number can be accommodated, it would be well for those expecting to attend to write me early so as to secure their room. This hotel is located right in the heart of the city, and accessible to all the electric car lines, and within half a minute walk of the Chamber of Commerce, where the convention meeting will be held. It is absolutely fireproof, and the rates \$2 to \$2.50 per day. We have special prizes to offer in a number of the events, including a \$50 silver set for the championship team race. Average prizes, amounting to \$25, will be given as follows: \$100 Parker hammerless for the first average; \$50 cash, second average; \$50 rifle, third average; \$35 cash, fourth average; \$25 cash, fifth average; \$15 cash, sixth average; \$10 cash, seventh average; \$10 cash, eighth average. The programme will be ready for mailing on the 13th inst. The Free merchandise shoot on the third day will include many valuable prizes, and ought to prove quite a novelty, as the donations continue to come in. We have published only a partial list in the regular programme, it being our intention to issue a supplementary programme just before the shoot with a full list of prizes in this event. H. M. STEWART.

Trap-shooters who are going to Knoxville will please note that they may procure reduced rate tickets from New York to Knoxville and return at the Norfolk & Western Railroad office, corner Broadway and Thomas street, New York (directly opposite FOREST AND STREAM office). These tickets can be had either on the Pennsylvania Railroad via Philadelphia and Harrisburg to Hagerstown, thence by Norfolk & Western to Knoxville, or by Royal Blue Line from New York via Philadelphia, Baltimore and Washington to Shenandoah Junction, thence by Norfolk & Western to Knoxville. Each of these trains leaves New York at 5 P. M. and make the same connection at Shenandoah Junction. The Chattanooga limited, leaving New York (on either road as above) at 5 P. M. on Sunday will arrive at Knoxville on Monday at 2:30 P. M. The round trip ticket will cost \$30 from New York, \$26 from Philadelphia and \$30 from Washington.

Frank Mead, one of the most enthusiastic members of the Knoxville Gun Club, has been spending a couple of weeks in New York and will leave for home to-morrow. Mr. Mead is a brother of Arthur B. Mead who spent last Spring in this locality and took part in a number of tournaments. The brothers, along with their father, who a score of years ago was a well known grocerman in New York City, have extensive marble quarries near Canajoharie and a considerable amount of their product is being used in the construction of the new library building in Washington. The Mead Brothers are expert shots at either live birds or targets and are also enthusiastic trout fishermen. The first of June, along with a party of friends they will hit to the mountains for a two weeks' stay and then vote to the trout.

The fourteenth annual tournament of the Minneapolis Gun Club to be held on May 23, 24 and 25 bids fair to be a successful affair. The programme comprises seven events each day. The first event each morning will be at 15 singles, \$1 entry, for seven merchandise prizes, valued at from \$15 down to \$3. There will be thirty-five average prizes for those who shoot in all regular events each day. First prize is a \$100 Parker 18-gauge gun. There are seven cash prizes from \$40 down to \$15 and twenty-seven of merchandise.

This will be a great day for the Passaic City Rod and Gun Club. New Jersey's shooting strength is expected to spend the two days cracking away at Keystone targets on the club's picturesque grounds. The Erie road from Pavonia ferry will take you to Passaic, where stages will meet all trains and transport all visitors to the grounds.

The Vermonters are expected to turn out in force for the tournament of the Putney Rod and Gun Club next Thursday and Friday. The shooting will begin at 9:30 A. M., and will be under American rules. The 10-target events will be shot under the "Jack Rabbit" system and all others one man up. Eighty per cent men will shoot at 19 yds., others at 16 yds.

The next tournament of the New Jersey Trapshooter's League will be held at Marion on May 27, under the auspices of the Endeavor Gun Club. Besides the State team contest the Endeavors will put up an all day's programme of sweepstakes events. The fun will open at 9 A. M., and the team contest will start at 2 P. M.

Syracuse blossoms out with the Salina Gun Club, which is officered: Frank T. McInley, President; Francis E. Michael, Secretary and Lewis Mantz, Treasurer.

The Hampden Gun Club, of Reading, Pa., will hold a shoot at Petsch's Farm on Decoration Day.

The Connecticut League shoot will take place May 25 instead of May 23.

C. H. TOWNSEND.

On the Old Stone House Grounds.

The monthly shoot of the Newark Gun Club took place on Erb's Newark grounds on Thursday, May 11, and for the first time this season they had a clear day. The opening event was at four live birds, \$3 entry; then came the club shoot and three 10-bird sweepstakes, each \$5 entry. The scores:

THE SARATOGA ANNUAL.

The fourth annual tournament of the Saratoga Gun Club, held at Saratoga Springs on May 9 to 12, was without doubt the best attended and most successful shoot held in the East this season. The weather was simply magnificent from start to finish, and for the first time since last summer the boys were able to discard overcoats and heavy sweaters and shoot in jerseys. The attendance held almost even throughout, as may be seen from a look at the scores. The first guaranteed event on the opening day had 29 entries, and the last guaranteed event on the fourth day had 24 entries. This shows conclusively that the contestants had enthusiasm of the lasting order.

The grounds of the Saratoga Gun Club are situated about a mile and a half from the depot, in a field adjoining the picturesque "Horse Haven" of the Saratoga Racing Association. This "Horse Haven" comprises a beautiful wooded strip, about a quarter-mile in length, containing stables for the accommodation of racing stock, and also consisting of a half-mile practicing track. It extends along Union avenue, opposite the main race track.

The grounds are equipped with two sets of expert bluecock traps with the North electric pull, each set of traps being provided with a permanently located screen. The targets are thrown toward the southwest, and the foreground is perfectly clear. In the distance, with their peaks partially hidden by the smoke of the target, can be seen a range of mountains, which extend away into New England.

All the visiting shooters were quartered at the Hotel Kenmore, kept by that well-known sportsman John M. Ramsdill, who is one of the most enthusiastic members of the club, and a good, steady shot at targets. Here on the opening morning were William Wagner and William Rothwell, of Washington, D. C.; W. Fred Quimby, Major J. M. Taylor and Percy Van Dyke, of New York; the Duke of Falmouth, George Mosher, C. D. Barrett, of Boston; E. D. Miller, of Springfield, N. J.; L. Lyons, of Horace Darby, John B. Sanders, Henry Graiz, William Wadsworth and Fritz Geissel, of Albany; Frank Northrup, of Johnston; A. M. Scherhorn, of Cortland; Daniel Lefever, George Mosher, M. Keller and George Luther, of Syracuse; H. L. Edgerton, of Williamstown, Conn.; Will H. Cruttenberg, of Cazenovia; Samuel Goggin, of Troy.

The big bag was after 9 o'clock with a 10-target warning event in which there were twenty-eight entries. Cruttenberg and Card's kingbird targets were used, and no one had occasion to complain of getting "dusted targets," this being conceded to be the easiest breaker in the market. "Crutty" himself was on hand acting as overlooker and referee on one set of traps. The programmes showed ten events each day, Nos. 1, 2 and 10 being at known traps and angles, and Nos. 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

The Saratoga Gun Club, not in the least frightened by the ill-success of its last year's shoot, duplicated its programme of 1892 and again offered \$2,000 in guaranteed purses and gave \$100 for averages. Last year the club lost a cool \$1,000, but on this occasion we are pleased to say they came out safe and sound. There was no shooting done outside of the ten regular events, which were finished not later than 3 P. M. each day. None of the shooters were inclined to leave the grounds before 5 o'clock as a rule, but instead of having a wideawake hustler to make up the sweeps and keep up the sport the management evinced little or no interest except to run off the regular schedule. And even in these to the North shooting as they were. The programme was finished it would be from five to fifteen minutes before the names would go on the blackboard. All the shooters were on hand to shoot, and with few exceptions they would have willingly fired from 175 to 200 shots a day had they been permitted to do so, but as it was, few of them exceeded 125 shots on any one day. It is safe to say that with a lively man to hustle up the squads the number of targets thrown could have been exceeded by no less than 6,000 during the four days. The complaints in regard to the slow work was general and did not come from a corporal's guard of those present.

The shooting from the start was strong and a close contest for averages resulted. Rolla Heikes's form, however, was a little too fine for his competitors and he came in a winner of first average by breaking 107 out of 110 targets in the guaranteed events and 137 out of 130 for the full programme. Harry Goggin, second, broke 102 out of 110 with 125 birds. Miller was third on 103, Barrett fourth on 102 and Wagner fifth on 100.

Below are shown detailed scores of the day, there being four money in 10-target events and six in those at 20 targets:

No. 1, 10 singles, all amateurs, entrance \$1:	
Heikes.....	1111111111-10
Levenson.....	1111111111-10
Miller.....	1111111111-10
Barrett.....	1111111111-10

Extra No. 15 targets, expert rules: Heikes 14, Levenson 11, Miller 11, Wagner 14, Peters 13, Barrett 13, Van Dyke 15 targets.

No. 2, same: Heikes 12, Levenson 13, Barrett 13, Peters 14, Gates 11, Edgerton 13, Rothwell 12, Van Dyke 11, Miller 12.

Friday, the Final Day.

Another beautiful shooting day and the attendance was up to the standard of those preceding. Several of the Albany shooters reappeared and along with them came Geo. W. Dorn, Thomas Greer and R. Betts. The shooting was fully up to the usual standard all around and in the case of Rolla Heikes it was wonderfully good. Heikes broke 108 out of 110 in the guaranteed events and 127 out of 130 for the day. He lost his 9th and 10th targets, this giving him a clean run of 100 breaks, all but 20 being under second average. He broke 100 on 103, Edgerton and Schemerhorn 102 each, got third; fourth went to Hunter on 101; Barrett, Miller, Gates and Buck divided fifth on 99 each. The events were finished at 3:15 P. M., after which V. E. Pike and Daniel Lefever shot a match at 50 targets each for \$10 a side, Pike being allowed 5 targets. Lefever won by breaking 33 to Pike's 32. Then H. L. Edgerton and Henry Greer shot a match at 50 targets each for \$5 a side, Edgerton making a clean score to Greer's 24. This closed the shoot, which is entitled to be called the best of the season to date, both as regards the average attendance, the quality of the work and the pleasant feeling existing between the shooters. On the first day there were 33 contestants, on the second 32, on the third 29 and on the fourth 30. In all 57 individuals took part in the tournament.

Below are the scores of the fourth day and following these is a carefully compiled table giving a summary of the work done by those who shot in all guaranteed events each day:

No. 1, 10 birds, entrance \$1:	
Miller.....	1111111111-10

MEMBERSHIP SHARES

IN THE

Triton Fish and Game Club,

CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 102,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 6lbs. (*Salmo fontinalis* only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment. Intending purchasers should carefully examine Sec. 4 of constitution, also pages 12 and 24 of by-laws about membership certificates, agents, membership cards, route and mode of payments.

For Prospectus, By-Laws, Maps, etc., and full information address

Messrs. TOWNSEND & HOWARD,

228 TEMPLE COURT, NEW YORK CITY,

AND THIS PAPER.

TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address

DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

SUNAPEE LAKE, N. H.

1,200 feet above the sea; dry climate; bracing air; no malarial influences; refreshing sleep in the oases of hemlocks and balsams; exceptional opportunities for rest and recreation. Superb land-locked salmon, trout and black bass fishing. Safe boating for ladies and children. Redoubt society. Very accessible from New York and Boston. Lots for sale and to lease in Soc-Nipi-Side Park; 13 1/2 miles on lake shore; restricted for 50 years. For prospectus, etc., address THEODORE R. SHEAR, Attorney and Counsellor at Law, No. 29 Wall st., New York, or HENRY C. WILSON, 53 State st., Boston, Mass. 21

FOR SALE OR TO LET.

RIPOND LODGE, superbly located on Highland Lake, Brighton, Me. Best of bass fishing. About 20 acres of woodland. A new cottage house of 11 rooms completely furnished for summer use. Open fire place; wood in abundance. Ice house filled. Place well adapted for a family or club. For full particulars address C. H. LOOMIS, Medford, Mass. 20

FOR SALE.—ONE SHARE SHAWINIGAN CLUB

(fishing and shooting); also one share Laurentian Fishing Club. These clubs have most extensive limits of protected territory in the Laurentian Mountains, north of Montreal, embracing lakes and streams. Fine club houses, boats, canoes, etc. For particulars address "SHAWINIGAN," care F. & S. 21

SALMON FISHING.—AN EXPERIENCED

Angler will take charge of two gentlemen for first-class salmon and trout fishing about 25th July on one of the best salmon rivers in Canada. Complete outfit provided. Address ANGLER, P. O. Box 400, Fredericton, New Brunswick, Canada. 20

ALBEMARLE AND PAMPLICO CRUISING AND

Hunting Association.—Bear, Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing: Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 20. One more subscriber wanted. H. A. Weeks, 74 Murray st., N. Y.

Atlantic coast, and fishing clubs on the Atlantic coast. Plenty of game and every comfort and convenience. Parties meaning business address Box 214, No. 37 East 17th street, New York.

SALMON FISHING.—SEVERAL POOLS ON

Restigouche. Address P. O. Box 192, Savannah, Ga.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understood of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and elegant illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

SOLD BY

Forest and Stream Publishing Co.

PRICE \$2.50.

Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

ANDROSOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For muskellunge, trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For muskellunge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, muskellunge, pike.

MUSKOKA LAKE.—The best place on the continent for fly-fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Warton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

N. J. POWER, General Passenger Agent,
L. J. SEARGEANT, General Manager.

A BLANK DAY.

BUT IT WAS NOT ON THE

RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

A. H. HANSON,

Gen. Pass. Agent, Illinois Central R. R., Chicago.

Rome, Watertown & Ogdensburg Railroad.

N. Y. C. & H. R. R. R. CO., Lessee.

The Rome, Watertown & Ogdensburg Railroad is the route to the best fishing grounds in New York State and Canada. Through cars are run from New York City, Chicago, Detroit, Buffalo, Niagara Falls, Suspension Bridge, Utica, Syracuse and Rochester, to Cape Vincent, Clayton, St. Lawrence River, Massena Springs, Ogdensburg, and all principal places on Lake Ontario, and to Norwood for all points in the White Mountains and Maritime Provinces.

This line reaches the best and most famous fishing grounds in America for salmon, muskellunge, muskellunge, black bass, brook trout, lake trout, white fish, pickerel, perch, and other fish. Information in regard to the fishing grounds and how to reach them will be cheerfully furnished upon application to

THEO. BUTTERFIELD,

General Passenger Agent,
Syracuse, N. Y.

FISHING AND HUNTING IN Labrador, Greenland & Newfoundland

A trip for a limited number of fishing and hunting in the Far North. The great salmon and sea trout rivers of Labrador and Newfoundland will be visited. Caribou and Arctic game, bear, walrus, etc., northern waterfowl. Guides for hunting and boats for fishing provided. The party leave Boston July 10, and occupy about three months. Earlier return will be afforded by the Northern British Mail Steamer. Address CAPT. JAMES A. FARQUHAR, 33 South St., Halifax, N. S. Refers by permission to Mr. F. J. Myers, 337 Broadway, New York City. 21

Routes for Sportsmen.

Opening of the Chicoutimi Extension, 1st July, 1893. The New Route to the Far-Famed Saguenay and the only rail route to the delightful summer resorts north of Quebec.

CANADIAN ADIRONDACKS. Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate. Hotel Roberval, Lake St. John, has first-class accommodation for 300 guests, and is run in connection with the "Island House" at Grand Discharge of Lake St. John, in the center of the "Ouananiche" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels. After 1st July trains will connect daily at Chicoutimi with Saguenay steamers for Quebec. Day-light trip. A beautifully illustrated guide book free on application. For information as to hotels, apply to hotel managers; for folders and guide books to ticket agents at all principal cities.

ALEX. HARDY, J. G. SCOTT,

THE RECORD BROKEN.

WITH this issue the FOREST AND STREAM breaks the advertising record of twenty years. It carries more advertising announcements than have been contained in any previous single issue since the establishment of the paper in 1873. This breaks the record not only of the FOREST AND STREAM, but of all journalism in this particular field. No other sportsman's journal has to-day, or has ever had, an equal amount of *bona fide* paid advertising.

The advertising exhibit of to-day is an admirable object lesson. It speaks volumes for the growth, development and magnitude of the trade and commercial interests represented, and it demonstrates not less clearly and emphatically the high estimation of this paper by intelligent advertisers. As a medium of communication between sellers and buyers no other publication can begin to compare with it.

And where shall we look for a more interesting array of advertisements? It is conventional to refer to an enlarged advertising department as an encroachment upon the reading columns. But the FOREST AND STREAM advertising pages are peculiar in that they are capital reading matter. At all events we know that there is a large class of readers who go through the paper, reading everything from first cover to back cover, with all the advertisements new and old, and omitting nothing, unless it may be the editorial page. We have good ground for confidence, then, that more eyes will scan the "ad." pages than will ever get so far as this concluding sentence.

SNAP SHOTS.

Not the least noteworthy pages of the Report of the United States Commission of Fish and Fisheries, Part XVII., for 1889 to 1891, just issued, are those which here put on permanent record in the history of the Commission the story of the Senate investigation of the charges preferred against Commissioner McDonald. The charges were, in brief, inefficiency, extravagance and dishonesty in the conduct of the Commission. The committee, after a most thorough searching and exhaustive investigation, reported that "not one of the charges affecting the administration of the affairs of the Commission, or the standing and integrity of any official connected therewith, has been proven to have any foundation in fact whatever;" but that on the contrary, "throughout the entire Commission the most perfect system and discipline prevail, resulting in an economical and judicious expenditure of the appropriations made by Congress." And they concluded their report with an expression of conviction that the evidence taken in the investigation would convince all fair-minded persons that the Commissioner and his subordinates "deserve commendation for the conscientious work they are performing."

In December, 1891, when Whittier had attained his eighty-fourth birthday, Oliver Wendell Holmes sent the poet a letter of congratulation, in which, reviewing the

list of authors given in Griswold's "Poets and Poetry of America," he wrote of the authors' names contained in the work: "Three which I see there are still among those of the living, Mr. John Osborn Sargent, who makes Horace his own by faithful study and ours by scholarly translation; Isaac McLellan, who was writing in 1830, and whose last work is dated 1886; and Christopher P. Cranch, whose poetical gift has too rarely found expression." Within the period of less than two years elapsed since that writing, the poet of Amesbury himself and Cranch and Sargent have passed away; and to-day Holmes may find in Griswold's but one name other than his own as a survivor. Last Sunday, May 21, found the venerable Isaac McLellan, vigorous in body and placid in spirit, at the entrance upon his eighty-eighth year. In recognition of this rounding out of an active and honored career, and wishing the poet-sportsman many years to come in his home on the Long Island shore, the FOREST AND STREAM to-day publishes from his pen an interesting paper of recollections and reflections. It will be read with a more lively interest because McLellan has made his name familiar to the anglers and sportsmen of this country by his frequent contributions to our columns. The first column of the first page of the first number of this journal contained a poem from his pen.

In angling circles less is heard of pickerel and pickerel fishing than of some of the more aristocratic fishes and their taking; nevertheless he is foolish who pooh-poohs the strength of the pickerel interest, and who makes light of its following. A census would show an astonishingly large pickerel faction armed with spears and axes, and snatch-hooks and tip-ups, and ready early and late to defend their immemorial right to fish for pickerel in their own way and in their own time. The New York folks undertook last year to tell these people that they must not fish through the ice for pickerel, in any waters. No measure could have been devised more effectively to arouse opposition to the fish laws; and when a proposition for a repeal of the law came up this year, the members fairly tumbled over one another in their eagerness to secure for their constituents the old-time pickerel privileges. A law was enacted making the fishing in waters not inhabited by trout legal in some eighteen counties, and if any county was omitted this was only because it did not ask to come in.

Where may we look for a simpler, less pretentious and more graphic and illuminative picturing of the life of the plains in the old days of buffalo and bull-trains, than in the relation by Mr. Lew Wilmot? He pretends to give you nothing more than a plain recital of personal experiences; but for one who may read with sympathetic understanding it is a portrayal of phases of life and of the actors in that life, which has the value and dignity of history. We have taken occasion to say before and it may well be said again, that the pens engaged in writing for FOREST AND STREAM are supplying something more than bare records of experience with rod and gun. From week to week these pages give pictures of the life of the people, now of this quarter of the continent and again of that; and not only give an insight into their manners and customs, but reflect, too, their sentiments and opinions and ways of thought. The historian of the future will do well not to overlook the public library alcoves where shall be stored the bound volumes of this journal.

The daily newspaper reader must be surfeited with the reports of never-ending wrangling over the World's Fair Sunday opening discussion. The doings of the local board of control and the counter doings of the national board constitute in sickening measure the exposition news of the day. Under these circumstances we congratulate the happy fortune of those who are so privileged as to read the racy, sprightly, serious, humorous, newsy, instructive and sentimental letters which come from the FOREST AND STREAM's World's Fair Bureau. The very best next thing to seeing for one's self the sportsman's special features of the great exhibition is to have them seen by the intelligent eyes and described by the intelligent pens of our staff correspondents.

The California dog story related by "Podgers" in his commentaries reminds us of one told by Mr. Charles L. Schember, to whose good taste and supervision is due the handsome typographical appearance of our columns. At his home in Yonkers Mr. Schember had a bright young

cocker spaniel named Pilot. The dog's favorite resort for a mid-day snooze was an unused manger in the barn. Once upon a time, going to his accustomed retreat, Pilot found that it had been invaded by an industrious hen, and he was confronted by an egg which she had laid in the exact geometrical center of his bed. Pilot took the egg carefully in his mouth, carried it up to the house, deposited it on the back stoop, where he had often seen the man put the gathered eggs; and went back and had his sleep. The next day the same thing happened. Then the old hen gave it up, and thereafter Pilot had his accustomed repose undisturbed.

It is reported that Barnegat Bay net fishermen, having a war on hand against the hotel-keepers, because of their activity in securing the anti-netting legislation, have concluded to enforce the law forbidding fishing on Sunday. It is their intention to annoy the Sunday fishermen, that the patronage of the hotel men may be diminished. This is only another illustration of the working of the Sunday angling laws. The statutes are dead letters; ten thousand men go fishing every Sunday in summer in New York and New Jersey, and no one ever thinks of putting into effect against any one of them the law, except for purposes of spite, just as occasionally the law against Sunday driving is called into action to satisfy a grudge.

Whether on Tuesday we make our holiday on the water or on land, with enjoyment to the full of the pleasures of the day let there be a thought for them in whose memory and honor the day has been appointed. We live too wholly in the present; the men and the events of the past are all too soon forgotten, even the men who did so much for us and the events which meant so much for us. Of all our national anniversaries none other has so deep meaning as that of Decoration Day, nor is any other more worthy the keeping in the spirit in which it was first set apart. On Decoration Day, then, pay a tribute of appreciation and gratitude and veneration to the boys who fell.

Connecticut game and fish bills are referred to the Committee on Agriculture. The members of this committee treat with scant decency those who appear before them on business relating to game and fish protection. The impression one gets from a visit to the Committee on Agriculture at such a time is that the gentlemen who compose it would feel quite at home on the empty barrels and soap boxes of a country store. Why should game and fish legislation at Hartford be relegated to the Committee on Agriculture? It is time that Connecticut followed the example of Massachusetts, and provided a game and fish committee.

HERE is a bit from an expunged manuscript which is interesting, because it shows, that while maintaining perfect serenity of temper, a controversialist may yet mix his metaphors: "It is evident that the storm of indignation which has been aroused among the friends of game and fish protection throughout every section of the State has somewhat rattled the President of the Commission, who is learning that public opinion can cut through even bristles; but, loathsome reptile-like, when trampled under foot in his impotent wrath, attempts to strike his fangs at any object that comes before his distorted vision."

The address by President Henry C. Ford, of the Pennsylvania Fish Commission, before the Fish Protective Association, printed in our issue of March 30, has been published in pamphlet form by the association for gratuitous distribution and copies of it may be had on application to Secretary M. G. Sellers, 1020 Arch street, Philadelphia. It is a tract well worthy of wide currency.

Is there to be found in this country a Chinaman who is a practical and practicing sportsman, in the current, American, FOREST AND STREAM signification of the term? No prize is offered for the detection and reporting of such an individual, but the interest the report would surely have ought to be sufficient stimulus to any one who can tell us about him.

Dwellers on the New Jersey coast are just waking up to the true meaning of the pound net fisheries. The meaning is that the pound men get all the fish and no one else gets any.

The Sportsman Tourist.

REMINISCENCES OF A VETERAN.

BY ISAAC M'LELLAN.

PLEASANT it is for a traveler after a long day's journey to pause at some elevated hilltop for rest and retrospection, and to take a comprehensive view of the route lately traversed. Far as eye may reach, even to the horizon's misty edge, he sees beneath him outspread like a map, each lovely spot he has visited. Far off in distant obscurity shines out the starting point of his career; and even so can one recall the scenes and events of his early time of youth. Through the haze of vanished years he can recognize the play grounds of his boyhood. There again bubbles and sparkles the little brook where he had cast his primitive tackle for the small, springing trout, the yellow sunfish and bream and the silver-sided perch. There, too, runs and rolls the ample river, by whose embowering banks he loved to roam, to plunge for refreshing swim or to angle for the pickerel and black bass by lily-pads or dark abyss. Then, too, he remembers the swampy rivulet where he sought for snipe and woodcock; the wayside hedges and the tussock swales where he started the quail flock; the hickory groves and the piny woods where he found squirrel and partridge; the upland forests haunted by deer; the open prairies alive with grouse flocks; the rough seacoast where from his little boat he shot at the passing squadrons of the coot, old squaws and shelldrake; the ample bay where he had such rare sport with the redhead, widgeon, black duck and teal, and the reedy marshes where he lay in ambush-blind for the whistling pinions of the curlew, willet, yellowleg and dowitcher.

All these regions of resort still survive freshly in the memory of the veteran sportsman, even as the scenes of the traveler's adventure are present to his eye and mind as he surveys the features of the natural world, through which he has lately journeyed. Now brightly are photographed in memory the names, forms and features of those old friends, who were the associates of the thoughtful sportsman and scholar, in the years departed. I well remember such school-boy friends as Charles Sumner, Horatio Greenough, Lothrop Motley, Wendell Phillips, the Sturgies and Sargents; such Phillips Academy comrades as Willis, Holmes, Quincy, Rantoul and Grew. Such college associates as Longfellow, G. B. Cheever, J. S. C. Abbot, Hawthorne and S. S. Prentiss; such lovers of the rod and gun as Webster, Forester, Porter, G. C. Scott, Hallock, Picton, Wilkes, Skinner, Carl Benson, S. C. Clarke and many others, well known in the field and in the sanctum of the old *Spirit of the Times*.

Then how pleasant to recall again the various places one has frequented with rod and gun; such as the rocky coasts of Maine and Massachusetts, Boarshead, Cohasset, Scituate, Marshfield, Manumet, Pa., Montauk and the wide bays of Long Island, Barnegat and Chesapeake Bays, Currituck Sound, the great prairies of Illinois, and the woods and waters of western New York.

For many years these were the places of my frequent resort, and it is pleasing now to inspect them in the magic glass of memory. These scenes pass before me in long procession, the features of the long absent and the dead still fresh and unfading, the woods as green, the waters as brilliant, the skies as bright as in the days of old. The mutations of life do not efface the recollection of kind faces, happy days and fair landscapes.

Ah, of those friends how few remain!
Few links of the long-sunder'd chain;
Few of that group that lov'd to pass
O'er the old Common's sacred grass,
Or muster where the Old Elm stood,
The latest patriarch of the wood;
Who down the Beacon Mall would ride
On snow sled, or on skates would glide,
Or gather where the Rope Walk gave
Its welcome to the Backbay ware,
Just where the Public Garden now
Spreads flowery bloom and leafy bough—
The few of them that linger here
Still hold their names and memories dear.

In boyhood my earliest use of rod and gun was in company of my good cousin, S. C. Clarke (author of "Fishes of the Atlantic Coast"), when we together frequented the woods and followed the brook on the estate of our beloved grandsire, Gen. Wm. Hull, at Newton, Mass. We two often in boyhood fished at the old Cambridge Bridge or at the Boston wharves for smelt, pollock, tomcod and flounders.

My earliest experience with the gun was in wild pigeon shooting, more than fifty years since. Those beautiful birds were then very plentiful in New England and I have shot them within a few miles of Boston; but of late years they have abandoned their ancient haunts, migrating to the abundant harvest fields of the West. In New England they were then shot by the concealed gunner as they collected on a tall pole, like the old fashioned well-sweep. It was usual to bait with grain the ground beneath, and the flock would gather there for food, first alighting on the pole and then settling to the feast. This bird has great strength of wing and is capable of long-sustained flights. It is said to travel at the rate of a mile a minute and it requires a good marksman to stop them. Pigeon shooting in those distant days was a favorite sport with the gunners, though quail, partridge, woodcock, jacksnipe and wild ducks, especially coot, were abundant in the woods and by the shore.

During my college days in Brunswick, Me., the wild pigeons were innumerable in the surrounding pine woods, and they made good sport for the students. My chief companions in such sport were Stephen Longfellow, elder brother of the poet Henry W., and Sergeant S. Prentiss, so very famous in later years as the most eloquent lawyer and statesmen of the Southwestern States. Prentiss was a small person and quite lame, still he would tramp the woods and roads at my side, gun on shoulder, unconscious of fatigue in his ardor for game.

Along the Massachusetts coast extend numerous salt marshes resorted to by all varieties of bay snipe, and furnishing rare sport to the gunner. Chief of these were Ipswich and Marshfield marshes, and close at hand stands the little village of Marshfield—famous as the sporting home of Daniel Webster. Some forty or more years since the immense salt meadows overflowed at times by

tidal creeks, were alive with the swift-winged birds, and there Mr. Webster found great recreation. He owned and farmed some 1,700 acres, which were bounded on one side by the beautiful Green River, which emptied out this place into the sea. There he kept at anchor, opposite his boat house, his little sloop, in which he delighted to sail out into the open waters, to angle for the various salt water fish, so abundant on that coast. For some years he amused himself with bird shooting over the marshes, and also in coot shooting from a small dory boat off Brant Rock, a fine shooting point near the mouth of Green River. But as years advanced he gave up the marsh bird shooting, and then the coot shooting, saying he was too clumsy to shoot in a small boat, but devoted himself to the sea fishing. It was my good fortune through his kindness to occupy for more than two seasons one of his adjacent farm houses, and so I had daily opportunity to witness his enjoyment of life, in inspecting the farm labors—and trying for cod, haddock, bluefish and black-fish (tautog) in the surrounding waters.

On a lovely autumn day, Oct. 24, 1852, the remains of the great statesman were committed to the earth on a pleasant grassy slope of the hill that overlooked the meadows, the woods, the river, and the sea; and by his side repose the bodies of his two beloved sons, Fletcher and Edward, the former killed on a battlefield of Virginia and the latter a victim of the Mexican war.

In removing to New York I made many literary and sporting acquaintances, chief of whom was Genio C. Scott, author of "Fishing in American Waters," in the preparation of which I gave him some little aid. With him I enjoyed many pleasant fishing excursions, especially in the ponds and creeks of South Oyster Bay and at Sodus

ISAAC M'LELLAN.

Bay, on Lake Ontario. Still another close friend was Mr. Jerome Thompson, the artist, who had a studio in the upper part of the Appleton building, on Broadway, corner Leonard street. I visited him often, and then would drop into the office of the old *Spirit of the Times* and that of the *Kuickerbocker Magazine*, occupying a lower floor. To both of these famous journals I was a frequent contributor and there often conferred with Editor Clarke and Messrs. Porter, Wilkes, Frank Forrester and others.

I had a great regard for Herbert, as the most prominent of our sporting writers, and liked to confer with him on rod and gun, though I did not quite agree with him on certain special topics. For instance, he did not seem to care very much for the sports of duck and bay snipe shooting, nor even for deer hunting, preferring the sports with dog and gun for the Western grouse and quail and woodcock shooting. He was ever most genial, generous and a very agreeable companion.

It has been said of him that he was not always kind and considerate in the treatment of his first wife, but I wish to correct such statement. Miss Sarah Barker, of Bangor, Me., his first wife, was a most charming and intelligent girl, and was first cousin to my brother-in-law, Mr. W. H. P., and his sister, Mrs. Col. W. A. H., was ever the most intimate friend of Sarah Herbert and had constant intercourse with her when subsequently they were residing in New York. I have questioned my relative, Mrs. Col. H., as to the domestic relations of Herbert and Sarah, and she assures me that they were most friendly. While Mrs. H. and her husband were living at the Astor House they had frequent visits from Herbert and Sarah, and on several occasions, when Sarah was troubled with a little lameness, Herbert would lift her from the carriage at the door and bear her in his arms up stairs to the apartments of Mrs. H. Herbert's mother, in England, was ever kind to Sarah, sending her handsome gifts and urging her to visit the family in England. Herbert and Sarah had but two children, the first a boy, the other a girl baby that died in Philadelphia. The son is now living at Folkestone, England, and in a letter lately received from him he speaks in grateful terms of the literary reception of his father in this country, whose memory he holds in most affectionate regard.

I have had extensive experience in sport in various parts of the country, but time and space will not allow me further to extend these reminiscences.

A Robin's Farm Bell Nest.

For the fourth time the supposed same robin has built her nest, laid her eggs and reared her young on top of the farm bell of W. H. Weimer, in Donegal township, the bell being in daily use. During the ringing of the bell she will remain on the nest, swinging to and fro, apparently as unconcerned as though she were hatching in some secluded spot.—*Greensburg (Pa.) Press*.

ANGLERS' EDEN.

The Pleasures and Benefits of a Great Forest—Pleasant Notes and Observations.

The season for trout-fishing in the Adirondacks has come again, and thither hundreds of men who at home are engaged in the arts and sciences and business pursuits have gone particularly for recreation, and incidentally to cast the fly as bread is cast upon the water, in the hope of some return. W. C. Prime, in his "I Go a-Fishing," says: "There is a distinction to be kept in mind between going to get fish and going a-fishing," and then adds: "The young angler—that is, young in experience—counts much on fulness of basket, on the rivalry with companions, on the glitter of his catch when spread out in the evening. So do we all. But as we grow older we learn more and more to appreciate the immeasurable joy which dwells on the banks and in the waters of the rivers and lakes, and which are surely to be taken whenever one goes a-fishing, and therefore the old angler has always a successful day, catching that which he went out to catch with great certainty, and coming home with a load of beauty in his heart, and beauty to talk and tell about, though there be not a fish in his creel." These are the sentiments of a true angler.

No region in this part of the country offers such pleasures to nature's lovers and anglers as the Adirondacks, even if much of the territory has been usurped by clubs and millionaires. There are still two million acres over which an orderly individual may roam, among mountains, lakes and streams. He will not find fish and game so plentiful as they were a quarter of a century ago, before great masses of people began to make summer homes there, but nature's panorama is the same, except for the devastation wrought by spoliation.

What stories our old fly-books tell us as we take them from their winter's rest and look them through! A large printed volume would not contain their secrets revealed only to their possessors. They tell of camps and tramps, of pleasure with hardships intermingled, of pools and brooks and lakes, where solitude protected myriads of trout; of camps where now there are great hotels, of guides then young and active, now old and incapable. Trails have been converted into thoroughfares, and locomotives now plough through fastnesses once known only to wild beasts. Time's changes have been stamped upon this great wilderness no less plainly than upon the outer world. But there is hope now that the new forestry law will check the ravages of late years and throttle him who in his greed for money would outrage nature.

Fishing time begins when the ice breaks up and the snow water is nearly gone. Then it is that the water is so cold that trout go everywhere in search of food, not confining themselves as during the heat of summer, to spring-holes and other contracted places where the water is cool, for trout can scarcely live in water of a temperature much above 60°. Very soon the fish will begin to gather at the foot of rapids, on their way to the highest water they can find, and a day or two thereafter they will be most plentiful among the rocks and stones which create foam-covered eddies in the running water. A little later and they will linger for awhile at the head of such rapids, and when they leave such tarrying places an angler who would be "lucky" must know their habits and resorts.

About this time, as the old almanacs used to read, when the fish are "on the rapids," look out for black flies. The temperature of the atmosphere will be high, and the little pests will come by millions in a single night. Henry Guy Carleton once studied these little insects and arrived at this conclusion: "The black fly is not as large as a bulldog, but he can bite with both ends. He earns his living by raising lumps like the eggs of a speckled hen on the forehead and behind the ears of a man, who will simultaneously wish that he could die and be out of his misery. One hundred and seventy-five black flies can feed comfortably on a square inch of a man's ear, but the experienced angler does not seem to mind them until they settle down nine deep." Later will come the punkies, which give a sensation as of poison from prickly ash, and still later the deer flies, which will make a man howl from pain every time they remove a patch of epidermis. The innocent little mosquito is the only songster among all the insects which seem to be in conspiracy to drive unseasoned piscatorialists from their midst. These insects, strangely enough, seem to have particular fondness for the novice.

He who would find nature at its best and trout plentiful, must not lurk where there are luxurious hotels. He must rather seek the seclusion of unpretentious hostleries where comfortable beds and wholesome food are dispensed at moderate price; places which have not yet been overrun by the multitude. Take with you few equipments, and those of the best. Of flies you need but a small variety. Your rods and lines must be well chosen; if of the best material they may be light and easy to handle. Cast-off winter clothing, with rubber coat and waterproof hat are better than any suit of buckram. You can judge with almost unflinching accuracy of the experience and skill of an angler by his outfit. When you see one with all of the paraphernalia which money can purchase, you may rest assured that his creel will but very seldom need cleaning.

A true angler prefers to fish with flies rather than with bait, not because he does not consider bait-fishing good angling, but rather for the reason that he is quite as successful with flies, and prefers their cleanliness. But he will not hesitate to substitute grubs or worms if occasion makes it necessary. As has already been said, none but the young aspirant and the market-fisherman so devote themselves to the killing of fish as to cause them to resort to other allurements than flies to satisfy their ambition. There is really little real enjoyment in "yanking a chalk line" for him who angles for recreation as well as for trout. And for such, too, it is doubtful if trout fishing carries with it the same zest which is realized in taking bass. The surroundings where trout live are more congenial to the naturalist than those of the resorts of bass; and the gamesomeness of the fishes is reversely different. Compared with a bass, a trout is a feeble fighter, sending fewer thrills through line and rod.

It is a grand sight to see the great forest burst into spring attire. The buds rapidly expand into the densest foliage and countless numbers of wild flowers in infinite variety appear as if to welcome the springtime. Evergreens no longer monopolize the sight, but are almost lost among the towering branches awakened from a winter's sleep. The underbrush revivifies, and dogwood,

witch-hazel and other flowering shrubs put forth their beautiful and all but odorless flowers. Wild nature seems to exert itself to decoy to its embraces its lovers, and each succeeding year they flee to her in greater numbers. It is a haven of rest for tired brains at any season between the snows, and it will be well for the people of the State when the wilderness shall have been converted into a well kept, well protected park.

D. H. BRUCE.

SYRACUSE, N. Y., May 20.

BULLWHACKING IN BUFFALO DAYS.

No DOUBT many a reader of FOREST AND STREAM, while traveling up the Platte in the luxurious palace car, has been awakened from his reverie by the porter entering and announcing "Dinner is ready in the dining kah." You leisurely go in and take a seat, give the waiter your order, and then take the last FOREST AND STREAM from your pocket to while away nearly half an hour, regretting when the waiter spreads before you a dinner second to that of no hotel. You nibble at most all of the delicacies, and in three-quarters of an hour you return to your car, not realizing that from the time you entered the dining car until your return, that you have passed over more ground than it used to take us boys ten days or two weeks to travel; and we worked from morning until night, and any one of us could have eaten more in ten minutes than you could have done in a day.

In 1857 my brother Dick was going to California, and was going to drive an ox team as far as Salt Lake for Majors & Russell. I persuaded my father to let me go with him as far as that, and return; for they were paying \$40 per month for the round trip, or \$50 to be discharged at Salt Lake.

There were three others of our acquaintances who were going too—Jack Brown, John Canady and Hans Donderson, a German who had worked for us. Hans was no ox driver, but was a whole-souled good fellow, and could speak very little English. After getting all our traps together and bidding our friends good-bye, we stepped aboard the steamer for Leavenworth and present-d ourselves at the office of Majors, Russell & Waddell, where we signed articles of agreement and were told we could go out to the camp on Salt Creek and begin work Monday morning. This was Saturday. The wagon master, Sam Johnson, took mount to camp, where we found quite a company, principally Missourians. On the way out Sam told us that we must not swear or use any bad language while we were in civilization, as Mr. Majors was a preacher and would discharge any man he heard swearing. I asked, "How does he expect us to drive from seven to ten yoke of Texas steers and not swear?" "Well," he said, "we must not swear until after we get away from home." Sunday was a beautiful day, and Mr. Majors came out to camp and preached us quite a sermon.

Monday morning Sam had the cattle brought in; and told Dick, Jack Brown, John Canady and myself to yoke up ten yoke each and go in and haul out loaded wagons. In about two hours we had our teams coupled up ready to start for town, where they were loading wagons as fast as they could. Dick, being the oldest and considered best driver, was to drive the lead team, John Canady next, myself next and Jack Brown fourth. We had hitched on to a wagon each and pulled out along the wharf, and had stopped, as a steamboat was rounding to. Just before she reached land a large wharf rat ran out from a pile of flooring that lay between my team and the hill, and made for the gangplank. I uncoiled my whip, gave it one swing and I cut the rat nearly in two. There was quite a crowd on the steamer and I received a tremendous applause, and they kept it up until old Sam rode up and said, "Lew, the passengers want to see you crack your whip." This I did a few times. The ladies put their hands to their ears and the gentlemen applauded. The whip I used was 18ft. long and weighed 4lbs., yet it was not as long nor as heavy as the one Dick used. We were told to go ahead, and it must have been quite a curiosity to the many emigrants on the boat, but few of them having any idea how the Western people transported supplies. We were kept busy that week hauling out wagons as fast as they could load them; our loads ran from 8,700 to 9,500lbs. to the wagon. By Saturday night our train was made up. It consisted of twenty-nine freight and two mess wagons; and our crew comprised thirty-one drivers, two cooks, two night herders, two carry yard drivers, one wagon master and two assistants. There were one mule, six horses and 350 yoke of oxen.

Old Sam told us at breakfast Sunday morning that Mr. Majors would be out in the afternoon to preach us a farewell sermon and give us a good lecture. Among the things he told us was that before entering upon any great and important undertaking we should first invoke the aid of the Deity. We all knelt down while he prayed; and no doubt but that was the last time a great many of our knees touched mother earth in benediction, although mine often came to the ground when I would kneel at some mud puddle and blow away the green scum and slake my thirst, and think the water good. Mr. Majors told us that as we were about to leave civilization behind we must do nothing wrong; and should any do wrong he would be tried by the train, a majority of whom should rule, and Sam should preside. I wanted to know if Sam did wrong who would preside. He said the next assistant; but that there was no danger of Sam doing wrong, for he was an old and experienced wagon master. After presenting us each with a New Testament and telling us to remember the Sabbath and keep it holy, he shook hands and wishing us God speed left us.

Monday morning was a new day to a great many of the boys; some were lost in trying to get eight or nine yoke of oxen together, and it was 1 o'clock before Dick was told to go ahead. We made only about three miles, but it was a start. Hans was put to driving the carry yard, and he was a faithful hand and did well, although he made a ludicrous attempt at swearing and could only say "Shu puck." The next day we got off by noon and did a little better.

I had become quite a favorite with Old Sam; he showed me a good many small favors; I had boasted to my own household companions about it, and while they were glad, some of the other boys were a little envious. But they had to wait only a few days for their revenge.

One evening Old Sam rode up and told Dick to drive out and we would corral on a small mound overlooking a little muddy stream that puts into the Grasshopper. I spoke up and said, "Sam, it looks very much like we were going to have a heavy rain; hadn't we better cross the creek?" Old Sam flew off the handle and roared out, "Who in blazes is running this train, you or me?"

"You are of course," I said, "but if it rains the creek will be swimming, and it will be three or four days before it will go down."

"That's none of your business, and after this you speak when you are spoken to."

"All right." I had made a blunder, but it was too late to correct it.

We camped on the mound, so it would be much easier

laughed. I said, "Will you swim Little Blue on your mule and bring in what I kill, cheek or no cheek?" "Yes," he drawled out.

The next morning as day was dawning, I woke Dick up and told him I was going for a hunt. "Oh, wait till after breakfast." "I'll kill a buffalo for breakfast." "I'm not going till I get my breakfast, when lots of the boys are going."

I turned out, buckled on my revolver, shouldered my little rifle and started for the creek, which I found deep and sluggish. When I approached the creek I heard some animal plunge into the water. I stood still a few moments and presently I saw the creature, about as large as a coon, swimming. When I moved it dove and as it went under it slapped the water with its tail. I knew then it was a beaver. I did not try to shoot at it; I was after larger game. I went up the creek nearly a mile before I found a place I could wade, then pulled off my clothes and started across. The water was fearfully cold and came nearly up to my arms. But I cared little for cold or wet. After I got my clothes on I felt splendidly, and started and ran for a half mile to get warm. It was but a short time before I saw three buffalo lying down on a small ridge. I crept up the hollow until I was within less than 100yds. of them. Here I waited and watched for quite a while. I knew it would be useless to shoot at the body with my small rifle, and I had often heard that it was of no use shooting at the forehead; so not having heard any objections to the butt of the ear, I concluded I would try that. I raised my rifle, took careful aim and fired. Two of the buffalo jumped up; the other rolled over on to its side. I kept well hidden and in a few moments the two trotted off up the ridge. As soon as they were out of sight I loaded my rifle, pulled off my boots, and having everything in readiness for a run approached the down buffalo. I was certain it was dead, yet I did not know it. I went up to within about 10yds. and took a shot at one of its eyes, but it did not move. I loaded my rifle and very carefully approached my fallen victim. I felt proud. I rolled him over as best I could, took his entrails out and cut out his tongue, then put on my boots and struck out for camp. The water did not feel so cold, and it was not so far. I reached camp just before grub time, and for a while I was the hero of the train. The boys began chaffing old Sam about his packing in my buffalo. He joined in the laugh and said he would do it if he had to swim his white mule.

After breakfast about twenty of the boys shouldered their guns and started for buffalo. But when they got to the ford, and felt the water and saw how deep it was, they concluded they would hunt on the camp side of the creek. Old Sam took three horses and we went for my meat; it was a young bull, and fat and good. We got back to camp in time to have some for dinner. The other boys came straggling in and all had killed buffalo, yet only four of them brought in any tongues.

After supper I shouldered my rifle and started for the creek to watch for beaver. About a mile below camp I found where the beaver had been at work the night before, but not understanding any of their habits I walked along very close to the edge of the water. I selected a place about 50yds. from where they had been at work and had not been waiting very long when I heard a very peculiar noise, which seemed to come from the water. I soon saw a beaver coming toward their feeding ground, and when it came near the bank it wheeled around, dove under the water and brought its broad, flat tail down, which resounded like hitting the water with a canoe paddle. I was surprised. I was certain I had not moved. It came up about 50yds. away. I was determined not to shoot unless there was a chance of securing the game. I waited a short time, when a smaller one came swimming along very leisurely and made straight for the place the first had landed at, and when it landed it went through about the same performance, although it did not make as much fuss with its tail, but it left in a hurry. The shadows of the hills had begun to get very long, the sun was nearly down and I had begun to think about abandoning my hunt for that evening, but soon I saw another beaver coming nearly straight across the creek. I had my rifle ready and intended to shoot just as soon as its head reached the bank. On it came, and when it touched the bank with its forepaws and raised its head out of the water just a little I fired, dropped my rifle and ran down to where it was. The water was very bloody. Just then it came to the surface about 6ft. below where it was when I had shot at it. I made a plunge and grabbed it as it was sinking. I got wet, but I had the beaver. I dragged it out on the bank, and after examining it closely pulled off my clothes, wrung them out, put them on and started for camp with my game. Before I got there I met Dick coming down to see what I had been shooting at. He was as much pleased as I was and that is saying a good deal. We pronounced it to be a very large one; in fact, we thought it must undoubtedly be the largest one in the Little Blue. When we reached camp Old Sam examined it and pronounced it to be a yearling. This lowered him in my estimation, for I thought he was trying to make me feel bad. Dick and I peeled it and, of course, like all green hands, we cut the musk bags, which gave us a rather high-toned smell for a few days.

The next morning everything went smoothly, we got off in good season, made about eight miles, and camped near the creek again. As soon as dinner was over I pulled out for the creek, and a number of the other boys, who hankered for beaver, went along. I had taken my fishingackle; I did not care for beaver although I should have

starting a train down hill than up. Well, it rained that night as if the reservoirs of heaven had turned upside down. By morning the little muddy creek had become a river. Half the cattle had broken away from the herd, and it took the boys until late in the afternoon to get them back. Old Sam was furious. Of course I was to blame.

The second day Old Sam mounted his white mule and rode down to the ford, to see if we could cross. The bank was quite steep and slippery. Old Sam pointed the mule for the other bank, and as that venerable white mule knew Old Sam better than I did, it did not stop to offer any advice; it went in and under, where a deep hole had been washed out in the ford. Sam crossed, turned around and came back, wet up to his shirt collar. Some of his best friends laughed, some smiled; I hid behind my wagon when he passed on his way to the tent to change his clothes. After changing his rig and wetting the inside from above the collar, he came out, called us up and told us to get our axes and go and bridge the creek. There being plenty of small cottonwood, we soon made a passable bridge. The next day we yoked up and crossed the creek. One of the boys let his team get a little too far to the right and his wagon turned over, yet it did but little damage. That was charged to me also.

Things went on about the same, though we made a little better time, as the boys got used to their oxen. When we reached the high ground overlooking the Big Blue, we could see dark objects away across the hills, which we were told were buffalo.

Saturday night we camped near Marysville, or where Marysville now stands. The next morning was beautiful. I had intended to go hunting and fishing down the Blue; but while we were eating breakfast old Sam said: "Boys, if you will drive to-day, when we get into the buffalo country, we will lay over a day and hunt." This was unanimously agreed to.

Our progress was very slow the next week, or seemed so to me. Large herds of buffalo could be seen across the Little Blue, and I was very anxious to kill one. Saturday night we camped near where the road came down from the high ground to the creek; and at supper I announced that next day I should kill a buffalo. Old Sam looked up and said in a very sarcastic manner: "You will have to get a bigger gun than yourn, unless you load it with cheek and conceit." At this only about eight of the boys

shot one if it had been near the bank. I hunted along the creek until I caught a couple of frogs, which I cut up into bait, and then I sat down on a nice bank and went to fishing. In a few minutes down went the cork float, I gave a jerk and found I had hooked a fish, which I landed over head and as far back as my pole and line would reach. I rushed back to where the grass was shaking, and there lay flopping a yellow catfish of about 2lbs. weight. I soon had my hook back into the water, and in a minute or so had another bite. I landed another cat. This I kept up until time to go to camp. When I strung them I found I had seventeen nice catfish; the first was the largest, yet the smallest would have weighed over a pound, so I had about 25lbs. of fish. When I reached camp the boys gave me three rousing cheers, and wanted to know what kind of game I proposed to bring in next. I told them it would be owing to what kind I found, but that I was not after buffalo or beaver any more for some time.

[TO BE CONCLUDED NEXT WEEK.]

"PODGERS'S" COMMENTARIES.

SAN FRANCISCO, May 15.—Here it is the 15th of the second month since the fishing season opened, and the undersigned has not yet wet a line in any stream, a lamentable fact that goes against all precedent. But that dreadful condition of slavery called business, which is the bane of existence, keeps one's nose down to the grindstone, and leaves no time for the pastimes that the soul yearns for.

At this season, too, California is at its best, and the country is beautiful. The hills and dales are in luxuriant green, and wild flowers intermixed with the grass make a trip to the interior streams a joy and a luxury. You can camp out and fear no drenching showers to dampen your ardor; and the trout are eager and ready to snap the dancing fly. Everything is lovely except yourself. And the season slips by, while you cast longing glances at the split-bamboo in its case. What is more trying to the soul than not being able to go fishing when the time is ripe and all nature smiles? I leave the conundrum unanswered. The true fisherman only can appreciate the longings for a day in the country where the fish wonder why you come not. It is true one can slip off for a Sunday one day, but our near-by streams are pretty well fished out, and to enjoy good sport it is necessary to go further away, and that requires time—a couple of days at least, and how one hates having to fish by the watch, with the screech of the locomotive in his ears and a train to catch. Besides, Sunday is no day to be on a stream, as every farmer's boy takes that holiday to splash along the creek and spoil your sport. Hence I wait over lost opportunities, or rather the want thereof. What makes it more irritating is that the trout are said to be abundant this season in the far-away streams, and are biting well. Woe is me, for I am not in it.

I notice in reading the last number of *FOREST AND STREAM* that our friend Judge Greene administers unto me a gentle rebuke for having, as he says, in all gentleness, cast unseemly reflections on Oregon, its tendency to rain at all times, its climate and its general shortcomings. I bow in all humility and meekness to the reproof, but disclaim all intention to poke fun at his adopted country. Of course I sympathize and condole with him that he does not live in California; but that is a misfortune, not a fault. I really did not intend to wound the sensitive hearts of our neighbors, and was totally unaware that I had done so. I take it all back, and will sin no more, whatever the shortcomings of Oregon's climate, it is amply redeemed by the existence of noble trout streams, its pheasants and its ardent sportsmen. Hence, I throw myself on the mercy of the court and plead "previous good character" in mitigation of the punishment that may be in store for me.

I am not sensitive on the subject of earthquakes that the Judge hints at, as one of the attractions of California. I have had chills and fever, and would welcome any other kind of shake in preference; neither do I take any stock in Death's Valley he mentions as being 300ft. below the level and liable to submersion. That is in Arizona; hence California is not responsible. But if the Judge is looking for a more local shoal where he can send poachers and those who kill game out of season, we have several localities we can offer quite warm enough to answer the purpose.

As to the invitation the judge extends to have me to "come up" and try the Chinook salmon, the huckleberries and bears, I accept, with the proviso that I take them separately. Bears and berries might not agree with me taken together, and it might suit the bears better to have Californian served up cold. I must on the whole decline the bears. As my experience with that class of natural history has not been a happy one, remembering, as I do, spending a whole night in a tree on one occasion in the '50s, while a grizzly did me the honor to camp at the foot of the tree awaiting my descent to shake hands with me, I confess to a slight prejudice against bears ever since. Anything else the Judge may have to offer in the way of Oregon attractions I accept with thanks.

I note the discussion in the *FOREST AND STREAM* on the merits of cockers, and I take the side of the cockers, for they are very nice little doggies and have merits. I have owned several and can attest to their good qualities as retrievers in dense scrub and underbrush, as they can wriggle underneath and bring out birds where it would bother the larger dog. Speaking of dogs reminds me of the intelligence of a half-breed (half retriever and half spaniel) owned by a man who manages trap shoots for a club near here. The dog in question retrieves all the birds that are shot, and in cases where there are a hundred birds it gets to be rough on the dog. For his convenience a bucket of water is placed handy to enable him to alleviate his thirst. As the shoot progresses he gets weary and footsore, and after bringing in half a dozen birds he goes to the bucket, and after taking a lap or two puts first one forepaw in the bucket, then the other, then turns around and dips in each hindfoot successively, and continues to do this to the end of his labors. He was never taught to do it, but reasoned it out himself that it was a good way to relieve his feet from the heat consequent upon so much travel.

It is my theory that most dogs know more than most men, and taking the average of dogs and men on intelligence the dog would win "by a large majority." Dogs can do many things that a man cannot. What man was ever able to scratch a flea between his shoulders? and yet man is four-legged, his arms representing his forward ones

in our early stages, only we have become too proud and cocky to use them as nature intended, but devote them to prize-fighting and the double purpose of driving with one while we hold our best girl in the buggy with the other. Speaking of which, how singular it is, that before marriage that girl requires so much holding, and after, is so well able to take care of herself. The danger phase of pitching out of a buggy seems to have passed entirely.

Speaking of prize fighting you will soon have an exhibition of the skill of the kangaroos in that line. A man has just landed here from Australia with a couple of kangaroos that he has taught to stand up and sparr with skill sufficient to knock out any ordinary pugilist. It appears to be a natural tendency of the animal to strike out with his fore-feet or hands, and when very much in earnest he brings to aid the long single toe of one of his hind feet and rips down the abdomen of his opponent. This feature and tendency and one also to kick a man about 10ft. his trainer is endeavoring to suppress; and things go on very well until the animal gets two or three heavy "biffs" on the nose, when he forgets all the rules about below the belt and shows a disposition to return to his natural methods and tear things. But the owner and trainer speaks encouragingly of being able to eradicate that little fault in time; meanwhile if a few pugilists should happen to be "opened out" there would not be much mourning I imagine, as gentlemen of that class are fast losing their popularity.

The kangaroos will first visit the World's Fair of course, or in course of their progress eastward, but you will see them in due time. Why not turn them loose in Wall street with the bulls and bears? When jumps are in order they will be found useful. But "stumps," not jumps, seem to prevail in that sulphurous latitude just at these presents. Blessed are they who are far away, and having nothing to lose are not in it.

Natural History.

THE LAST BEAVER.

A SKELETON of a beaver's head adorns a shelf in my library. It often calls for the telling of a story which may be of interest to the younger readers of *FOREST AND STREAM* who have never had, and perhaps now never will have, an opportunity of witnessing the curious habits and great instinct of this almost extinct animal.

Early in the '50s I was engaged in the peninsula of Northern Michigan, and necessarily had to run a sawmill

A BEAVER POSE.

for making material for buildings. There was a pretty lake, one of a galaxy of them, from which flowed a stream that ran the mill. The foot of the lake was closed by a beaver dam, and a supply of water was thus kept up for a dry time, when the deficiency was made up by cutting into the beaver dam to let the water down the stream. There were a large number of beavers in these lakes, each of which had two or more beaver houses and a dam at the foot. Most of the beavers had been captured by the trappers, and I made an effort to save this remnant by forbidding the taking of any more on my land. But I soon found that a sawmill and beavers were not compatible.

No sooner had we cut into the dam, and returned to the mill a mile away, when the expected water began to dribble and finally stopped. "What the — is the matter with the water?" said the foreman. A man was sent to examine and found the beavers had mended the break and stopped the water. The break was opened again, but no water followed the man on his way back. The man was talked to in the expletive way usual to Westerners, but he insisted that he had done his duty.

When you want a thing done go yourself, was my motto, and I went. Knowing a good deal about beavers, having explored their haunts with Mr. Morgan, the author of the only book about beavers extant so far as I know, I approached the dam cautiously and peering over the thick brush saw five or six fellows, just putting the finishing touches to the repair of the dam by plastering mud on the work with their broad flat tails, excellent trowels for the purpose. As soon as they discovered me they dived and disappeared.

There was no help for it but to trap the animals, for which I was sorry, but no water no lumber, no mine no money, and the beavers must go. I set some traps and opened the break.

The water ran freely for a few hours but the next morning the stream was dry. There were three beavers in the traps, and the break was repaired as neatly as if the best mason had plastered the dam over. The break was opened and the traps reset, and water came down for a few days, when it stopped. The same course was repeated, and as soon as the work was finished I hid in the brush and awaited events. The lake slowly fell, and in less than an hour I saw a gentle ripple from one of the beaver houses, and very soon a beaver landed on the dam and examined the break very intently for a few minutes. Then he dived and returned to the house on the opposite side of the lake, and with another started on a trail I had seen to another lake twenty or thirty rods away. By and by he returned with two others, and the four went to work filling the break. They started up the lake and swam back, each with a stick in its mouth, which was stuck in the hole, and this was repeated until the break

was filled again. Then they all went to work stirring up the bottom which was made up of dead leaves, and these filled the openings between the sticks, and the water was stopped once more.

This went on until all the beavers were captured as I thought. The last one caught was a female, and by its side as it lay dead in the trap, stood a young beaver on its haunches in the peculiar way with these animals, resting on the stretched out tail, and looking most disconsolate. This sketch I made at the time and send it for perpetuation in the *FOREST AND STREAM*. I was sorry for the little fellow, and thinking he would not bother us, I left him as he stood mournfully viewing his desolation. I sent a man for the trap and the skin of the beaver in it, and he brought this last of the family, which he found lying dead by the trap with no doubt its dam in it. The water ran and probably runs yet, but I still feel sorry for his sad fate. The skull on my library shelf was his.

H. STEWART.

BREEDING RUFFED GROUSE.

TOLEDO, O., May 9.—*Editor Forest and Stream:* During the month of February and the early part of March I was fortunate enough to get together a number of ruffed grouse for the purpose of continuing the experiments for their domestication interrupted some four or five years ago. In this labor of love I have had the very kindly cooperation of "our paper," and of Messrs. Nathan L. Hayes, of Clinton, N. Y., and L. D. Burdick and Clark Black, of McDonough, in the same State. At Toledo Mr. W. O. Dakin, an experienced poultry raiser, has contributed his very extensive knowledge on that subject to the general fund, and under all these favoring circumstances we are quite sanguine of success. Our arrangements this spring include a covered house about 8ft. square, connected by a small door with a nicely sodded and netted run which contains several trees (and which is some 8ft. in width and nearly 100ft. long). At the back of the house proper is a covered rectangular space with nest boxes which can be examined from the outside without in any way disturbing the birds themselves.

As you may readily imagine, I am as much delighted these days as a boy with a new pair of boots. One of my grouse hens, which began laying on the first of May, has a nice little nest with eight eggs, and a fair prospect of half a dozen more before she finishes. She is so thoroughly tame, more so than any bird I have ever owned, that I have no doubt she will go straight along and take up work of incubation as soon as she is through laying.

Are the ruffed grouse really polygamous? We have always been told so, and all my experiments looking toward their domestication have been conducted on this assumption. But this spring there have been in this particular inclosure, three hens and one male bird, and the latter has attached himself to this one hen, following her about from place to place like a sedate and well-disciplined husband, apparently caring nothing for other females, nor they for him. And if we go into the inclosure, (which is some 8ft. wide and nearly 100ft. long), he is so intensely jealous that his attitude and actions are as ludicrous as those of a school-boy under his first "great passion." At such times he will at once strike an aggressive pose, and attack the hand or foot of the intruder, whichever may be presented to him, with all the dash and bravery of a game-cock. The behavior of this bird is more like that of the male quail, who is always a model of conjugal fidelity. He has, however, killed one hen whose presence in the same range with himself and his spouse did not seem to meet with his approval.

The authorities all tell us that the male grouse is a passionate but tyrannical and selfish Turk, and that he has no interest in his female companion after the fervors of the mating season have abated. Here possibly is an illustration of the refining influences of civilization, and an opportunity for a constant companionship with the better sex.

Under all circumstances, there seems every probability that these eggs are fertile, and that if they are properly incubated they will hatch. But so far I have not ventured to count the chickens to be produced from them.

JAY BEEBE.

"Nehrling's North American Birds."

It is with satisfaction that we receive Parts VI., VII., and VIII. of "Nehrling's North American Birds," a work of which we have had occasion to speak favorably in past numbers of *FOREST AND STREAM*. We have often alluded to the need of an accurate, popular and pleasantly written ornithology of America, which should be illustrated by colored plates and yet should be published at a price which would be within the reach of the average man. This need will be at least partially supplied, we think, by Dr. Nehrling's work when it shall have been completed. Originally the plan was to limit the work to a single volume, but this has been found impracticable, for the material has expanded until now two are necessary. The numbers now before us carry us to the end of the first volume.

Part VII. deals with the warblers, from the oven bird (*Seiurus*) to *Cardellina* and the vireos are begun. Parts VII. and VIII. carry us through the vireos, shrikes, waxwings and swallows. In this double number also is printed an extended introduction, which among other subjects treated, includes bird legislation, the acclimatization of exotic birds, and a brief memorandum of nesting boxes, the latter illustrated by a number of cuts of bird houses. The index to the first volume is also found here. Of the plates illustrating these parts of the work, the single figures by Mr. R. Ridgway are remarkably life-like and true to nature. The grouped birds are less effective, although those representing the blackbirds and the swallows are fairly good.

The life histories of the species described in these parts of the work are quite as good as in past numbers and are delightful reading. The value to agriculture of bird life is quite fully gone into, and the whole tone of the work is admirable. The author never loses the opportunity of insisting on the importance of preserving our birds, and yet the lesson which he teaches is so happily presented that it never becomes wearisome.

The Best Line to Denver

From either Chicago or St. Louis is the Burlington route. Only one night on the road. Daily vestibuled trains, with Pullman sleepers, reclining chair cars (seats free) and Burlington route dining cars.—*Adv.*

Game Bag and Gun

SNIFE IN WESTERN NEW YORK.

LOCKPORT, N. Y., May 18.—While I speak more particularly of Niagara county, I think my remarks will apply to the entire section visited by these birds in the western part of the State. The writer, a long-time reader and contributor to *FOREST AND STREAM*, believes in the folly and destructiveness of spring shooting, and heartily inforces all that has been said in this regard. We now, however, step to the front to explain the position of our sportsmen in regard to spring snipe shooting.

Early last spring an item in the *Buffalo Express* to the effect that the Senator from the district comprising Chautauque, Cattaraugus and Erie counties would make an effort to have that section exempted from the law providing for the close season of English snipe (more particularly) in the spring, caught the eye of the writer. Now, as the exact conditions prevail in all the western border counties of the State, the writer at once, with the assistance of other local authorities, so interested our own representative that, as the reader knows, a considerable portion of western New York was exempted from the law regarding English snipe, etc. Now to our Eastern brother sportsmen, to whom this may have seemed unfair, let us explain. At the most, the border counties have but one month's snipe shooting in the spring, extending usually from about April 5 to May 5. Further and more particularly, this is all the English snipe shooting they do have. For some reason that we are not able to explain, fine snipe ground is visited by the birds on their spring flights, but in the fall they pass over the same ground with only an occasional straggler stopping over for a day's rest. I have had good fall snipe shooting on the Montezuma marshes in the central part of the State and to the west of us on the Detroit River, where I go to our club grounds for duck in the fall, we find the snipe in plenty; but for some reason best known to themselves the snipe family do not make western New York a fall resort.

Now as to the condition of spring birds, we find that when they have a week's rest and feed on their ground where they are in first-class order. The largest English snipe we have any record of hereabouts was killed the first week of this present month by John Few, a local shot. It was a male bird and weighed 6oz. 8drs. It was handled by at least a dozen local sportsmen, including our well-known ornithologist J. L. Davison. In connection with the English snipe, but remaining later than the first named bird, we find a considerable number of the pectoral sandpiper, or jack snipe, as we call him to distinguish him from the English snipe; this bird gets quite fat here in the spring and is about as acceptable as the other bird.

To sum it all up, our excuses for our spring snipe hunt are as follows: To begin with, after being cooped up all winter, we have that longing to get out in the fields where the sun shines on both sides of the fence and the south wind brings memories of the land of flowers, we feel a good deal as Maurice Thompson did when he wrote:

"Ho for marshes green with spring,
Where the bitterns croak and the plovers pipe,
Where the gaunt old heron spreads his wing
Above the haunt of rail and snipe."

The only thing we have to hunt is the snipe; and he is only here for a week or two in the whole year. We cannot find that the birds nest with us, neither do we find that the females are carrying any eggs. The flight in fact resembles the fall flight in other localities but is shorter. The birds are in good condition and the limited number killed does not affect the number of the birds to come any more than the fall shooting of other more favored localities. Remember this applies only to English snipe and we ask that these facts be accepted as a reasonable excuse for hunting that bird in this locality in the spring. The new law now closes the season May 1. This is satisfactory to us as it would shorten our season but a few days at most, and we will live up to the game laws in any event.

BLUE BILL.

MY FIRST BEAR HUNT.

WHEN I was a boy I lived in Berkshire county, Massachusetts, not far from the Vermont line. Like most farmers' boys who lived in that region I liked to hunt woodchucks, which were very plentiful. I had a dog whose name was Bravo. For short we called him Brave. This dog, which was part hound, was a famous woodchuck hunter. He often went off and hunted them on his own account. And many a time when I was engaged in hoeing corn or some other farm work, have I heard Brave barking and tearing around in the upland pasture trying his best to let me know he had a woodchuck in some hole in the ground or crevice in the rocks. If I had time I would sometimes go and dig the woodchuck out if I could. Brave was always delighted to have me to come, and always eager to help in digging. Sometimes I would find him head and shoulders buried in a hole he had dug himself, tearing away at roots and stones in his efforts to reach the woodchuck. Sometimes we succeeded, and sometimes we did not. If we succeeded in unearthing the animal, it would not go far away before Bravo was upon it and made short work of it.

Sometimes in the fall when farm work was not pressing, I would take my gun—almost every Yankee boy had a gun—and Bravo and start out for a day's hunt. Woodchucks were the largest game we found, generally. Although there were many foxes; but they were cunning enough to keep out of our way. There were also wildcats, and sometimes bears in the mountains, but as yet—for I was only about thirteen years old—I had not captured anything larger or more savage than a woodchuck.

One day, late in October, I started for a day's outing in company with a chum of mine, a neighboring farmer's boy named Ben. He was a brave little fellow about a year younger than myself. I took my gun, and Ben carried a basket in which to bring home the nuts we expected to find. Of course, Bravo followed us. There had been a heavy frost the night before. The air was crisp and full of that "woody" smell so delightful at this season. The trees were rich in yellow, russet and crimson foliage. The ground was covered with fallen leaves, which rustled as we walked through them. It was a perfect day and we enjoyed it thoroughly.

We wandered a long way from home, seeking the

wildest and most secluded places we could find, occasionally gathering nuts, or popping at squirrels, which we seldom hit. We had climbed half way up a pretty high mountain, which was thickly covered with woods and underbrush, with now and then a big rock jutting out from its side. About noon, being tired and very hungry, we sat down on such a rock to eat our lunch. The view from this rock was beautiful. It overlooked the valley for miles. The village was almost buried amid trees in the distance, but the two church spires showed where it was, while the millpond gleamed, a bright spot in the landscape.

As we sat enjoying the view and eating our lunch, Bravo, who had been lying beside us, became uneasy. He got up and sniffed the air. This he did two or three times. Then he would lie down again, but only for a moment. I spoke to him and he came close to me and whined. I noticed that the hair on his back was bristling up. He was excited and seemed to be afraid of something. I patted him and told him to lie down. He obeyed, but in an instant he was up again, his eyes gleaming and the hair on his back standing erect. Before I had time to quiet him, with a growl and a bark he was off, bounding down the mountain side. I grasped my gun, which was loaded with small shot only, and followed him. Ben excitedly followed me, trying to keep as close to me as possible. The mountain side was rough and we could not keep up with Bravo, whose barking grew fainter and fainter in the distance. But we followed as best we could. What it was that the dog was after we did not know. I had never seen him act so before. Whatever it might be I felt secure, because I was armed. I had a gun in my hands and that was enough.

At length Bravo's barking became distinct. It was louder, and we knew he had stopped running. We hurried on and soon caught sight of him. He was under a large chestnut tree, in which he had evidently treed something, for he was looking up, very much excited, and barking furiously. When he saw us he became more excited, and putting his forepaws on the tree trunk, he seemed to be trying to climb it. All out of breath, and nearly as much excited as Bravo, I reached the tree and looked up. At first I could see nothing. But getting around a little on one side, I saw, sitting quietly on a limb of the tree, near the trunk, a small black object, which I soon made out to be a young bear.

At this discovery I was more excited than ever. There was a chance I had longed for. I had never shot a bear. In fact, I had never seen but one before, and that was a tame one. I had heard bear stories and I believed them to be savage and dangerous animals. But this small black animal looking so calmly and mildly down at us did not seem savage a bit.

My first thought of course was to shoot him at once. The mere idea of shooting a bear increased my excitement. I had generally killed whatever I had shot at—if I hit it, and of course I expected the bear to drop as soon as I fired. I stepped back a little and raised the gun to my shoulder. But my hands trembled so I could not point it anywhere near the bear. I lowered the gun and wondered what was the matter with it. I raised it again, but still it would not aim at the bear. I lowered it and examined it again. Then I remembered having heard old hunters tell about the "buck fever." And I made up my mind that I had it. As there seemed to be no danger of the bear escaping I thought I would wait a few minutes and calm my excitement before shooting. This was necessary, as it was simply impossible for me to hit the bear if I fired then.

Just then the dog's strange conduct attracted my attention again. He stopped barking and raised his nose in the air and sniffed and whined. His eyes shone like fire, his hair was standing on end like the quills on a porcupine. With a fierce growl he darted past me in the direction we had come and was soon out of sight. But only for a moment. He came running back, his tail between his legs, and looking behind him, and giving short snappish barks. At this, I began to be alarmed, I felt that danger was near. Overcome with this feeling I grasped Ben's hand, and we ran as fast as our legs would carry us. The dog ran with us. We had gone but a short distance, when, hearing a queer noise behind us, I looked back, still running, and to my horror saw an immense bear followed by another cub, lumbering toward us on a lively run. This sight did not increase my desire for bear hunting just then. My gun, which had given me such a feeling of security before seemed a mere toy in the presence of such an enraged monster. For an instant I thought it was all over with us. But if we could only climb a tree we might be saved. I remember having heard that a tree too small around for a bear to climb was the safest. Such a tree was just before us. Dropping my gun, I grabbed Ben and fairly pushed him up until he could get hold of a limb. He scrambled up like a squirrel, and swinging himself over a branch he reached down, and catching me by the collar of my coat helped me to a place beside him. We were none too soon, for the savage beast was close behind me. As I struggled to get out of her reach she reared up on her hind legs and made a grab at my feet. The cold sweat covered me from head to foot as I felt her claws sink into the flesh of my left ankle raking downward, tearing my trousers and pulling off my shoe, which she crunched in her teeth. But I got out of her reach, and I did not much mind the deep scratch she had given me. Brave, belying his name, had made himself scarce. He did not mind hunting a cub, but an angry she-bear was another matter.

The bear did not try to climb the tree, instinctively knowing, I suppose, that it was too small for her to clasp. We climbed high up in the tree, and, feeling safe now, we watched the motions of the enemy. She went to the tree where the other cub was, and, I suppose, called it, for it came down very deliberately. They seemed in no hurry to go, but hung around, nosing over the leaves on the ground hunting for chestnuts. As I sat and watched them I began to have a slight feeling of shame and resentment. I did not like the idea of hunting bears and being hunted and treed by them in return. This feeling was intensified by the pain I felt from the deep scratches in my ankle. The longer I watched their impudent movements the greater became my feeling of resentment. I felt that I must shoot one of those bears. But how should I get my gun? It was lying under the tree where I had dropped it. The large chestnut tree under which the bears were was some little distance away. It seemed that I might slide quickly down and get the gun without

attracting the attention of the bears. But there was a great risk in doing so. Ben and I discussed the matter. Even if I should get down there would be great difficulty in getting the gun up in the tree.

A thought came to me. In my pocket I had a stout fishing line. On the end of this was a large hook, on the end of which I had impaled many a good-sized sucker. A short distance above the hook was a bullet which served as a sinker. Sliding down to the lower branches of the tree I took the fish line and fastened the bullet close to the hook. I then let the hook down and fished for my gun. It did not take long to get the hook over the trigger guard, and with perfect ease I drew the gun up. Then, bracing myself around the tree with one arm, I drew the ramrod, and with the screw or "wormer" on the end I drew the paper wad from the gun and emptied out the shot. I then drew the wad which covered the powder and poured in the gun an additional handful of powder, making a double charge. I covered this with a paper wad and, with Ben's help, rammed it down as well as I could in such a difficult position. I then took the bullet from the fish line and put it in the gun. To this I added a large handful of shot. This done, I felt that I had a charge in my gun with which I could face the most savage bear in the mountains.

By this time I had recovered my calmness. I was no longer excited. My hand was steady and I had made up my mind to shoot a bear. I told Ben what I meant to do, and left it with him to go with me, or to stay in the tree. He chose to go with me.

For a moment or two we had lost sight of the bears. There were some small trees and bushes between us and the chestnut tree which hid them. We watched till we saw one of the cubs, so we were sure they were still there. We then slid quietly down the tree without attracting attention. I opened my big jack-knife and gave it to Ben in case he should need a weapon, and we began to crawl stealthily toward the bears.

It seems queer now to think of our audacity in attacking such a dangerous brute as a she-bear with cubs, but it was the courage of ignorance. We knew nothing of the very great danger we were in.

By shielding ourselves behind bushes we got pretty close before the bears discovered us. There were only two in sight, one of the cubs having strayed away. As far as the cubs were concerned we felt no more fear of them than we would of a couple of sheep. Nor were they much more to be feared. No sooner did the old bear see us than she started toward us on a lumbering run. There was a low pine bush between us and her. As she started we halted behind this bush, ready to receive her. I cocked the gun and held it to my shoulder with a perfectly steady hand. Ben stood partly behind me, holding his open jack-knife like a soldier waiting to repel a charge. (And that reminds me that poor Ben, years afterward, met his death in nearly the same position on a Southern battlefield.) On came the enraged bear directly toward me. I tried to keep the bush between us till I got a good chance to fire. I had not long to wait. I can hardly tell how it happened. A dash—and the muzzle of my gun was almost in the bear's ear—a deafening report—a shoulder almost knocked out of joint—and I lay sprawling on the ground not far from an immense dead bear. Ben was frightened when he saw me fall, but I soon recovered. I had not counted on the "kicking" of the gun, from such a tremendous charge so loosely rammed. But I killed the bear. The cubs made off with themselves and we could not find them.

After looking a long time at the bear, examining her teeth, feeling of her claws and wondering at her great size, we went home, two as proud boys as could be found in Berkshire county. Getting help and a horse we got the animal home early the next morning. And for a long time Ben and I were the heroes of the village.

SHELLY.

Notions of a Carthage Man.

In the March 3 issue of the *Gazette* you speak flatteringly of the public spirit shown by Dr. W. O. Blaisdell, of Macomb, in introducing new game birds into this State, which is commendable. But what is the use of one person spending his time and money in trying to keep this country supplied with game, while a dozen will go out in a bunch and kill everything that flies? Why not protect our native species that would in a few years, if protected, restock our now silent woods and fields with sufficient to supply every one. The law protects game to a moderate extent, but we need a general distribution of knowledge on the subject and a public sentiment against its wasteful destruction. If our domestic poultry were treated in the manner that wild game is, there would not be a chicken, duck or turkey left in a week. Two neighbors owning adjoining timber pastures have protected a very small colony of squirrels for two years that were driven out of the shot-swept woods. They have increased wonderfully in this short space of time, and if unmolested will soon begin to send out colonies to restock the woods. Another neighbor has protected three flocks of quail during the past severe winter, and they have become so gentle that when he went to feed his cattle they followed him like chicks, and he fed cattle, hogs and quail together. Next summer his feathered friends will repay him well by eating destructive insects. Knowing the remarkable hardiness and fecundity of our native game, the writer proposes that everybody should interest themselves in preserving and increasing it.

First—A farm or timber pasture posted should be considered a game preserve and respected accordingly.

Second—Hunters should make it a rule never to shoot at a flock of six or less. This was the inexorable rule among the Indians.

Third—Destroying nests and selling bird eggs should be discouraged as much as possible. Twenty years ago boys used to go in the woods and pack off wild turkey eggs by the hundreds to town. Is it any wonder there are no flocks of wild turkey now?

Fourth—The selling of game should be restricted by law in our State to one month in a year.

Fifth—Hunters should turn their guns four times a year on the numerous rats, weasels, mink, snakes and all other enemies to our feathered game.

Sixth—Hunting clubs all over the country should make united effort to preserve and increase the native game, and in a very few years there will be plenty to eat and for sport, but none to waste.—W. C., in *Carthage (Ill.) Gazette*.

FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

III.

Billy Hofer's Illumination.

May 16.—The other Monday night was the first "illumination night" at the Fair. All the modern wizardry in electricity was brought in use to weave spells, to deceive, to charm, and to enchant the eye. The Court of Honor was glorified in roscate light. Little stars danced on the water, melting and tremulous. The forms of the sea horses and of the goddess rowers of the great fountain boat became idealized until they seemed a marvelous dream. The columns of the peristyle floated and faded back, and the figures of the quadriga started up at the compelling beckoning of the golden statue of the Republic. There was a spell upon the place as, one by one, row by row, thousands by thousands, there beamed out upon the dome of the building which made the central motive of the magic scheme, the wondrous lights which flooded out the present, which lit up the past for you, and almost taught you of the future. Then the high coronal of starry light took radiance, and the dream was full, it was complete.

It was an inspiring yet a softening scheme. You felt the trumpets sounding, yet beneath the summoning bells there ran the sound of lapping waters. You thought of adventure, of war, of the stern import of high deeds; but under that was the sweet laughter of children. Your heart felt the tingle of lofty music, the rhythm of noble poetry, but then came tempering breaths from sweet-smelling flowers and happy fields. Unquestionably there was a spell. Do not say the days of magic and of spells are gone. They are not. It is only our own fault if we do not hear and see.

From the Court of Honor to the Hunters' Cabin on the island you could kill an antelope. In the cabin there are antelope skins and skins of deer and elk. There are saddles and "chops," lash ropes and quilts, blankets and pack-cinches. Moreover, there is a great fireplace, wherein upon that evening there blazed a most happy and seductive fire. Billy Hofer pulled out some boxes and spread over them some skins, trailing them out in front toward the fire. On those improvised "Indian seats" we lay down. We could look easily into the fire. "You can see all sorts of things in a fire," said Billy. And so we did.

"Wait," said Billy, at length, "we are forgetting something. This is illumination night, and we don't want folks to think the Hunters' Cabin isn't up to the times. I suppose we ought to have at least one candle, besides the fire, and seeing it is a special occasion, I don't know but we can afford two. We will make it two. There, how's that? It shall not be said that the cabin is behind the other buildings to-night when it comes to illumination."

So we sat down, and while a million candle power of electric light was blazing in the Court of Honor, two candles on a piece of board lit up the window of the cabin, and the fire made irregular and dancing shadows on the wall.

"Could you think the Fair was outside, so near?" said Billy.

No one could. The illusion was complete. A more dramatic contrast never was on earth. Here was the very center of energy of the whole country, alive and ablaze, while next door to it was the quiet of a mountain home. Here was a battle of the search light and the candle.

"I like it pretty well here," said Billy Hofer, "but I shall not be sorry when I can go back to the Rockies. If it wasn't for this cabin I wouldn't stay here a minute. I feel just as if I was at home in here. There's too many gods and angels 'round here for me. They're stuck all over the buildings. I'd rather see a few more trees."

"This is a good enough cabin," he continued, "but if you want perfect comfort you want to have a regular Indian lodge. I haven't got our lodge up yet, but will have after a while."

"Many a time I have been out alone in the mountains days at a time. I don't mind being alone, there is always so much to look at. A dog is great company, or a horse even. A fellow's watch is a big comfort, too; you can always hear it talking. Sometimes, if my watch gets out of order when I am out alone in the mountains, I feel awfully broken up and lonesome. But then at night, if you have a good lodge up, you just crawl in and make your little fire in the middle of the lodge and stick up a candle near your head, and lie down on your blankets, or maybe propped up a little on your Indian-back, the way we've got it here, and then you take your book and go to reading. You don't need any one to help you read. There you are, as comfortable as any one on earth. That's what I call happiness."

"Have you ever noticed what a way the water has of talking? You can hear all sorts of voices in the running water. You can listen to it for hours. Now, suppose you're down on a stream getting water, and your partner is up on the hillside above, calling for you. You can hear him but he can't hear you if you answer, or he won't be able to locate you."

"Were you ever scared, Mr. Hofer, so that your hair stood up?" asked a companion.

"Yes, I have been," said Billy, "scared so bad my hair rose up straight."

"At a bear?"

"Oh, no. There's no use getting scared at any animal. Some bears will fight and some won't. They're like men that way. What scared me, and what will scare me any time now, was a snow slide. I was caught in one once, and carried down the side of the mountain I don't know how far. Another man was in with me, but we both got out, somehow, before the slide took us over into the cañon. I wasn't scared then, and didn't feel hurt, but that night in my cabin I found that my side was all black and blue. I happened to go to the door, that night, for something or other, and as I looked out I heard a sound like the creep of a slide. Then I got scared. I sat down by the fire and just shivered and shook all over, I was so scared. My scalp crept. Since then a slide always scares me. I can't bear to hear any one sing that song about 'Slide, Kelly, slide.'"

Mr. Hofer was bewailing the appearance in one of the city papers of an interview wherein he was not correctly reported. "They make me say there are 'thousands of caribou in the Yellowstone Park,'" said he, while of course I never said anything of the kind."

"When you are out catching young wild animals, don't you ever get attached to the little fellows as pets?" we asked him.

"Yes, of course I do, and to some much more than others. I don't much care for elk. They are awkward, clumsy things, with no great intelligence or affection about them. An antelope is the thing that you love, though. I don't know what there is so fascinating about a young antelope, but there is no other animal to which you get so strongly attached."

"I had a bear cub once that I thought a great deal of. Some bears are nice and some aren't. I liked this one. I think one of the funniest sights on earth was to see this little fellow sit up with a can of condensed milk in one paw trying to get the other paw down into it to feed himself. I often thought that if I could get a good photograph of that scene, showing the expression on the bear's face, I could sell it for almost anything to that condensed milk company."

And so we talked and talked until 9, 10 and 11 o'clock came and the candles of our illumination needed trimming. The wizard lights over in the Court of Honor flared to their zenith, paled and died out one by one.

The great search light which floods the sea-fountain

ANGLERS' PAVILION, FISHERIES BUILDING.

with curled rainbows can cast up into the heavens a shaft of light visible at a distance of eighty miles. But I wonder if it can carry our eyes any further toward the heart of nature, or toward the secret of content than Billy Hofer's illumination, made of two candles and an open fire?

The U. S. Exhibit.

The collection of fresh water fishes shown by the U. S. Fish Commission in the East Annex of the Fisheries is the finest ever gotten together upon an occasion. An equally fine display of salt water fishes is promised for a later day. The fish in the U. S. aquaria are much troubled with fungus and are unsightly, but Dr. Bean explains that in a week this will almost entirely have disappeared. This collection of fishes has been made under many difficulties, but when all is done it will be the most typical and representative aggregation of American fishes ever known.

The personnel of the U. S. Commission as represented here is as follows: Dr. Tarleton H. Bean, representative of the U. S. Commission; Mr. W. De C. Ravenel, chief special agent in charge of fishculture. Mr. W. H. Abbott, of the Fisheries Division; Mr. C. H. Townsend, of the Scientific Inquiry Division; Prof. S. A. Forbes, director of aquaria; Dr. S. P. Bartlett (also secretary of the Illinois State Commission), field agent and receiver at Quincy, Ill. These certainly make up a fine body of intelligent and earnest scientific workers, and under their hands one of the most interesting features of the entire Fair has been perfected. The preparations and the work of installation are much more complete in the Government Building than in any other of the public buildings; indeed, nearly everything is in place and in order.

A model fish hatchery is shown in the Government Building, a very curious thing to many. There are 20 jars now running, showing 100,000 eggs of perch, pike-perch and trout in various stages of development. In one tank a number of trout fry are also shown.

Near by the hatchery are displayed some large tables of statistics of the U. S. Commission, to which I heartily commend the wise Illinois governor, John P. Altgeld. By these tables it appears that the Commission during the years 1872-1882 distributed of the young of food fishes, 341,696,977. During 1882-1892 the output was 2,391,389,410. This latter, or the former, or a much less number, is much bigger than the Illinois governor can think. Of whitefish alone over 1,000,000,000, or about one-third of the total, have been distributed. Of adult black bass there have been distributed 123,666. This latter represents only one year's work, and that the beginning one. The statistics do not run into 1893. Certainly these figures are of interest.

Not All Dry Facts.

A great many think that the work of the U. S. Commission is all dry, scientific or statistical, and that it has no interest for the average man, so that the U. S. exhibit can well be passed or hurried through. Never was mistake

more serious than this. To miss the U. S. exhibit is to miss one of the most entertaining features of the Fair, one that is not only instructive, but interesting and fascinating. Thus one may see depicted the life and customs of the Indians of the Northwest coast and Alaska, their weapons, their implements, their manner of taking fish and their methods of life. The seal fisheries, the rookeries, the beasts, birds and peoples of that unkind country are shown to the life, as well as the dress, the ornaments and the odd belongings of those savage but ingenious folk who dwell so close to the wild nature here so graphically shown in evidence. Hours could be spent in the Indian quarters alone, looking at the models of the Alaskan villages, the salmon weirs, the rude nets, the crude but effective harpoons, spears, gigs and arrows, so uncouth in some ways, and yet so finely and intricately ornamented in detail.

Private Exhibits in the U. S. Building.

Still again, it is not only matters historical, scientific or anthropological that the U. S. Fish Commission is confined. Some of the finest private exhibits of the Exposition are in this department, including the displays of many noted makers of fine tackle. Most of the cases are now completely furnished, especially so far as the rods are concerned. The Montague City Rod Co. shows in a row of fine cases a collection of 87 rods in all, ranging from low-priced tools to high-grade split-bamboo, and including many very workmanlike wood rods. The reels to be shown by the U. S. Commission will come from the Andrew B. Hendryx Co., of New York, but they are not yet in place.

A Jubilee Rod.

Mr. G. C. Hemenway, representing the well known house of Abbey & Imbrie, was the other afternoon looking with interest at the work of installing the Abbey & Imbrie display of fine rods, the queen bee of which is a magnificent production known as the "Jubilee rod." This rod is one of five made by Abbey & Imbrie for display in the Queen's jubilee exposition in London. The other four were sold in England at \$2,000 each, and brought the American house \$75,000 of trade besides. This rod now in Chicago is the equal of the others in all respects. It is a perfectly-made split-bamboo, faultless and ornamental to an unsurpassable degree. Even the ferrule plugs are exquisitely engraved. The precious metals only are used in the trimmings and fittings, the grip being of pure gold, richly and deeply chased. The butt of the rod contains a cut topaz the size of a pigeon egg and worth alone \$1,200. This is *de luxe, fin-de-siècle, fin-du-monde*, anything you like. Add to this the full display of the Abbey & Imbrie flies and you may picture a very striking case.

An Amateur Display.

One of the prettiest things about the whole fish exhibit is a handsome case, only about 3ft. square, which Dr. Bean has received in charge for Mr. D. W. C. Farrington, of Lowell, Mass., a gentleman 70 years of age, who has kept young by outdoor pleasure trips. Mr. Farrington shows a tidy card of trout flies, all of his own tying, which are as beautiful and faultless as any made by a professional. Below the flies is the mount of a fine brook trout, one of the most artistic things of the kind I ever saw, and yet showing an effect accomplished by the simplest methods. The skin is not stuffed at all, but is simply a half skin stretched in profile over an oblong block of polished beech wood, whose curve is just that shown by the full figure of the trout. The skin is attached by fish glue, and is laid on without a wrinkle. Every spot and line of color and tracery are there. The glass eye is the only artificiality, and the whole is artistic and very fetching. Mr. Farrington must have an artist's eye and hand.

Mrs. Marbury's Flies.

But if we are to speak of art, and tastefulness and beauty, we must after all pass further on and yield the palm eventually to a woman. There is no display in the Fine Arts Building more exquisite, more delicate, or more beautiful than the collection of the Chas. F. Orvis flies, as arranged by Mary Orvis Marbury. There are 78 plates of actual flies, of all sizes and colors, from gray-nidge to Jock-Scott salmon, tied perfectly—and nothing on earth is more beautiful than an artificial fly. The plates, or screens, are hinged at the back and swing freely for easy inspection. Each screen is something like 3ft. square and each screen carries a photograph, or several photographs, of illustrative motive, many of them typical or directly illustrative of the country, or the methods of fishing in that country, where the fly would naturally find its use. There are photographs showing fly-fishing and fly-fishing waters for trout, salmon and bass, from Pennsylvania and Montana, from Maine and Michigan, from Colorado and California, from the Adirondacks, from Canada, from Eastern States and Rocky Mountain country, North, South and everywhere. Indeed, the photographs themselves would be artistically interesting in the highest degree even without the brilliant offset of the feathery poems by their side. The artist faculty here, however, is too subtle to be tied down to narrow lines. It would be natural for another to put by a given fly only a picture showing that fly in use. Not so with Mrs. Marbury. You may find only a general and artistically germane handling of such topics, and as you turn the leaves of this fairy book you may fall upon the photographic copy of some noted painting showing a phase of angling sport, or you may see, perhaps, a group of the factory girls who tie the flies, or you may see the picture of a wood, a country road, a bridge over a brook; to find next, in contrast of motive, the stupendous scenery, the heavy rush of waters of the colossal West. Let those grumble who wish, there is one thing at the Fair which no man is fit to criticise and which no woman will criticise, and that is the collection of artificial flies arranged by Mary Orvis Marbury.

Near the above is a display of the 32 colored plates familiar to the readers of "Favorite Flies and Their Histories." On the whole, Mr. Orvis may feel delighted with the showing his sterling products have received.

The Gun Exhibits Later.

Owing to the unfinished condition of installation affair in the great Manufactures Building, it will be best to defer mention of the gun exhibits until later. When such firms as the Winchesters, the Smith & Wessons, etc., have not their goods yet in order, it is best to wait a bit.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Sea and River Fishing.

ON THE NORTH SHORE.—V.

The Return Trip.—V.

[Continued from page 430.]

EARLY the next morning we broke camp with the intention of going to Mamais, but not liking the appearance of the weather shortly after starting, put into Montreal River, where we had breakfast. We found here on the gravelly banks at the mouth some large dip-nets, about 1 ft. in diameter, with which the Indians take Mackinac salmon in the fall season. Peter gave us a practical explanation of netting the fish. The net, which is fastened to a pole about 20 ft. long, is thrown in the stream, and then dragged down the current so the fish can be taken head first. As soon as a struggle in the net is felt, it is an immediate race up the bank dragging along the kicking victim. All the Indians and half-breeds at Aguawa station secure their winter's fish here. To give you an idea of their plentitude, will state that Mr. Schilling last fall caught seven barrels of them in two or three days. Here they are cleaned and salted, and then taken home in their "Mackinacs."

This river is exceedingly picturesque in places and well worth ascending. It plunges through gorges, and comes sweeping along with a roar over rapids, and by chasms of wild, dreamy fascination; in fact it is a region of grandeur that will ever tempt the prophetic soul and yearning heart of man to deep meditation, and lead him to fervently exclaim:

"But let me often to these solitudes
Retire, and in Thy presence reassured
My feeble virtues."

Having breakfasted, we ventured again upon the lake, and after going some five miles, the flying scuds and a rising breeze so filled the soul of the prognosticating Emery with frightful adversaries, that we sought the shore, much to our chagrin. "Me no like it," was the plea for a retreat, and "me no like it" either, as we were getting very tired of this retreating at every indication. In about an hour, the wind dying out, we proceeded once more, but to the music of the dipping oars, as the little breeze then prevailing was a head one. The men worked with pipes in their mouths and were in no hurry for the advance. At Point aux Mines we went in and had dinner. After that, Ned wishing to try for a trout or two, we coaxed along the rocks to give him a chance for the red-coat. He whipped the waters for quite a while, and then concluding there were none that desired an interview, reeled up and discontinued his thrashing. Away we go again, over the heave of the lake, to the low murmur of the beating waves and the drifting of dingy clouds overhead.

Just before reaching Mamais, we met the Hon. Andrew Jackson and Judge J. H. Steere, of Sault Ste. Marie, in a Mackinac with their boatman, off for a ten days' trout-trip, headed direct for the Twin Sisters, our last camping place, and as they had a favorable wind, which was now blowing quite fresh, expected to reach it by nine o'clock that evening. One of their men was a brother to our Peter, and is said to be one of the best guides that ever went out from the "Soo." We had quite a friendly chat of some fifteen minutes and then the boats parted and soon had miles between them.

The boys were now using the sail, and the breeze, which was freshening every minute, sent our boat plowing through creamy fields of snow. The shadow of night was fast falling, and a sky forming of portentous clouds, promising anything but pleasant weather. We were sure of port, for it would be but a few minutes before reaching and swinging around the rocky point just ahead that led to the channel between the island and shore.

"Down with the sail," sang out Peter, a moment after, and down it came, and then into the harbor we swept, glad that the day's vexatious trip was over. Our astronomer and his associate were both happy, as they expected to have a cabin, a deserted one, to sleep in that night. We also concluded to inhabit part of it, taking the upper story and leaving the boys to stand guard below, where their culinary preparations would not interfere with us.

We had landed at a small pier which had been built there years ago when the place was used as a fishing station. It being quite convenient enabled the men to soon have the boat unloaded and the goods under cover in a small inclosure adjoining. In making an examination of the sleeping room we noticed that it was well ventilated, one of the window frames being without sash, and fortunately for us, found a couple of beds of balsam at least a foot thick in one corner. It had dried some, but the fragrance from it was still fresh, filling the room with an aroma that was pleasant to inhale. The mattresses being placed on these downy boughs, it made a bed fit for prince or peasant.

Taking our supper in the cabin was really an unmistakable advance to civilization, yet I preferred the fresh air with the blue canopy—for he who stands often with nothing between him and the open heavens will gain from them both health and morals. "Air is the king of physicians," and his great magician, the sun, is ever changing, with a wand of gold, the fireless eye and sorrow cheeks to the brilliant glow of health. A caged bird droops and dies for want of flight, of air, of change, and so with the slave of mammon. Better by far the sports of fields, woods and streams, where the huntsman winds his merry horn, and the angler circles his deceptive flies.

"The fall of waters and the song of birds,
And hills that echo to the distant herds,
Are luxuries exceeding all the glare
The world can boast, and her chief favorite share."

We were just dropping into the land of forgetfulness that night when we heard the tramp, tramp, tramp of many feet, and in monotone the caw, caw, caw of divers crows that had taken possession of the roof.

"I think," said Ned, after listening awhile, "they are holding a caw-cus."

"Ned, that's horrible, they are simply indulging in the National game."

Flop, flop, flop, and one sailed away.

"He is out on a fly," said Ned, with a chuckle.

Flop, flop, flop, goes a second.

"Another one umpired out," again cries the effervescent Ned.

A caw, caw, caw, then a flop, flop, flop, and they all went out on the fly, and I went into dreamland and saw an elephant nine batting with their trunks and sending great cannon balls sky high.

A daffodil sky and a west wind that shook out [the fragrance of the balsamic forest were the morning salutations. The breeze, soon after breakfast, was blowing such great gusts that it was simply impossible to venture further on the trip; but as we had had fine sport were perfectly willing for a day or two's rest therefrom, and so possessed our souls with gentle patience.

The boys, aspiring to be mighty nimrods, took the gun, as soon as they had cleaned the breakfast dishes, and scoured hills and dales in eager search for game, but after an absence of four or five hours returned in disgrace without fur or feather for a trophy. Ned in the meantime had crossed over to the island with his rod, but owing to the heavy "northwester," to which point the wind had now turned, could not cast his flies to advantage against the head wind. He was soon satisfied with his futile efforts, and then went to gathering some gooseberries, with which the island abounded. Being left alone in camp, I strolled along a narrow road that led to Point aux Mines, and feasted on what nature presented in this lonely solitude. There were few birds and those not rare. No gorgeous oriole in ruffling gold, the princeling of them all, greeted me, nor did a blackcap present himself to proudly display his yellow waistcoat and velvet hood. A white-throated sparrow, however, crossed my path, as also a little warbler, the violet of the air, and then a partridge, in his dull grassy colors, flew upon the limb of a maple and looked at me with his stupid eyes as unconcerned as if I were of the forest. A butterfly next came in delightful review, and on his delicate hues I feasted as if making it an artistic study, when suddenly a cawing crow in plumage as dark as Erebus—a reminder of the night's prowling of some of his thievish crew—rose on high, sounding his discordant notes as he flew by, and this was all I saw of the children of the air.

As I idled along the path I could hear the roar of the great lake, and wishing to see the angry sea once more in the bright sunlight, I picked my way through the forest, and was soon upon a gigantic rock looking at the towering surges as they showed their white teeth. Here I saw great bulwarks of granite that had been bolted with traps of porphyry and quartz, crusted with mica schist, and riveted with spikes of iron, lead and tin, that had been dethroned by the battling storms and lying prone upon the ragged shore as evidence of the immense strength of the wave's batter, and the crushing power of the ice. Avalanches of white whirling foam came with a rush and roar over the savage crags that were frightfully appalling, and told impressively why widows and orphans inhabit the cities of the sea. Satisfied with the passion-worn waters, and the wild dismal stretch of coast with its frowning cliffs, its rents, its fissures and its debris of rock, I again sought camp, feeling that my hour in the green woods and by the tumultuous lake had been to me a revelation that

"All are but parts of one stupendous whole
Whose body nature is, and God the soul."

From the way the heavy surges pounded all day we concluded we were in for a three days' blow, as a northwester generally lasts that long. This was Emery's prophecy, but he was doomed to disappointment and a running fire from us, for the next morning the heavens were in cream-colored masses, while the glowing sun turned the waters into a rich and dazzling sapphire that gave promise of a glorious day.

The word was given, after we had partaken of the matutinal meal, to break camp and sail for Grindstone Point, where we expected a day or two's royal sport with the piscoes of the rouge and rosy hues. We had had two days' absence from the pursuit of the redfins, and were now becoming quite anxious to hear once more the rhythm of the reel and to feast our eyes upon the rich red hues that rivalled the blush of the peach and the pink of the shell.

Ned was so desirous of feeling the thrill of delight in handling one of these claret-painted combatants, that we ferried him to the island for that purpose, and there left him to be taken up after we had loaded the boat and were on our winding way over the tossing seas.

The boys were so eager to be afloat that morning that I took an active part in getting things aboard, and it seemed but a few minutes before we were off and had picked up Ned, who declared there was neither a hungry, gaping or over-curious *fornalis* along the island shore. He was content to wait now that he had wet his flies and seen their surface-dance, but he would go for gore, with a vengeance, when he had reached one of their populous districts at or near the point with the gritty grindstone women.

Emery, the prophetic, ever on the lookout for cloudy signals, espying a few trifling scuds peeping o'er the far-away belt of the horizon in the west, announced, with serious aspect, "a blow soon."

"For heaven's sake," says Ned, "let it blow, and blow the old patched rag to tatters, for I am heartily tired of this sailing in zephyr breezes, and sneaking ashore every time a little puff of wind arises."

This silenced the serious prophet, who, fully realizing that we were for an onward movement without regard to his direful warnings, leaned over the rudder handle and riveted his eyes upon those tiny clouds as if they were to him a matter of life and death.

There was a good sailing breeze now, that made the foam bells fall and tinkle with a glad merriment along the sides of the speeding craft. Overhead the sky was luminous, while upon land and water the sunlight fell in hazy warmth. The ever present scavenger—the white-winged gull—as if pleased with the dazzle, sailed on high, while the coast, under the lustre of the advancing sun, gave us picture after picture of grand beauty in silvery tints and quiet shadows, which mingled in pleasing harmony with the purple hills, the peaceful vales, the frowning cliffs, the jutting rocks, the receding bays, the lonely islets, and all that make, under drowsy clouds and the throbbing sound of wavelets, the impressive in nature. Naturally we turned to converse, after some upon scene of shoreland had delighted the eye and pleased the fancy, and nearly every subject handled until we had worn it threadbare. One day in camp Ned asked me if I had observed the immense latitude and longitude that Peter gave to his narrations. "I had," I answered, and then we agreed to give the fairy romancer a pill or two of his own making, as he had just stated, when we were on the topic of humidity, that he had seen it shower on the lake

every day for six months. Thinking it a good time to endeavor to balance the account, Ned said:

"That was a long-continued dropping of the moist beads, but when I was in Washington Territory, some years ago, it was visited by a rainfall that washed twenty-five miles of the Catskill Mountains into the Pacific."

"What, rocks and all?" inquired the surprised Peter.

"Yes, and rocks bigger than a house were carried by the torrents fifty miles or more to the sea."

"Gee Whillikins!"

"Not only that, but it rains so long and hard in that country that the people naturally become web-footed, and are thus enabled to cross a stream like a duck."

"What?"

"Not only that, but the climate was so wet that all their cats and dogs disappeared in the moisture. Then they tried Newfoundland dogs and water spaniels for awhile, but it was entirely too damp for them and so they went. Then a brilliant idea came to them, which was the training of fishes to follow them around."

"Fishes!"

"Why, certainly. I had a fine Columbia River salmon, which accompanied me downtown every day and waited around the office door till I came out and then followed me back home. One of my neighbors was attended by a beautiful trout, which weighed about 6 lbs., and insisted upon going everywhere he went, swimming, sporting about him all the while."

"That takes the bakery, oven and dough," concluded Peter, and then he looked as if he had been ground down to a fine point, and stood before us as a close relative of Ananias.

We heard no more romancing from that half-breed as we were aware of during the remainder of the trip. The chestnut we thought a good one and apropos.

ALEX. STARBUCK.

[TO BE CONTINUED.]

THE TARPON IN THE GULF.

OSPREY, Fla., May 15.—If there lives a man, who has been through the entire angler's list from the rifle chub to the Silver King, and who still speaks in a depreciatory tone of the pluck of the tarpon, I wish to hear from him. The creek chub, the Nipigon brook trout, the black bass of the cold Canada lakes, the fierce salmon of the icy rivers of Norway are all good enough in their way, but compared with the tarpon it is in a small way.

Last week I coquetted with a *Megalops* for fourteen minutes, and in this short space of time he cleared the water for an airing no less than eleven times—ran under the boat, twice and stood on his head with tail out of water over an oyster reef once in a vain endeavor to rub the snood away. The violent efforts of this acrobat, however, quite exhausted him, and inside of a quarter of an hour he was guffed and amusing himself by trying to hammer out the bottom of my boat with his powerful tail. Following the rules of prudence my companion and I retired to the extreme ends of our small flat bottom craft, resigning amiships to his majesty. This was a small fish measuring 5 ft. 7 in., but he was a very frisky little fellow.

Little Sarasota Bay, better known for its fine oysters than for its fishing, is connected with the Gulf of Mexico by a narrow and deep channel which looks like a river and runs like a mill race. Through this narrow inlet, water pours in and out at each turn of the tide with a speed far from comfortable when it is going the wrong way. This passage is the only relief for a series of bays almost ten miles in length. From my winter shanty to the Gulf by way of the Pass is about three and a half miles, while in a direct course across the bay and over the key, to the beach is not half a mile. (While I am on this subject of land and water it may be well to assure the gentle reader that I have no real estate or lots for sale, nor do I know of any of the neighbors who either wish to sell or desire to see strangers. There is no hotel within twelve miles and boarders are not wanted and are detested. There is no school, no church, no society, no railroad, no beef, no butter, no comfort, but when it comes to climate, tarpon, other gulf fish, oysters, then I can have a word with you.)

The tarpon cares nothing for railroads or churches, so he is satisfied to headquarter around here and may be taken with proper bait and outfit off and on from October to June. Through the summer he is a drug in the market. Sometimes in fall and spring I have hooked him within a few yards of my front door (no lots for sale and no near neighbors wanted).

The impression prevails that the tarpon is a bay fish; that he noses around in the mud and among the weeds, picking up a nice piece of fresh mullet on general principles just as a man might pick up a half dollar lying on the pavement. The notion is correct as far as it goes. Your swell New York society man also grovels; he slips around on Wall street, he frequents dark, ill-flavored offices. But down town we do not see him at his best; he must beseech over champagne among the Four Hundred before we can size him up. The king may degrade himself sometimes, he may poke around among weeds and allow his bur-nished sides to come in contact with the foul mud of the inner bays; he may frequent the home of the wearisome catfish. The average angler finds him inside and waits, seated in his boat anchored near the flats and oyster bars, for the coil to run out.

Yesterday, however, I saw the king amid royal surroundings. At the mouth of the Pass I viewed a great school of these magnificent fish playing and feeding in the breakers. They dashed around and came to the surface exposing their backs, fins and tails. At times as many as five or six would be on the surface at the same moment. By wading in among the rocks I managed to get within casting distance, but could not get them to take my bait, which was a large chunk of rovalia. I next tried to get to them with the boat, but the Gulf was so rough that we almost swamped. I have an idea that the silver king may be taken in the Gulf at the mouth of the Pass without waiting for a coil to run out, so we may have a sensation ahead.

The tarpon which I saw yesterday were occupied in the midst of a lot of small fry, acres, in fact, of small fish about two inches long and no thicker than a small quill toothpick. Thousands of the fry were being devoured by Spanish mackerel, bony fish, groupers, man-grove snappers, rovalia, etc. Whether the tarpon were devouring the small fry or picking up larger fish I am unable to report, as the millions of small fry kept near the surface, giving the water an inky appearance.

NONE SUCH,

THE "KINGFISHERS" IN CANADA.—II.

Big Basswood Lake.

WE were out with the sun in the morning, a trifle stiff and sore from a too close contact with Bro. Dyer's floors, but otherwise in good trim and humor for a big breakfast—for we were hungry as wolves—and to begin the work of making camp.

Dyer came out to inspect the outfit and offer a few suggestions about locating the tents, which gave us the opportunity of getting the first good sight of him, and he was certainly the oddest looking little "ole cuss"—with the wind meandering through his whiskers—that we had seen for many a day.

He was rigged out in a pair of well patched doe skin breeches that scorned a near acquaintance with his shoe tops, so slick and glazed with grease and other foreign substances that a fly would have slipped and broken its neck had it attempted to locate on them. These held up by a strap buckled around his waist, an old unglazed woolen shirt, and his head adorned with a low, flat-crowned hat of the same ancient aspect, around under the band of which were stuck at various angles a lot of feathers from the tail of a grouse. But it afterward turned out that Bro. Dyer was like a singed cat—a good deal better than he looked—and we got to respect him for his independence and a vein of good practical sense.

The cook made a big pot of coffee, fried some ham and eggs, making use of Dyer's big stove in the summer kitchen at the south end of the house, and we ranged ourselves around a big table in the dining-room, old Sam remarking from the head of the table that "he wished he had a quartz mill to break up them round, flat rocks that Dobie had played on 'Jeems Mackerel' fur ship biscuits."

Breakfast over, we lost no time in getting to work at making camp, even though we had to sprain the Sabbath in doing it. Four tents were put up right at the edge of woods in the open space east of the house, a table built a few yards from them, over which the big fly was stretched not more than 50ft. from the kitchen door, and we began to feel at home. However, we were not "on our own dung-hill," and didn't feel that it was our turn to crow by hoisting "Old Glory," for there, not 30ft. over our blasted American heads, a few yards from the house, flew the Cross of St. George from a new flag-pole, which Dyer must have erected for our especial benefit.

However, after a day or two he took it down and very courteously asked us to hoist the Stars and Stripes in its stead, and the old flag was fished out and run up to the block; but this time, out of deference to our neighbor, the usual salute and ceremonies were dispensed with.

Dyer wished us to let it remain up, but after a couple of days I took it down and put it away, lest some of our neighbors, not so imbued with international courtesy as Brother Dyer, might happen around and "kick" and make trouble for us with the nearest magistrate, not half a mile away—Mr. Harris, who was also the postmaster of Day Mills and the big tadpole of the puddle.

Dyer was a typical and thorough John Bull, and when the weather was not stormy he had some one of his half dozen or more different English flags flying at the top of the staff to remind him of his allegiance to good Queen Vic. He was an old bachelor, living there alone, with no companionship but some well chosen books, a dozen or more firearms, from an ancient pistol, a pair of old large caliber Colts, and an old muzzle-loading shotgun, on up to a modern breechloader, a Hotchkiss and a Winchester rifle, the guns standing in a rack against the south wall of the dining room, and all loaded, as Harry averred. Besides these, three or four score of trolling spoons and baits of all sizes and shapes, and odd conceits, hung against the stairway wall, all made by his own hand when the snow was deep in the winter and time hung heavily on his hands. His other fishing tackle was, however, of the most primitive kind; a pole out in the "bresh" and seasoned, with a line tied to one end—and either end would have answered about as well as the other—without reel or other appliance, constituting his whole stock in trade. (Before breaking camp we rigged him out with a jointed rod, reel, an oiled silk line and a lot of hooks, and made him happy.) At the west side of the room was a small work bench with an iron vise attached, and back of it, along the window, a tool rack filled with watchmaker's and a variety of other kinds of tools. Verily, this room was a curiosity shop, and well worth an hour's inspection.

He was a watchmaker by trade, but had given it up a few years before on account of failing eyesight, and having taken a fancy to this charming little spot on Big Basswood Lake, he bought a patch of land and built a house on it with the notion of some day making a summer resort of it, but the C. P. R. R., when finished, had given the expectant Day Mills people the go-by by three and a half miles and Dyer was left high and dry on the plateau overlooking Big Basswood, waiting for something to turn up as it were.

But the railroad is not too far away, and if some one with a little capital and United States push would go in there and give it a lift the place might be made a most desirable and pleasant summer spot for quiet-loving people and the brethren of the rod who are fond of very fine fishing.

With these few digressions we will proceed with the camp making. Brother Dyer was disposed to be a little pompous at first and had some notions about making a camp and other matters, but we had been at it too long to pay much attention to suggestions, and things went serenely our way, as they usually do when in the woods, and by the middle of the afternoon the camp was about finished to our placement, and Dyer graciously admitted that we "knew how to do it."

He said our cook could, as a matter of convenience, use his kitchen and big stove, which was done for several days, but we made up our minds that the tariff was too high and kicked for a new deal. He wanted \$12 a week, or \$1.50 each, for the use of that stove and "other conveniences," but it smacked so much of a case of "bleeding the tenderfeet" that we concluded to move the camp rather than be played for a lot of suckers. However, we found him disposed to be reasonable and fair after a talk, and he left the matter entirely to us, with the result that a bargain was made satisfactory to all concerned and the cook used the stove till we broke up. We knew, however, that the arrangement didn't "set well on Kelpie's crop," as he remarked, "It was the first time he had ever camped in a man's door-yard who kept a stove for revenue only."

But after Dyer got us sized up and we had become

accustomed to his peculiarities we found him more companionable and ready to accommodate as the days went by, and the camp turned out to be a very pleasant one. I don't write these things as a criticism on brother Dyer's methods, I only write them as a hint that a man may be mistaken in his estimate of a party and a trifle "off" in his ideas of the value of accommodations he may have to sell.

Not till the camp was in running order did we take time to view our surroundings and have a look at the lake, although we had stolen a glimpse or two at it from our limited point of observation, which was in the bight of a lovely little bay that allowed only a view across, and up lake a distance of three or four miles to an island, where it took a trend to the left.

A hundred and fifty yards or more out from the house was a low bare point of rock looking up lake from the entrance of the little bay, and just back of this, heavy woods began and reached clear around to the camp and beyond, hiding from sight a matter of three miles of the lower end of the lake. Dyer's house, and the camp were 150ft. or thereabouts back from the water, 30ft., at a guess, above the level of the bay and near the break of a gently sloping hill, down which led a path to a strip of sandy beach a few rods long that made a good landing place for the boats, and it was the only sandy spot in more than three miles of shore line on that side of the lake; in fact there are only seven or eight patches of sandy beach to be found around the entire circuit of the lake, which Dyer estimates at twelve miles long by two and a half miles wide at the widest point; all the rest rocks, rocks, rock and dirty brown weather-beaten and gray-tinted piles and walls of granite rising straight out of the water nearly all along the south shore line to heights of from 5 to 80ft. and more; and along the west half of the north shore the formation is much similar. Nearly all around this line of broken shore, indented by several deep bays on the south and at the lower end is a growth of lovely woods; cedar, spruce, pine, hemlock, aspens, birch and small bushes, but not a solitary basswood that we could discover; hence, why the name, Big Basswood?

It is a grand lake, a most beautiful lake, and one might float around on its waters a whole summer and find something new and fresh every day to please the eye. The water is so clear to the bottom at a depth of 20ft. or more, and it must be fed by springs from the bottom, as there are only two feeders, a couple of puny streams flowing in at the head—one, Beaver Creek, the other the outlet of Loon Lake—while its own outlet is, as aforementioned, a very rapid, wild stream of considerable volume. This stream has, we were told, a fall of about 98ft. in three-quarters of a mile or less, to where it flows into Mud Lake. The greater part of this fall is within a distance of a couple of hundred yards above the mill where the bridge spans the stream at the foot of the hill. It comes tumbling and brawling down the hill over a bed of rock, ragged and rough, overhanging with trees and bushes on the east side of the wild-looking cleft in the hill through which it finds its way, dodging and scurrying around and over great boulders and shelving rock with a noisy melody, and dropping here and there for temporary rest into quiet little pools, "where the trout love to hide."

From the bridge up to the very head where it drops out of the lake over a little dam that has raised the water in Big Basswood 4 or 5ft. above its natural level, we took at different times about fifty trout of "small caliber," and it was hard work to get even so many, for it had been fished to death by the natives, as evidenced by the well-worn path through the woods and "bresh" along the east bank. A few rods below the bridge was another mill—this one a saw mill—and from there on down to where it flowed into Mud Lake not a sign of trout or other fish was to be found, although the "village blacksmith" told us that before the mill was built and the stream polluted and ruined with sawdust it was literally alive with them of good size, and great strings were taken out by the neighbors round about without a thought of the supply ever running out, as the stream filled up with them from the lake below about as fast as they were yanked out.

But the sawdust got its work in, and now the water below the mill is utterly barren.

So it goes, and will keep on going; what with the mills, the count-fisher and the trout-hog the trout have a hard row to hoe, and the wonder is there are so many of them left.

When the camp was finished we began to think about bait, but we found it rather a perplexing question at first. Dyer said there were no minnows to be had in the lake, which was true, for in all our cruising and fishing around it we never caught or saw any minnows, not even a young perch, bluegill or goggle-eye. There are no fish in the lake, so our neighbors told us, except small-mouthed bass, brook trout and lake trout—same as the Mackinaw—some of the latter having been taken as high as 25lbs. in weight. However, this broad assertion was disproved one day when we found washed up dead on the beach at the camp a curious looking fish about 6in. long, shaped like an eel, dorsal, tail fin and all, but with belly fins and very fine, hard scales, and a 4in. dead minnow that Charley pronounced a "striped chub."

But we got on the trail of some speckled frogs on the grassy common back of the camp and soon had enough "hived" for a starter in the morning, as the day was too far gone to put the canvas boats together and start out for a study of the water that evening.

This common proved to be a regular bait mine for us; we hived probably 200 frogs on it during our stay, and while the morning dew was on the raspberry bushes around the border we could pick off a pint or more of grasshoppers that "hadn't got their jints limbered up fur jumpin'" as old Sam said, and these were found most excellent bait for the bass.

Next morning, the 18th, after breakfast, we put the two canvas boats together, the "Ironclad" and the "Ben Harrison," the latter a steel-ribbed boat made by C. W. King, of Kalamazoo, Mich., and a very excellent and seaworthy boat, and got ready to go a-fishin'. While we were "jointing up," brother Dyer came out from the house with his "deep-set granulated voice" and a rakish tilt to his feather-mounted hat and nearly paralyzed us with, "Gentlemen, I'd like to inspect your tackle, to see if it is strong enough to handle some of the big fish in this lake," and with a self-satisfied air he proceeded to "heft" the light rods, examined with a critical eye the size of our lines, and at last said, with an incredulous smile and a shake of the head, "Too light, gentlemen, too light; they'll smash 'em into bits." But they didn't, as he found out after we had fished

a few days, and long before we broke camp he gracefully admitted that he had learned a good many new wrinkles about tackle and bass fishing.

He had written that he could furnish us a couple of boats, but when we came to look at them we found them unfit for use. One was a long, narrow, cranky, clinker built affair, made by some one that evidently knew all about making everything except a boat. It was designed for a sailboat, Dyer said, but it wouldn't stand up without a half ton of rocks in it for ballast, and this brought it down till the gunwales were within 3 or 4in. of the water. Without the ballast it would loop over to one side or the other till the gunwale touched the water, and lie there—and we let it lie there. The other had been designed no doubt for a skiff, but the builder must have been a coffin maker and got the two trades mixed up somewhat in his mind, for it looked and handled about as much like a coffin as it did a boat. However, some of the boys used it a time or two as a last resort, but it was a back breaker to pull and none of them hankered after a second trial.

The cook made us happy by saying his folks, who lived up near the extreme head of the lake, had two boats, and if any of us would make a trip up there we were welcome to the use of one or both of them as long as we were in camp. A day or two after Charley and I went up in the ironclad and brought back one of them, a little light wooden boat, 10ft. 2in. in length, as I remember it, with a 4in. keel from stem to stern. I think it was the best boat in rough water that I have ever been in, and the boat question was at rest, for there was no day that we all fished from the boats, and these three were ample for our needs.

Our first day's fishing did not amount to much, as we spent most of the time prospecting the water and admiring the wild scenery along the shore. We took eighteen bass altogether, all small-mouths, that ran from 2 to 2½lbs., and in all our experience we have never found harder fighters.

Old Sam and Harry walked over to the outlet, about 60 or 70 rods from the camp, and fished along down the stream to the falls for trout, but it was hard work, and their combined score was only eight trout, hardly enough to change the smell in the fryin' pans, and some of them were little above the limit of 5in.

We fished the stream several times afterwards, but never got more than five or six out of it at a time. It had been about fished out, and what were left had become too smart and shy to be fooled.

After two or three days we got down to bass fishing in earnest, and we caught them nearly everywhere. All along the south shore, up lake as far as an island about three miles above camp, at every rocky point, around another small island at the entrance to a deep, narrow bay—there were three deep bays between camp and the big island in the middle of the lake—almost anywhere and everywhere there were bass. Around the big island was great water for them, and we rarely fished it, notably along the south shore and upper end, without getting fine sport. They would bite at almost anything offered. We caught them with whole frogs; with the leg of a frog; with a frog's head; and one afternoon I took seven with the skin peeled from a frog's hind leg, which, trailed after the boat, had a whipping, fluttering motion like a flag in a breeze. They had a mighty "sweet tooth" too for grasshoppers, whether there were a half dozen or more on the hook or only one.

Fishing from almost any point of rocks along up shore we could see the fish take the bait in the clear water, and after he was hooked, from two to half a dozen and sometimes more would be seen chasing around after the bewildered victim to "see what was agitatin' of him," as Old Sam said.

A rubber helgramite was "pie" for them, and we took quite a number with the fly. The idea seems to prevail among anglers that a bass will not take a fly on the surface of the water, and the Colonel had said he would give \$5 to see a bass come up and "bark at a fly" like a trout. One afternoon he took three this way; the bass breaking almost on the instant that the fly struck the water. He was highly elated over it, and afterward, his fly-rod had more work to do than the bait-rod.

He and young Owen took many an hour's comfort on the point of rock across the little bay in front of the house. This was easily reached from the boat landing by a well worn path around the shore through the woods and brush, and there anchored on their camp stools they would sit and smoke, and fish off the ledge in 20 or 30ft. of water, and many a bass come to grief and was scooped up with the landing net and dropped in a puddle of water in a depression in the solid rock a few feet back of them. This rock was a favorite loafing place, and was rarely unoccupied during the day by some of us, especially when the lake was rough.

KINGFISHER.

"Forest and Stream" Fishing Postals.

DINGMAN'S FERRY, Pa., May 20.—Our guests this week are having splendid success in number and size. Streams are in most favorable condition, and prospects for the coming week are the very best.

LINDSTROM, Chicago County, Minn., May 20.—Black bass are now being caught in large numbers in Chicago Lake. The females have not begun yet to shed their spawn and will not apparently for some days yet. This is a backward season, and that may account for a late spawning, but it is very plain that the season ought not to open until late in June at the earliest. C. J.

SHOHOLA FALLS, Pa., May 20.—Mr. J. D. Walton, Eighth avenue and Fifty-first street, New York, caught 67 trout in one day weighing 15lbs. Mr. M. Lamber, Milford, Pa., caught 50 trout weighing 18lbs. The prospect for next week is good. G. W. H.

CHARLESTOWN, N. H., May 19.—Another unsuccessful two-mile "tramp for trout" on Tuesday, 16th inst. Not a bite, not even a nibble, in one of my old favorite brooks. I will indorse "C. D. S." fully. He beat me two years ago on my own ranch, though, as a visitor, I gave him the best water. Shall try again when the water gets warmer, but fear "brook fishing" is done for for some years to come in this part of the State. VON W.

CUMMINGTON, Mass., May 16.—The spring has been so cool that the best trout fishing in this section will be several weeks later than usual, very little having been done as yet. E. S. H.

THE MAINE ICE IS OUT.

THE ice is out of the Maine lakes at last, and the trout season of 1893 is fully opened. A telegram to the Boston Herald, on Friday evening last, from Mr. O. A. Dennen, of the Kineo Hotel, announced that the ice had left Moosehead Lake. This clearing of the ice was nineteen days later than last year. The same day a telegram announced that Umbagog, the lower lake of the Rangeleys, had cleared of ice. This news was enough to put the sportsmen on the *qui vive*, and some of them took the trains Saturday morning for the Rangeleys and for Moosehead. Among these were the Stevenses, mentioned in the FOREST AND STREAM last week, as always among the first to be off. Mr. C. P. Stevens has been up Richardson Lake on the first steamer for many seasons, and doubtless succeeded in doing so this year.

The telegraph announced on Saturday evening that Richardson Lake was clear of ice, and the other lakes in the chain have since cleared. J. B. Marble telegraphed on Sunday that Rangeley Lake cleared that morning. Mr. J. A. French, of Andover, has the Upper Dam camps again this season, and his son Tom is again running their steamers. Richardson Lake was fifteen days later in clearing than last year, it having been first clear of ice on the 5th in 1892. But the late clearing of the lakes in Maine makes promises of good fishing. Sportsmen say that "the trout will be hungry, having been shut up under the ice so much longer than usual." Again, the water is remarkably high in all the Maine trout and salmon lakes, the result of the late heavy rains and the late melting snows and ice. By many this is looked upon in a favorable light, so far as fishing is concerned. It will be remembered that the water was remarkably low in these same lakes and ponds last year.

One of the parties to be off early this week is headed by V. B. Nelson, of the Lynn police. At Mooselucmagentic lake he is to meet his fishing friends, who have been down to Grand Lake and Grand Lake Stream, for land-locked salmon. They were to meet Mr. Nelson, at Mooselucmagentic, according to announcement by telegraph, and then they are to take in a few of the trout. These other gentlemen are Mr. Mansfield, the well-known Lynn tanner; Mr. Beggs, of the firm of Beggs & Cobb, one of the argest tanning concerns in the country, and Mr. Joseph Hoyet, also of Lynn.

The lumber trade of Boston and New England, in fact, is to be represented by one or two fishing parties this season. Each man in one of these parties has an office in the party, from anglevorm-digger and bait-fixer up to camp-cleaner and general provider. The grand object of the party is to move the ice out of Kennebag Lake on May 30, according to the programme, but alas, the ice leaves before that date. The gentlemen's names are Mr. Barney, Mr. Goss, Mr. Blanchard, Mr. Rich, Mr. Howe, Mr. Kennedy, Mr. Palmer, Dr. Bell, Mr. Pooker and Mr. Norton.

Another party from the lumber trade will be headed by the gentlemen of the Guilford Lumber Co., of Guilford, Me. This party will go to Moosehead Lake about May 25 and will remain some ten days. Mr. A. S. Percy is the Boston man of the concern, and Mr. P. McDuff is the New York man, and both are to be in the fishing party.

Mr. Charles Z. Basset, of Appleton & Basset, with his party, as mentioned in the FOREST AND STREAM last week, will start for Haines Landing, Mooselucmagentic Lake, on Thursday of this week. Mr. E. D. Pecker, a well known Boston stock broker, has concluded to join the party.

Mrs. Bartleman, who has spent several summers at the Mountain View House, foot of Rangeley Lake, leaves this week for the same point. Her son John is already there, having gone early in April. Mrs. Bartleman is generally successful in the streams about the mountain View with the fly. But alas for the laws that protect the trout! One of the streams she most delights to fish has been perpetually closed to all fishing. The wisdom of the last Maine Legislature believed that stream to be one of the trout nurseries of the lakes below and so it is perpetually closed.

Mr. Samuel Hano, of Newton, Mass., is already at the Rangeley Lakes, where he has gone early to put his new camps in order at Quimby Pond. His family will follow him later.

Sportsmen who have visited the Rangeley Lakes, and more especially The Birches and Bemis Camps, will be greatly pained to learn of the death of Florence Ella, wife of Capt. Fred C. Barker, on the 12th of May, aged 29 years. Mrs. Barker was the daughter of H. T. Kimball, of Rangeley, but better known as the proprietor of the Mountain View House. By her genial ways and loving, spotless life she had endeared herself to everybody in the lake region and had become the light of the camps of the noble-hearted Capt. Fred as well. Sportsmen have paused to shed tears of heart-felt sympathy for Capt. Barker. Hundreds have mentioned their sympathy and desire that FOREST AND STREAM pay this tribute to her and her bereaved husband.

The G. W. Wadsworth party, formerly the Eugene Clapp party, has dwindled to two or three since the death of Mr. Clapp. This year it will contain only Mr. G. W. Wadsworth, Mr. Haskins and possibly Mr. Paine; they will leave for Haine's Landing, Mooselucmagentic, about the 30th of May.

Mr. David H. Blanchard, so well known to the readers of FOREST AND STREAM for his efforts last year to have less of netting in the New Brunswick salmon rivers, will start for Lake Winnepesaukee on Wednesday with his daughter. He goes to the camps of Mr. Rolin Jones on that lake. Mr. Jones and family left on Saturday for the same place. Mr. Frank Haynes is to join the party. Mr. Blanchard is also preparing for a visit to the salmon river.

Mr. Claude H. Tarbox, with his brother-in-law, J. Orin Bailey, and a couple of friends, recently tried the river at Byfield for pickerel. They fished one day and returned with thirty-three fine pickerel, the finest string from that river for a long time.

Senator W. P. Frye, of Maine, was to leave his home in Lewiston for his camp on Mooselucmagentic lake as soon as the ice was out. Mrs. Frye goes with him. He is also to have for a guest Senator Chandler, of New Hampshire. Senator Frye walked into Dame, Stoddard & Kendall's the other day, and introduced the Senator from New Hampshire to Mr. Henry C. Litchfield, and the latter sold him an outfit. It seems that Senator Chandler is a beginner in the art of fly-fishing in Maine, but under the tutورش of Senator Frye he is likely to make rapid progress.

FOREST AND STREAM.

The Patridge party, that has visited the Rangeleys for a number of seasons, is somewhat broken up this year. Mr. Patridge is not going to the Rangeleys at all. He will visit the ponds in Winthrop later, for bass fishing. His physician forbids his taking the cold and chilly draughts connected with fishing early at the Rangeleys. His friend, Mr. Ackerman, of New York, with his son, will probably start for the Upper Dam about the 26th of May.

SPECIAL.

ANGLING NOTES.

A Little About Several Things.

The fishing in Lake George, N. Y., this spring has been remarkable, not only for the number of lake trout taken but for the unusual number of large fish that have appeared in the scores; and by large fish I mean lake trout weighing 14 to 16lbs. each. These are large fish for this lake, where for years 17lbs. was the maximum weight, a 12-pounder a prize, and one of 15lbs. a rarity.

A curious thing about the fishing has been that one piece of water about twenty-five acres in surface area has furnished the best of the fishing and most of the large trout. This place is between Green and Crown islands and extending around to and in front of the Sagamore Hotel dock on the first named island. This has not been noted heretofore as trout water, and some parts of it are shallow, so shallow that a trout of 15lbs. was caught where the water was only 10ft. deep. It was quite apparent why the trout were there, for the whitefish swarmed the water in immense schools, but why the whitefish should visit that particular part of the lake in hordes, that is, what special food took them there, has not yet been discovered. The bait used by the trout trollers was whitefish, and one fisherman who had nothing but chubs in his bait bucket, which the trout ignored, weighted a minnow gang and cast it into a school of whitefish and in this manner hooked and secured six whitefish of proper size for baiting his gang. This will give an idea of how the whitefish swarmed. Generally whitefish are seen all over the lake, each size schooling by itself, and when the water is still, they may be seen breaking the surface in all directions.

Two fishermen, Mr. E. P. Moore and Calhoun S. Enchis, of Glens Falls, while trolling for trout May 1, near Sabbath Day Point, hooked a black bass, small-mouth, of 18lbs., by far the largest black bass ever taken from the lake. Mr. Moore tells me that the bass was caught at the surface where the water was deep, at least he thinks so, but in this he is probably mistaken, as he was fishing from a steam launch and was not familiar with the sounding. The bass was a female, big with spawn, and was returned to the water alive.

In more than twenty years I have known of but two black bass being taken by trout trollers in May. As a rule the May fishing is done at the surface of very deep water, although I recall a year when we found trout on a shoal feeding on yellow perch, but that was years ago, before whitefish were planted and the round whitefish native to the lake were scarce. In 1883 a friend who had never trolled for trout went to the lake with me in May for the spring fishing. His boatman was a good oarsman, but knew little or nothing of the shoals, and every possible direction was given to him where to go and what to do. He came into the cottage at noon one day and announced that he had caught a black bass at the surface where I had told him the water was 100ft. deep. This I doubted, so much so that my friend rowed me to the place where his boat was when he felt the strike and asked if the water was 100ft. there, and I said it was about that, and asked him how much line he had out at the time, and he replied about 200ft., and I asked him to row 200ft. to the point where the bass took his bait. This he did, and when I told him to look over the side of the boat he was surprised to find he could see bottom. The date was May 11, the fish weighed 4lbs., and was a female full of spawn, and, as my journal reads, "might have spawned in six weeks." There was deep water around the shoal, and the fisherman, not knowing of the shoal, supposed he had taken a black bass where the water was 100ft. deep.

May 6 there was snow along the sides of the hills at North River and North Creek, the terminus of the Adirondack railway, and the streams were so high and thick that no brook trout had been taken up to that time.

A. N. CHENEY.

Canandaigua Angling Contest.

THE third annual fishing contest of the Canandaigua (N. Y.) Rod and Gun Club will take place on Thursday, June 15. Porter F. Leach, of West Bloomfield, and Scott R. Sutton, of Naples, will act as captains of opposing teams. The rules governing the contest are as follows:

Rule 1. Only members in good standing in the Canandaigua Rod and Gun Club will be permitted to enter the contest.

2. Fishing is restricted to Canandaigua Lake, its inlets and outlet.

3. All fish must be caught between the hours of 12 o'clock, midnight, and the hour of reporting. All fishermen must report with their fish at the Town House on or before 9 o'clock P. M. All fish presented later than 9 o'clock P. M. will be barred and shall not be counted.

3. Each and every fish must be caught by hook and line, or rod and line—the line, or rod and line, handled, and every fish landed, by the contestant only.

5. No set line, or other devices than those mentioned above, will be permissible.

6. A supper will be provided on the night of contest, for contestants only, which supper must be paid for by the contestants on the losing side.

7. No person will be allowed more than one prize.

8. The size and weight of the fish, and the amount each one scores, shall be as follows:

Trout, German.	Length. Inches.	Score. Points.	Pickereel.	Length. Inches.	Score. Points.
Trout, Lake.	34	40	Pickereel.	12	7
Black bass.	8	40	Bullhead.	6	5
Pike.	32	40	Rock bass.	6	4
Whitefish.	12	20	Sunfish.	6	4
Chub.	8	8	Suckers.	10	3

Each contestant will score one additional point for each pound of fish caught.

The short sea sunfish, not the fresh-water sunfish, looks more like the disverred head of another fish than the entire animal, and is an uncanny sight,

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Michigan Bass.

Mr. Geo. M. Kilmer, Jr., of Lansing, Mich., has the following to say in regard to the fly-fishing on the Grand River, of the south peninsula:

"In the FOREST AND STREAM of April 27, I notice the interview with B. O. Bush of Kalamazoo, in regard to fly-fishing in the Grand River. He recommends below Lansing near Grand Ledge. I have fished that stream from where it rises to its mouth. There is as good fly-fishing above Lansing about a mile and a half, as anywhere on the river, and in fact there is fly-fishing all along the stream from head to mouth. There are lakes all around Lansing where the fly can be used with success on black bass, speckled bass and rock bass, but there are but very few who use the fly. Live bait is generally used."

The above I recommend to the many Chicago gentlemen who in a short time will be anxious to know where they can find some good fly-fishing for bass.

Trout Waters.

Mr. M. R. Rogers and Mr. J. A. Hanley, of this city, inquire for trout waters where they can cast a fly. Unless one goes to the extreme North to such streams as the Brule, the Escanaba, the Little Oconto or the like, the best advice I could give would be to try the White River, near Princeton, Wis. It is almost too early yet, I presume, for good fishing.

In Chicago.

May 20.—Señor Carlos Ramirez, of the City of Mexico, is spending some weeks at the World's Fair in Chicago. When he returns to his country he will represent, among other American products, the Colt's gun, to which he takes a fancy. Señor Ramirez says that the best way to get rich, so far as he knows, is to go into coffee planting in the *tierra templada*, say in Tamaulipas. It takes about seven years to get a plantation started, but after that one rapidly becomes disgustingly rich. A few thousands of dollars are needed for the start. The coffee country is also a good game country.

Mr. E. H. Kniskern, representing the Wilkes-Barre Gun Co., is in the city for a few days, and is spending the time in making many pleasant acquaintances among the craft in Chicago. He goes to Milwaukee from here.

Mr. Harry P. Morgan, of Harrisburg, Pa., is a well known shooter of that city. He has come to Chicago for a while to see what is new, and is enjoying the Fair besides.

Mr. Harry Marlin, secretary of the Marlin Firearms Co., who is in charge at Chicago for the firm's exhibit at the Fair, leaves this week for a short business trip among some of the larger Western towns, but will soon return and put in the summer here.

Mr. Harry Greener, son of the well-known maker of the Greener guns, England, is here in charge of the Greener exhibit. The English guns have a space by themselves in a different part of the Manufactures Building from the American guns.

Mr. C. W. Dimick, of Boston, agent of the U. S. Cartridge Co., of Lowell, has been in Chicago on business and pleasure a few days this week.

Out of Chicago.

Mr. C. C. Lamos and Dr. H. C. Buechner have gone to Gaylord Club, Wisconsin, trout fishing. This is in the Pike River country.

The Fred Taylor party will start on its annual trouting trip to the Norm Johnson ranch, on the headwaters of the Little Oconto, next week.

Messrs. C. E. Rollins, C. S. Loughridge, A. M. Gilbert, Wm. Borden and Dr. Hoyt left this week for a few days' trout fishing at Mr. Rollins's place, Interval Farm, not far from Wausaukee Club, Wisconsin. This is in the Middle Inlet country. The Interval farm and adjacent land, in all 7,000 acres, will soon be turned into a club preserve.

Mr. R. W. Cox and Mr. John L. Stockton purpose a trouting trip before long to some waters known by Mr. Stockton.

Mr. D. W. Mulvane and Mr. H. P. Dillon, of Topeka, Kas., have outfitted here and gone up to Gogebic, Michigan north peninsula. They will go to Mr. S. D. Thompson's new place, at the north end of the lake, just opened this year.

Mr. W. G. Beales, a well-known attorney; Mr. Brooks, of Pitkin & Brooks, and ex-Congressman Adams started to-day on a northern trouting trip.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

LEWISTOWN RESERVOIR.

CLEVELAND, O., May 6.—*Editor Forest and Stream*: Although I have many years been a reader of your paper, the best of its kind in the world, and during this time have persistently in season hunted and fished whenever my business would permit and wherever my money would carry me that I could learn of any hunter's or fisher's paradise, from the McKenzie in Oregon to Lake Worth in Florida, I have never dared to try to put in print any of these many seasons of recreation that are the brightest of my life. But as some reference has been made in your columns to the Lewistown Reservoir, in my native State, I want to say to your many readers that as a place in which to catch the big-mouthed black bass I have never seen its equal.

A party of us left Cleveland on April 26 and reached Huntsville on the evening of the 27th, and no small part of the pleasure of the trip was the evening spent in the delightful company of the veteran sportsman and fly fisher, Judge Ingalls, of Huntsville. He keeps an ideal hotel for the sportsman, presided over by himself and his accomplished wife. His memory is stored with the richest incidents of hunting and fishing life. He has Bob White in confinement, breeding, to be at a later day turned out to the fields; a family of minks, consisting of the male and female and six kittens; fox and gray squirrels, together a happy community, and eighteen wild geese, which the Judge has been in the habit of using as decoys. Until the evening of Thursday the 27th I had not seen him since one blustery night in July, 1890, when we stood wet and cold on the bleak rock at the southern point of Michipicoton Island, on the north shore of Lake Superior, gazing vainly over the vast expanse of water for the return of our boat and friends to carry me to camp; and as the shades were deepening into night this prince of

sportsmen, Judge Ingalls, with his half-breed guide and veritable cockle shell of a boat, relieved us from our embarrassment and bore us away two miles to our camp. He is the same hospitable man to-day that he was then.

A six-mile ride on a Sunday morning over one of the glorious pikes for which southern and western Ohio are noted brings us to the Lewistown Reservoir. We are gladly welcomed and well entertained by Mr. L. H. Becht, manager of the Lake Ridge Hotel, located right on the bank of what was once known as Indian Lake. By the damming of the Miami River there has been added to this natural lake a large artificial reservoir containing in all about 17,000 acres of water. It is an ideal home for the wide-mouthed black bass, the croppie, sunfish and yellow perch.

The weather was too cold, the water was too roily and the wide-mouth had not come from his winter home in the depths of Indian Lake to any great extent. Nevertheless, in the company of those ardent sportsmen George Schuster, of Cincinnati, and W. S. Withycomb, of Cleveland, Ohio, the time passed even too rapidly, and we promise ourselves that when the water subsides and the bass are off their beds to arm ourselves and again visit this delightful spot.

As we believe in giving our brother sportsmen what information we can, we herewith give you some of the catches of last season:

Recent single day catches of black bass at Lake Ridge (Lewistown Reservoir), Huntsville, O.: Wm. Pratchett and friend, 89; M. Tool, 37; Walter Fern, 63; Howard Bates, 52; Al Corradi, 95; Al Smith, 93; C. Abergast, 69; Dr. C. S. Mathews, 62; Judge J. D. Ernston and Gregory, 38; R. S. Nichols, 80; Samuel Borger, fished 18 days with an average of 48; J. D. Ernston, W. Schuller, H. Bates, F. Ratterman, 107; Judge Ivor Hughes, 65.

Largest.—Pratchett and Hozea 4, combined weight a trifle over 30lbs.; Al Smith 7, combined weight 35lbs.; C. S. Mathews 1, 6½lbs.; M. Tool 1, 8lbs.; E. Irwin 33, 108 lbs.; F. Sanders 4, 29½lbs.; Chas. Ellis 1, 8½lbs.; Samuel Borger 1, 6½lbs.; Dr. I. De Johns 8, 42lbs.; M. E. Archer 1, 7½lbs.; Wm. Pratchett 25, something over 100lbs.; Judge Ernston 25, 67lbs.; Judge Hughes, one string of 3, 4lbs. each, one string of 6, 4½lbs. each, one string of 7, combined weight 35lbs., 1 fish, 8½lbs.; Lot Ireland, Col. H. Young, Sidney, John Bush, each caught one of 8lbs. weight.

W. B. Higby.

The Missouri Dynamite Law.

In the issue of May 11 you quote the law enacted in Missouri to punish the dynamite fiends, or rather to punish those who sell or give dynamite to said fiends. You speak in favor of the law and pronounce it a heroic measure. As a matter of fact it is so heroic that no one observes it, and in consequence it is worthless. In a case like this, where a large majority of the people are indifferent on the subject, it is difficult to enforce a mild and reasonable law, and out of the question to enforce any such stringent and troublesome measure as this. In the State of Missouri there are not less than 5,000 transfers of dynamite from one man to another every week day in the year. For each of these deals the law requires an affidavit costing fifty cents, making an aggregate cost of \$750,000 per year. I am familiar with the dynamite trade in Missouri, but have not heard of any one paying attention to this law, and probably never will hear of such a thing. Even were the law complied with it is no protection to the fish, for a man who will dynamite fish will not hesitate to commit perjury to get the dynamite. A good deal of the "dynamiting" is not done with dynamite any way. It is a well known fact that a bottle filled with rifle powder is just as effective as dynamite and is used in many of the supposed dynamite cases. A law inflicting a reasonable penalty is far more effective than such stringent measures. With those who try to be good citizens it is not the fear of punishment that brings observance of a law, but because it is the law. To this extent every reasonable law enforces itself, but after all, public sentiment is the power behind the law, and without this power no violator of a law will be punished. It is no trouble to get the laws enacted, but often very difficult to educate the people into sustaining them. **FOREST AND STREAM** is a grand educator in this direction, and has protected more fish and game than all the laws. If you have a poaching neighbor lend him your **FOREST AND STREAM**; it will soon break him of illegal and unsportsmanlike methods of killing fish and game.

O. H. HAMPTON,

Traveling Agent Atlantic Dynamite Co.

Central New York Trout.

CORTLAND, N. Y., May 20.—The average angler wears a broad smile and a sun-scorched countenance these days. It seems to be a great season for fish. A very large number of brook trout have been taken the past week in this and adjoining counties. The fish have averaged large, too—from 8 to 15in. A score or so of Cortland and Syracuse anglers, not content with the success to be had hereabouts, have flitted up to the Adirondacks, where, it is said, the ice is all out of the lakes and the water is swarming with trout.

Large catches of pickerel are reported in some of the waters around Cortland and Syracuse, and I hear of a few big ones being taken at the head of Cayuga Lake near Ithaca. Messrs. Jones and Watkins, of this village, caught 75 pickerel at Dryden Lake the 17th, some of them touching the 4lb. notch.

Cayuga, Dryden, Otisco, Tully, Little York and Skaneateles lakes all afford good pickerel fishing.

I think May 30 will disclose a pretty large supply of black bass in central New York waters.

Last week a gentleman of Baldwinsville caught a silver bass which weighed 36lbs. Some 5,000 pike were recently put in Tully Lake, the same number in Otisco Lake and an equal number in Seneca River at Baldwinsville; 50,000 whitefish were last week deposited in Little York Lake and about that number of wall-eyed pike fry, I am told, are being distributed in some of the other small lakes in this immediate locality.

M. C. H.

Sebec Salmon.

In a letter from F. M. Ford, at Sebec, Me., account is given of his taking, on the 17th, three salmon in one hour that weighed 7½, 6½ and 5lbs. Chas. Donald and C. J. Jose, of Sebec, took ten the same day that weighed 50lbs. Fishing opens from every section finely. The high waters seem to add to the catches, and one of the best seasons for fishing is now open. E. C. FARRINGTON.

Pennsylvania Fish Protective Association.

The regular monthly meeting of the executive committee of the Pennsylvania Fish Protective Association was held May 18, at the rooms, 1020 Arch street, Philadelphia. The act of Assembly recently passed by the Legislature permitting the use of fish weirs or baskets in the rivers of this Commonwealth was the subject of discussion. The passage of an act so long ago as 1734 protecting the Schuylkill has never been regretted, and the more recent law making such protection general was just resulting in positive benefits when the efforts of more than a century of labor is proposed to be abolished by this most pernicious legislation. How it could be possible that such a bill should have any advocates exceeds comprehension to those having any interest whatever in advancing the good of our people in replenishing the streams of this State with food fishes. It was the sense of this Association that we do most earnestly protest against this act becoming a law, and a resolution expressing these views was forwarded to the Governor of the State.

M. G. SELLERS, Secretary.

American Fisheries Society.

THE annual meeting will be held in Chicago, June 15. Secretary E. P. Doyle (No. 53 Broadway, New York) invites the preparation of papers for reading at the meeting, and asks that the titles may be sent to him at an early date.

Onondaga and Oneida Lakes.

SYRACUSE, N. Y., May 19.—We shall receive to-morrow 50,000 muscalonge fry for Onondaga and Oneida lakes, which will make over 200,000 fry that the Anglers' Association has put in public waters this spring. Our waters are full of fish—which means good protection.

HENRY LOFTIE.

Fly-Fishing for Bass.

THERE is excellent fly-fishing for small-mouthed black bass along the Grand River, above and below Lansing, Mich. This point and other good ones reached by the Chicago & Grand Trunk Railway. W. E. Davis, General Passenger Agent, Rialto Building, Chicago.—*adv.*

THE FISHERIES BUILDING at the World's Fair will undoubtedly be the center of attraction for all lovers of the rod and reel that visit Chicago this season. Among the many fine exhibits will be found that of Yawman & Erbe, Rochester, N. Y., manufacturers of the Fisherman's Automatic Reel. This firm has on exhibition a full line of their reels, and they extend a cordial invitation to all fishermen to inspect their exhibit, which is located in Section Q, Angling Pavilion. Western sportsmen, send to above address for catalogue and price list.—*adv.*

Fishculture.

The New York Commission.

PRESIDENT L. D. HUNTINGTON of the New York Fish Commission reports that the 1893 output from the hatcheries for the winter hatching exceeds that of any previous year. The aggregate runs up to more than 60,000,000 and comprises the following: 5,000,000 brook, brown and California trout; 8,000,000 lake trout, 7,000,000 Adirondack brook trout, 17,000,000 whitefish (for Lake Ontario), 16,000,000 tomcod (Long Island Sound, South Bay, Peconic Bay), 5,500,000 smelt (same waters), and 3,000,000 ciscoes; total 61,500,000.

The shad hatching station has been established at Hudson, the car in which the fry are hatched having gone there May 19. In addition to the fry that will be hatched at Hudson, arrangements have been made with the U. S. Commission to secure fry from the Government station at Gloucester on the Delaware River, the United States to hatch the fry and the State of New York to transport and plant in the Hudson River. The United States has for several years hatched on the Delaware and transported to and planted in the Hudson free of expense to the State a large number of shad fry, but this season, by reason of the Government exhibit at Chicago, the United States Commissioners could not spare the men to transport. But in order to secure a good plant of shad fry in the Hudson the Commissioners of this State have made arrangements for transportation.

Arrangements have been made with the U. S. Commission by which striped bass will be planted in the waters of New York. The U. S. Commission has now a man at Edonton, N. C., on Albemarle Sound, looking to the securing of eggs, which will be hatched there by him, and the fry will be brought to New York waters.

Trout in a Seepage Ditch.

OUR contributor, E. E. Millard, sends us this interesting note, taken from a recent number of the Cheyenne *Sun*: "Twenty-four years ago A. D. Butler, once a resident of Cheyenne, entered a quarter section of land about a mile and a half from Greeley. At the time this land was taken by Mr. Butler it promised to be valuable for farming purposes, but the numerous irrigating ditches that were run about it caused the soil to become wet and soggy, so much so that it became valueless. About this time the Denver Pacific claimed the land, as a part of its grant. Mr. Butler gave up all hopes of securing a title to the quarter and so the matter stood for sixteen years. While Senator Teller was Secretary of the Interior he rendered a decision against the railroad company, and Mr. Butler completed his filing on the land, and in due course of time title was secured. Then he offered the property for sale, but none could be found foolish enough to make the purchase, and finally he made up his mind that it would be useless to even try to give it away. He paid the taxes until two years ago when an idea occurred to him and he acted upon it without delay. He opened a ditch without an outlet or an inlet. The ditch filled with water from seepage and was then stocked with trout. A moss grew on the side of the ditch which was covered with insects and this fed the fish and they grew without other nourishment. That was two years ago, and those trout will now average 2lbs. each. There are 40,000 of these in the ditch and he is this year looking for a market for them. This year he will add 60,000 more fry and extend his ditch until the once valueless farm will be covered over with them. This is the first instance on record where trout have been grown in seepage water, and it demonstrates an important fact, which will be taken advantage of by many people in the near future."

A NEW-SUBSCRIBER OFFER.

A *bona fide* new subscriber sending us \$5 will receive for that sum the **FOREST AND STREAM** one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a *bona fide* new subscriber for six months will receive the **FOREST AND STREAM** during that time and a copy of Dr. Van Fleet's handsome work, *rdib, Portraits for the Young* (the price of which is \$3).

The Kennel.

Communications for publication relating to business should be addressed to the *Forest and Stream* Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

May 30 to June 2.—American Pet Dog Club, Lenox Lyceum, New York. Marion E. Bannister, Sec'y.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 8-22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

Don't forget that entries for following Derbies close June 1:

American Field Trials Club with W. J. Beck, Columbus, Ind.
New England Field Trials Club with W. M. Lovering, Taunton, Mass.
United States Field Trials, with P. T. Madison, Lock Box 4, Indianapolis, Ind.

AMERICAN KENNEL CLUB MEETINGS.

A SPECIAL meeting of the American Kennel Club was held at its offices on Thursday, May 18, commencing at 1 P. M., President Belmont in the chair.

Present: A. C. Wilmerding, associate members; J. D. Shotwell, Collie Club; J. B. Blossom, Gordon Setter Club; Dr. J. F. Perry, Keystone Kennel Club; H. F. Schellhass, National Beagle Club; Edward Brooks, New England Kennel Club; W. A. Power, New England Field Trial Club; E. H. Morris, New Jersey Kennel League; Dr. M. H. Cryer, Omaha Kennel Club; James Mortimer, Pacific Kennel Club; G. Muscatelli, Arnold, Pointer Club; H. C. Glover, South Carolina Poultry Association; James Watson, Southern California Kennel Club; F. S. Webster, Washington City Kennel Club; H. B. Cornwall, Westminster Kennel Club; Dr. H. Van Hummel, Illinois Kennel Club; A. H. Heppner, Great Dane Club of America; G. H. Welhaus, Central City Kennel Club; J. F. Barnard, Androscoquin Kennel Club; G. E. Robbins, Des Moines Poultry Association; D. E. Loveland, Boston Terrier Club; G. E. Cornwall, Rhode Island Poultry Association; J. E. Green, Western Michigan Kennel Club.

On motion the following credentials were read from the following clubs, naming the following gentlemen to represent them as their delegates, all of whom were duly accepted: American Mastiff Club, George E. Stensson; Mascoutch Kennel Club, E. F. R. Drake; St. Louis Kennel Club, May 19, M. Taylor; Illinois Kennel Club, Henry Van Hummel; Great Dane Club of America, A. H. Heppner; Central City Kennel Club of Jackson, G. H. Williams; Rhode Island Poultry Association, G. E. Cornwall; Des Moines Poultry and Pet Stock Association, G. E. Robbins; Boston Terrier Club, David E. Loveland; Western Michigan Kennel Club, James E. Green.

In the matter of the credentials from the Duquesne Kennel Club, under which Mr. William E. Littell and Mr. Moorehead claimed to be the delegate, it was voted that the secretary of this club be directed to communicate with the Duquesne Kennel Club and ask them to send on the proper credentials.

There being apparently a similar misunderstanding concerning the credentials from the Seattle Kennel Club, both Dr. L. C. Lawrence and Dr. Saiveur claiming to be the delegate, on motion of Mr. Power Dr. Saiveur was accepted as the delegate subject to ascertainment by the secretary that he was the authorized delegate from the Seattle Club.

The credentials of Robert Leslie to represent the Massachusetts Kennel Club, which were laid over at the last meeting, were read, and in connection therewith the secretary read a formal protest from the Massachusetts Kennel Club against the right of Mr. Leslie to represent them before the A. K. C. on the ground that he had not been legally elected. The secretary also stated that the committee appointed in the matter had not reported and that Mr. Anthony, one of the members of that committee, had resigned from the club.

On Dr. Cryer's motion it was voted that the former committee be discharged and that another committee of three be appointed by the chair to investigate and report. The chair appointed as that committee Dr. Cryer, Dr. Perry and Mr. Watson.

It was moved that the consideration of the proposed amendments to the constitution should be the next in order of business.

Mr. WARSON—These proposed amendments to the constitution, as you are all well recommended by me, and I have had conversation with a number of gentlemen on the subject in order to get their views with the idea of endeavoring to put the club on rather a different foundation, and this seems to be in accordance with their views. The pivot of the whole matter, on which the whole matter will stand or fall, is this Article V., which refers to the management of the club. There are a number of gentlemen present who have never been here before and are very little in the manner in which we have been carrying on our business, and they certainly are not able to take any great active part in the meetings. The result has been that we seem to have got into the habit of giving over our business to the advisory committee. There is no objection whatever to giving it over to the advisory committee, and the only object of this article is to increase the advisory committee, to be a more representative body of the club at large, and have it as the advisory committee, as an elective body, instead of having the meetings supposed to be a full representation of all the clubs, which they are not, being only a part of the representation, to have gentlemen elected to this larger executive committee, and allow them to conduct the business, of course subject to the calling of special meetings, provided there were a sufficient number of members of the association who choose to differ from any action which the executive committee might take. Mr. President, I think you are a member of a large number of clubs, and I think you will agree with me that it is the custom of the clubs to place the management of the business, the executive, in the hands of an elected body such as this. Take a larger association, such as the National Trotting Association—its business is placed in the hands of the board of appeals. Take the National Rowing Association. They elect a committee which has only the power of conducting the business of the association under the rules of the association. It has no legislative powers, and the proposition here is simply to enlarge the advisory committee, and the giving of the business into their hands. That is one feature. All the other features which come before you are wholly alterations, the idea being that this was the fundamental change, and that all the other changes were minor. They were simply to make something a little clearer, and then I makes the general reading of it in keeping with the executive meetings. I should suggest that Article V. be first considered, as it is the key to the whole.

Dr. PERRY—This is the second time I have been upon my feet, and I have served two years and a half. I want to go on record as in favor of this proposed resolution, and in advocating it I shall give expression to what I believe to be truths, and therefore, there is no apology necessary. In the first place, the club knows that under the present condition of things there is much about the American Kennel Club which is practically burlesque. You take sixty odd delegates of them. There are but very few clubs which are really represented in the American Kennel Club. It is absurd to suppose that they would send a delegate from Washington or even from St. Louis here. Out of all the clubs in the country I think it is a fact that you can count on the fingers of one hand all that have money in their treasury. They are poor. They cannot send delegates here. It costs me \$30 to come on from Boston, and I am located very near New York, too. Consequently these clubs from a distance cannot be really represented. Their credentials are given to men who act upon their own individuality. They are not instructed, as a result we can almost say that simply a plain matter of fact, square and fair, and in nine chances out of ten that man will take offense at it, and I say, "You put upon the president and secretary altogether too much." They do not want it. They should not have it. Look at the responsibility. Here are three months between the meetings, and all these points must be decided either by the secretary or the president. He consults with the president and between the two they render a decision. It is not right; it is unkind; and then if anything goes astray

Now as to the expense. Dr. Perry stated that throughout the country there was a feeling that the American Kennel Club was taxing the breeders to a large extent, and that was not true. But we have fought that all out before. I remember very well when I first came into this club that there was a strong effort made to reduce the registration fee to 25 cents. If it had been done, you would have had no stud book to-day. Nothing can succeed in a club like this in publishing a stud book and having money to devote to the interests of dog matters unless you make a little profit. If you make a loss, no matter what principle you are governed by in a great big concern like this, you fail. Nobody will consent to make it fail, and you will not. I am sure the representatives of the breeders will agree with me. You may recall when I first came in that I guaranteed the club against loss for five years, and there was a great deal of objection on the part of some to that, and I stated that I would not have made it if I was not sure that the club was going to make money by it; and it would not have made money if it had not been for very good and careful management, which came principally from Mr. Vredenburgh, who was there from morning until night, and who conducted the club as masters of the stars and planets in the same way. If it was his club, you would be a popular breeder to-day. I think that you are going to reduce their charges, but if you cut down the profits you will simply prevent the club from growing. The American Kennel Club is getting in a position to-day where it will be able to step in and provide more valuable diplomas than any single association can give, with the exception of the Westminster Kennel Club. The American Kennel Gazette, although not a readable paper is a comfort, and when anybody wants to look back ten or fifteen or twenty years to find out what has happened, is more serviceable than all the sporting papers together. Its dry bones are what makes it useful. It is meant to be a help to the breeder. All the regulations in regard to compulsory registration which were

with a number of good hotels and restaurants within a block or two.

DOG CHAT.

Canada and the World's Fair Show.

The Canadians are very much exercised over the postponement of the World's Fair show; and well they may be. Under the skillful management and energy of Mr. A. D. Stewart, a creditable lot of dogs, nearly two hundred, have been secured and all preparations made to put down at Chicago an exhibit that Canadians could well be proud of. The following telegrams explain the present state of affairs.

WORLD'S FAIR GROUND, Chicago.—To A. D. Stewart, Hamilton.—Delay in construction makes very probable will postpone kennel exhibit until September. Will decide to-night after conference and wire you to-morrow. W. I. BUCHANAN.

To W. I. Buchanan, Chief of the Department of Agriculture, World's Fair, Chicago: Postponement will be intensely unpopular here and will probably result in no Canadian exhibit being made at all. We have spent hundreds of dollars preparing exhibit; all our dogs are now in trainers' hands and loss will be heavy. Canadian fall circuit of dog shows occupies whole month of September and postponement will interfere with this, besides bringing management into ridicule. Let there be no postponement. Wire to-morrow sure. A. D. STEWART.

WORLD'S FAIR GROUND, Chicago.—To A. D. Stewart, Hamilton.—Impossible to complete buildings for kennel exhibit. Will be postponed until Sept. 20, 21, 22 and 23. Official notice will go out to-morrow. Regret can make no other decision. Will notify Canadian Commissioner this evening. W. I. BUCHANAN.

This exhibition meant much to Canadians, as the interest displayed by the Dominion Government in the kennel exhibition made them feel a certain *esprit* to put their best dogs forward and uphold the honor of the Dominion against all comers. This they were prepared to do, but now their efforts, for the present, are of no avail. When we suggested a postponement we had more in mind the convenience of exhibitors in this country and England. A postponement to September would probably be inconvenient to Canadians, as, of course, they must uphold their own shows, which take place during that month. The dates now claimed by Mr. Buchanan, Sept. 19 to 22, however, do not conflict with any claimed, as yet, by Canadian kennel clubs, so there is still a hope that our friends across the border will be able to show at Toronto and then journey to the Windy City. Of course, the whole affair has been badly bungled. Canadians have been put to no little expense, in a bad time of the year, to prepare their dogs for the proposed June event; many dogs are in the hands of professional trainers and certificates of registry, etc., have been paid for and all arrangements made for transportation. All this bother and annoyance has been saved the Americans through the uncertainty regarding the premium list and judges, and we imagine the exhibitors in the States will give a sigh of relief to know that the agony is over, for a while at any rate. We sympathize, however, none the less with Mr. Stewart and his fellow countrymen. In view of the postponement, new entry blanks will have to be made out so that the Canadian Government will not pay entry fees to the Chicago management for dogs which may now be entered but which will not go to Chicago.

Wissahickon K. C. Show.

It will be a pleasant surprise to a good many exhibitors to hear that an open air bench show will be held at Wissahickon Heights, near Philadelphia, Pa., June 6 to 9, mention of which was briefly made in our last issue. There is no reason, except the possible one of traveling in hot weather, why such fixtures should not become popular in this country. They have been so for many years in England, where weather conditions are not so good. The Wissahickon fixture should be particularly so as it is held in a charming locality in one of Philadelphia's aristocratic suburbs. Coming as it does the week before the time set for the postponed Chicago "fiasco," it should prove a solace to the disappointed ones. The show is given under A. K. C. rules, and the Wissahickon Kennel Club will probably become a member of the A. K. C., though the premium list conveys no information as to who the officers of the club are excepting that Dr. L. C. Sauveteur is the secretary *pro tem.*, and to this gentleman thanks no doubt are due for getting up the whole affair. The premium list is well arranged and the prizes for the open classes are \$10 and \$5 and challenge classes \$10. Mastiffs, St. Bernards, both kinds, great Danes, Russian wolfhounds, deerhounds, greyhounds, pointers, all setters, cocker spaniels (black and any other color), collies, beagles, fox-terriers, and pugs have sexes divided in challenge classes. A kennel prize of \$15 is given in most of the important breeds, and a field trial class is made for pointers and one for setters, of each breed, placed at any trials in Canada or United States; prizes \$10 and \$5. The entry fee is \$3 and entries close Thursday, June 1, with Secretary L. C. Sauveteur, Seminole Kennels, Chestnut Hill, Pa. Mr. John Davidson takes pointers, all setters, foxhounds and Chesapeake, beagles and miscellaneous, and Mr. C. H. Mason the rest of the breeds. "Will" Connors, so well known as manager of the Seminole Kennels, is the superintendent, and should know just how to cater to the wants of the "boys." The grounds of the club, St. Martin's Green, are located within 100 yds. of the Wissahickon station, which is on the Chestnut Hill branch of the Pennsylvania road.

A Brutal Act.

It is not often our duty to chronicle extreme cruelty to man's best friend, but Rochester shelters one of those specimens of humanity for whose existence among civilized beings is matter for apology. Mr. W. J. Higginson, of Rochester, is known to many show-goers as an enthusiastic bull-terrier breeder, and he has won several prizes with Lady Dinah, Billy Bulger and others. Two weeks since his bitch Lady Dinah strayed from the kennels, and while going along Mr. Hope avenue she was accosted by a mongrel dog which stood guard over the home where the human cur lived. Lady Dinah expected soon to become a mother, and not being in the humor to be snapped at by the pariah she returned the snapping compliment, and the two became involved in an active dispute, which would have resulted unfortunately for the mongrel had not the owner of the latter appeared. This brute kicked Dinah so that he broke two of her ribs; not satisfied with this he picked up a big stone and threw it at her. The poor bitch was scarcely able to move, but this did not deter this cowardly brute from picking her up by the hindlegs and beating her head several times on the pavement. Several men standing by exerted themselves sufficiently to stop any further exhibition of inhumanity, and some one took Dinah home. The bitch's life was despaired of, but under skillful treatment it is expected she will pull through, although she lost five puppies. It makes one's blood boil to think of it, and no wonder Mr. Higginson went round with blood in his eye and eventually found out who the brute was; his name is John Pauckner, living at corner of Cypress and Mt. Hope avenues. The S. P. C. A. have taken the matter up and are pushing it. The man has been arrested and a hearing was set for Monday, 22d. Lady Dinah is one of our best light-weight bull-terriers, and Mr. Higginson is entitled to sympathy.

A saloon-keeper in Chicago has a brother, Ryan, by name, who owns two great Danes. Last Saturday night the dogs were stolen. Unfortunately for the thief he passed the saloon-keeper's place, and he, recognizing the dogs, went across the street and asked the man where he was going with the dogs. For answer the man struck him in the face. "I'll fight for a

dog any day," said Ryan, and pulling off his coat, buckled into the stranger. Dogs and men rolled over together, but Ryan's bartender coming out with a revolver the thief at the sight of it made his escape. The "fight for a dog any day" is the excuse for this little tale.

Mr. Mortimer Resigns.

It only needed Mr. Mortimer's resignation as superintendent to bring down the house of cards that the World's Fair management had erected by their shilly-shallying methods. As matters have turned out the postponement of the show is the best thing that could have happened, and what we suggested in these columns. With nearly four months to reflect upon their conduct of the show so far, it is probable that the management can bring themselves to consult the proper people next time, and so arrange a premium list and judges' list that will beget confidence. A despatch from our Western office reads: "Dog show postponed till Tuesday, Sept. 19, lasting four days. Entries close Sept. 12. The premium list of dog show will be issued under separate cover." This looks more like business, and now we can possess our souls in peace and reflect upon what might have been; and we welcome, as will our readers no doubt, a cessation of World's Fair talk for a time, as far as dogs are concerned. Now we can better devote our energies to making the Pet Dog and the Wissahickon shows the success they deserve to be. In connection with Mr. Mortimer's resignation it may be said that in nothing has he been consulted regarding the show, and feeling his position an anomalous one he resigned the latter part of the week before last.

Spaniel Club Meeting.

A meeting of this club was held at Mr. Wilmerding's office, 163 Broadway, New York, May 13, at 11 A. M. Those present were A. C. Wilmerding in the chair, E. M. Oldham, R. P. Keasy and A. E. Foster. The subject of field trials for spaniels was brought up and a general and informal discussion took place, with the result that a committee was formed consisting of Messrs. Wilmerding and Oldham to inquire into and institute if possible field trials for this breed. Ideas and suggestions will be received with pleasure from spaniel men, members of the club and others, on the subject. The World's Fair trophy was left in committee's hands for proper selection in the event of a dog show being held at Chicago. A sum of \$40 has already been subscribed by members for this trophy. *Re Keyes*—Oldham matter: Mr. P. Keyes having written a satisfactory letter of explanation to Mr. Oldham, the latter requested the executive committee to let the matter drop. This is the result outlined by us some time since. The meeting then adjourned.

Maine Dog Law.

In reference to the new dog law in Maine, which we have spoken of several times lately, Hon. A. M. Spear of Gardiner has been investigating the validity of the law, which has been questioned in some quarters, and has run across several court decisions in Massachusetts, where they have a law very similar to that in Maine. According to these the law is perfectly constitutional and a constable can enter any inclosure or even a dwelling to kill an unlicensed dog providing he does not break the peace or break open doors. These decisions also declare that it makes no difference regarding the force of the law whether notices are posted or not. It also appeared that the Massachusetts court holds that the dog is not a domestic animal, over which point there has been so much discussion in Maine.

Canada is Ready.

Under the able management of A. D. Stewart, Canada is now ready to send her dogs to the World's Fair. Entries are all made and I am not like our Ottawa friend in thinking our Canadian dogs will not hold their own. Methinks we are not behind our American cousins in many breeds; in setters, pointers and cockers we can more than hold our own in quality, if not in numbers. Give us time, the Canadian Kennel Club is doing a lot of good. All we want is to work in harmony and work for the interest of one of man's best friends—the dog. Our kennel papers of America show favorably in comparison with any country in the world, and with more enterprise in many ways. Let our passport be harmony and the rest will take care of itself. T. G. DAVEY.

Death of Champion Bradford Harry.

One of the old landmarks, if we may use such a term, in Yorkshire terrier circles has paid the debt of nature. Mr. P. H. Coombs (one of the pioneers of the Yorkshire fancy in this country) champion Bradford Harry dropped dead April 26, probably as Mr. Coombs tells us, from heart failure. This good little Yorkshire was whelped May 16, 1885, and was by Bruce out of Lady. His first win was at Newcastle, England, in 1887, and since his importation in that year has won prizes at several important shows and has also done his share toward improving the stock in this country. Mr. Coombs has our sympathy in his loss.

Death of Galatea.

The English setter bitch Galatea, a celebrated field performer, well known to field trial men, died at the kennels of her owner, Mr. C. C. M. Hunt, at Palmyra, N. Y., on May 19. Galatea was whelped in 1884, and was by Mack B. out of Chica. She was bred by Mr. W. Tallman, who afterward broke her and ran her in the Eastern field trials; as a field performer of high merit and as a companion in the field she had few equals.

A Breeders' Kennel Club.

A new kennel club, to be named the Breeders' Kennel Club of Chicago, is in process of formation. All reputable breeders are invited to join—so says a daily despatch.

Life in the Old Dog Yet.

A petition is being signed by members of the New Jersey Kennel Club requesting the secretary to call a meeting at an early day.

Manitoba Field Trials.

It has been decided to extend the date of closing entries for the Derby in the Manitoba field trials to June 15.

The new St. Bernard St. Augustine will probably reach Boston before this appears in print. He will remain at Messrs. Toon & Symond's kennels for a short time before going to his new owner, Mr. C. J. Bonsfield, Bay City, Mich., who owns the Bay City Kennels, of which the well-known St. Bernard's Lady Taylor and Lord Dante are inmates. Mr. Bonsfield is the secretary and treasurer of the Bonsfield Co., large manufacturers of woodenware in Bay City. If in good health when he lands St. Augustine will shortly be placed at public stud along with Lord Dante.

We should not have neglected to mention Elf in speaking of Emeline's death recently. We had more particularly in mind this year's competition. Elf was not in anything like her Brooklyn form when seen at the Elmira show this spring. She now has a litter of five (four dogs) by champion Royal Krueger. Winnie K. has four, two dogs; Queechy also four, two dogs; Nell Royer four, three dogs; and sweet little Ava W. has three, two of which are dogs. Another, Pearl, has three bitches. Several more are due soon, so that the beagle

industry may be said to be flourishing in the Covert hamlet which name, by the way, is very appropriate as the site for a kennel of beagles. "Wix" will show a team at the pet dog show. Mr. Wixom has now some sixty dogs in his kennels and he makes the covert allusion that they are "not all weeds."

The Seacroft Kennels' noted fox-terrier bitch Grouse II. has whelped a litter by Blenton Rasper that are doing well. The well known wolfhound Svodka has been bred to Servants.

A litter that should result in good field stock is that by Lad of Rush out of Lady Margaret, that Col. Purcell tells us about. There are six pups, sexes evenly divided and two dogs are black and white.

Mrs. J. F. Smyth, the owner of Swiss Mountain Kennels, is determined to maintain the prominent position she has taken as a cocker spaniel exhibitor. She recently purchased a number of Mr. W. B. Palmer's (Woodstock, Ont.) stock. Among them is Obo III., by champion Obo ex Gipping Floss (E. 20,653). He is said to be a grand-bodied dog, with heavy bone and feathering, so little seen nowadays, but a slight chorea prevents his being exhibited. This, however, does not prevent his usefulness as a stud dog, and with his breeding Mrs. Smyth thought she was doing well to buy him.

A Spaniel Club was organized during the San Francisco show. The Pacific coast is becoming strong in specialty clubs; they already have a St. Bernard and fox-terrier clubs.

Mr. W. J. Beck, secretary of American Field Trials Club, wishes us to particularly state that he is a Hoosier, and his address is Columbus, Indiana, not Ohio.

Mr. Edwin Pugh, who, it will be remembered, owned the celebrated pug champion George, that died some months since, now mourns the loss of Ned, George's first son, who died of old age. He was in his fifteenth year, and has been blind for the last two years. He was a prize winner in his time.

Now that the reciprocity treaty between the A. K. C. and C. K. C. has been annulled, the disqualified on this side may show on the Canadian side, and vice versa, for of course the C. K. C. may now be expected to take similar action. To have much effect, disqualification by either club should be recognized by the other. American exhibitors at Canadian shows will now have to register or list their dogs with the C. K. C., and the A. K. C. will gain a quarter for each Canadian dog exhibited at our shows. It's good for the clubs anyhow.

Dr. F. H. Hoyt, who owns some nice Italian greyhounds which he showed during the last circuit, tells us that his entire kennel building and fences surrounding the yards have all been swept away by a recent flood. There is at this writing 10 ft. of water where the main building once stood. Dr. Hoyt fortunately saved his dogs, but as he is now cramped for room he is compelled to sell off a number of his pets.

Exhibitors of live stock at the World's Fair are now only required to prove ownership of animals for sixty days previous to closing of entries and not six months, as before. The dog show will come just after the horse and cattle show and before that for sheep and swine.

There will probably soon be a new set of officers of the Maryland Kennel Club, which now has a largely increased membership. A show will be held next year.

An inquiry at the A. K. C. office elicited the fact that only about fifty or sixty certificates of registry had been issued to intending exhibitors at the World's Fair show. The book is supplied with about 1,600 blanks.

In the Watson-Bell affair, according to our report of the A. K. C. meeting and Mr. Belmont's speech, it will be seen that the president took the same view of the position of the M. K. C. in the case as FOREST AND STREAM did at the time.

We hear that the pointer Duke of Kent II. will not appear in the New England field trials but will be sent to do battle on Southern fields—Eastern and Southern trials. Mr. Bob Leslie thinks he owns that N. E. F. T. Derby Stake already, his King of Lynn is doing such good work. Kathleen Kent (King of Kent—Belle Randolph) is reserved for the All-Age.

We regret to hear that Messrs. Heppner & Bernheimer's new importation, the great Dane Helios, is down with distemper and not expected to pull through.

New Jersey Kennel League.

The first annual meeting of this organization, held Tuesday evening, May 23, at the Clinton Café, Newark, was the occasion for an enthusiastic gathering of admirers of man's best friend. An executive meeting was held at 8 P. M., and then followed a dinner, during which the annual meeting was held. The menu cards were very tastefully gotten up, almost as much so as the good things provided by the host. If the good fellowship and enthusiasm in the good cause displayed for upward of six hours may be taken as an earnest of what is to follow, then the future for the fancy in New Jersey once more looks bright. From the time the Little Necks went to their final destination until the last cigar was out, dog chat was in order and speeches followed fast, and men who probably never considered the dog question before were drawn into making known their ideas and particular fancies. Mr. E. H. Radel, of Newark, N. J., presided, and did his part well. The question of a bench show was discussed, and it was decided to leave all arrangements in the hands of the executive committee, who will at once set about their plans. The show will probably be held in October or January. A committee on legislation was also formed to try and secure such legislation as would improve the breeds of dogs in the State and curtail the large number of mongrels with which New Jersey, and Newark in particular, is infested. The meeting finally dwindled down to a discussion of the special merits of St. Bernards, great Danes and poodles, in which Messrs. Radel, Christopher, Morris, Kuebler and Dr. Sattler were very active. The following officers were elected: President, Ed. H. Radel; Vice-Presidents, Charles Heath, Dr. Edwin Field, W. O. Kuebler; Secretary, Dr. W. F. Seidler; Treasurer, R. R. Moore; Executive Committee, E. R. Christopher, A. Haines, E. H. Morris, Dr. Sattler, Frank Link, M. H. Hanchett, W. J. Whelan, W. J. Browe; Auditing Committee, W. O. Kuebler and E. R. Christopher; Legislative Committee, Dr. Seidler, E. H. Morris, E. R. Christopher, Dr. Sattler, Frank Link, W. J. Whelan, Arthur Mussey. Members present in addition to those already named were J. C. Eisele, Geo. Browe, Carl C. Brandt, A. A. Eisele, Chas. A. Young, H. McDowell, A. A. Hahn, Jas. B. Conover, W. T. Stickney, Jas. Johnston, Dr. H. C. Blythe, D. Philip Roth, W. V. Rucklehaus, Jas. B. Conover, Geo. Browe and Harry McDowell were elected and included with the charter members. H. W. Lacy, honorary member. Our thanks are due to the club, and especially Mr. Radel, for courtesies extended.

There are lots of good things in our kennel special column this week. F. S. Anderson offers some good St. Bernards

Casper and Elmhurst; R. L. Purcell-Lewellyn, trained English setter; G. H. Babcock, well-bred mastiff; P. H. Coombs, Yorkshire terriers; J. E. Woodland, blue blood English setters; Bedminster Kennels, English setter kennel; J. H. Parrott, bulldog; H. Curtis, well-known bulldog Bombardos; Banks & De Russy, pointer pups; J. F. Stoddard, dachshund dog; F. H. Hoyt, Italian greyhounds; R. H. Burr, trained Irish setter; 339 West Seventeenth street, young pointers; J. Penhall, English setters; J. Winchell, bloodhounds and mastiffs; Hill Hurst Kennels, poodles. At stud—J. J. Scanlan's Irish setter Inbiquin; Hill Hurst Kennels, Oakleigh Bruiser, wire fox-terrier. We also draw attention to Franklin Hallet & Co.'s Excelsior Meat Dog Cakes, which are good.

The entries for the pet dog show closed May 22, and the number known so far is 288; there will probably be 300 in all. The club must be congratulated on this excellent entry, taking into consideration the limited number of breeds.

The A. K. C. Meeting.

The A. K. C. meeting last Thursday was a memorable one. Commencing at 1 P. M., it was not adjourned till 10:45 P. M. The delegates stuck well to their seats with n'er a bite nor sup. A number of new delegates were on hand and at no meeting before have we seen the club business so generally discussed by the delegates. The important new move suggested in FOREST AND STREAM in last issue, to have a meeting of the club in the West, went through flying. If held in September during the World's Fair show it will be well attended by the delegates.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

In a pleasant, chatty letter, Mr. E. D. Adams, Hon. Secretary of the Manitoba Field Trials Club, mentions that the date of closing Derby entries is extended to June 15. He says: "We have the promise of a good many entries and everything tends to show that keen interest is being taken in the sport. * * * As far as I can learn there are more good puppies in this country than ever before, among them being a Roderigo—Lee Gladstone bitch owned by Mr. E. Hughes, of Brandon. Messrs. Adamson & Cain, of Virden, have imported from England three very fine pointers, two bitches and one dog. Mr. R. I. Gallagher has also purchased two fine setter Derby entries, Count Noble and Dad Wilson stock, also a pointer bitch, Spotted Boy stock. Birds are more plentiful this spring in Manitoba than they have been since I came to the country, so prospects are bright. Our president, Mr. Simpson, drove all over our grounds a few days ago and reports a full stock of birds. The grounds are being carefully guarded and there will be no lack of grouse for the trials. About passing the dogs coming to the trials through the Customs: This has all been arranged for, and there will be no duty on them provided that if sold in the country duty will be paid."

The American Field Trial Club has reduced the entry fee to \$15 in the Derby, payable in three parts of \$5. All-Age Stake \$20; \$5, \$10 and \$5. These trials follow immediately after the United States trials at Bicknell, therefore handlers can easily start in both trials.

A New Cock Robin.

Who killed the World's Fair show?
"I," said "Doctor" Rowe,
"With my 'fake-list' bow,
I killed the World's Fair show."

Who saw him do the deed?
"We," FOREST AND STREAM said,
"When we his 'fake-list' read,
We knew he'd done the deed."

Who helped to bury the dead?
"We," the angry dogmen cried,
"With our protest far and wide,
We helped to bury the dead."

Flaps on the Beaver's Tail.

TORONTO, Can.—Mr. Gambier Boulton, the well known English photographer of animal subjects, was here this week and delivered an interesting lecture before the Toronto Camera Club. His series of canine prints was exceedingly interesting, especially a number of photographs of bulldogs, some extending many years back and showing the gradual change in type and formation down to those of the present day. Mr. Gambier Boulton had made arrangements to take a snap at some of Mr. Kirk's dogs, but the excessively wet weather we had during the early part of this week made the carrying out of the project impossible.

The dog show committee of the Industrial Exhibition met on Friday; those present were C. W. Postlethwaite, chairman; J. S. Williams, J. Maughan, J. Wilson, H. B. Donovan and C. A. Stone. Mr. Postlethwaite was elected Chairman for the year. Mr. Maughan, Vice-Chairman, and Mr. Stone, Superintendent. The Pointer Club will this year offer specials of \$40, divided as follows: \$10 to best dog and \$30 to best bitch in open class open to all—and \$10 to best bitch and \$10 to best dog owned by members of the club. The Spaniel Club will again offer the \$100 challenge cup in addition to other specials, and the National Beagle Club and Collie Club have also semi-officially signified their intention of donating specials.

The wife of C. A. Stone, May 18, a daughter; congratulations.

The management of the Industrial Exhibition dog show this year consists of: C. W. Postlethwaite, chairman; J. Maughan, vice-chairman; J. F. Kirk, Jno. Massey, J. Henderson, J. Wilson, J. Dilworth, J. S. Williams, Capt. C. Greville Harston, Robert Junor, J. G. Mitchener, H. B. Donovan, W. P. Fraser, R. G. Wilk; secretary and superintendent of bench show: Mr. C. A. Stone, Toronto.

FOREST AND STREAM is by this time of course aware of the collapse (it can be called nothing else) of the World's Fair bench show for June and postponement to Sept. 19 to 22.

Toronto dates are Sept. 11 to 15, and Montreal several months ago filled a claim in the following week. If Montreal will hold a show, which at present seems improbable, Canada of course will support it and not the World's Fair show. In fact, if the show is held and the Canadian Kennel Club recognizes the claim for dates, I cannot see how held under C. K. C. rules. Ottawa naturally follows Montreal and has claimed dates Sept. 26 to 29. The selection already made could be allowed to stand, and no doubt by that time a further selection could be held to make up the full number which the Government has agreed to take charge of, namely, 200. However, it is but surmising yet, as until further particulars are made known, and the executive of the C. K. C. meet to discuss procedure, no definite action

can be arrived at. It is intensely disappointing and annoying to all those who have spent time and money in working up a representative and large exhibit from the Dominion.

Mr. W. Brodie, who leaves for Scotland this week, takes with him Mr. J. O. Bennett's smooth fox-terrier bitch Stardale Belle. She will remain in Mr. Brodie's kennel until bred to Mr. Stephens's crack sire Stipendiary. If the union proves successful the result should give this breed a lift in Canada.

Messrs. Brodie & Lyndon claimed Mr. H. P. Thompson's fox-terrier pup Tally-Ho, by Blemton Rattler ex Tambourine, winner in selling class at Toronto K. C. show.

H. B. DONOVAN.

Says No Better on Earth.

HOPE, Ind., May 15.—Please stop my For Sale ad. of Scotch terrier puppies. All sold. No better advertising medium on earth than FOREST AND STREAM. Send bill. Yours in haste, U. R. FISHEL.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to the management of dogs, answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

G. H. P., Stillerville, W. Va., Lindsey's Irish setter Dash, by Goings' Bob out of Niall's Fan, by Lord Waterford's Ponto out of Miss Warburton's Venus; Goings' Bob by Hutchinson's Bob out of his Lill. Crena by Ch. Basto out of Capt. Lemprier's Sal, by W. Kinahan's dog out of Jepson's Belle, Basty by Sir H. Bruce's dog, dam not given in E. K. C. S. B. Nellie B by Lindsay's imported Dash out of Crena. The others you mention are not registered. We do not know of any Gordon setter breeder at Garfield, Pa.; sorry we have no information on the subject.

G. B. S., Pittsburgh, Pa.—My Irish dog is about one year old. He is scratching and biting at his whole body, head, legs and even his tail. Little pimples all over him; hair all out in spots on head and body; eyes are sore and swelled this past week. Running at nose, noise in throat as though it was choked up. Have been giving him five drops of Fowler's solution of arsenic in food morning and evening, and also washing him with carbolic acid in warm water. Ans. Treat for worms and apply following dressing:
Sublimed sulphur.....16 ozs.
Oil of tar.....10 ozs.
Sperm oil.....4 pints.
Mix together. To be well rubbed all over the dog every other day.

J. J., Westfield, Mass.—I have a black cocker bitch that has a cough, not very bad, and scratches herself most of the time; eyes run a little. What is good for her? Have given her mange cure. Do you think it worms? Ans. Treat for worms. Give the following:
Mag. subh.....5 i
Ferri sulph.....3 i
Acid sulph dil.....3 i
Aq. ad.....5 vii
Mix. Give one dessertspoonful twice a day. For the cough give one teaspoonful of Stokes' expectorant mixture three times a day.

W. W. McS., Stevensville, Pa.—I have fine bred English setter, ten months old, strong and healthy, but with a lameness that baffles me. When he came to me about a month since I noticed a very slight lameness in right fore foot, but no inflammation, no enlargement, no displacement of bones, and the only mark a slight shiver of one toe nail, which I removed carefully with a scissors, and which is now perfectly smooth. The lameness still continues and with no swelling, or inflammation. When standing he advances the lame foot slightly, putting only a part of his natural weight on it. He shows no soreness from pressure of foot, leg or shoulder. The shipper says it was done in transportation as he started sound. Ans. We cannot express anything definite in a case like this; it is necessary to see the dog. From your description it is probable the lameness is in the shoulder or elbow. Examine the toes carefully.

Dachting.

The various rumors concerning Volunteer under her new owner, Com. J. Malcolm Forbes, Eastern Y. C., amount to the fact that Com. Forbes is desirous of converting her once more to the cutter rig, but that the Lawley Co. is too busy just now to do the work, with other alterations below, consequently the yacht is fitting out under her schooner rig. Two weeks since her large boom, stored since 1887 at Wintringham's yard, was shipped to Boston. Later in the season Volunteer will be seen under her old rig, the sole representative of the much-talked-of 90ft. class. It is probable that she will be raced, and her presence in the trial races would add greatly to the excitement, but Com. Forbes is not likely to give her a new racing rig, such as her added length would fit her for, and to race her as she was raced in 1887. Her length will in all probability prevent her being chosen to defend the Cup, even if she were successful in the trial races.

There is a prospect of a revival of that annual agony, the steam launch race, which was laid at rest last summer by the Norwood-Vamoose fiasco, the non-completion of the Gardner-Mosher boat and the burning of the Yankee Doodle, once the Buzz. The owners of this last craft have dug up her rusted remains and are building a hull 70ft, long and 7ft. beam to receive the same machinery. They now propose a sweepstakes race of \$100 entrance, with a purse of \$1,000 added by the city of Philadelphia, the date to be July 4 and the course on the Schuylkill River.

The fact is not generally known that the Paine fu-keel just missed being the Tobin bronze boat. It was decided to build her of that material, but an accidental delay of a day or two in ordering made the order second to that of the Herreshoffs, and the makers of the metal were unable to fill more than one order of this size on such short notice.

The obvious fakes which have been laid before a suffering community during the winter are of late giving place to true and reliable pictures of the new yachts. The sketch of the Stewart & Binney syndicate boat is from the Boston Globe, whose correspondent secured a photo of the yacht in the yard. Her fin will be put on in the Erie Basin dry docks, New York, the hull being towed around as soon as she is launched.

New York Y. C.

The third regular meeting of the New York Y. C. was held on May 18, with Vice-Com. Duncan in the chair, Com. Morgan being at Newport.

The committee on club sites reported that the new station at Bay Ridge will shortly be ready for occupancy, and that the station at Whitestone L. I., has been removed to the bulkhead of the Long Island Railroad Company's dock, thereby being in close communication with New York.

The committee on the reception of the Viking ship reported progress. The following programme was announced by the regatta committee: June 15.—The annual Regatta.—Regular Prizes.—In each class there will be a first prize if two or more start and a second prize if four or more start. Special Prizes.—There will be first and second prizes, as above, for yachts in cruising trim.

Aug. 7.—The rendezvous for the August cruise has been fixed by the committee appointed at the February meeting for Aug. 7, at Glen Cove L. I. On the day of rendezvous cups, which will be offered by the commodore, will be sailed for.

Aug. 11.—The flag officers have appointed Friday, Aug. 11, for the Golet cups off Newport. On squadron's return to Newport, the cups offered by Capt. J. J. Astor will be sailed for. During the cruise the customary prizes for the runs from port to port will be offered.

Sept. 15.—The autumn sweepstakes. For each class in which three or more enter. Course triangular, ten miles to a lag outside of Sandy Hook. Time limit seven hours, but if no class makes the race on the first trial, it will be started again on the following day without time limit.

Yachts entered alone in these classes will be governed by Section 4, Rule 5.

In each sweepstakes the second will save her entrance if four or more start. The club will add a \$300 cup for first prize if two or more start, and a \$100 cup for second prize if four or more start.

Entrance, \$100 half forfeit. Entries, which must be in writing, must be addressed to the regatta committee at the club house, 67 Madison

avenue. They will be bulletined at the club house, on their receipt. The list will close at 12 M., Sept. 1.

The match for the America's cup will close the season.

Rear Com. Ellis tendered his resignation, as he will be absent on the Navahoe and his yacht is under charter.

The following gentlemen were elected members, and among the number are eight or ten yachtsmen.

Lo Roy Bates, Warren B. Fales, James Cockcroft, James B. Townsend, James R. Hopkins, John C. Rich, U. S. N.; Albert Stevens, Henry M. Frankel, Thomas B. Parker, Cornelius J. Ryan, W. H. Dikey, Richard Peters, Clarence A. Mackey, L. J. Callanan, Walter J. Sears, U. S. N.; Chandler W. Wayland, Aaron Ward, U. S. N.; William G. Roelker, Frederick H. Von Stade, H. Walter Webb, A. Walpole Cragie, William Osborne, George M. Preston, William R. Sands, George Bird, John C. Tappin, Henry Pearce, William G. Dickinson, Edwin S. Cramp, John C. Orr, Benjamin F. Sutton, Paul G. Thebaud, Henry D. Babcock, John Burke, Lewis Cass Ledyard, Edgar S. Scott, Andrew S. Johnston, W. A. Marbury, C. T. Van Santvoord, Horace See, Conway H. Arnold, U. S. N.; Armistead Rust, U. S. N.; and Willard H. Jones.

The 25ft. Sailing Length Class.

THE 25ft. sailing length class, improperly called the 25-rating class in imitation of the English term "rating," was established in 1891 by several New York clubs with the idea of putting to a practical test the theory of sailing or corrected length as a basis of classification. After two seasons of trial the results have been seized upon by the adherents of a length classification as demonstrating the correctness of their views. Although there has been considerable racing in the class, the boats have been largely of one type, and the work of one designer, so that the results can hardly be taken as conclusive. The first boats built for the class were Smuggler, Nameless and Needle, miniature cutters, designed by Wm. Gardner, of about 25ft. l.w.l., and 6ft. 6in. to 7ft. draft. The racing of these three similar boats together in 1891 proved nothing, and the defeat of one of them by a shorter and wider boat in a single race at the end of the season was equally devoid of result. Last year the class was augmented by three new boats, two by Gardner and one by Herreshoff, and a number of races were sailed. The first boat, Pyxie, was a fin-keel variety of the cutter model of Nameless, shorter and wider and with deadwood all cut away, but still allied in model to the cutter type. The second was a Herreshoff fin-keel, El Chico, a canoe-like hull with bulb fin; and the third, designed by Gardner, was a fin-keel very similar to El Chico. None of these boats varied greatly from the dimensions first chosen by Mr. Gardner for Smuggler, of 25ft. l.w.l., by 625ft. sail area, and consequently the result of their races has been merely to test the individual merits of the boats and their helmsmen, and to throw no light on the more important question of the best proportions of length and sail for the class. On her visit to Boston last year Pyxie met a different class of boat in the Eastern 21-footer, boats of less length and greater sail area, and as a result she was badly beaten in the races, sailed mostly in light weather. This experience proved what some observers of the class had already pointed out, that the dimensions of the boats Nameless, Needle, Smuggler, Pyxie, El Chico and Nemadgy were not the best possible in a sum total of 25ft. sailing length, and that in the light weather which is found on Long Island Sound a smaller hull with more sail would prove a winner.

The first to take advantage of this hint is Mr. George Bullock, of the Seawanhaka Corinthian Y. C., who now appears as the owner of the mysterious fin-keel just completed at Lawley's from Stewart & Binney's designs. Folly, as she is called, is one of the finest small craft yet launched about New York or Boston, the workmanship and finish being specially good. She is of canoe shape, with a roman

The Stewart & Binney fin-keel on the stocks at Wilmington. From the Boston Globe.

nose, a round section with light bilge and a very neatly shaped overhang which terminates in a light archboard, quite different from the Herreshoff stern. She is 31ft. over all, 21ft. l.w.l., 7ft. beam and 6ft. 6in. extreme draft, of which 5ft. 3in. is fin, a plate of 3/16in. Tobin bronze 4ft. 6in. long on lower edge. In place of the balance or fishtail rudder of all fin-keel craft she has a small triangular fin of Tobin bronze at the after end of waterline, the bronze rudder being hung in the usual manner on the plate, the after edge forming a deep, narrow, moderate rake. Her cockpit is long and narrow, elliptical in shape, and an elliptical coaming includes enough of the deck to form a seat. Between the cockpit and mast is a circular hatch opening into the cuddy. The hull is of Spanish cedar, both planking and deck, of double-skin construction, a smooth a beautiful piece of work. The deck fittings are few and simple, the rig is a mainsail and jib. With her waterline of 21ft., as given, she will be entitled to no less than 500sq. ft. and there can be little doubt as to her performance in the usual light weather about Oyster Bay with the small cutters of only 625sq. ft. What the result will be in harder weather, and whether these proportions do not tend to the opposite extreme, of too little hull and too much sail, remains to be seen, but in any event the new Folly is likely to throw new and needed light on the practical operation of classification by sailing length. In this connection it may be mentioned that another mystery of the deep is still unsolved, a new "Alpha" that is still in the Herreshoff shops, said to be for a New York owner. Her dimensions are as yet unknown, but it is not unlikely that she may make her moorings in Oyster Bay and strike terror to "vested interests" in the 25ft. class.

[We understand that the waterline is over 11ft., probably between 22 and 23ft.]

Seawanhaka Corinthian Y. C.

THE Seawanhaka Corinthian Y. C. will open the season on May 27 at its Oyster Bay club house, breakfast being served at 1 P. M., immediately after the hoisting of the flags. The house this year will be in charge of Messrs. F. Delano Weeks, George Bullock, Sidney Chubb, Auguste P. Montauk and Francis T. Underhill. The first of the season, although last year was an experiment, it was most satisfactory, the experience gained, however, has pointed to improvements in various directions. The town house, which was closed last summer, will be kept open throughout the year; the train service to Oyster Bay has been improved by the Long Island R. R., a new and much larger steamer has replaced the small launch, and will meet all trains from New York at the railroad pier. The landing boat in front of the club house has been entirely improved. The mess dinners, which have become such a popular feature of the winter season, were discontinued on May 18, but will be resumed in October. The navigation class, under Capt. Howard Patterson, has lately concluded its work. A special meeting of the club was held on May 23 in consequence of the recent resignation of Com. Weeks, at which Mr. Robert Center, of the recent Medusa, was elected commodore for the third time, having served in 1894-95. Com. Center has appointed Mr. Auguste P. Montauk as fleet captain.

The programme for the season has just been announced by the race committee, Messrs. Walter C. Kerr, R. D. Townsend, R. W. Gibson, Irving Cox and W. Emlen Roosevelt. On the opening day, May 27, two races will take place.

The Hoyt naphtha launch races for the cup presented by Mr. Colgate Hoyt, for cabin launches, a cup of the value of \$50; for open launches, a cup of the value of \$35. Launch races for cabin launches will be open at 3 o'clock P. M. over the catboat inside course, allowances to be made according to handicap posted at club house.

The club catboat race, a special race for club catboats, will be started over the catboat inside course at 3:10 P. M. Helmsmen will be selected and boats awarded by lot. Four entries will be required; helmsmen's prize \$15.

The regular races of the season will be open to yachts of the Atlantic, Beverly, Corinthian of Marblehead, Corinthian of New York, Eastern, Knickerbocker, Larchmont, Massachusetts, Marine and Field, New Haven yacht clubs, and Royal Nova Scotia Yacht Squadron, and will be governed by the racing rules and time allowances, and under the direction of the race committee of the Seawanhaka Corinthian Y. C.

The 23d annual Corinthian race will be sailed on Saturday, July 1, the full conditions of which we will publish later.

On the various dates given below there will be sailed special races for small yachts; to be sailed under the racing rules and time allowances of the club, except as specified. Entries will be received from yachts under 32ft. waterline length, all sailing in one class. Unless otherwise directed by the race committee these races shall be sailed from a one-gun start at 11 o'clock A. M., and over the Bell Buoy course. Helmsmen shall be Corinthian P. M. over the catboat inside course, except that screws shall be limited to one man for each 5ft. of waterline or fraction thereof, exclusive of the helmsman. Second prizes may be added at the direction of the race committee.

Rouse and Wetmore series: Tuesday, May 30; Saturday, June 24; Saturday, July 15; Saturday, Aug. 12. For prizes of the value of \$75

each, presented by Mr. Henry C. Rouse and Mr. Charles W. Wetmore. Measurements will be made under the Seawanhaka rules, extended to meet the requirements of the several rigs carried, and time allowances for the first race shall be determined upon the following: For keel yachts, their racing length; for centerboard yachts over 35ft. waterline, their racing length; for centerboard yachts over 30ft. and not over 35ft. waterline, 9/10 of their racing length; for centerboard yachts 30ft. waterline and under, 9/10 of their racing length.

For the second and subsequent races such other method of allowance, classification or handicap may be adopted as the race committee shall determine. When a yacht shall have won two prizes she shall be barred from further entry.

Roosevelt handicap race, Saturday, July 22. For the Alfred Roosevelt memorial cup, value \$75. Under handicaps to be arranged and announced by the race committee.

Bullock handicap race, Saturday, Aug. 26, for a cup valued at \$50, presented by Mr. George Bullock; handicaps to be arranged and announced by the race committee.

The race committee announces the following new regulation: Code signals concerning the starting of races, when it has been determined by the race committee that a race shall be started the code signal M (white X on blue ground) signifying "get under way," will be hoisted under the club burgee on the steamer or on the club house staff, and intention to postpone a race will be announced by signals, as indicated in the special signal code of the club.

Queen Mab.

As we go to press the news is announced that Queen Mab has been purchased by Mr. Percy Chubb, a New York yachtsman. The yacht was designed by Watson and built last year by Henderson & Co. for T. C. B. West. She is the first large centerboard racing yacht built in Great Britain for many years. She is of composite construction, 59ft. 3in. l.w.l., about 16ft. beam and about 11ft. draft, her centerboard being of Delta metal, weighing 3 1/4 tons. Her sail area by the Y. R. A. rule is 4,032sq. ft., making her of 40-rating. She will find no yachts of her own length to race with in this country, as there are no modern yachts between the 40ft. Wasp and 70ft. Katrina. Last season Queen Mab was conceded to be the best of the 40-rating class, her record standing 46 starts, 24 firsts, 11 seconds and one other prize, amounting to £1,187, including a Queen's cup at the Royal Firth regatta. Much

similar yawl, for J. W. Hill, of Boston. She will be 38ft. over all, 27ft. l.w.l., 10ft. 6in. beam and 5ft. draft. Her name will be Linda. At the same yard a keel has been laid for a steamer for Mr. Goodyear, of New York. She will be 61ft. over all, 55ft. l.w.l., 11ft. beam and but 5ft. draft, being intended for the Indian River.

Nothing has yet been done toward a suitable harbor at Chicago, and it is very doubtful whether one will be built. The schooner Fortuna is now on her way from Marblehead to the St. Lawrence, the steam yacht Norseman, Mr. S. R. Platt, has sailed from England for Chicago. The steamer Wild Duck, Col. J. M. Forbes, has sailed for Montreal, where her owner and a party will join her preparatory to a trip through the canals and lakes. The new Herreshoff steamer Laurie, will visit Chicago, and the steam yacht Manola, Thos. Pratt, of New Haven, leaves this week with a party aboard.

The latest proof that truth is stranger than fiction is found in the occurrence of May 10, off Chatham, when 3,000lbs. of dynamite were exploded under the wrecked Alva. The terrible explosion which ensued not only tore the hull apart, throwing a large portion so far away that it was not visible, but it so frightened a large whale that it rushed wildly around and finally became entangled with the bell buoy. In his struggles he parted the mooring chain and made for sea with the buoy in tow and the bell ringing. This quite discounts the story in "Olivette," which may, after all, be true. Little is left of the Alva, as the remaining pieces can be easily destroyed by small charges.

Serkara, schr., designed by Stewart & Binney for N. L. Francis, of Boston, was launched at A. J. Frisbie's yard on May 15, the owner and a party of friends being present. The yacht is 70ft. over all, 50ft. l.w.l., 15ft. beam and 9ft. 6in. draft. The saloon is 15ft. long, under a low trunk, and there are two 8ft. staterooms. The saloon is finished in white and mahogany, with crimson upholstery. The joiner and cabinet work is very handsome and conveniently arranged. The sails were made by Wilson & Silsby. The yacht was christened with American wine by Miss Mallon, of Dochester.

Waterhouse & Cheeseborough are quite busy with a number of vessels. The passenger steamer is nearly finished, the Foster fin keel will go overboard this week, and Lawley has the molds ready for a 47ft. yawl of shoal draft, for Biscayne Bay, Fla. Lawley will build the Hopkins yawl and also a 30-footer. An order has just been placed with Story, of Essex, for a keel cruising schooner for W. T. Lambert

QUEEN MAB. DESIGNED BY G. L. WATSON.

has been said about her centerplate, the common report being that she does not use it.

The report that Queen Mab had had her centerboard removed is now supplemented by another to the effect that the board was not removed, but merely beveled off on the edges. There is also another report afloat to the effect that she has sailed for America, having been purchased by an American. Sawyer & Son, of New York, recently made to Mr. Watson's order a set of sails for a 40-rater, and as Watson is building no new boat of the 40 class this year, it is probable that they were intended for Queen Mab.

Brooklyn Y. C. Annual Regatta.

THE Brooklyn Y. C., under its recent and present management, has done much to regain its old-time prestige, and though it is hardly likely that the fleet will again number such big vessels as once sailed under the B. Y. C. flag, the club is building up a fine fleet of cruising and racing craft from 60ft. downward, and is working hard for the encouragement of racing.

This season the annual regatta will be on a larger scale than ever of late years, invitations having been sent to 33 clubs about New York. The race will be sailed on June 12, starting at 9:30 A. M. sharp, and the courses will be on New York Bay. The race will be under the Seawanhaka rule, now used by the club, with no shifting ballast, a crew limit, and the helmsman of each yacht must be a member of a club having one or more yachts entered. The club classes are as follows:

Cabin Yachts—Schooners—50ft. class, 50ft. and under, course 23 miles; 60ft. class, 50ft. to 60ft., 37 miles; 70ft. class, 60ft. to 70ft., 32 miles; 80ft. class, 70ft. to 80ft., 27 miles; 90ft. class, 80ft. to 90ft., 22 miles; 100ft. class, 90ft. to 100ft., 17 miles; 110ft. class, 100ft. to 110ft., 12 miles; 120ft. class, 110ft. to 120ft., 7 miles; 130ft. class, 120ft. to 130ft., 2 miles; 140ft. class, 130ft. to 140ft., 2 miles; 150ft. class, 140ft. to 150ft., 2 miles; 160ft. class, 150ft. to 160ft., 2 miles; 170ft. class, 160ft. to 170ft., 2 miles; 180ft. class, 170ft. to 180ft., 2 miles; 190ft. class, 180ft. to 190ft., 2 miles; 200ft. class, 190ft. to 200ft., 2 miles; 210ft. class, 200ft. to 210ft., 2 miles; 220ft. class, 210ft. to 220ft., 2 miles; 230ft. class, 220ft. to 230ft., 2 miles; 240ft. class, 230ft. to 240ft., 2 miles; 250ft. class, 240ft. to 250ft., 2 miles; 260ft. class, 250ft. to 260ft., 2 miles; 270ft. class, 260ft. to 270ft., 2 miles; 280ft. class, 270ft. to 280ft., 2 miles; 290ft. class, 280ft. to 290ft., 2 miles; 300ft. class, 290ft. to 300ft., 2 miles; 310ft. class, 300ft. to 310ft., 2 miles; 320ft. class, 310ft. to 320ft., 2 miles; 330ft. class, 320ft. to 330ft., 2 miles; 340ft. class, 330ft. to 340ft., 2 miles; 350ft. class, 340ft. to 350ft., 2 miles; 360ft. class, 350ft. to 360ft., 2 miles; 370ft. class, 360ft. to 370ft., 2 miles; 380ft. class, 370ft. to 380ft., 2 miles; 390ft. class, 380ft. to 390ft., 2 miles; 400ft. class, 390ft. to 400ft., 2 miles; 410ft. class, 400ft. to 410ft., 2 miles; 420ft. class, 410ft. to 420ft., 2 miles; 430ft. class, 420ft. to 430ft., 2 miles; 440ft. class, 430ft. to 440ft., 2 miles; 450ft. class, 440ft. to 450ft., 2 miles; 460ft. class, 450ft. to 460ft., 2 miles; 470ft. class, 460ft. to 470ft., 2 miles; 480ft. class, 470ft. to 480ft., 2 miles; 490ft. class, 480ft. to 490ft., 2 miles; 500ft. class, 490ft. to 500ft., 2 miles; 510ft. class, 500ft. to 510ft., 2 miles; 520ft. class, 510ft. to 520ft., 2 miles; 530ft. class, 520ft. to 530ft., 2 miles; 540ft. class, 530ft. to 540ft., 2 miles; 550ft. class, 540ft. to 550ft., 2 miles; 560ft. class, 550ft. to 560ft., 2 miles; 570ft. class, 560ft. to 570ft., 2 miles; 580ft. class, 570ft. to 580ft., 2 miles; 590ft. class, 580ft. to 590ft., 2 miles; 600ft. class, 590ft. to 600ft., 2 miles; 610ft. class, 600ft. to 610ft., 2 miles; 620ft. class, 610ft. to 620ft., 2 miles; 630ft. class, 620ft. to 630ft., 2 miles; 640ft. class, 630ft. to 640ft., 2 miles; 650ft. class, 640ft. to 650ft., 2 miles; 660ft. class, 650ft. to 660ft., 2 miles; 670ft. class, 660ft. to 670ft., 2 miles; 680ft. class, 670ft. to 680ft., 2 miles; 690ft. class, 680ft. to 690ft., 2 miles; 700ft. class, 690ft. to 700ft., 2 miles; 710ft. class, 700ft. to 710ft., 2 miles; 720ft. class, 710ft. to 720ft., 2 miles; 730ft. class, 720ft. to 730ft., 2 miles; 740ft. class, 730ft. to 740ft., 2 miles; 750ft. class, 740ft. to 750ft., 2 miles; 760ft. class, 750ft. to 760ft., 2 miles; 770ft. class, 760ft. to 770ft., 2 miles; 780ft. class, 770ft. to 780ft., 2 miles; 790ft. class, 780ft. to 790ft., 2 miles; 800ft. class, 790ft. to 800ft., 2 miles; 810ft. class, 800ft. to 810ft., 2 miles; 820ft. class, 810ft. to 820ft., 2 miles; 830ft. class, 820ft. to 830ft., 2 miles; 840ft. class, 830ft. to 840ft., 2 miles; 850ft. class, 840ft. to 850ft., 2 miles; 860ft. class, 850ft. to 860ft., 2 miles; 870ft. class, 860ft. to 870ft., 2 miles; 880ft. class, 870ft. to 880ft., 2 miles; 890ft. class, 880ft. to 890ft., 2 miles; 900ft. class, 890ft. to 900ft., 2 miles; 910ft. class, 900ft. to 910ft., 2 miles; 920ft. class, 910ft. to 920ft., 2 miles; 930ft. class, 920ft. to 930ft., 2 miles; 940ft. class, 930ft. to 940ft., 2 miles; 950ft. class, 940ft. to 950ft., 2 miles; 960ft. class, 950ft. to 960ft., 2 miles; 970ft. class, 960ft. to 970ft., 2 miles; 980ft. class, 970ft. to 980ft., 2 miles; 990ft. class, 980ft. to 990ft., 2 miles; 1000ft. class, 990ft. to 1000ft., 2 miles; 1010ft. class, 1000ft. to 1010ft., 2 miles; 1020ft. class, 1010ft. to 1020ft., 2 miles; 1030ft. class, 1020ft. to 1030ft., 2 miles; 1040ft. class, 1030ft. to 1040ft., 2 miles; 1050ft. class, 1040ft. to 1050ft., 2 miles; 1060ft. class, 1050ft. to 1060ft., 2 miles; 1070ft. class, 1060ft. to 1070ft., 2 miles; 1080ft. class, 1070ft. to 1080ft., 2 miles; 1090ft. class, 1080ft. to 1090ft., 2 miles; 1100ft. class, 1090ft. to 1100ft., 2 miles; 1110ft. class, 1100ft. to 1110ft., 2 miles; 1120ft. class, 1110ft. to 1120ft., 2 miles; 1130ft. class, 1120ft. to 1130ft., 2 miles; 1140ft. class, 1130ft. to 1140ft., 2 miles; 1150ft. class, 1140ft. to 1150ft., 2 miles; 1160ft. class, 1150ft. to 1160ft., 2 miles; 1170ft. class, 1160ft. to 1170ft., 2 miles; 1180ft. class, 1170ft. to 1180ft., 2 miles; 1190ft. class, 1180ft. to 1190ft., 2 miles; 1200ft. class, 1190ft. to 1200ft., 2 miles; 1210ft. class, 1200ft. to 1210ft., 2 miles; 1220ft. class, 1210ft. to 1220ft., 2 miles; 1230ft. class, 1220ft. to 1230ft., 2 miles; 1240ft. class, 1230ft. to 1240ft., 2 miles; 1250ft. class, 1240ft. to 1250ft., 2 miles; 1260ft. class, 1250ft. to 1260ft., 2 miles; 1270ft. class, 1260ft. to 1270ft., 2 miles; 1280ft. class, 1270ft. to 1280ft., 2 miles; 1290ft. class, 1280ft. to 1290ft., 2 miles; 1300ft. class, 1290ft. to 1300ft., 2 miles; 1310ft. class, 1300ft. to 1310ft., 2 miles; 1320ft. class, 1310ft. to 1320ft., 2 miles; 1330ft. class, 1320ft. to 1330ft., 2 miles; 1340ft. class, 1330ft. to 1340ft., 2 miles; 1350ft. class, 1340ft. to 1350ft., 2 miles; 1360ft. class, 1350ft. to 1360ft., 2 miles; 1370ft. class, 1360ft. to 1370ft., 2 miles; 1380ft. class, 1370ft. to 1380ft., 2 miles; 1390ft. class, 1380ft. to 1390ft., 2 miles; 1400ft. class, 1390ft. to 1400ft., 2 miles; 1410ft. class, 1400ft. to 1410ft., 2 miles; 1420ft. class, 1410ft. to 1420ft., 2 miles; 1430ft. class, 1420ft. to 1430ft., 2 miles; 1440ft. class, 1430ft. to 1440ft., 2 miles; 1450ft. class, 1440ft. to 1450ft., 2 miles; 1460ft. class, 1450ft. to 1460ft., 2 miles; 1470ft. class, 1460ft. to 1470ft., 2 miles; 1480ft. class, 1470ft. to 1480ft., 2 miles; 1490ft. class, 1480ft. to 1490ft., 2 miles; 1500ft. class, 1490ft. to 1500ft., 2 miles; 1510ft. class, 1500ft. to 1510ft., 2 miles; 1520ft. class, 1510ft. to 1520ft., 2 miles; 1530ft. class, 1520ft. to 1530ft., 2 miles; 1540ft. class, 1530ft. to 1540ft., 2 miles; 1550ft. class, 1540ft. to 1550ft., 2 miles; 1560ft. class, 1550ft. to 1560ft., 2 miles; 1570ft. class, 1560ft. to 1570ft., 2 miles; 1580ft. class, 1570ft. to 1580ft., 2 miles; 1590ft. class, 1580ft. to 1590ft., 2 miles; General orders No. 1. William Caleb Loring is hereby appointed fleet captain."

On May 15, the centerboard sloop Olive, of New Rochelle, white bound for Atlantic City, N. J., ran ashore on the outer bar of Absecon Inlet, but was floated by the aid of other yachts without serious damage.

The Bayonne Y. C., has elected the following officers: Com., W. E. Ellsworth; Vice-Com., T. Hopkins; Sec., Phil. J. Mooney; Treas., F. H. Ellsworth; Meas., Phil. E. Van Burskirk. New York Yacht Racing Association Committee—Capt. Joe Ellsworth, John O'Neil and Edward H. Bennett.

The yacht Gitanra yesterday arrived in Boston, in tow, from Savannah, Ga. On the 20th of last month the Gitanra, with Mr. George Weld and a party on board, went on Wolf Island Shoal, Dubois Inlet, coast of Georgia, at 7:30 o'clock at night, with a high wind blowing over her stern, a heavy sea running, and the cheering accompaniment of thunder, lightning and driving rain. On this shoal the Gitanra rounded till 1:30 the following day when she was bumped in over a sand bar which lay directly astern, and beached within two miles of the shore. Then the passengers and crew were taken off, and two days later the yacht was dragged by two tugs through the sand to a channel, and thence towed to Savannah. Her pig iron ballast was put aboard a lighter and sent ahead to Savannah, where upon the yacht's arrival it was put back again, and the yacht, having been caulked and made as tight as possible, came on to Boston. She will now be hauled up on the ways and her owners will hold a consultation as to whether she is worth being further repaired. As she stands now she is a sorry-looking vessel. Her lead keel is gone, both boats are more or less stove in, and everything below is ruined by the salt water. The piano, the bunks, the transoms, the desk, library and in fact all the cabin furnishings are a hopeless wreck. The foremast, which, with its boom and gaff was cut away to make a raft, is ruined, and all the running and standing rigging will need thorough overhauling. For a rough estimate it would cost eight or ten thousand dollars to put the yacht in trim again. Mr. Colbreth, who went as mate, says that the treatment which the yacht's crew received at the hands of the Georgia "Crackers" who live in Dubois, was outrageous. They stole everything that they could lay their hands on, and the yacht, till she was hauled off, was constantly surrounded by a flotilla of small boats, ready to take advantage of the slightest relaxation of vigilance on the part of the crew and to bounce upon the yacht and loot recklessly. The steward was knocked down and beaten because he attempted to do guard duty when he went ashore for provisions. The wreckers refused to put him on board the yacht again, and altogether, from Mr. Colbreth's account of Dubois, it is a good place to avoid.—*Boston Morning Journal*, May 17.

The Longport (N. J.) Yachtsmen's Association has elected the following officers: Pres. A. B. Steelman; Sec., Bolton Steelman; Treas., J. C. Albertson.

A serious accident occurred on the Delaware River on May 8, the sloop Monarch capsizing when off Chester, her party of eleven men being taken off by the tug Owen Brady before she sunk. The Monarch is, we believe, the 48ft. cabin centerboard yacht of that name.

Flash, shoot, has been chartered by C. B. Baker to J. H. Sterling, Larchmont Y. C., for the season.

The Canaris Y. C. will open the season on May 27 by a review and reception.

The annual regatta of the Douglaston Y. C. will take place June 24. Lady Evelyn, schr., has been sold by Sir Roderick Cameron to A. E. Tower, of Poughkeepsie, who is refitting her at Newburgh.

W. Van Deusen, of Cooper's Point, has on the stocks a 30ft. launch for F. J. Petry, of Philadelphia, to be named Tincum. She is 38ft. over all, 6ft. beam and 2ft. 3in. draft.

A. C. A. Membership.

EASTERN DIVISION: Franklin S. Leavitt and Harry W. Anderson, Boston, Mass.

Rifle Range and Gallery.

Zettler Rifle Club's Bi-Monthly Shoot.

CYPRESS HILLS PARK, May 21.—The members of the Zettler Rifle Club met here this morning for their regular outdoor practice. Following so close as it does after the club's prize shoot on Monday, the attendance was not as large as there would otherwise have been. However, the scores of those who were present and participated in the three hours' practice were well up to the average. F. Fabarius in age is several years past three score and ten. He is excusable for making a miss now and then. Dr. Boyken was experimenting with the .33-30 and his scores are not what he can do with the proper tools. R. Hamann shot in expert form. He made in 9 strings of 10 shots each the following scores: 210, 216, 210, 213, 226, 225, 212, 217, or an average of 219 per string.

Ten-shot scores, 3 scores to count:

A Merchandise Series.

HARTFORD, Conn., May 20.—The Colt Gun Club have just finished a series of 24 shoots commenced June 1, for a number of merchandise prizes, the conditions being to shoot once every two weeks for 24 shoots at 25 targets, and any member shooting 10 times out of the 24 shoots is entitled to be in for the prizes. To make it equal for the poorer shots a handicap of 1 to 7 targets was allowed to be added to what the shooter broke out of 25. Fifteen qualified for the prizes. Following are the actual scores with handicap added and prizes selected, the best scores taking first, second best next choice and so on:

Score.	cap.	Total.	Prizes selected.
F Manross.....	236	0	250
F Risley.....	244	0	244
C Burbridge.....	242	0	242
O Treat.....	311	30	341

RIFLE NOTES.

THE New York City Corps, Capt. Chris Rehm, will hold its monthly shoot in Washington Park on Friday, May 26.

A team match between the Heidenreich and the Port Chester Rifle clubs will be shot off at Port Chester on Decoration Day.

By referring to the report of the Zettler Rifle Club shoot at Cypress Hills on the 21st inst., it will be seen that the shooters all used lubricated bullets. At the previous shoots most of them used the 330 patched bullets. Some days ago one of the members of the club experienced a desire to know what his rifle would do with lubricated bullets on a slide rest, so he betook himself to Cypress Hill Park and gave the rifle a good, thorough test. The best 30-shot group was just covered by a 3/16in. circle. This result was not what had been expected and when the shooter went into the Zetter's office all used the 15th issue, he had many misgivings as to how his pocketbook would look at the close of the shoot. But when the festival was over and the loss and gains counted up, it was found that this member was one of the two or three who reached the head of the prize list, and got back more cash than he shot in.

A team match between the Hudson Rifle Club of Mariou, N. J., and the Greenville Rifle Club of Greenville, N. J., will take place in Armbruster's Park on Tuesday, May 30. Each team will consist of ten men, the five of Armbruster's best diners, to be paid for by the losing team.

The seventh annual summer festival of the Miller Rifle Club, Capt. E. Fischer, will take place at Pohlmann's Park, Jersey City Heights, on June 4 and 5. The club offers a liberal programme for both shooting and bowling. On the ring target there are sixteen prizes, ranging from \$40 down to \$1. On the bulls-eye target there are twelve prizes ranging from \$20 down to \$1. There are four premiums of \$10, \$7, \$5 and \$3 for the most red flags.

Heidenreich Rifle Club.

The summer festival and grand prize shoot of the Heidenreich Club was held in Union Park, on Friday, May 19. The weather conditions were all that the rifle crank, or the pickpinner could ask for, and as a consequence all hands were there prepared to take advantage of the pleasures of the day. The shooting house was the Mecca toward which all the lovers of the rifle were attracted and from the opening of the range in the morning until sunset, the targets were well patronized. The Zettler Brothers had charge of the shooting house and supplied the rifles and ammunition for those shooters who had left their guns at home. At 6 P. M. there was not a round of ammunition left; the Zettler Brothers' stock having been completely exhausted; this brought the shooting programme to a close. All of the prominent shooting societies from New York, Brooklyn, Staten Island, New Jersey and Connecticut were represented. On the honor target, 3 shots, possible 18 (18 ring, 300 ft.), the following scores were made: Geo. Schlicht 52, M. Kaufmann 43, Aigeldinger 41, Val. Horn 41, M. Schulluff 40, W. Waegler 31, T. Goodman 31, W. M. Mays 29, Thos. J. McManus 21, M. Bush 17, Eberhardt 9.

Ring target—Two best tickets to count possible 108, 18 prizes, \$25 to \$1: Geo. Schlicht 106, Louis Flach 105, L. Schmidt 104, E. Fisher 104, W. Helbig 103, M. Dorrier 103, D. Miller 103, E. Zettler 101, Fred Ross 101, Val. Horn 100, J. E. Smith 100, M. Seidel 99, F. A. Bachmann 97, Jacob Hesse 97, Louis Vogel 97, J. Aigeldinger 89, Thos. McManus 88, M. Simmer 87.

Bulls-eye target (24 in. center), best center shot to count, 16 prizes, \$12 to \$1: J. E. Smith 28, B. Zettler 28 1/2, Val. Horn 30 1/2, F. Goodman 32, Geo. Schlicht 34, L. Schmidt 44, W. M. Mays 49, Louis Vogel 49, E. Fisher 50, R. Auden 52, Louis Flach 53, Thos. J. McManus 59 1/2, W. Helbig 59 1/2, Fred Ross 67, M. Seidel 67, F. A. Bachmann 74.

New York Central Schuetzen Corps.

THE spring festival and prize shoot of the New York Central Corps took place in Washington Park on Thursday, May 18. There was not as large an attendance as one would expect from a society with the large membership the Central Corps has, and it would be for the interest of the Corps, as well as for rifle shooting in general, if the board of officers of the Corps would follow the example of some of the other shooting societies in New York, who, with a very much smaller membership, are able to hold prize shoots with liberal prize lists and still turn in a good cash balance to the treasury after paying all expenses to the shoot. A society which holds out no inducements to its members to come to a festival can hardly expect much of an attendance.

The Overbaugh medal, presented to the Corps by C. E. Overbaugh in 1888, to be competed for by the members and to go to the member winning it the most times in five yearly competition, was decided at this shoot. Aug. Rohde having won it three times now holds it permanently.

On the target of honor, 3 shots, possible 75, the following scores were made: Fred Schmidt 74, Jos. Jordan 61, Aug. Rohde 56, Fred Schraeder 52, C. F. Genierich 52, Hermann Tonjes 51, Emil Berckmann 48, Fred Baumann 47, D. Meerse 47, Jacob Dux 43, W. Bergner 42, T. Jutjens 38, H. Kramer 36, H. Holsten 33, Hy Luhrs 30, A. Richter 14, C. Lehnitter 12, W. Seppelfeld 0.

Ring target, 3 shots, possible 75: Fred Schraeder 63, Fred Schmidt 63, Emil Berckmann 63, Aug. Rohde 63, J. Eisenhardt 62, Jacob Dux 62, F. Genierich 61, W. A. Ross 56, H. Holsten 52, W. Bergner 52, Fred Baumann 50, D. Meerse 49, H. Young 48, T. Jutjens 47, J. Jordan 39, A. Richter 20, C. Lehnitter 15.

Man target, 3 shots, possible 60: C. F. Genierich 53, Fred Schraeder 51, Fred Schmidt 51, J. Eisenhardt 51, Emil Berckmann 49, Jacob Dux 43, T. Jutjens 42, W. A. Ross 41, H. Holsten 41, J. Jordan 39, D. Meerse 30, Fred Baumann 37.

Newark Schuetzen Park.

By invitation a few shooters gathered at the Newark Schuetzen Park, on Monday, the 22d inst., for the opening of the season 1893. Alex. Volheye, the genial proprietor of the park, was on hand to extend a friendly greeting to the visitors as they entered the shooting grounds. Frank Watts, who has just passed through a siege of pneumonia, was out for the first time.

There being no regular programme the afternoon was devoted to pool shooting on the German ring target, 3 shots per man, possible 75, entry 25 cents:

First pool winners: W. Hayes 65, F. Watts 64.
Second pool winners: W. Hayes 65, F. Watts 64, B. Walther 63.
Third pool: W. Hayes 67, G. Weigman 57.
Fourth pool: F. Watts 70, W. Hayes 64, Gardner 62.
Fifth pool: W. Hayes 65, F. Watts 59.
Sixth pool: W. Hayes 65, B. Walther 62.
Seventh pool: W. Hayes 67, B. Walther 64.
Eighth pool: W. Hayes 67, G. Weigman 67.
Ninth pool: G. W. Plaisted 65, W. Hayes 63.

Miller Rifle Club.

HOBOKEN, N. J., May 30.—The Miller Rifle Club, of Hoboken, has completed its eighth annual summer festival, a prize shooting and bowling festival, which takes place in Pohlmann's Pavilion, Ogden avenue, Jersey City Heights, on Sunday and Monday, June 4 and 5. Shooting will be a feature on both days, the picnic and prize bowling only taking one day, June 5. The committee of arrangements could not secure a suitable date with the manager of the Union Hill Schutzen Park, and therefore the club decided to hold their festival in the place named above. The range is 300 yds. long, 75 ft. wide, and therefore .22cal. rifles only will be allowed to be used. If appearances go for anything this affair will eclipse any former effort of the club.

Programme: Ring target 200ft. range, 16 prizes \$40 to \$1, open for all comers, tickets \$1.00 per 3 shots, re-entries unlimited, two best tickets to count, shooting Sunday and Monday from 9 A. M. to 7 P. M. Bulls-eye target 200ft. range, open to all comers, tickets, 10 shots, \$1 unlimited, the best bulls-eye by any one shooter to count by measure, prizes \$30 to \$2. Premiums: For first most bulls-eyes \$10, \$7, \$5, \$3, first and last flag each day \$1. Prize bowling, June 5, prizes \$15 to \$2, a handsome gold medal for the ten best tickets; bowling will take place from 9 A. M. to 11 P. M. Ladies' prize shoot: For a hand

some gold medal, all entries to be accompanied by a prize, one day, June 5, only. Target of honor: three shots, open to members of the club for the prizes presented by the judges and members. Judges' target: One handsome gold medal, and handsome gold mounted umbrella, no member allowed to shoot on this target. Shooting committee: D. Miller, L. Sobl, W. H. Rogers, L. Vogel, F. Brandt, J. Meyer, L. Flach, A. Meyns. Bowling committee: H. F. Meyer, K. Zoch, A. Pfingst, F. Kammel, H. van der Heyden, J. H. Holsten, J. Shueman, Wm. Forkel. Arrangement committee: F. Liehl, J. Scott, H. D. Hencken, D. Peters, H. Lohman, Jr., J. J. Devitt, H. Kattenkamp, W. F. Taylor.

Excelsior Rifle Club.

The weekly medal shoot came off at the headquarters of the club, 78 Montgomery street, Jersey City, on Tuesday night, May 18. The appended scores were made by the members participating. Ten shots, possible 250, distance 25yds.: O. C. Boyce 238, C. Thomas 237, W. J. Hennessey, 237, P. H. Duff 234, Thos. Hughes 232, C. Bauchle 229, Jas. Binns 225, C. L. Pinney 224, L. A. Rayer 207.
The regular Friday outdoor shoot took place in Armbruster's Schuetzen Park in Greenville, N. J., on the 19th inst. The weather conditions were favorable for good shooting, and the scores of the members were up to the average. Ten shots, possible 250, distance 200yds.: O. C. Boyce 214, J. H. Ward 213, L. P. Hansen 212, C. Thomas 206, L. A. Rayer 178.

Empire Rifle Club.

THE Empire Rifle Club held its weekly medal shoot at headquarters, No. 12 St. Marks Place, on Tuesday, May 16. In the competition for the gold, silver and bronze medals the following members have qualified and received their trophies: Gold medals—C. Zettler, Jr., W. Miller, H. Zettler, B. Zahn. Silver medals—L. Buss, W. Meisenholder, A. Rosenstraus. Bronze medals—F. Davies, J. Grimm, G. Hillmeyer, M. Keller, F. Lohman, W. Rosenbaum. The scores for the week ending May 16 are appended, 10 shots, possible 250, distance 100ft.: B. Zahn 245, C. Zettler, Jr. 243, W. Miller 243, H. Zettler 241, W. Meisenholder 240, A. Rosenstraus 239, L. Buss 235, F. Davies 231, G. Hillmeyer 220, M. Keller 215, F. Lohman 213.

Greenville Rifle Club.

THE Greenville Rifle Club, of Greenville, N. J., indulged in its regular Saturday afternoon practice in Armbruster's Park on May 30. There was a good attendance of members, and a pleasing incident to all present was the appearance of Jas. Dodds in the shooting house. Mr. Dodds is the club's treasurer and he has just recovered from a two months' siege of pneumonia. The scores, 10 shots, possible 250, distance 200yds.: H. Chavart 235, C. Boag 235, G. Plaisted 212, J. Hill 200, F. Ross 215, W. H. Kobedeux 213, Geo. Furkess 210, Jas. Dodds 192.

Turtle Bay Rifle Club.

THE weekly outing of the Turtle Bay Club came off at Woodside, L. I., May 14. Only four members turned out to participate in the day's sport. The scores are appended, 10 shots, possible 250, distance 50yds.: G. E. Jantzer 235, H. Walther 231, O. G. Fuchs 230, J. Krampert, 225.

The following scores were made on the 2d, distance 50yds.: G. E. Jantzer 238, H. Walther 235, C. H. Plate 230, J. Krampert 230, A. Frank 215.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

May 25-26.—Putney (Vt.) Rod and Gun Club tournament.
May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
May 30.—Maplewood vs. Union Gun Clubs, team contest at live birds, at Springfield, N. J.
May 30.—White Plains (N. Y.) tournament.
May 30.—Highland Gun Club tournament, at Moline, O.
May 30.—Muskegon (Mich.) Gun Club tournament.
May 30.—Sportsmen's Gun Club tournament, at Wilkinsburg, Pa.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June 1-2.—Norristown (Pa.) Penn Gun Club tournament, bluebirds 100 bird race, entrance \$10; for programme address Jonas U. Cassel Norristown, Pa.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
June 14-17.—Sportsmen's Association of the Northwest, annual tournament at Victoria, B. C.
June 20-22.—South Dakota State Sportsmen's Association tournament, at Vermillion, S. D.
June 21-22.—Inter-State Manufacturers' and Dealers' Association second annual tournament, Wapnonock Park, Altoona, Pa.
June 27-28.—Oregon State Sportsmen's Association tournament, at Salem, Oregon.
June 28-29.—Summer tournament of the Peekskill Gun Club, Peekskill, N. Y. H. B. Wygant, President, Peekskill, N. Y.

ON THE HILL AT PASSAIC.

THE Interstate Manufacturers' and Dealers' Association tournament at Passaic, N. J., last week, given by the Passaic City Gun Club, and held on their beautiful grounds on the hill was an enjoyable gathering of shooters from this vicinity. In these days with all the sports at various points, each one earning the support of local shots, Manager Shaner considers that an attendance of twenty men is to be counted as a well patronized shoot; but he points with pride to the participation at Passaic of thirty shooters at one time, and to an attendance in all of fifty-one shooters during the week.

The grounds are admirably situated, the tournament was well contested, weather favored the New Jersey boys, and taken altogether the Passaic City Gun Club and the Association have abundant reason for satisfaction. The scores follow:

No. 1, 10 targets:		First Day.

THE LANSING TOURNAMENTS.

The Manufacturers' Association's Tournament.

The May tournament of the Manufacturers' Trap-Shooting Association was held on the Fair grounds in the beautiful city of Lansing, Mich., on May 16 and 17. It was most successfully conducted by its popular manager, Mr. John Parker, of Detroit, Mich., under his energetic attention the spirit of the competition did not flag for a moment from start to finish. He was ably assisted by Messrs. Keller, Lindsey, Courtney, Grubbs and Bush, all of whom seem to have an incurable target-breaking habit. Mr. Bush was most courteous, obliging and popular.

Montgomery Ward & Co. had an exhibit of guns under the charge of their genial and wide-awake representative, Charles W. Grubb, of the Hunter Arms Co. and Parker Bros. respectively also had an exhibit of guns.

The Paul North electric pull was used. The weather, while not bad, was not favorable for good scores. A steady wind blew from behind the traps on Tuesday, and on Wednesday it blew both steady and strong. It added much to the speed of the targets, besides making their flight erratic. A background of woods in the distance was unfavorable for good sighting, particularly in a dull light.

At a meeting of the directors Messrs. McMurchy, Courtney, Keller and Lindsey being present, it was decided that a tournament would be held in Missouri in July, the date of which would be fixed and announced later on, one in Virginia in August and one in Pennsylvania in September. In June the Association will have its representatives in Chicago.

American Association rules as revised by C. W. Dimick, governed. There were four 10-bird events each day, which were the only ones in which a handicap was made. It was the Parker system, as follows: In the first of these events each day every one shot at known traps, known angles and fire system. The handicap enforced there after is explained as follows: "Those who win or tie for first money shoot first in next 10-bird event at unknown traps and unknown angles, from traps 1, 2 or 3, or 3, 4 or 4, according to where he is standing as he walks down the score, he having 3 unknown traps to shoot from always, indicator to be turned at each shot. Those who win or tie for second money shoot second in the following event at known traps, unknown angles. Those below second place are shot handicapped. Thus a shooter is classified from one event to another according to the score he is making."

The two 15-bird events each day were shot as follows: "One man up at a time, standing in the center, 5 unknown traps and angles, indicator turned at each shot. Those who break 15 straight receive \$10 each, the 14s \$8 each, the 13s \$6 each, the 12s \$5 each, the 11s \$4 each, the 10s \$3, the 9s \$2 each."

The 20-bird events were as follows: "One man up at a time, standing in the center, 5 unknown traps and angles, 21yds. rise for 12-bore and 23yds. rise for 10-bore; both barrels can be used, second barrel to score same as first. Those who break 20 straight \$15, the 19s \$12, the 18s \$11, the 17s \$9, the 16s \$7, the 15s \$6, the 14s \$5, the 13s \$4, the 12s \$3."

The surplus shoot each day was as follows: At 15 targets, known traps and angles, rapid fire, open only to those who have participated in the two 15 and 20-bird races. Any surplus accruing from entrance money or what has not been paid out of the \$100 which the association puts up each day will be shot for in this shoot; 70 per cent. of the total is divided among the three highest places, 50, 30 and 20 per cent., and the remaining 10 per cent. is divided among the three next highest places, 50, 30 and 20 per cent.

All prizes not specified were divided 40, 30 and 10 per cent.

Tuesday.

Heavy clouds which overcast the sky nearly all day made a dull light, and this unfavorable circumstance, with the steady wind which blew from the rear, made their effects felt in the scores. Mr. Courtney was shooting a new gun in the forenoon, which he could not get on friendly terms with. He returned to town, got another gun with which he was better acquainted, and that afternoon he had a stride in his shooting and gave more for an example.

The targets throughout the tournament were bluebirds. Targets were included in entrance.

No. 1, 10 bluebirds, \$1.50: Keller 7, Heikes 8, Courtney 6, Whiskers 8, Holt 7, Searies 8, Howes 7, Carpenter 9, Grubbs 5, Sweet 7, Schelling 7, Hammond 7, Renick 6, Bush 6, D. Smith 3, Thompson 6.

No. 2, 10 bluebirds, \$1.50: Courtney 8, Heikes 10, Whiskers 10, Searies 9, D. Smith 4, Keller 6, Carpenter 8, Holt 5, Howes 4, Schelling 8, Sweet 3, Thompson 7, Hammond 8, Hall 8, Renick 7.

No. 3, 15 bluebirds, \$2.50: Keller 9, Heikes 12, Courtney 8, Whiskers 7, Searies 11, Holt 7, Howes 5, D. Smith 1, Carpenter 6, Schelling 10, Renick 8, Sweet 7, Thompson 11, Bush 10, Hammond 8, Lindsey 12, McMurchy 10, Cooley 7.

No. 4, 5 pairs bluebirds, \$1.50: Heikes 7, Courtney 5, Whiskers 5, Searies 7, Holt 5, Howes 5, Smith 4, Carpenter 7, Cooley 7, McMurchy 5, Schelling 6, Thompson 7, Renick 5, Hall 7, Bush 4, Delavergne 6.

No. 5, 10 bluebirds, \$1.50: Heikes 8, Whiskers 9, Searies 8, Sweet 8, Lindsey 7, Smith 4, Cooley 7, McMurchy 10, Thompson 8, Schelling 8, Delavergne 8, Carpenter 7, Keller 6, Holt 6, Howes 6, Courtney 8, Renick 10, Bush 7, Hammond 7, Drew 8.

No. 6, 15 bluebirds, \$2.50: Keller 8, Heikes 14, Courtney 8, Whiskers 10, Searies 12, Holt 11, Howes 4, Lindsey 8, Cooley 7, Thompson 13, Smith 4, Delavergne 6, McMurchy 15, Schelling 9, Carpenter 4, Sweet 8, Bush 9, Renick 10.

No. 7, 10 bluebirds, \$1.50: McMurchy 9, Renick 6, Whiskers 9, Heikes 10, Searies 9, Holt 6, Howes 4, Keller 4, Smith 4, Cooley 6, Lindsey 5, Delavergne 6, Thompson 9, Miller 7, Courtney 6, Schelling 8, Carpenter 4, Drew 6, Bush 3.

No. 8, 20 bluebirds, \$3.00: Lindsey 6, Keller 13, Heikes 17, Smith 7, Courtney 10, Whiskers 16, Holt 12, Howes 10, McMurchy 10, Searies 14, Cowley 12, Sweet 8, Thompson 18, Schelling 12, Carpenter 7, Bush 11, Delavergne 6, Renick 10, Drew 16.

No. 9, surplus, 15 bluebirds, entrance price of targets. Smith 6, Heikes 14, McMurchy 13, Searies 13, Lindsey 10, Cooley 13, Bush 11, Howes 9, Courtney 16, Thompson 11, Carpenter 9, Sweet 14, Schelling 14, Keller 11, Whiskers 14, Renick 12, Holt 12.

A few ten-bird sweepstakes were next shot, \$1 entrance.

Wednesday.

The weather was clearer and the light, therefore, was better, but a strong wind blowing all day steadily from the rear added to the difficulties of the shooting.

The chief event of the day was the individual State championship race for the Manufacturers' Trap-Shooting Association's individual trophy, which was won by Mr. Casper Schelling, of Lansing. The medal itself was of a pretty design, emblematic of the occasion, and artistic in construction. Hearty congratulations were bestowed upon the victor. Mr. A. G. Courtney, the representative of the Lefevre Arms Co., made a most happy presentation speech and three rousing cheers for the victor closed the affair of the trophy.

Messrs. Courtney and Lindsey left for their homes in the evening, and Mr. Keller left for Knoxville, Tenn.

No. 1, 10 bluebirds, \$1.50: Heikes 9, Courtney 9, Whiskers 9, Schelling 7, Keller 6, Holt 7, Searies 7, Brew 8, Van Duser 4, Nichols 9, Hewes 5, Renick 4, Miller 5, Wharton 7, Thresher 6, Bush 7, Tufty 3, Grubbs 6.

No. 2, 10 bluebirds, \$1.50: Heikes 7, Courtney 4, Nichols 7, Whiskers 8, Searies 10, Drew 7, Holt 3, McMurchy 4, Van Duser 5, Thompson 9, Schelling 6, Wharton 9, Woodworth 4, Sherwood 6, Hewes 6, Miller 8, Thresher 5, Renick 9, Hall 8, Keller 7, Bush 7, Allen 4, Lindsey 7.

No. 3, 15 bluebirds, \$2.50: Searies 10, Keller 9, Heikes 12, Holt 12, Whiskers 12, Courtney 8, McMurchy 11, Thompson 11, Schelling 9, Holt 11, Cooley 6, Lindsey 6, Drew 4, Wharton 7, Allen 5, Hewes 10, Renick 13, Bush 12, Thresher 9.

No. 4, 5 pair bluebirds, \$1.50: Heikes 8, Renick 7, Courtney 5, Whiskers 8, Holt 7, McMurchy 7, Cooley 7, Schelling 6, Thompson 8, Lindsey 8, Searies 6, Sherwood 3, Nichols 5, Drew 6, Wharton 6, Downey 3, Hall 2, Shelley 8.

No. 5, 10 bluebirds, \$1.50: Searies 7, McMurchy 9, Wharton 7, Renick

PRESIDENT N. W. HOLT.

8, Thompson 10, Holt 6, Van Duser 8, Lindsey 6, Nichols 9, Woodworth 7, Keller 4, Whiskers 8, Sherwood 3, Schelling 7, Downey 1, Schelling 7, Allen 9, Cooley 8, Drew 7, Hewes 8, Courtney 8, Heikes 10, Bush 7, Barr 6.

No. 6, 15 bluebirds, \$2.50: Heikes 10, Keller 10, Whiskers 11, Courtney 10, Holt 4, Thompson 9, Nichols 10, Searies 12, Lindsey 12, Cooley 7, Shelley 10, Allen 8, McMurchy 12, Schelling 11, Wharton 11, Drew 7, Renick 10, Bush 11, Watts 8, Hewes 13, Thresher 9.

No. 7, 10 bluebirds, \$1.50: Heikes 7, Thompson 5, McMurchy 8, Nichols 9, Lindsey 8, Woodworth 6, Schelling 7, Courtney 8, Cooley 7, Keller 9, Whiskers 8, Holt 7, Allen 8, Schelling 8, Wharton 7, Sherwood 4, Searies 9, Bush 6, Thresher 5, Van Duser 6, Woodland 2, Drew 9, Watts 10, Hewes 5, Renick 9, Bowers 4.

No. 8, 20 bluebirds, \$3.00: Lindsey 14, Holt 16, Whiskers 15, Keller 15, Courtney 16, Heikes 17, McMurchy 16, Thompson 15, Downey 5, Schelling 14, Wharton 11, Searies 15, Nichols 11, Cooley 10, Shelley 7, Renick 14, Bush 9, Watts w, Drew 12, Thresher 8.

No. 9, individual State championship race for Manufacturers' Trap-Shooting Association's individual trophy, to be permanent property of the winner, 50 bluebirds, known traps and unknown angles, ties to be shot off at 25 targets, entrance price of targets: Renick 41, Allen 34, Searies 40, Woodworth 25, Sherwood 16, Norton 36, Lindsey 36, McMurchy 44, Heikes 43, Courtney 41, Thompson 38, Holt 34, Downey 20, Whiskers 41, Grubb 40, Schelling 46, Nichols 43, Cooley 40, Sparrow 12, Van Duser 12, Shelley 13, Bush 15, Miller 13, Drew 17.

No. 10, surplus shoot, 15 bluebirds, entrance price of the targets: Searies 10, Wharton 12, Keller 10, Heikes 15, Holt 13, Whiskers 14, McMurchy 13, Thompson 15, Schelling 13, Nichols 13, Cooley 14, Lindsey 9, Drew 15, Wharton 11, Renick 13, Bush 11, Thresher 11, Allen 13.

Michigan State Trap-Shooters' League.

The first annual tournament of the Michigan State Trap-Shooters' League began at Lansing, on Thursday, May 17, following immediately the Manufacturers' tournament. American Shooting Association Rules, as revised by C. W. Dimick governed all contests. All events were shot under the Parker system, save a few otherwise arranged. Four moneys in 10-bird events, in larger events, five moneys. Any shooter failing on a purse could draw his share.

The Parker system has been referred to in the Manufacturers' tournament, but as it was the governing system in this tournament, excepting two or three events, it will be more fully explained, as follows: "In first event, all shoot at known traps and known angles, rapid fire system. In the second and all subsequent events, all contestants winning or tying for first money in any event, shoot as experts in the succeeding one, from three unknown traps and unknown angles. All winning or tying for second money in such event, in the next event shoot as semi-experts, known traps and unknown angles. All others shoot as amateurs, known traps and known angles. Each contestant is classified by this handicap, by the event in which he last shot."

This seems a fair arrangement theoretically, but in practice it is a failure in maintaining equality as it intends, since some of the most expert shots were often classified as amateurs under it, as will be observed by reference to the scores.

The first three events were shot under the Michigan system, one which many of the shooters found difficult to understand. Briefly stated, a single shoot was like this. Entrance \$1.30: Each contestant had a rebate of ten cents for all he broke. The surplus money left after paying for birds broken was divided in four equal parts, first, second, third and fourth prizes. Thus a shooter theoretically would gain nothing by dropping for place, and every time a bird was missed ten cents was lost. The first three events, however, were run together, the surplus in the first event going to pay entrance of those who had money in it to their credit, in the second event, and the surplus in the second went in like manner to pay entrance in the third event. The trial was most unsatisfactory. A tangle of figures resulted which was not straightened out for a day or two. Some of the boys explain it in this wise: You pay your entrance in all three events, but you only shoot one event at a time. There are four moneys. Those who put in a dollar extra on the side divide that money, 50, 30 and 20 per cent. outside the regular stake, in which the four moneys are divided equally. For each bird broken, ten cents is credited. The surplus goes to pay the entrance in the second event of those who have credit in it. Then there is a kind of pro rata arrangement. Some pull out and thus lose their interest in the subsequent proceedings, and others ask where they are at. Then after the second event everybody has lost track of the system. The surplus without the slightest idea of what he is all about. Then all are at once, either trying to explain it or asking to have it explained. The cashier figures, figures and figures. Then they give up the system.

Thursday.

The weather was pleasant and the attendance large and the competition spirited. Nos. 1, 2 and 3: 10 bluebirds, three times, Michigan system, \$1.30 each time: Hopkins 10, 6, 10; Cooley 6, 7, 8; Holt 7, 5, 8; Hall 4, 5, 7; Nichols 9, 10, 8; Drew 10, 7; Allen 4, 6, 7; Howes 7, 6; Van Duser

The New Nitro Powder Loader.

It has met with such a success that we advise sportsmen who load their own shells with these powders to send for one without delay. It gives a uniform and steady pressure in loading high grade paper shells with Nitro Powders, and is the only rammer from which the most satisfactory results can be obtained. The wads are all seated properly, and it is so constructed that a pressure

equal to 19lbs. is required for every shell loaded. Send 60 cents for sample. Our catalogue mailed to any address on receipt of 6 cents in stamps. For sale by all dealers.

MEMBERSHIP SHARES

IN THE

Triton Fish and Game Club,

CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 100,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from gills. (*Salmo fontinalis* only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment. Intending purchasers should carefully examine Sec. 4 of constitution, also pages 12 and 24 of by-laws about membership certificates, agents, membership cards, route and mode of payments.

For Prospectus, By-Laws, Maps, etc., and full information address

Messrs. TOWNSEND & HOWARD, 928 TEMPLE COURT, NEW YORK CITY, AND THIS PAPER.

SALMONIER, Newfoundland.

For sale or to let for the season, "WOODLANDS," the property of the late Sir Robert Pimsent (within five hours run from St. Johns and with telegraphic communication) situated on the banks of a lovely salmon river, and in the neighborhood of good duck, grouse and caribou shooting. Good anchorage for a large yacht within a mile of the dwelling house, which contains furnished dining and drawing rooms, kitchen and offices, schoolroom, seven bedrooms and three dressing rooms. Also good stabling. Apply for further particulars to CHARLES A. M. PIMSENT, St. Johns, Newfoundland, or P. O. Box 1177, New York.

TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the others. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address DR. J. DE V. MOORE, 157 Park Avenue, Utica, N. Y.

SUNAPEE LAKE, N. H.

1,200 feet above the sea; dry climate; bracing air; no malarial influences; refreshing sleep in the ozone of hemlocks and balsams; exceptional opportunities for rest and recreation. Superb land-locked salmon, trout and black bass fishing. Safe boating for ladies and children. Refined society. Very accessible from New York City. 14 miles for sale and to lease in Soo-Nip-Side Park; 134 miles on lake shore; restricted for 50 years. For prospectus, etc., address THEODORE R. SHEAR, Attorney and Counsellor at Law, No. 29 Wall st., New York, or HENRY C. WILSON, 53 State st., Boston, Mass.

WILL BE SOLD AT AUCTION AT 10 A. M. Wednesday, 31st inst., at the office of the undersigned: A splendid country house, near Quebec. P. Q. Large house, splendid stables, green house and lodge. Good vegetable garden and about 40 acres of land under cultivation, mostly in hay. Could be used as a club house or a pied-a-terre for sportsmen. Vicinity charming, socially. Immediate possession. V. W. LA RUE, Notary Public, 28 St. Anne street, Quebec.

FOR SALE.—ONE SHARE SHAWINIGAN CLUB (fishing and shooting); also one share Laurentian Fishing Club. These clubs have most extensive limits of protected territory in the Laurentian Mountains, north of Montreal, embracing lakes and streams. Fine club houses, boats, canoes, etc. For particulars address "SHAWINIGAN," care F. & S.

ALBEMARLE and PAMPLICO CRUISING AND Hunting Association—Bear, Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing: Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 20. One more subscriber wanted. H. A. Weeks, 74 Murray st., N. Y.

FOR SALE.—SHARE IN ONE OF THE BEST wildfowl shooting and fishing clubs on the Atlantic coast. Plenty of game and every comfort and convenience. Parties meaning business address Box 214, No. 37 East 17th street, New York.

SALMON FISHING.—SEVERAL POOLS ON Restigouche. Address P. O. Box 192, Savannah, Ga.

Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

ANDROSOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For ouananiche, trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascolonge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascolonge, pike.

MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.).—For black bass, pickerel, deer, partridge, bear, otter, etc.

LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Wiarton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

N. J. POWER, General Passenger Agent,

L. J. SEARGEANT, General Manager.

A BLANK DAY.

BUT IT WAS NOT ON THE

RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

A. H. HANSON,

Gen. Pass. Agent, Illinois Central R. R., Chicago.

Rome, Watertown & Ogdensburg Railroad.

N. Y. C. & H. R. R. CO., Lessee.

The Rome, Watertown & Ogdensburg Railroad is the route to the best fishing grounds in New York State and Canada. Through cars are run from New York City, Chicago, Detroit, Buffalo, Niagara Falls, Suspension Bridge, Utica, Syracuse and Rochester, to Cape Vincent, Clayton, St. Lawrence River, Massena Springs, Ogdensburg, and all principal places on Lake Ontario, and to Norwood for all points in the White Mountains and Maritime Provinces.

This line reaches the best and most famous fishing grounds in America for salmon, ouananiche, muscolonge, black bass, brook trout, lake trout, white fish, pickerel, perch and other fish. Informative in regard to the fishing grounds and how to reach them will be cheerfully furnished upon application to

THEO. BUTTERFIELD,

General Passenger Agent, Syracuse, N. Y.

FISHING AND HUNTING IN

Labrador, Greenland & Newfoundland

A trip for a limited number for fishing and hunting in the North. The great salmon and sea trout rivers of Labrador and Newfoundland will be visited. Caribou and Arctic game, bear, walrus, etc.; northern waterfowl. Guides for hunting and boats for fishing provided. The party leave Boston July 10, and occupy about three months. Earlier return will be afforded by the Northern British Mail Steamer. Address C. T. JAMES A. TARKENTON, 33 South St., Halifax, N. S. Refers by permission to Mr. F. J. Myers, 237 Broadway, New York City.

Routes for Sportsmen.

Opening of the Chicoutimi Extension, 1st July, 1893.

The New Route to the Far-Famed Saguenay and the only rail route to the delightful summer resorts north of Quebec, through the

ADIRONDACKS. Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate. Hotel Roberval, Lake St. John, has first-class accommodation for 30 guests, and is run in connection with the "Island House" at Grand Descharge of Lake St. John, in the center of the "ouananiche" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels. After 1st July trains will connect daily at Chicoutimi with Saguenay steamers for Quebec. Daylight trip. A beautifully illustrated guide book free on application. For information as to hotels, apply to hotel managers; for folders and guide books to ticket agents of all principal cities.

ALEX. HARDY, Gen. F. & P. Agt. Quebec, Canada.

J. G. SCOTT, Sec'y & Manager.

Answers to Queries.

to the friendly offices of Commissioner Hamilton, who showed himself unduly interested in the Glens Falls merchant both before and after the action of the board. This theory may or may not be more tenable than the other. Both may be alike without reasonable foundation in fact. Nevertheless both are held in Warren county today, and just because they are current there and are working decided harm to the cause of fish and game protection, they should be corrected and counteracted by some explanation of the reasonable ground, if such existed, upon which the board's action was taken. Or if it should develop, as we believe might be shown, that the Commissioners were misled regarding the facts of the Marzluff suit, the case would appear to be one to which they might well give further attention.

If the circumstances are substantially as detailed by our correspondent, and if it is not already too late to revive the action, the Marzluff suit should be continued, and the defendant compelled to prove his innocence or to suffer the penalty. The law must be vindicated; on the showing made in the bill of complaint there cannot be vindication "without cost to the defendant." The payment of his fine by Mr. Marzluff is an exceedingly small matter to him compared with the effects on protection of the current opinion his immunity has created in Warren county, that the fish laws are not intended to apply to a rich man nor to a man with a "pull." The Commissioners of Fisheries can do no more important service for fish protection in the seventeenth district than they may do by removing all ground for criticism of their resolution of April 17.

SICK BED AND TROUT BROOK.

WHEN in "Nessmuk's" youth the physicians assured him that he had not long to live, he "took to the woods" for very life, and with the healing and the strength and the endurance there gained outlived the doctors. All that "Nessmuk" ever learned of the secrets of the forest, all that he ever became as a master of woodcraft, he owed to this flight into the wilderness for very life. What is true of him is true of countless others. It is a curious fact that so many men who are now enthusiastic fishermen never knew anything of the pleasures of angling until they had fallen sick and a woods vacation was prescribed as medicine for their healing. Not only this, but just reflect that there are thousands of other people, veritable slaves to business and daily routine, who will go all their lives without ever knowing the first blessed thing about that delightful combination of rod and line and a fish in the water unless they shall be so fortunate as to fall sick and have a fishing trip prescribed to them by the family physician.

Once the charm of an outing has been experienced, however, straightway your drudge develops into a devotee of fishing, and when the time comes around he waits not for the doctor's order—in fact from the day he became an angler he has done away with the doctor. The transformation is more than of physical condition; with the knowledge of the delights of fishing has come an accession of common sense in business methods. He has found out the meaning of the adage all work and no play makes Jack a dull boy; he knows now that he can do more work and better work in eleven months than he used to do in twelve; he understands that the dynamic force expended in a year relieved by a woods vacation exceeds that of an all-the-year-around drive and grind. While once, in his state of foolishness he imagined that he could not afford to "let up" for a single day to go fishing, now you may find him planning for a week, or a fortnight, or a month, in the woods. Perhaps he has a permanent camp there possibly a cottage, where the whole family may join in the fun.

To go through life with our eyes blinded to the beauties of the fields, our ears unused to the rush of trout brooks, our nostrils closed to the scents and perfumes of the woods, this is to ignore the bounties of the creator and to punish ourselves by the ignoring. The earth was given for the enjoyment of man. Why is it not man's duty to enjoy it? There is opportunity for a lay sermon here, or perhaps for a real sermon from the pulpit; one that might be preached with sympathy and understanding and conviction and power by many a "fishing parson."

Secretary E. P. Doyle has laid out a pleasing programme for the Eastern members of the American Fisheries Society for their visit to Chicago on the occasion of the meeting of the Society, a fortnight hence. The details of the excursion are given in our fishing columns.

SNAP SHOTS.

IN his note the other day respecting the Maine fish and game preserves, Commissioner Stanley alluded to the Grindstone Pond decision as establishing that waters of an area exceeding ten acres are free to the public for fishing and may not be controlled by individuals or clubs. This is quite true; nevertheless the preserve people find no difficulty in keeping the public out. This is effected in a variety of ways; by pre-empting desirable camping sites; by recourse to the fire law, which forbids building campfires without permission; and by maintaining a force of wardens who warn off strangers and make them uncomfortable by feeling themselves to be intruders and trespassers even if they are not such in reality. In this way, the clubs have succeeded in keeping other folks out of their waters; and it is likely that the system will grow in Maine as it is growing everywhere else with giant strides.

The panther's scream and the snake's hiss and the woodcock's whistle having been considered, now comes the coyote's howl. A San Diego poetess recently sang:

"The shadowy, gray coyote, born afraid,
Steals to some brackish spring, and laps and prowls
Away, and howls and howls, and howls and howls,
Until the solitude is shaken with an added loneliness."

Thereupon there arose and has continued an agitated and prolix controversy between the Howlers, who contend that one of the coyote's cries is a howl, and the Barkers, who aver that the creature always barks and never howls. The latter faction is clearly in error. The coyote barks and howls, and wails and whines, and shrieks and moans, and gurgles and stutters, and grunts and groans, and utters a thousand fantastic and horrible sounds by night for what the language affords no characterization.

August 9 next will be the tercentenary of the birth of Isaak Walton. From the London *Fishing Gazette* it is learned that the anglers of Great Britain are considering the project of celebrating the occasion in some suitable manner. One proposal is that some hundreds of representatives of the fishing clubs throughout the kingdom shall gather at Stafford, Walton's birthplace, for a festival, and it is said that the Mayor and Council of Stafford are preparing for something of the kind. The recognition should not be confined to Great Britain; the anglers of America should celebrate the event in some fitting way. If the Isaak Walton and Charles Cotton fishing house shall be completed at the World's Fair that would be the place for it.

The Maine non-resident taxing proposition was based on the reasonable contention that those who visit the State for sport should contribute something directly toward the expenses of maintaining the game and fish supply. The accomplishment of this purpose has been set about in a much more sensible manner by the newly organized Maine Association, whose plans and purposes have already been noted. This is a voluntary organization, which seeks to increase the supply of fish by establishing and operating hatcheries, and to increase the game supply by assisting in its protection. The association invites the active co-operation of visitors and their practical help in the way of funds. Secretary E. C. Farrington tells us that this appeal for help from outsiders has been well received.

That is an old but suggestive story of the servant who knew nothing about starting the morning fire with kerosene, until she was warned by her mistress never to do it; and the next morning blew up the house. There is to be a sportsman's exhibition in the Crystal Palace, London, this month; and a class has been made for poaching methods and devices. This of course would prove highly instructive and suggestive to the poacher; and we do not wonder that the proposed display of unlawful implements and school of instruction in ways that are dark and tricks that are mean have aroused merited opposition.

The good old fashion of keggings brook trout has fallen into disfavor. It used to be considered quite the thing for the fisherman, who found trout abundant, to salt down kegs of them for sending out to his friends, that the folks at home might share his luck. The custom has been given over by most fishermen who go into the woods for an outing, but Maine residents still practice it extensively, though in diminishing extent.

For Prospectus and Advertising Rates see Page 487.

THE COMING YACHTING SEASON.

THE visit of Novahoe to British waters to contest the ownership of three cups, together with another trial for the America's Cup on the part of a new challenger, Valkyrie II., brings the yachtsmen of America and Great Britain into closer relationship than they have ever known in the past, and tends to make the coming racing season one of unusual interest. On the other side the racing has already begun, and three of the four new 85-footers, Valkyrie, Britannia and Calluna, have met. On this side the racing will not begin for a couple of weeks, and even then it will at first amount to little, as none of the new Cup defenders will be ready in season for the June regattas, and yachtsmen must wait with what degree of patience they can command until the August cruise for a view of the complete quartette. In the smaller classes comparatively little sport is promised, as but three racing yachts have been built this year, the Maxwell schooner Emerald, the 46-footer Carmita and the 25-footer Folly.

Thus far the promise of sport in the local regattas is below the average, but on the other hand the racing of the four new Cup defenders will make noble sport for all who are fortunate enough to witness it. Outside of racing, the season promises to be an exceedingly lively and active one; a very large number of yachts is fitting out, and on the whole a very prosperous yachting season may be looked for.

MR. MARZLUFF'S TROUT.

The Marzluff trout case, as reported by Mr. A. N. Cheney in our fishing columns, is one which appears to deserve the further attention of the Fish Commissioners of this State.

Mr. Marzluff is a Glens Falls merchant, who has shown much ingenuity by contriving to violate the trout law in four different ways at once. He took a lot of trout under size, on Sunday, with nets, it is alleged, and used them for stocking private waters. He was found out, and the district protector entered suit against him to recover the penalties accruing from the forbidden transfer of fish from public to private waters. The case of the people was well sustained by evidence, and there was nothing left for Mr. Marzluff but to pay his fine, or such portion of it as the authorities might insist upon; but just at this juncture the Commissioners of Fisheries came to his relief with a resolution recommending that the case be settled without cost to the defendant; and by direction of fish commissioner Robert Hamilton the suit was discontinued.

Mr. Cheney ascribes to the Commissioners as a motive for their coming to the relief of Mr. Marzluff an undue consideration for that gentleman because he is a man of means; and we understand that this is one of the two explanations of their action, which are commonly accepted in Glens Falls, where the facts of the Marzluff case are well known and have given rise to much unfavorable criticism. It is extremely improbable that the Commissioners were influenced in this case, or would be influenced in any other case, by a regard for the financial standing of a person charged with violating the game laws. The second theory adopted in the neighborhood is that Mr. Marzluff owed his immunity from punishment

The Sportsman Tourist.

DANVIS FOLKS.—VI.

A Disconsolate Trapper.

AS UNCLE LISHA plodded homeward past the Gove homestead, the wandering thoughts that bore him company turned toward his young friend Pelatiah. He cast a searching glance about the premises half hoping and yet half fearing that he might discover him, for he shrank from the duty to which he was committed.

"I s'pose I'd ort tu stop an' find the boy an' give him a talkin' tu, to rights," he soliloquized. "But I guess I'd better wait an' ketch him kinder accidental. This ere cornerin' a feller up an' rammin' advice into him somehow don't make it set so well as it does to kinder coax it into him julluk a pill in a spo'ful of apple sass."

He quickened his pace till he had passed the house and come to the little bridge that spanned Stony Brook. As he lingered there idly watching the flow of the stream whose every bend and purling rapid and trout-haunted pool he knew as well as the corners of his old shop, and listening to its changing babble, familiar to his ears as the thud of the hammer on his own lapstone, he distinguished amid its liquid tones the sharp, metallic clink of a trap chain, coming, as a moment's listening assured him, from directly beneath the bridge.

"Someb'dy's ketched a mink er a mushrat," said he to himself, "an' I'm goin' tu meddle wi' other folkse's business tu the extent o' puttin' the poor creetur aouten his misery."

He descended to the bank, picking up a convenient cudgel as he went. When he peered into the dark shadow of the bridge he was not a little startled to discover the figure of a man sharply defined against the light. He was kneeling on the gravel between the abutment and the stream, so intently engaged in setting a trap that he was not aware of an intruder till Uncle Lisha tossed a pebble at his feet. The old man felt pretty sure of the trapper's identity, and was not surprised when Pelatiah's face was suddenly turned toward him with an expression of wonder overbearing its now habitual ruefulness.

His own silhouette, fore-shortened as he stooped beneath the low bridge, bracing his hands upon his knees, was not recognized at first, but there was no mistaking his hearty hail, "Good airth an' seas! Peltier, don't ye know yer Uncle Lisher?" resounding with exaggerated volume through the narrow passage.

Pelatiah left the half-set trap and came crouching forth, brushing his soiled palm on his thigh in preparation for the vigorous hand shaking that awaited him. When greetings were exchanged the two seated themselves on projections of the abutment and surveyed each other with kindly scrutiny.

"You haint growed old a mite," said Pelatiah. "I've ben a-growin' young sen' I come back makin' up what I lost in three year."

"An Aunt Jerushy, is she tollable well?" "Jest as smart as a cricket, an' tickled tu death tu git back hum again. An' haow's things goin' wi' you, Peltier, well, I s'pose?"

"My health's good 'nough," said Pelatiah, sighing as if that were an affliction, but Uncle Lisha did not heed it. "Trappin' some, be ye?"

"Some, got a few traps sot fer mink an' mushrat. The's a mink a-ha-ntin' raound this 'ere bridge."

"I heard your trap a-jinglin' an' thinks, says I, the's suthin' er nother sufferin' into a trap an' I'm a-goin' tu be marcful an' kill it, ef 'tain't a skunk. My marcy don't extend tu skunks, erless I've got a gun. It's tough for any cretur to be in a trap, whether no he's human or a dumb critter. Both git into 'em an' more times 'an not, the's haint no gittin' aout on'y by death er takin' off a laig. Most any dumb critter 'd ruther git free at the price of a laig er foot 'an tu stay an' die er be knocked in the head an' they're sensibler 'an lots o' folks which they 'll jest hump theselves an' grunt an' squall er flummix permiss-cus till they git tother foot an' like's not both han's into another trap, an' there they be. The grip o' the trap gits sorer and sorer, an' they quit a-pullin' an' give clean up, which haint no way fer a man tu do." The old man beamed a kindly smile upon his companion who sat with downcast eyes, slowly grinding the gravel beneath the heel of his cowhide boot, upon which Uncle Lisha's eyes finally fell, to note with displeasure that it was ripped and reel for lack of grease.

"An' you've goddaown tu buyin' store boots. Goo' fer nothin' things, made aouten split luther an' stuck tugether wi' short paigs. An' the idee of a feller 'at ketches mushrat, an' hes their ile, lettin' his boots git as red as a fox's tail." He evidently thought Pelatiah in a desperate strait and spoke with such sudden sharpness that the young man was startled from his listless attitude. "But you come up," he said with less asperity, "an' lemme take the measure o' yer hommils an' I'll make ye suthin' 'at you'll know you've got on when you wear 'em, an' that 'll be wuth spendin' a leetle ile on." Then almost without pause he said, irrelevantly, "Why Peltier, from what I heard I spected tu find you married an' settled daown, stiddy." Pelatiah flushed and made a quick, impatient movement. "Wa'n't you expectin' tu, one spell?"

"Ef I was, I haint naow nor never shall agin," the young man said in a low voice.

"Why, what's the motter ails ye? Merryin's a good thing when ye find the right one."

"Haow in tunket's a feller goin' tu tell when he hes?" Pelatiah asked, rising in such excitement that he bumped his head against the planks and sat down as suddenly as he had risen.

"Hurt yer head much?"

"Wish I'd knocked the dumb thing off'm my shoulders," he replied savagely. "Haow's a feller goin' tu tell? That's what I'd like tu know. I thought I'd faound the right one an' I thought more on her 'an all the hull world, I worshipped the airth she walked on. She might ha' walked on me—she did pooty nigh, an' I was prouid tu hev' her. An' I, dumb fool, thought she liked me jest as much. Mebby she did, fer a spell, an' thought she'd faound her mate. It's hopesin she wa'n't foolin' me the hull endurin' time, an' then 'at she hadn't. She promised tu hev me an' we was a goin' tu be married, an' the time was sot, an' then at the last minute she went off wi' another feller an'—an' I s'pose they're married, but I can't seem tu think on her as belongin' tu nob'dy else. She'd

ort tu suffer some, but I hope she's happier 'n what I be. She might be, an' yit be in hell."

"You hed bad luck, Peltier, but all women haint alike."

"The's haint none no better'n she was," Pelatiah said vehemently. "The's want never one harnsomer, an' haow could there be one better otherways? They're all fickleder 'n the wind that blows an' lighter 'an the blubbers on this brook."

"Taint no sech a thing," said Uncle Lisha, emphasizing each word with a downward jerk of his head. "I've roosted wi' one womern goin' on fifty year that's ben faithful an' true all them years, an' ther's lots more o' the same sort, fer I don't callate I'm the on'y lucky man on the livin' airth. You got into a trap nat'rally 'nough, bein' 'twas baited wi' a pooty face, an' it kinder leggo, an' neow ye c'n shake a loose foot which you'd ort tu be thankful it didn't take a laig, so tu speak, er mebby yer life."

"It might's well. I wisht it hed," said Pelatiah, grinding the gravel away savagely with his heel.

"Sho, no, you don't, nuther. Say, Peltier, what d'ye du wi' yer fur? Sell it tu Clapham, du ye? You didn't sell him that 'aire gray fox?"

Pelatiah could not withhold a laugh. "No, that was a feller f'm over the mountain."

"You du sell tu Clapham?"

"No, Hamner's hed most on't."

"Hamner? He don't pay cash?"

"No," but Pelatiah did not look up.

"Look a here, Peltier Gove," said the old man impressively, "you're a-flummuxin' into a was trap 'n the fust one was, a-tryin' tu draownd yer trouble wi' rum, 'specially Hamner's pizen. Rum may cure a belly ache, but not never a heart ache, not tu stay cured. It'll numb it fer a spell, but it'll make it come on wus 'n ever, an' need heftier doston every time tu numb it again. I do' know haow long you ben a-tryin' on 't, but I du know 'at you've faound it jest 's I tell ye. An' you've got tu stop it right stret off er you're a gone sucker. Right stret off. Not no foolin' wi' one more drink ner no tu-morrers ner birth-days ner New Years ner leavin' off gradwail. It'll be a tough job, but you c'n du it. Shet your maouth as tight as if 't was sewed up wi' a waxed eend, an' don't ye onrip it fer no coaxin', inside er aout. You've got tu du the job yerself, not but what God A'mighty 'll help ye, but you've got tu boost tu. I callate 'f the's goin' tu be any prayin' done, a feller hed better do it fer himself. It'll 'maount tu more 'n all the ministeis this side o' kingdom come a-prayin' fer him. An' naow I've said my say, an' you c'n go on settin' your mink trap. Bait it wi' mushrat 'f you've got it, it's better 'n fish. Don't forgit what I've said tu ye, an' come an' see Aunt Jerushy soon 's you can. I shall git settled daown tu work in three days, an' I want all on ye tu come in, jest as ye uster in th' ol' shop. Good-bye."

He stooped his way out with due care for his head and its precious covering, and clambering to the roadway resumed his homeward course.

"There," he said, with a sigh of relief, "I've gin the boy his pill. I'd know but I forgot the apple sass, but it's hopesin it won't set bad an' 'll du him good."

Pelatiah sat long after his old friend left him, with his chin upon his hands, staring abstractedly on the swift current of the brook, in whose voice he seemed to hear the kindly words of advice repeated again and again. When he arose and resumed the setting of his trap his face wore a stronger and more hopeful expression.

ROWLAND E. ROBINSON.

BULLWHACKING IN BUFFALO DAYS.

[Concluded from Page 143.]

A FEW days later we reached a whisky station called Elm Creek. Here we met a train returning, wagon master and drivers on a "bust." One young fellow had a splendid rifle which he wanted to sell for whisky money. I shot his rifle, and it was splendid. I told him I would trade him a small squirrel rifle and pay him some boot. He looked at my rifle and offered to trade for \$5 boot. I accepted the offer and told him that I would give him my rifle and bullet moulds for his rifle and moulds. After I paid him he went back to the station. I moulded a few bullets and gave my new rifle a thorough trial. It was a splendid gun, made by Sam Hawkins, St. Louis, and was sighted for 150yds.

I had barely got through trying my new purchase when the young fellow came back and wanted \$5 more and claimed I had cheated him. He was very boisterous in his demands. I told him all right, if I had cheated him he could bring back my rifle, moulds and my \$5 and he could have his gun. He said he had used the \$5, and that if I did not pay him \$5 more he would give me a thrashing and take the gun too. Before I had time to reply Hans came up, and stepping right up before the hostile, said:

"What for you wants to make troubles mit dis poy? If you wants any dings mit him, you shust fite mit me."

The young fellow, after a momentary survey of his new antagonist, began to back off, Hans following close up. Hans said to him, "You shust go right avay mit yourself," and he did.

Next morning we pulled out before the other train had their oxen brought in. Nothing of any interest occurred for a number of days. We passed Fort Kearney, but when we reached Plum Creek the buffalo had become so numerous that we sometimes had to stop to let them pass.

The Sunday after we passed Plum Creek we were camped near the Platte. As soon as grub was over I shouldered my new rifle and started for the sand hills for an antelope. I had seen quite a number a few days before, but they were so far off I could not tell much about them and I had kept traveling on; had passed within range of a number of buffalo, but had not shot at any. I hunted until I got tired, but could not find any antelope.

I sat down on the hillside and for a little while my mind wandered back to home and I thought how uneasy mother would be if she could see me sitting there, four or five miles away from the train, away out in the Indian country. As I sat there thinking, quite a large buffalo came along within about 150yds., and when opposite me he stopped. I thought I would try my new rifle at the side of his head; at the crack of the rifle down dropped the buffalo. I reloaded my rifle and went very carefully to where he lay. I stood gazing on that noble animal, and in my sorrow I would have given anything if I had not shot.

It was so far from camp I knew the meat would not be

brought in, but I would take the tongue anyhow. I had unsheathed my knife and was just going to cut its tongue out, when I heard a rumbling sound, and looking up, I saw a line of black heads stretched along the crest of the hill as far as I could see each way. I dropped my knife, grabbed up my gun and was just in the act of starting to run, but on taking another look I saw that they were too close. It was an immense herd of buffalo, and of course they would trample everything in their path into dust. On and on they came, oblivious of me, and I stood there almost paralyzed with fear, but the moment had come when I had to act. I attempted to kneel down beside my dead buffalo, but it must have been more of a fall than kneel. I laid my rifle across the buffalo and when the nearest buffalo was within 20yds. I fired, dropped my rifle and crawled as close under the dead buffalo, as I could. I reached one hand as far under as I could and with the other on top took a good hold of its mane and drew my head as far as possible under its neck.

In a moment more the herd was passing over me. Every second I expected to have some one of the animals jump on the dead buffalo, and to feel its feet slip off on me. I had no means of telling how long it took the herd to pass, but on and on they came, uttering that peculiar grunt they give while running, while I lay there clinging to the neck of the noble animal that but a few minutes before I had so wantonly deprived of its life—and for what? Just to try a rifle.

At last the main herd had passed and a few lame ones came hobbling by. As soon as I dared to I raised my head, but could not see any more coming. I jumped up, grabbed up my rifle and started for the camp. Just as I left my retreat I saw the front part of the herd reach the Platte River. They must have been nearly half an hour passing by me.

I ran, trotted and walked very fast until I reached the wagons. I set my rifle down by my wagon and sank down on the ground completely exhausted. Dick noticed me and came up and asked, "Are you sick?" "No." "Well, what is the matter? Something has gone wrong. Have the Indians been after you?" "No." "Something is wrong. What is it?" I told him in as few words as I could, and ended by saying that I wanted to lie down. He helped me up and into the tent. Old Sam and some of the boys were sitting where they could see into the tent, and when Dick had put me in bed and come out for some water, old Sam wanted to know what was the matter with Lew. Dick told him, and old Sam said it was the luckiest escape he had ever heard of. I took a drink of the water, but my stomach would not retain it, so I threw it up. Just then Old Sam came in and said he had some brandy, which would be the best thing I could take. But I told him I could not take it, for nearly the last thing I promised mother was I would never take a drink of any kind of spirits.

I soon went to sleep, yet it was not refreshing. I thought I was being run over by wagons, buffalo, and that the train was stampeding. Dick sat by the bed, and when I would try to raise myself up he would put his hand on me which would break my dream. Supper came. Old Sam said I had better be let alone, but for Dick to take a plateful of grub into the tent, and when I waked up, if I was all right, I would be hungry as a wolf, but if I was feverish and wanted water, for Dick to call him, as he was afraid I might have brain fever.

Along in the night I woke up, and had hardly got my eyes open, when Dick spoke and said, "Are you awake, Lew." "Yes," I replied. "How do you feel?" "All right only I am fearfully hungry." "I am glad of that," said he, "there is a plateful of grub." He handed me the food, and I soon dispatched it. I then lay down and took a good sleep.

Next morning I was all right, except as to color. My head was white as tow, and my face was whiter than my head, and it was nearly two weeks before the color came back to my face. I had made one vow while running for camp, and that was I would never kill another animal just for fun. If I could not use the meat or hide, or unless some else wanted it, it could go.

Although that dead buffalo saved my life, yet I had no business out there.

Of course we had lots of whooping and whipping to do yet we got along very well, until we reached Julesburg. The Platte was tolerably deep and we had to block up our wagons and put thirty yoke of oxen to each to cross. So we had to wade the Platte back and forward for nearly three days. While I must admit that a bath is occasionally very beneficial to one's health, yet when it comes to being in ice cold water for three days, it loses all of its hygienic properties. We got across without an accident. Before we pulled out from our camp, another returning train came and camped a few hundred yards from us. The wagon master was an old acquaintance of Old Sam's, and came over and took dinner with us. While at grub, they began blowing (about their teamsters Sam's friend told him he had a man who could out-shoot any man on the road for fun, money, marbles, chalk or whisky).

"Well," said Old Sam, "my men are not very good shots, but I've got a tow-headed boy here that can beat your man for fun."

"No; we won't shoot for fun," said his friend.

"Well," said Sam, "you said fun, money, marbles chalk or whisky."

"Well," said his friend, "that was only the preamble and if it wasn't like stealin' your money, I would bet you a hundred to twenty, if you mean that tow-head," pointing to me.

"Well," said Sam, "We will put up \$20 each, and let them shoot 150yds., off-hand; the best two in three."

The proposition was accepted, and Sam's friend went for his man and rifle.

Hesoon returned with a great big healthy young fellow carrying a long heavy rifle. Quite a number of the teamsters came along with them, some to see the match others to speculate, but our boys bet them to a stand still. They stepped off 150yds. and put a 6in. spot in the forehead of a buffalo skull. It was decided I should shoot first. I stepped to the scratch, raised my rifle banged away and over turned the old skull. I had hit just in the upper edge of the black. "Good shot," said Old Sam; and his friend said, "Yes." The young fellow stepped up to the scratch, but he was a little nervous. He held his rifle a little while, then lowered it to take a fresh breath, raised his gun a second time and fired, overturning the skull. A shout went up from his friends he had hit the skull, but was about 3in. from the black

I stepped up to the scratch full of conceit, as Old Sam called it. I raised my rifle and fired and down went the target. I had hit the black not an inch from the center. It was then our boys' turn to shout, which they did lustily. The young fellow stepped up, but his nervousness had not all left him. He fired at the first attempt, but did only a little better than before. I stepped up and shot my last shot, and planted it in the black near the top and not more than 2 in. from the first one. The boys shouted again. The young fellow stepped up again and this time he hit the black just at the edge. His best shot was nearly an inch further from the center than my worst. Old Sam asked his friend if he wanted to steal any more of his money. He replied not to-day, but said his man had done the worst shooting he ever saw him do. Old Sam gave me \$10 and a partial renewal of our former friendship.

We camped on the North Platte the next Sunday, and as we were out of the run of the principal herds of buffalo, I thought I would kill an antelope. I hunted along through the sand hills not very far back from the river, and at last saw a small band of antelope going in to water. I followed along at a respectful distance behind, and when they came out I got a shot at one about 200 yds. off, and killed it dead. I took its hams and started for camp, which I reached tired and hungry.

We made fair progress until we reached the black hills. Here we spent one Sunday. I had heard about black-tailed deer, and was very anxious to see one. I had killed two white-tail deer in Kansas, but I wanted to see if the black-tail were the same. I left the road, and had tramped for several hours when I came on to a small

to examine the mess wagons, and if no sugar could be found, to go through the train. Before we went through the mess wagon Old Sam said we were not quite out. He only wanted us to go slow or we would soon be out.

One night we camped near Pacific Springs. A fearful storm came up, blew down a large shed, killed a number of horses, and slightly wounded a couple of men. From here on we had our regular routine of hard work until we reached Salt Lake City, where we discharged our cargo; and after bidding those who were going on good-bye, we doubled up our train, that is, coupled two wagons together and started on our homeward march. Everything ran very smoothly, most of the cattle were in the cavayard, while six yoke walked right along with two empty wagons.

We laid over one Sunday near Independence Rock, and I went out to the south of camp. I killed another black-tail deer and carried the horns to camp. One day while the train was traveling Old Sam and I went out together; I had a horse, while Sam rode his white mule. We came across a small band of elk; I killed one, but it took me three shots to finish it. We packed the hindquarters on one horse and rode the other turn about, Sam doing the most of the riding. We reached the wagons just as they went into camp. When we reached the buffalo country I killed quite a number, but I never went out afoot again for buffalo or for anything else while there was any danger of encountering a herd.

We reached Leavenworth just six months from the time we left, all of us tanned to a delicate brown. Some of us started for our homes, while a few spent all they had earned in a few nights, and like some of Uncle Sam's

creature which attacks them in the water and becomes attached to their sides, causing the fish apparently much suffering. It is no uncommon thing for large fish to be taken there whose sides are all scarred up in consequence of these attacks.

It would not be surprising if many fish were thus destroyed. Probably there are not in the world two lakes more numerously stocked with trout than the Upper and Lower Klamath lakes. Judging by map measurement they each average thirty miles in length by ten miles in width. Many large streams empty into them, affording splendid fishing and spawning grounds. Lying east of the Cascade range of mountains, where genuine winter prevails in the season for it, the water is better and the fish healthy and solid—features which do not prevail on the western side of the mountains, where an almanac has to be consulted to accurately ascertain the season of the year.

But, to revert to Link River. There is another and very peculiar feature about its banks, they are a snake paradise. The blue ribbon—though it may have been consistently worn by the sportsman for the last decade of his life—will not prevent the seeing of tens of thousands of snakes in a walk of a mile from the town. They are of a harmless variety, and of all colors and sizes, 6 in. to 6 ft. in length. On warm sunny days they lie twisted together in heaps of hundreds, and it is not uncommon to see 3,000 of them in fifteen minutes' walk. If disturbed while taking their siesta in their effort to get away they become twisted into the form of a cable as large as a man's body and cannot move. According to an estimate made by one of the oldest and most intelligent inhabitants of that vicinity, there are snakes enough in that country to build

SOME LINKVILLE SNAKES.
FROM A PHOTOGRAPH TAKEN ON A DAY NOT GOOD FOR SNAKES

stream up in the hills. There was a meadow here some three or four hundred yards long. The grass was high. About the middle of the meadow lay a number of animals, and one had a very large pair of horns, like a deer's, only a great deal larger. I knew they must be elk. I took a survey of the ground, and saw that by going back down and crossing the stream I could come up on a small ridge and get within a hundred yards of them. This I determined to do.

I crawled back out of sight, ran back down stream, crossed and kept around out of sight, and crept up to the brow of the hill. Just before reaching the top I was brought to a standstill. I was stooping over, walking pretty fast, when I came near stepping on a big rattlesnake. I retraced my steps a few feet to where I could get some rock, which I did, and killed that snake before I went on. I looked over the hill very carefully, and there, not over 100 yds. away, lay seven elk. I had not forgotten my vow about killing any animal I could not use, so I had only to watch them until I got tired. Then I raised myself up, and an instant they saw me. They jumped up and acted as though they were bewildered. They did not seem to know which way to go. They would trot off one way, then zigzag off another. I believe I could have killed all of them, but I left them on the hills and started a nearer way back to the wagons. While walking along tolerably fast I saw an animal jump up from a small bunch of brush and it went bounding off like a sheep. I ran down after it. As soon as it crossed a small ravine and got up on the opposite side about 50 yds. it stopped. I shot at it and killed it dead. I loaded my rifle and went up to it, but could not name it, unless it was a black-tail deer. It was red, had horns about 3 in. long, and they were soft, covered with velvet. It had but little hair on its tail, although there was a little black tuft right at the tip.

I skinned the head complete and took the hams and made a bee line for camp. As soon as I got in sight I fired off my rifle, when a couple of the boys came out and relieved me of my deer and rifle.

Everything went all right until we got up on the Sweet-water. Here one day the cook of our mess announced that we were out of sugar. I spoke up and repeated what Mr. Majors had told us, that there was plenty of grub in the mess wagons to last us the round trip, and I asked the cook if he had examined both mess wagons. Old Sam spoke up in a very gruff manner, and said he had examined the mess wagon and we were out, and that settled it. I said no more and the rest of the meal was devoured in silence. After grub I called for a meeting and twenty-seven of the boys stood by me, and it was decided

boys, were ready to enlist again with the first train that would start.

Such is the way a good many of us helped to carry freight across the Great American Desert.

LEW WILMOT.

THE SNAKES OF LINKVILLE.

OAKLAND, Cal.—*Editor Forest and Stream:* As you have got into the way of publishing photographs of hunting scenes and the like, I send you one, taken last summer, illustrative of "The Alluring Charms of Linkville," published in your paper of Aug. 20, 1891. At the time this was taken it was not a very good time for snakes, for, ordinarily, every crevice of the wall is filled with the reptiles, without an exception. And that which is true of this wall is also true of every stone wall in that region.

This wall skirts the bank of Link River, and between it and the picket fence shown runs a walk which is a resort for the love-lorn swains and maidens of Linkville in the gloaming of a dusky moonlight eve. If a few score of the crawling creatures attempt to bar their way across the walk they are gently pushed aside, and the wooing still goes on uninterruptedly. It is also the haunt of the festive fisherman, who never lays his string down there to take a rest. He knows what would become of his fish.

In different places along the wall close inspection will show some of the skins which the reptiles have shed. In publishing the article of Aug. 20, 1891, I cannot say I blame you for putting it under the "That Reminds Me" head, for it reads too Munchausen-like to be taken for fact, and every statement made in that article was and still is strictly true, and a naturalist could do no better than visit that region.

M. W.

The Alluring Charms of Linkville.
From Forest and Stream, Aug. 20, 1891.

The most unique locality to be found by the sportsman is probably that surrounding the town of Linkville, in Klamath county, Oregon. The town nestles at the foot of a large mountain, and lies right on the bank of what is locally known as Link River. This stream—which is quite large—connects the Upper and Lower Klamath lakes, is alive with thousands, and probably millions, of large fish, which are constantly passing to and fro between the two lakes, and are as constantly jumping out of water in sight of the town. They are of all sorts and sizes. Some of them appear to be cutting up these antics for the fun of the thing, and some to shake some kind of an eel-looking

a wall 4 ft. wide and 4 ft. high at least a mile long. Some of the farms there are fenced with walls laid up with round water-worn stones. These walls constitute the home of thousands of these reptiles. If one of these walls is approached, from nearly every interstice a snake's head will be projected with forked tongue forbidding trespass on their domain. What is singular about this whole affair is the protection afforded to these reptiles by the inhabitants there. They will not allow them to be killed or even injured. Their children, familiarized with them from their birth, have no loathing or fear of the reptiles, but pick them up and play with them, as any other child does with a toy, under caution of the parents not to hurt them. The reasons given by the farmers and others for this protection are three. First, the farmers could raise no crops without their aid in destroying various bugs, insects and vermin which would otherwise overrun the whole region with destruction of all living vegetation; second, the reptiles smell sickening enough living, but their stench is intolerable when dead; and third, they devour and reduce the number of frogs; and hereby hangs a tale, o'er true.

Perennially there descends upon Linkville and the surrounding country untold millions of little creatures, resembling a frog, and about the size of a small one, which are reminders of the Biblical frogs of Egypt. Where they come from no one seems to know, but it is probable that they come from the rivers and lakes and Klamath marshes. Upon their arrival every door and window has to be closed against them, or they will invade the house in countless numbers and dispute possession of every part thereof, even to the bed. There is no standing upon politeness at these times. The entrance to, and exit from, a house is done with instantaneous celerity, and a resounding slam to the door which, under ordinary circumstances, would betray a passionate mood. Of course the streets of the town are full of them. And now the snake takes his annual feast, as that of the Passover. And thus is nature's law of supply and demand fulfilled. Up among the mountains surrounding Linkville there are many kinds of game, but thick cowhide boots are the correct thing for the sportsman, as the rattler will dispute his way.

But if the sportsman desires to go fishing with the most economical of tackle, he may provide himself with an inexpensive pitchfork and pay a visit to Lost River, a sizeable stream a few miles east of Linkville. There he will find pickerel of enormous size, and so thick in the river that they fill it from bank to bank. The inhabitants never use any other kind of tackle,

More anon.
ALAMEDA, Cal.

M. W.

MY WHITE VIOLET.

LITTLE white violet you are my love,
Nestling so modestly down in the moss.
Shyly you hide from the bold sun above.
Humble the home that the oak shadows cross.
Yet 'tis the one of your choice, dainty love.

Pretty white violet you are my own,
Here on the leaves I will lie by your side.
Happy am I at not being alone,
Never a feeling or mood need I hide
When I am with you, my pure one, my own.

Honest white violet you'll not deceive,
Nor do I ask you to give love for mine.
Comfort enough 'tis for me to believe,
Pleasure to feel that you cannot design,
Then when I love you, you will not deceive.

ROBERT T. MORRIS.

THE GUNPOWDER RIVER.

TRAVELERS between Philadelphia and Baltimore look from the car windows in crossing the Gunpowder River, and see in it but a dreary waste of water, marsh and mud, and it is only those who have sailed upon its broad expanse and explored its numerous bays and coves in the bright summer days that know what a beautiful river it really is. Its shore line is broken by high bluffs and bold promontories, and by many indentations and creeks, while smooth white sand beaches alternate with patches of bright green rushes that grow in the water close to the shore. The beauties of the west shore are to be seen to most advantage early in the morning, when the bluffs stand out in bold relief, bathed in many beautiful tints by the rising sun, shining upon the variegated clays of which they are composed. It is in the autumn, however, when the luxuriant foliage of these river woods (which crown each bluff and promontory) have been painted by nature's touch in all the gorgeous colorings she only can produce, that one is lost in admiration.

In the afternoon, sailing up the river, the scene is particularly striking. The vision stretches over the broad expanse of water to away above the railroad bridge, toward the north, over the emerald green marshes, and past the light green willows that mark the course of the river above them, until it is met by the gently sloping farm lands, dotted here and there with picturesque cottages, fields of grain, orchards and green pastures. As you sail down the river, which is more than a mile wide below the railroad bridge, and gaze out toward the blue waters of the Chesapeake, where many sails can be seen passing, it appears as though the mouth of the river was before you and that you could sail directly into the bay by keeping a southerly course. And so you could if your boat was flat-bottomed and did not draw over a foot or two of water, but under this broad expanse which stretches for a mile from Rickett's Point to Spry's Island, and which appears to be the mouth of the river, are hard sand flats over which one can wade at average high tide. The river when it reaches these flats turns at nearly right angles from a southerly to a westerly course, passing between Carroll's and Spry's islands, and turning again south empties into the bay.

The Gunpowder River up to 1887 was one of the best rivers in Maryland for ducking and fishing. The coves, flats and middle grounds produced a thick growth of wild celery and other kinds of duck food, and all varieties of ducks visited its waters in countless thousands. I have seen acres of ducks and geese feeding on this grass, and many hundreds were shot from the blinds built on the shores. White perch, yellow perch and rock bass made their homes in the grass and afforded fine sport with hook and line. Since the time of the great blizzard of 1887 the whole character of the river has changed, and few ducks have been shot from the blinds since then. The tremendous northwest wind at that time blew all of the water out of the river, and the immense beds of grass were left exposed for more than forty-eight hours to the zero temperature that prevailed. The mud was frozen hard to the depth of more than a foot, and many persons living on the shore walked dry-shod over miles of river bed, where they had never passed before except in a boat. This terrible cold killed nearly all the grass, and the ducks and fish departed for other feeding grounds.

Nearly all the land bordering on the river from its mouth to Joppa, which is ten miles up, is either owned or rented by ducking clubs. Carroll's Island, which has a world-wide reputation as one of the best ducking points in Maryland, lies just within the mouth of the river on the north side. The club owns a very extensive property, with miles of shore on the Gunpowder and Saltpeter rivers (the latter being a branch of the former), and has many suitable points for the construction of blinds. But the most and the best ducks are killed at Carroll's Island by what is known as overhead shooting, done from blinds sunk in marshes over which the ducks fly in passing up or down the river. This club has a fine house, fitted up and furnished in elegant style, with every comfort and luxury to be found in a first-class club house. The membership is limited, and the cost of a share in it is well up in the thousands.

The next place to Carroll's Island north is Grace's Quarter, which is a fine tract, consisting of a farm of many acres and several miles of shore on Saltpeter and Gunpowder rivers. They have no overhead shooting here, but some of the points are famous, and thousands of ducks have been killed from the blinds in them. To give some idea of what one of these first-class river farms costs, with all the ducking and fishing privileges, it may be noted that this place was sold a few years ago to a party of five gentlemen for \$60,000. Further north and nearer the railroad bridge is a fine old estate known as Harewood, which has one very good point. The place has been rented from year to year to different clubs, who at times have done very well. The last owner was very fond of the sport, and one might say that he died in the harness, as he was found dead in the blind one day, having over-exerted himself rowing after a crippled duck.

Just north of Harewood is the P. W. & B. R. R. bridge, which has always been a favorite place for gunners who do not belong to any club. The ducks in trading up and down the river pass over the bridge and frequently give good shooting. But it does not take long to educate the ducks up to the fact that danger lurks on the bridge, and they soon learn to climb hundreds of feet high on approaching it, but no matter how high they climb there

is always some enthusiastic nimrod who will let go his gun at them. Parties shooting from the bridge have a boat fastened near them which they jump into as soon as they shoot, to recover the duck. Frequently three or four boats will start out after the same duck, all parties claiming it, and there will be a fearful war of words, sometimes ending in blows. The man with the most assurance, loudest and vilest tongue generally gets the duck. I have seen a rough, who got most of his ducks by claiming, put up his gun as if to shoot, then look right and left at those nearest to him to see if they were going to shoot, and if they did and were successful in knocking down a duck, he would immediately claim the duck (not having shot his gun off at all), and by his rowdy and tough talk would eventually get it. But it is not always the rowdies who do the claiming, for I have heard of several men who pass for gentlemen doing lots of it. One day one of these parties came on the bridge with a \$300 Greener gun, and took his stand near another man. They both had a shot at a duck which was killed; both claimed it, but the one with the costly gun got up on the bridge, ran for his skiff, fell down in his haste, nearly going through the bridge, and lost his gun overboard, which was not recovered for several days, and then was a minus a lock.

The east shore of the river nearly all belongs to one estate and there are but few clubs on that side. The lower ones have very good shooting for canvasbacks and redheads, and as there are five creeks entering on this side, three of which widen out into large ponds, they also have exceptionally good mallard and black duck shooting. The famous Maxwell's Point is on the east side about half way between the bridge and Rickett's Point. It is a bold promontory that juts far out into the river, the shores for more than a mile being protected against the tide and ice by a rip-rapping of granite blocks, all of which were brought from Port Deposit, Md. Judging from what remains, it must have been in years gone by a most magnificent place. The point is covered with rare evergreens and other beautiful ornamental trees, interspersed with choice fruit trees. There are the remains of large greenhouses and grapevines, while scattered along the road approaching the house are many painted tubs, in various states of decay, each one of which formerly contained some rare exotic. The house is large and roomy, with wide porches running all around it, from which a magnificent view of the river and bay can be had. This was formerly the summer residence of Gen. Cadwallader, of Philadelphia, and it is still owned by his heirs. At the time he occupied the place it was kept up in regal style, and I have heard that he had a deer park and aviary of rare birds, among which were some flamingos which escaped from their captivity and spent most of a year on the shores of the river. This point, like the others mentioned, has been a great ducking place, and thousands of canvasbacks and other ducks have fallen to the unerring aim of the shooters concealed in the blinds.

Before the grass was killed the fishing in the Gunpowder was very good, especially in the fall when rock were running. It was no infrequent event for a skillful fisherman to catch anywhere from ten to sixty of these splendid fish in a day, and I know of one catch of seventy-six taken in one place near the bridge in a few hours. The fishing now is not poor for those who know where to go, as there are several places where the largest kind of white perch can be caught in great quantities. Since the grass disappeared the perch have fed along shore on hard bottom among the rushes that grow very thick in such places, working their way through the rushes to very near shore. I caught quantities of them all during the past four summers, using a stiff rod with a sinker on the end of the line and a No. 1 Sproat hook on a gut snood fastened to the line eight inches above the sinker. I would drop my sinker wherever I could find a small opening in the rushes, and as soon as it reached bottom I would feel a bite. Many fine perch were lost by their running through the rushes and tearing out the hook.

There is a spot off Carroll's Island called the Stone Pile, where two of the barges loaded with stone for Maxwell's Point were wrecked many years ago, that rarely fails to yield a good catch of white perch, but it is very difficult to locate; few but those who have the bearings down pretty fine ever get on it. It is a terrible place to lose hooks and anchors, and rivermen say there are at least fifty anchors on the stone pile. I always use a trip line when fishing on it. Another place where one is almost certain to find any quantity of perch is where the channel makes its first turn from south to west. Here the tide has scooped out a hole 30 or 40 ft. deep, the south side of it being nearly perpendicular. One can anchor in 6 to 8 ft. of water and fish in 30 ft. This place can only be fished with a hand line, and consequently is not much in favor with those who prefer the rod.

Vast quantities of herring are caught every spring in this river with gill nets and seine, at times tremendous hauls of rock and perch are made. Shad are becoming more and more plentiful every year, thanks to the U. S. Fish Commission, who have planted numbers of fry in the river. For a period of more than twenty-five years not a single shad was caught, about five years ago a few hundred were taken at Joppa, and last season and this several thousand were taken in the river. There are very few large yellow perch now to be caught, but catfish, eels and crabs abound. The average depth of the river is 6 ft., but near the mouth there are a series of holes from 30 to 50 ft. deep.

The Gunpowder also has something of historic interest, for one of the numerous settlements made by our ancestors about 1700, when they were looking for a good place to build a city, was established at Joppa, which was situated at the head of tide-water on the river. According to Mr. Scharf in his "Chronicles of Baltimore," an act was passed by the Provincial Assembly of Maryland in 1707 to build a court house on the Gunpowder River, and a tract was purchased called Taylor's Choice, afterward Joppa. In 1731 small-pox visited Joppa, and the Legislature suspended the sessions of the Court from June to November. This place was used as the county court house until 1768.

During this time the town, which was never large, did a very flourishing business and was one of the most prosperous and important seaports in Maryland. Tobacco was brought to Joppa in vast quantities, which was shipped to Europe and the West Indies. In 1768 the county seat was removed to Baltimore, and Joppa soon began to decline. The only building now left is a very large and substantial one built of bricks brought from England. It

stands facing the river, and is a large double house with wide hall through the middle and a very high hipped roof. The remains of one of the old wharves is still visible just at the junction of the Big and Little Gunpowder Falls. The water at the end of the old wharf is 6 to 7 ft. deep, and at the time Joppa was in its glory there was a good channel, as deep or deeper, all the way from the mouth of the river. But cultivation and opening up of the country draining into the river has caused it to fill up so that the marshes now extend almost a mile below Joppa, and the channel has become entirely obliterated. The draw in the railroad bridge marks the place where the channel ought to be, but there is now at this place and all the way across the river an average depth of only 3 ft. The marshes at the head of the Gunpowder are a great place for reed birds and rail shooting, and blackbirds frequent them in countless thousands.

BALTIMORE, MAY.

Natural History.

JAGUAR, OWL AND SKUNK.

TAYLOR COUNTY, Tex., May 11.—I have read "Aztec's" letter from San Luis Potosi, in Mexico. He thinks that that great cat, the jaguar, is not much of a fighter in Mexico. That cannot be said of him in Texas, for all accounts agree that he is here a fighter from Fightsville. He is mostly found now in the brush or chapparal of southwest Texas, where the trees are too small to afford him refuge when pursued. When the dogs come up to him he must stand up to business, and he enters into it as if he rather liked it. One blow with his terrible paw will break the skull or disembowel any dog. I have never hunted him, but those who have, tell me he is a regular dog-killer; that the dogs know him so to be; that few of them have the stomach to venture near him, and that when he makes a break at them they instantly turn tail and scatter for dear life. And it need not be thought strange that there should be such difference between the jaguar of Texas and his brother in Mexico.

The fox of Texas is precisely the same in appearance as the fox of the Eastern States, but he is very unlike him in quality. Here he is a poor, stupid, unenterprising creature, out of whom no sport can be got. When pursued he takes to the first tree he can climb, and there he will stay until he is shaken or shot out. He is a mere abortion of a fox, and may be the jaguar of Mexico is like him.

Capt. Chas. Bendire, of the National Museum at Washington, writes me that the bird I spoke of in a late letter as making a note like *Cuculus canorus*, is our little burrowing owl of the prairie-dog towns, and that this note is his love call, emitted only when he is in love. His ordinary note is familiar to me, and it is so totally different from his cuckoo note that I could not entertain him as the author of it. Also some of my neighbors said the note was made by the "monkey-faced owl," a bird spoken of by everybody in this country, but I cannot say I know him. Capt. Bendire is no doubt correct, and I thank him for the information.

I had a combat with a skunk this morning, and am now so malodorous as to become a great offense to my household; inasmuch that they seem to wish I were far away. Wherever I move the fragrance follows and expands about around me. Truly, I have become a perfume box. The animal discharged several volleys at me at very close range, bespattering my clothes and hitting me with one shot in the corner of my right eye, which burned like cayenne pepper. I also got it on my face and beard. The odor, it appears, will not wash out, but must take its own time about leaving. The liquid producing the stink is of a dark yellow or brown color, and there is much of it. The beast was trying to waylay some of my poultry, and I killed him with a crowbar, not having time to get at my gun.

N. A. T.

Report of the American Museum of Natural History.

THE annual report of the president of the American Museum of Natural History for the year 1897, has just been issued, and it includes among other things, the address as delivered at the reception tendered by the trustees of the museum in commemoration of the opening of the new wing, together with the act of incorporation, constitution, by-laws and list of members.

The treasurer's report for the year shows that the expenses exceeded the receipts by over \$27,000, and of this more than \$4,000 is charged to the Department of Public Instruction. As against this it must be stated that the endowment fund has been increased \$10,000 since the last report by the gift of \$5,000 from Wm. Schermerhorn, Esq., and a bequest of a like amount from the estate of the late Sarah M. Hitchcock. Moreover, by recent act of Legislature, the board of estimate and apportionment is authorized to grant annually \$50,000 to the museum in addition to the \$25,000 heretofore authorized by law. This is conditional on the free opening of the museum to the public every day in the week except Monday and the morning of Sunday.

The collections throughout have been increased by many gifts from public-spirited individuals in all sections of the country. In the department of taxidermy, the bison group, the woodchuck group, the three bird group have been added during the year. Fifty mammals and fifty birds have been prepared and placed on exhibition. A new Guide to the Exhibition Collection of Mammals was published and the labeling of the collection completed. The largest additions to the collections are perhaps to be found in the department of vertebrate paleontology and archeology and ethnology, but the entomological collection was increased by the purchase of the Harry Edwards collection, which contains 250,000 specimens. There has been very satisfactory growth in the library. A very interesting addition to this is a copy of Audubon's Quadrupeds of America, the elephant folio edition, presented by Geo. H. Brown, of this city.

A New Game Law.

"Book agents may be killed from Aug. 1 to Oct. 1; spring poets from March 1 to July 1; scandal mongers from Jan. 1 to Dec. 31, inclusive; umbrella borrowers from Feb. 1 to May 1, and from Aug. 1 to Nov. 1. Open season all the year on life insurance agents.—*Anoka Union*.

A HABIT OF THE ROBIN.

MUNCY, Pa., May 21.—Mr. Elting in a paper to *FOREST AND STREAM* last fall wrote of some disreputable practices or habits of the robin. He alleged that the parent bird ate the excrement of its young, and that invariably, too. Now, I did not believe that your correspondent had examined closely enough, but that he was perhaps deceived by some action of the bird. Mr. Gibbs took issue with him immediately and sent in his protest. For one, I said that if our robin is guilty of such detestable habits he cannot hide them long from the great army of watchful investigators. I did not suppose, however, that I would be able to prove or disprove the statement, nor do I expect to now, but I give the results of some personal observations, made only a few days ago.

About the first of May, while helping to trim out the limbs of a large walnut that hung too heavily over the roof of my house, I discovered a robin's nest and in it five young birds, apparently not more than two or three days old. The nest was close to the house and could be seen very plainly from three windows. I spent hours watching the old bird feed and care for the young. I have seen them come to the nest with food and take out the excrement many times, yet I never saw them swallow it. Usually they would drop it while flying sometimes close under the tree, and at other times rods away. Sometimes they would not drop it at all, but alight on the fence or walk or on another big tree with it. When I first made this discovery I said, "Mr. Elting is right, I guess." But I began to investigate and found that the cunning bird had deposited it every time where it alighted—it made no difference whether on a limb of the tree, on the ground or on the fence or on the walk, it was there every time. I invested nothing in either theory, and said let the right prevail; and now, after a careful examination I find that I have found and accounted for it each and every time it was taken from the nest, and I for one, say emphatically that the robins, of this section at least, do not eat it. J. M. ENGLISH.

Exactness in Observation.

"Gentlemen, you do not use your faculties of observation," said an old professor, addressing his class. Here he pushed forward a gallipot containing a chemical of exceedingly offensive smell. "When I was a student," he continued, "I used my sense of taste," and with that he dipped his finger into the gallipot and then put his finger into his mouth.

"Taste it, gentlemen, taste it," said the professor, "and exercise your perceptive faculties."

The gallipot was pushed toward the reluctant class one by one. The students resolutely dipped their fingers into the concoction, and with many a wry face sucked the abomination from their fingers.

"Gentlemen, gentlemen," said the professor, "I must repeat that you do not use your faculties of observation; for if you had looked more closely at what I was doing you would have seen that the finger which I put in my mouth was not the finger I dipped in the gallipot."—*Traveler's Record.*

"DIDYMUS" AND HIS NIGHTMARE.

ST. AUGUSTINE, May 15.—It is generally thought that the Hough bullhead yarn which was published in *FOREST AND STREAM* some time ago could "take the rag off the bush" against anything in the line of whoppers ever penned, but a quiet little story (not sworn to) was placed before the readers of *FOREST AND STREAM* about that time that takes the rags from all the bushes, from Maine to Mexico.

"Circumstances alter cases," and a little female circumstance is in the way of my saying much about it, but I humbly beg, beseech and pray, that the gifted author-ess will, even at this late day, own up, retract, and utterly repudiate the whole thing and let me have a good night's rest. If it was about a pair of buzzards, the story, as big as it is, might be swallowed with some oiling, but it was all about a pair of insignificant pet humming birds. One of them was brought up on principles adopted by its ancestors (and rigidly adhered to by generations of them yet unborn), and stubbornly refused to bathe its lovely little form in anything but water from the clouds, before it touched the earth. The other was a little rowdy, and because his companion refused to wallow in the water with him like a vulgar catbird, "he would take him by the leg and drag him in!"

Now, I do not like to dabble in doubts, and especially if printed in the truth-loving pages of *FOREST AND STREAM*, and when I saw in imagination those long lines of wagons loaded with slimy bullheads of the Hough variety I managed to swallow the story, with a little straining; but those humming birds have been gradually training me for the lunatic asylum ever since their unparalleled exploits were paraded before the world by *FOREST AND STREAM*. Now, let's see.

The unwashed little party would not, with meekness aforethought, lie down on his back by the side of the saucer of water to let the other fellow "pull his leg" and haul him up over the side! That has not an air of probability hanging round it, and if he had to chase him round the room to "catch as catch can" he couldn't fly with him through the air, like a fish-hawk with a mullet, to get him to the bath tub, and as to getting him on the carpet and hauling him across the room and then up the table leg. But I may as well stop. It won't do! And I want to say right here that I do not write this for publication, but to ask your individual sympathy in my troubled state of mind. I wake up twenty times a night in a dazed condition, only to see that villainous little brat of a bird dragging his companion across the room by his leg, with his feathers rumped and torn out till he looks like a bit of muddled-up rag, etc. Yours in misery, DIDYMUS.

Cow, Calf and Coyotes.

CORPUS CHRISTI, Texas, May 23.—As I was looking over your paper I noticed a piece about a coyote or wolf catching a jack rabbit. I have a jack rabbit instance to mention. Once as I was going to a ranch on the Rio Grande River I noticed a cow fighting a pack of coyotes. We went up and examined the case. The cow had her calf underneath her and was keeping the coyotes off. She had already killed fifteen of them when we came up. Of course we shot at them and killed three, which made eighteen dead. The Mexican I had along began skinning them and brought them to the ranch. J. S. K.

Game Bag and Gun

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

THE SOUTHERN QUAIL'S HARD LOT.

MR. WM. C. BLACKMER, Salisbury, N. C., under date of May 11, writes the following interesting information concerning the bird supply in North Carolina this year:

"From my own experience and from inquiries made, I am satisfied that our birds in this immediate section were not hurt by the cold snap. Of course, some men slaughtered; but the unprecedented weather kept the pot-hunter from his avocation, and the coveys found enough food to sustain life. I have been told, what I did not know before, that when driven to it by hunger, our quail will fly to the cedars in covey and eat the small blueberry. I opened the crows of some I killed after the snow was gone, and while I found no cedar-berries, I did find the redberry from the wild briar and pine mast in abundance, and further east, the birds were said to be tainted with the pine odor. This I cannot vouch for."

From an old friend, Mr. S. N. Ayers, Blue Mountain, Miss., I received the following game notes under date of May 15:

"The quail stood the winter well, although we had a 12in. snow in January which remained on the ground more than a week. But, fortunately for the quail, after three or four days the snow melted sufficiently to settle and harden so the quail could travel on top and get acorns which had fallen in the meantime, and sumac berries enough to live on.

"The prospect for the coming season will be better than last, especially if we have a dry June, that being the month most of the quail are hatched in this section.

"The quantity of birds last season was below the average owing to a very wet May and June, which drowned the larger part of the young; consequently, the most which were raised were of the second crop, or late hatching.

"The quantity of birds here has diminished from one-half to one-third in the last seven years, especially in certain sections of Mississippi, although there is a fair quantity here now. The reasons for this are that there are fully three times as many bird hunters now as then, in some localities; more particularly pot-hunters. Furthermore, in some localities, the game law is not respected and in particular by those who own no dogs. Such men slip around in Bob White time and whistle them up to shoot them. They also rob all the nests they can find. The trouble here is the most of the people need educating up to respect the game laws. No longer ago than this morning I heard a young man say he was sorry he failed to have his gun with him to-day, as he could then have killed a half dozen of quail. I shamed him all I could, telling him it was against the law and that in any case it was a shame to kill birds of any kind when they were nesting. He then said he would not shoot hens. I told him the cock sits half the time and would raise the young should the hen die, so that he was no more excusable for killing cocks than hens.

"Squirrels are very scarce. No ducks. The fewest number of turkeys. In fact, a turkey is not allowed to yelp, gobble or put-t-t at any season of the year. Such as are so fortunate (?) as to hatch are killed before they are as large as jay-birds."

Now, I consider that a real nice letter, full to the brim with useful information and containing an admonition which every shooter in the land should heed. Spring shooting and wanton destruction will exterminate the game birds of America if persisted in. The novice and the unthinking will say, "No—impossible." Think of the fate of the buffalo, the wild pigeon, and the partial destruction of ducks, quail and snipe. No sensible man can then say, "No." The day has come when legislation should destroy the vocation of the market-hunter, when a fixed open season should be rigidly enforced, and when individual selfishness should give way to public good.

It is not commonly known that negroes destroy thousands of quail eggs every season. The negroes use them as an article of food and find a ready sale for them in most of the Southern towns. Negro dogs also destroy large numbers of nests. There are from one to a dozen dogs to each negro family. They are in a chronic state of semi-starvation, and have to depend on their own exertion for subsistence in most instances. Thus they become great prowlers. Between civilization and barbarism the poor quail has a hard time and an unhappy life.

B. WATERS.

An Old Southern Rifle.

AMONG the arms now hanging up in the Boone and Crockett Club Hunters' Cabin at the World's Fair, and to be seen by visitors there, is an old crooked-stocked muzzle-loader which was once the property of John L. Villalonga, late of Savannah, Ga. This arm, which until recently was in the hands of Mr. Inglis Stuart, of this city, was by him loaned to Mr. Grinnell to be a part of the furniture of the hunters' cabin.

When the rifle was delivered a note giving its history accompanied it, which we print:

NEW YORK, May 8.—Mr. George Bird Grinnell: DEAR SIR—The Villalonga rifle—so-called—was made on the order of John L. Villalonga, late of Savannah, Ga. It was made by Louis Smith, of Georgia, and told me that Mr. Villalonga used it in the Seminole outbreak in about 1840, being a member of the expedition sent against these Indians. I do not know how it came into the possession of Louis Smith, who says that he has had it for twenty-seven years, but believes he bought it from some trader. I became aware of its existence while I was in the South last January, and subsequently purchased it from him on behalf of the Villalonga family. I understand they are quite willing it should be exhibited at Chicago, provided it is returned to me when the Fair is over. Mr. Villalonga had a great passion for hunting, and, as I am informed, was especially proficient in "barking" squirrels, and I am told that he was an exceedingly accurate shot with this rifle. In this respect he was *primus inter pares*, and that is saying a good deal, for these men were most skilled in the use of rifles. But he also used this rifle with many of the old men in the southern tier of Georgia and northern Florida, with whom his memory is still green, and they have given me many anecdotes which I do not deem it necessary to recall here. Doubtless such of the Southerners who may see this rifle will find an interest in it, as by many of them he is so well remembered. Yours very truly, INGLIS STUART.

The Merchantable Timber of the Adirondacks.

Editor *Forest and Stream*:

The Forest Commission of the State of New York has lately issued its report for the year ending Dec. 31, 1891, and an interesting and beautiful report it is, one of which the Commission and the State may well be proud.

There is, however, one page in this otherwise commendable book, with which I take issue, and with which every reader of *FOREST AND STREAM* should make himself familiar, and then use every effort in his power to thwart the execution of the recommendation there made. I refer to page 194, the conclusion of the chapter on the spruce blight. After referring to the immense damage done by this blight, and the probability of its recurrence, the report continues as follows:

In view of this liability the State should amend its forestry laws so as to permit the sale of matured spruce trees. The full-sized spruce on the State lands should be harvested, and the proceeds turned into the State treasury. The large trees can be taken without injury to the forest and without any diminution of its foliage and shade. The spruce, more than any other tree, can be cut with safety and benefit to the forest, because its habitat is always plentifully supplied with young growing trees and nurseries. It is a fast grower, and the young trees will soon take the place of those removed, creating thus a perpetual supply. Throughout the Adirondack forests there are many localities where the lumbermen are cutting a second crop of spruce; and on some lots they are taking off the spruce for the third time. In view of all this we feel constrained to urge the State to accept the revenue which can be obtained from its matured spruce, instead of leaving these trees to blow down, or to fall from old age, or to be destroyed by the recurrence of some blight.

It sounds exactly as if a lumberman dictated it.

The statements are all true, and yet all lovers of the forest must unite to prevent the execution of the scheme set forth, or live to weep again over the injury done to public property by treating it as one might with safety treat private property.

Facing page 139 of the report is a wonderful picture representing the result of removing the matured spruce, and on page 139 is the statement that the desolation represented, is caused by the erection of a dam two miles below Raquette Pond, whose back flow extended up the river fourteen miles or more. This dam was built by the State to assist lumbermen in driving logs. If the *FOREST AND STREAM* would reproduce this picture it would be all the argument needed against the sale of timber on State lands. Timber can only be gotten out by the aid of dams or railroads; and we want neither on the State preserve.

The estimates of the number of matured spruce to an acre (given as eight on page 28 of the report), are, to say the least entirely below the average in the parts of the forest with which I am familiar; but even if this very low number were correct, it would mean the destruction of forty trees to an acre, for it is generally conceded that five trees are destroyed for every 12in. log which reaches the mill. Log roads must be made throughout the territory cut over and logging camps must be erected.

In No. 13 of your present volume you published an interesting article on the "Adirondack League Club," with a beautiful half-tone of the foot of the Lower Stillwater. Many a delightful day have I passed on and near the very spot represented, but it will be twenty years before another such beautiful view can be taken there; for this great club has been bitten by the same serpent which has poisoned the Forest Commission, and to-day a dam spans the stream at the point represented in your picture, a desolate clearing of considerable size covers the site of the old bark camp, and the beautiful Stillwater is overflowed and ruined. Even Lake Caswell, the gem of that locality, is no more, having been included in the general drowning out. (I send two photographs of the "Foot of the Lower Stillwater" more correct than the one printed by you, one showing the dam in process and the other the lumbermen's clearing. I wish you could reproduce them alongside of the picture you printed March 30.)

Not! Let the clubs and preserves sell their timber if they think best, but keep off the people's property.

One hardly likes to put into cold type all he thinks about such honorable men as the officials of a great State like ours; but I am certain that every one of your readers (not a lumberman) who has seen the forest in process of being stripped of its merchantable timber must agree with me, and I call upon all those who have seen it to impress it upon all their sportsmen friends, that we, the people, want no axes in ours. S. A. C.

Carrying Guns in Close Season.

CHICAGO, Ill., May 23.—Editor *Forest and Stream*: I have just read the article by "Sink-Box" in your issue of May 18, in which he suggests that it should be *prima facie* evidence of the violation of the game laws in regard to close time for a person to be seen in the woods or field with gun and dog, or gun alone, during the close season on upland game. I may not fully understand his position in the matter, nor do I know how the law works in the States in which it is in force, but I should think that it would be a very unjust law in certain cases. Under such a law a person could be arrested for hunting hawks, gophers, skunks, foxes, wolves and other vermin during the close season on upland game—arrested for violating the law, when, in fact, he was doing much for the protection of game in destroying some of the worst enemies with which it has to contend. In most of the States this law would prevent a person from hunting fur-bearing animals with a gun during part of the season in which their fur is in prime condition.

"Sink-Box" adds that if such a law was in force you could get out a warrant and make the hunter prove that he was not violating the close law. This would be a great inconvenience to the honest hunter, and have a tendency to keep him at home, for he would not wish to be annoyed by an arrest, while it would have no great terrors for the violator. A person disreputable enough to violate a game law would have little trouble in proving that he was not out for that purpose, unless found with the game in his possession; for a witness testifying that the person did not go out for the purpose of violating the law, would only have for his proof the word of the violator, and a game law violator would have no hesitation in lying to his wife or friend before starting out, and thus have his witness fixed in advance.

As I expressed myself above, I may be way off the track, and may not understand the workings of similar laws already in force. It seems to me a useless incumbrance to the laws; however, I may be superficial in the matter. What we want is good, plain laws, so arranged that there may be no loop holes for the offender, and not laws which will be obnoxious to the honest citizen.

OLD AVAILANCE.

IA Maine Warden's Notions.

LOWELL, Me.—*Editor Forest and Stream:* I will give some of my ideas of the prospect of our game the coming season. We have had such a winter that it would be natural to suppose that partridges would have suffered and died, but I have seen more partridges this spring than for many years. The first of May I traveled through different sections of the country and I could hear them drumming in every direction. And I never have known of a winter that was so favorable for large game as the past winter, and I have not seen any signs of game being killed. Such reports have been fewer than ever before. Reports are often false; our newspaper reporters catch on to all conversation they hear and it is published for facts.

The fish and game association that has been established this year is without doubt going to do good work in protecting our fish and game, and our forests. Our forest fires destroy a great many partridges' eggs and young, and the young fawn deer will hide in the brush and be burned up.

The worst class of poachers we have set forest fires for the purpose of toting deer, bears, etc., and it makes it also more open ground to see the game. There is quite a number of this class living between the Penobscot River and Greenfield, and their principal hunting grounds are burned all that they can be, and as fast as weeds and bushes shed leaves enough to carry the fire, it is set on fire again.

One of the members of the newly organized fish and game association told me that each member was made a State warden, and that some of that class of hunters I referred to had told him that if Darling ever leased any lands it would be burned, etc. Now, so far as leasing is concerned it makes no difference, for they always have and will burn just as long as they are allowed to go at large, and they should be arrested every time they are known to trespass on wild lands, and from what I learn of this association they are organized for the purpose of enforcing the laws on this class of poachers, and I believe this is just what has got to be done to preserve our fish and game, and more especially our forests. J. DARLING.

Strange Vitality in Birds and Animals.

I HAVE very often noticed in FOREST AND STREAM instances of remarkable vitality on the part of large game. Nobody seems to be able to explain it, and yet in this enlightened age I am loth to believe that such is the case. In my own experience many strange instances of vitality have been remarked, especially in grouse. On one occasion I shot a grouse, sitting in the snow about 70yds. off, with a .44 Winchester. The bullet hit it in the back and came out of the breast, and yet that bird flew about 30yds. before falling. At another time I shot a grouse, running on a log, with my .45-90. I had no chance to shoot its head off, so fired low down in the back. The bird's entrails were completely carried away; nearly the whole abdomen being shot off, and yet it crawled under the log. Again I saw a grouse fly off with a No. 4 shot through its neck. It went over 100yds. before dropping. On another occasion I shot a hare through the heart with a .22 rifle. He did not move. I threw down the lever, inserted another cartridge and was just shooting again, when he sprang about 6ft. and died. I consider this vitality very strange, because so many birds and animals die at once from wounds which certainly seem far less mortal.

I believe that it is a mistake to shoot at the heart when sudden death to the game is imperative. Cats are supposed to possess great vitality. Well, I have killed at least half a dozen by shooting them between the eyes with a .22cal. rifle, and only one kicked. The others simply stiffened their legs and gave a few convulsive shakes of the tail. I hope to hear some other instances of this curious vitality I have mentioned, and will thank any one heartily for any explanations.

L. D. VON IFFLAND.

That Dogless Gunner.

WANTS TO KNOW WHAT HE IS.—I am a comparatively poor man financially and have to work hard to earn my living. During the fall of the year when it is possible for me to get away from work for a day, I take a gun and go out for a shot at a partridge or woodcock. I have no dog; can't afford one. Now, what I want to know is this: Am I a sportsman, sport or pot-hunter? Probably on account of my not being overstocked with this world's goods and having to flush my own birds, the cry will again be—pot-hunter.—*Strawberry Bank in Forest and Stream May 18.*

POTTSVILLE, Pa.—In answer to "Strawberry Bank" I would say that if he flushes his birds and kills them on the wing he is not a pot-hunter, provided, of course, that his bag is not too heavily laden. The absence of the dog makes no difference. The fact of his not owning a good pointer or setter is only his misfortune. I frequently hunt ruffed grouse by what we call "walking them up." It is hard work and much more difficult shooting than breaking clay pigeons at unknown traps and unknown angles. You have no indication of the whereabouts of the bird until it flushes, it may be to the right or left, to the rear or in front of you, and more often out of range.

REMLAP.

"Strawberry Bank" in last FOREST AND STREAM wants to know what he is. He's a natural curiosity; that's what he is, and ought to be on exhibition at the World's Fair. A man too poor to own a dog! Why the poorest man I know of owns seven, and would take another if it was offered him.

MC.

Powder and Shot Measures.

SAN LUIS POTOSI.—Speaking of these I have felt not only the inaccuracy noted by J. H. G., but especially the lack of a measure graduated for less than 2½drs. and 1oz. My wife has a very light 20ga. gun, and I have had no end of bother trying to load it so that the recoil would not be unpleasant. I have applied to all the implement makers, but nobody has or can get a measure smaller than that above noted. The Ideal loading flask is comparatively expensive, but very satisfactory for powder. But what is one to do about shot? Why can't some factory put on the market a handy measure graduated say from 1dr. up,

AZTEC.

FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

IV.

MAY 24.—Mr. Chas. H. Townsend, of the U. S. Fish Commission, late detailed for work at the World's Fair, has gone to the Northwest coast to carry on work of scientific inquiry. He joins the U. S. police ship Albatross, which will drop him off at some of the Alaska islands. Mr. Townsend is of old experience in similar work in that far-off corner of the world, and is possessed of a great fund of information of interest to sportsmen.

There is now in the new Esquimaux village on Stony Island avenue a man by the name of Capt. Ford, who was born of English parents in Labrador, fifty-four years ago, and who claims that he has never until now left his cold native country. The Esquimaux seem happy in their new village, which has much of interest, in common with the many other similar displays of the life and customs of wild peoples.

The Smith & Wesson Exhibit.

MAY 25.—Mr. M. H. McIntire is on as the representative in charge of the exhibit of Smith & Wesson. Mr. Joseph Wesson is expected to be present for a time later, but is unfortunately ill at this writing and cannot come. The display of this firm includes 192 revolvers of 11 different patterns, and in all calibers from the .22 up. Many of the arms are elegant in the extreme, and most of them are handsomely engraved. The engraving on one revolver alone cost \$2,000. It is rather embossing or chasing, for the gold and blue steel pattern stands up in relief. Tiffany, of New York, did the engraving on the silver "Arab model" butts of some of the revolvers. Much of this work is artistic as any work in any field.

Mr. McIntire showed me a full set of the standard gauges, to which all the interchangeable parts must respectively conform in the making of these arms. The fitting seems wonderfully nice. Another odd thing, and one not generally known as yet, was a self-lubricating bullet, on which the firm has spent two years in experiments, and which has been well mentioned in U. S. Government reports. This bullet is hollow, being built around a tiny copper tube, which traverses it and emerges at the point. This tube is filled with the lubricant, and at the base of the tube a little soft lead pellet is placed. At the instant of discharge the gas drives this lead pellet forward and up into the copper tube of the ball, expanding it so that it carries the lubricant ahead of it, the latter being thus forced out over the head of the ball as it goes out of the barrel. It is claimed for this bullet that 7,000 shots fired with it lead a barrel no more than twenty-five shots with the solid ball. The firm will soon give away 100,000 of these bullets to introduce them.

The cases when seen also contained a single-shot pistol and a revolving chamber target rifle among other objects of interest. Time would fail to speakfully of all the beautiful but deadly weapons shown here; but the display is worth study as showing one phase of the modern development of the armorer's art.

The Colts Exhibit.

The Colts Patent Fire Arms Mfg. Co., of Hartford, Conn., have a simple but very effective display, shown in two cases, a small and a large one. The latter is the one which contained the products of the firm in the expositions of Melbourne, Philadelphia and Paris, and I understand the arrangement of the contents is the same. In the center of this case is a large portrait of the founder, Col. Samuel Colt, and a very fine-looking man he was, too. About the portrait are arranged the medals, and the decorative motive shows all the makes of the Colts revolver, from the tiny .22 to the full-blown cowboy's friend with engraved pearl handle. The Colts revolver of 1833 is shown, and a bayonet pistol of 1836, neither quite so handsome as the present weapon, and there are a pair of old-fashioned cap and ball revolvers, gold mounted, and in their time no doubt once thought magnificent. The world moves, in revolvers as well as elsewhere. Two baby pistols, Colt Derringers, set off the mammoth .44s and .45s. There are 110 pistols shown in all, and of course one finds some magnificent work in ornamentation, in ivory, pearl and other fancy finishes, though for the most part the arms shown are simple and plain. All the parts of the arms are shown as they come from the drop-forging, and the curious will look with interest on these members of the Colts gun body corporate. There are also shown 24 Colts rifles, from regular stock, and 12 fine specimens of the Colts shotgun, ranging in price up to \$350. In the case with these are sectional parts of barrels, showing the curious process of manufacture of the six-blades Damascus barrel and the three-blades Turkish Damascus. Add to all these things the full line of sectional arms, and one may get a very good idea of what sort of goods he is using when he shoots a Colts six-shooter, rifle or gun. The display is rounded out by a big brass Gatling gun, which shoots about a basketful of lead at a clatter. The progress of American invention can nowhere be better seen than at this case showing in silent comment the development of an American weapon which has made a revolution, and perhaps helped put down revolutions of one sort or another under many different skies. The exhibit is creditable to so great a firm. Mr. C. E. Willard, their Western representative, is in charge.

The Parker Gun Exhibit.

Capt. A. W. Dubray, representing Parker Bros., is in charge of two long cases containing a double row, 50 in each row, of the sterling Parker shotguns, over which he presides with so fraternal a pride that you can not avoid the thought that he made every one of them himself. There are 100 of these guns, and they are arranged so simply that the whole makes a very solid and impressive display. There are two great glass front cases, which cost \$1,000 themselves (which, by the way, the authorities disfigured by cutting down at the ends to get them within the space, saving ruthlessly through the handsome heavy moulding). There is no ornamentation about the case, and no special effort at ornamentation about the guns, they being all taken direct from stock. There are

among the 100 guns three 20-gauges, of value up to \$100, twelve 16-gauges, up to a value of \$200, about eighty 12-gauges, of value up to \$300, a few 10-gauges and still fewer 8-gauges. There is one fine eight-bore, which Capt. Dubray calls his Parker gun. "Of course, you can kill a walrus with a 20-gauge," said he, "but I recommend an eight-bore."

When I say that no special attempt is made at ornamentation in these goods, it is not meant that the guns are not ornamented in their finish, for many are as elegantly engraved as one will see. The guns themselves are household words, and they make a good part of a valuable portion of the Fair.

The Marlin Exhibit.

"I claim for our exhibit," said Mr. Marlin, secretary of the company, "that it is probably the largest collection of repeating rifles ever gotten together. We have in one case 160 repeating rifles, and not one is a duplicate of any other. They run from the 15in. carbine up to the military arm, single shot or repeater, and we think the aggregation is as handsome a one as any ever seen."

Mr. Marlin's pride is certainly a justifiable one, and his company can not have too much credit for the trouble and expense it must have undergone to put this display in place. It is a display remarkable for its variety and brilliancy of ornamentation. There are rifles with walnut stocks, and rifles with white birdseye maple stocks, and rifles with stocks as handsomely checkered by the finisher as any costly English arm. There are rifles whose engraving must have cost a little fortune, and the engraving shows the character of many different artists. There are blue and gold rifles, and silver and blue, and gold and silver, and all silver, antique silver, all gold, all blue, or all nickel and white, and all the combinations of these, both with the walnut and the odd-looking light birdseye stocks. The whole is hardly less than bewildering, and it shows how careful is the trade to please the fancy of every individual shooter of this and of other countries.

"It is hardly correct to say that these are special guns," said Mr. Marlin, "for we make many such fancy patterns for actual trade. Most of the gold and silver mounted, highly engraved guns, and also most of those with the white stocks, go to the Mexican and Spanish trade. We sell a great many in South America."

About as handsome as any of these arms are a pair of .28s, all white nickel plate, barrel and all, with gold trimmings. Still another handsome thing is the lock-plate of one rifle, which holds an etching of the old fence on the Yale campus. Yet another similar piece shows Osborne Hall, of Yale, on the place where the fence once was.

The Marlin show a single-shot which they think will be better than the old Ballard. It is not yet quite ready for the market. They also have a model '93, in .32-40 and .38.55, the only repeater using these shells. They also have a full line of Marlin revolvers and pistols in their cases. We might stop here for a showing of American energy and thoroughness, but there is one thing more. We hear much of catalogues, of course, but who has heard of an American gun catalogue in the Chinese language? The Marlin exhibit here contains one, all in Chinese, as used by their agents in selling the Marlin goods in China. It strikes me America can take care of herself pretty well.

More America.

More America in two more cases near by, before and after loading, as shown by the Ideal Mfg. Co. and the B. G. I. Co. The Ideal reloading tools are known everywhere, but I will warrant no one who has not seen this display will be able to guess how many different sorts of Ideal tools there are. There are shown 36 tools, each in an average of 25 different sizes or calibers. The aggregate is startling.

The B. G. I. Co. are much concerned to load and also to clean a gun. They show in their cases a confusion of gun clothes and furniture such as I never before knew existed. There are all sorts of loading tools and cleaning tools, emery pastes, oils, everything the heart of the most exacting gun could ask. It is hard to see how anybody ever thought out all these things, but here they are, and if there were no use for them here they would not be. Most of these articles we have all met, one time or another, but how many have seen an auger that would bore a square hole? That auger is here, in several sizes, and the B. G. I. case is artistically ornamented with patterns of its tracing.

It is too Big.

The gun trade alone is too big to handle in one week's notice. Several more American firms remain to be noticed, the Winchester, the U. M. C. Co., the Levever Arms Co., the Remingtons and others. The English exhibits require separate mention also. It is hard to say even a word for each, but every firm which has gone to the trouble of sending an exhibit here is deserving of credit, and if any of the friends of FOREST AND STREAM have such exhibits at the Fair a word to the office of the paper will secure a visit which will be a pleasure to the visitor. It is part of the duty to tell its readers what is going on in the sporting world and that can be learned in good part among these representative showings at the Fair.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, *Red-B, Portraits for the Young* (the price of which is \$3).

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

ON THE NORTH SHORE.—VI.

The Return Trip.—VI.
[Continued from Page 451.]

WE had now reached Pancake Bay, and had nine miles to make to Bachewauung Bay, the only harbor between us and our destination unless we ran up the bay a few miles. Emery was somewhat fidgety when we told him to let her slide, as he was firmly settled in his mind about the weather, for the scuds were increasing in numbers and size in the west, and on these he hinged his forecast for a blow. We were bowling along at a fair speed, with a steadily increasing breeze, which would in all probability give us some snowy billows somewhat above the average before we reached a haven. Even with an ordinary gale, and we expected nothing more than that, the boat would ride it in safety, but it harassed that old astronomer to such a degree as to give him visions of a capsizing or a wreck.

Peter was a cool-headed sailor, and could be depended upon to skillfully handle the craft, and when we struck the heavy breeze, after crossing the bay, he relieved the careful boatmen by taking the rudder. The old rag now fairly rattled, the cordage hummed a lively tune and the fragile mast creaked and creaked, as if it wished to surpass the rustling sail in the grand uproar it was having with the howling wind. The surges gaily curled before the cleaving prow and raced along the sides in streams of lather that rode the waves in our wake like a broad and bending ribbon of purest satin. The sun still danced her dazzling rays upon the crested foam that turned like rolls of silver, flashing back the disappearing curls with a diamond-like glimmer.

The astronomer, though lost in some grand problem, sat eyeing his little white puffs with a reverence that was beautiful to behold, satisfied now that they were of as much value to the mariner as the "dipper" and the north star. Occasionally he would drop a monosyllable or two in Sanscrit or some other unknown jargon, with the helmsman, and then resume his attitude of admiration. Ah! Emery, what a precious, priceless pearl you are! Your forecasts taken from the home of splendor—the azure archway—are gems of ray serene, and should be known unto all mariners in all seas. You are a prophet, the seventh son of a seventh daughter, a soothsayer of the clouds, a reader of the writing on the wall, a necromancer of the scuds, and so on to the end.

On reaching the point at Bachewauung Bay, the breeze had become so violent and the sea was tossing in such heavy surges that we thought it best to make harbor in the bay until a more propitious wind favored us. This decided, the question arose as to the proper channel to take, there being an inner near the shore, and an outer that was fully a mile away. Peter said he thoroughly knew the shore channel, and was positive he could safely make it. Emery voted for the outside one, as its passage was void of all danger, but Ned and I, having faith in Peter's knowledge, told him to send her through the inner.

All this time a winsome girl stood in the doorway of the lighthouse, her thick blonde tresses escaping from her straw hat, waving us either a signal of warning or welcome. It then struck me, if the keeper were at home, that it would be an easy matter to be picked up from the chilly waters, though it might be an exceedingly uncomfortable position for us in the meantime. We, however, were in it for weal or woe, and as the *ukase* had gone out there was no retreat now, for once started it was either success or failure, there being no intervening station or half-way port about it. It was onward or overboard. Peter's thin lips closed tightly, and as his fingers closed still tighter round the rudder handle, their tips crimsoned, and then he swung the speeding craft about and direct for the inner channel, which movement brought a beam wind, and as we neared the angry waves that were tossing high over the shallows, giving us an ugly sea in the narrow path, we all took a good grip on the craft as a prudential measure, and then in a moment were at the mercy of the turbulent waters and the helmsman. Away we went with the heavy spray dashing upward from the bow, and more frequently inward, to the horror of the astronomer, who sat spellbound as if we were rapidly rushing to destruction, and which looked very much like it, when the intrepid pilot, with his keen eye ever alert, sang out, "Jibe!" and it was neatly done and none too soon, for just then the sight of a rocky and ragged bottom gleamed out in teeth-like ugliness from the side, as if it were waiting to grind us into splinters. A dread tremor thrilled all, followed by a ripple of delightful serenity, when at the last moment the ever-watchful guardian at the rudder, who had been strung to the utmost tension by the grave situation, announced: "All right now, but a close shave and missed only by a hair."

"You all fools, me no like it," exclaimed the trembling Emery.

"A miss is as good as a mile," said Ned, "and now for shore, there to remain till the rising of another sun!" and then he sang aloud in a clear voice, with his notes joining the hymn of the snowy surges:

"In Barataria Bay
We served with bold Lafitte,
How we did earn our pay
Who cares; the devil a bit."

Emery and Peter chattered awhile, ere we reached the beach, in a foreign tongue and with considerable animation. The astronomer appeared to be reading his daring nephew a lesson in careful navigation. Plainly could I distinguish fool, crazy, and the like, as he showered the French and gesticulated with that mercurial temperament so apparent in these fiery half-breeds. Even his brown fist was clinched and shaken at the bold helmsman, but it availed not, for Peter simply smiled, and said with reverence to the good old soul, for such he was, "All right, Uncle," and then the emphatic lecture was abruptly discontinued by the boat grating upon the gravelly beach.

Dinner was now hastily prepared, and about as hastily dispatched, for the stirring events of the morning had wonderfully increased our appetites.

After the meal the boys took our tent up the hill and put it in position on the broad plateau that ran from the landing to the entrance of the bay. The lighthouse keeper, a half-breed, recently appointed, hearing of our arrival from the fair one of the golden tresses, paid us a visit early in the afternoon. He amused us very much with his recital of the following exciting bear story, which we give in substance: "Last week, shortly after breakfast, I was called out of the house by vociferous shouts from a party of anglers in a boat who had shot a black bear in the face with some birdshot, resulting in totally blinding it. Taking in the situation at once as I reached the beach, I secured a stout piece of a heavy sapling and waited at the water's edge for the landing of the natarial bruin that was frantic with pain and swimming here and there at random. At last the bear struck the shore, howling most unmercifully and fairly frothing with rage. I carefully came to his side, but on his getting wind of me he made a sudden plunge and a fierce pass with his powerful paw, which, fortunately, was very wide of the mark, and as this seemed to fret him he made several more desperate lunges, but to no purpose. I kept well out of his way until I thought he had fully realized his helplessness, and then I again stealthily approached, and lifting on high the heavy club brought it down with such fearful force upon his bloody nose as to not only lessen the sapling by a foot, but to make that blind bear so very sick and wretched that he howled most lamentably, and tore around in a bewildering manner that was a sorry spectacle indeed. After he had again become quiet, I once more assumed the aggressive and gave him a savage and terrific blow, losing another foot of the club. This roused his anger to an infuriated degree, but it had such a telling effect that he made but a feeble movement or two, though he moaned and growled so incessantly that it was really pitiful to witness. I now quietly advanced, and with another blow in the same place he toppled over, gave a few struggles, and *Ursa major* was no more. He was in poor condition and unfit for the table, but I gave his meat away to those who had a hankering for bear steaks, and you can rest assured they were Indians."

He further stated that eight bears had been killed at and near the point the same week, and that he had captured two cubs which were swimming to the island opposite in company with their mother, who, at an opportune moment, reached shore and finally escaped. He attributed the presence of so many bears to the dry season that had about ruined the berry crop on which they so loved to feast.

On invitation we went with him to the lighthouse, where we had an interview with a Mrs. Quebec, a Cree Indian, 105 years old, who was being cared for by Mr. Devon. She formerly lived at Robertstraw, the most northern station of the Hudson Bay Company, where, she stated, she had assisted in years ago in making the shoes, gloves, etc., for the renowned Sir John Franklin, who undertook to solve the mysteries of the frozen zone of the North. She was everything but a toothless, tottering old hag, and did not look a year older than eighty. Her form was erect and of stout structure and medium height; head grand and massive, like a Numidian lion in repose, and set with eyes fairly aglow, while her lips smiled or frowned as occasion demanded, with an intelligent expression that was irresistibly attractive. Every line and furrow that marked her aged face were of such strong individuality as to satisfy you she was a remarkable woman among the untutored race. She could read the medicinal properties of herbs, roots and plants, as you could a book, and to this day wherever Mother Quebec, as she is called, is known to be, the Indians and half-breeds flock to her for a healing of their ills and ailments. She has had twelve children and has resided in Canada proper over fifty years. Her artistic skill with the needle, and in arrangement of the colored threads, is of the very highest order. We were shown in proof of this a sample of her work in a table cover that was made that summer. It was beautifully ornamented with a lace-like border that inclosed a fine display of bears, buffalo, wolves, rabbits, wild horses, etc., purely in the Indian style of architecture, angles instead of curves, but so delicately were they woven that even this rude style under her deft fingers assumed a beauty that delighted. We endeavored to secure this piece of handiwork as a souvenir of our North Shore trip, by the proffer of gold, but were unable, as it had been given to the lighthouse keeper, who valued it above our filthy lucre, and we honored him for it.

She is a grand old oak of the human type, and one of the last of a great race of savages,

"whose untutor'd mind
Sees God in clouds, or hears him in the wind."

Having finished our interview with the wondrous centenarian, we ascended the flight of stairs that led to the top of the flashing tower, which gave us a magnificent view of the loveliest of bays and of the great lake, which lost itself in the bright sunshine that glowed in changing tints of silver on the foam-tipped waves and along the rocky and beetling cliffs. I never passed or visited Bachewauung Bay but what I felt like paying my tribute. To me it is beautiful beyond expression, and has oft been the theme of the truly imaginative. Its shores and its slopes are rich in the scenic picturesque, and in season carpeted with all the bright colors of the flora of this icy region. Its islets

"Shine out with an opal glimmer
Like gems in a casket of light!"

While its streams that flow from mountain heights, come tumbling in seething cascades and racing rapids like unto veils of lace or frost-beds such as one sees in the meadows in the morning. The gorges and giant rocks that line these singing waters are ablaze with glowing hues that find relief in creeping shadows, curving bends and towering forests that swing to the gentle breeze or the violent gale. Having drank to repletion of the gorgeous panorama spread before us on all sides we descended to the terrestrial and tramped over to the tent where we read and conversed till supper, with the brilliant sunshine pouring generous libations upon us.

It was not long after the meal before the cricket opened with his evening song, and then the myriads of nocturnal insects joined in the melody with a special few that joined in drawing, like vampires, our very best blood. That loud-smelling terror, the repellent at this red-handed re-

volt, was soon ablated upon the exposed parts of our anatomy, and then the insectivorous revolutionists departed to a safer distance and a purer atmosphere.

The landscape, with the receding of the turbulent waters, was fast losing the rosy lights and silver shadows; the sobbing foam curled and broke on the brown and rugged rocks and wooded inlets of the shore; belated birds hurried with arrowy speed to their leafy haunts, and all had become as still as death, except the murmur of the waves in which all meaner and harsher sounds seemed lost and hushed to silence. The subtle moon breaks forth from the slow opening curtains of the clouds, and as she "walks in beauty to her midnight throne," through a jeweled sky, makes perfect the picture of night "which gives us the language of another world." We sat as we always did when the evening in splendor was clothed, and watched the constellations as they blossomed "in the infinite meadows of the heavens," until our eyes grew weary, and then it was to "nature's soft nurse," gentle sleep.

ALEX. STARBUCK.

[TO BE CONTINUED.]

TROUT FISHING IN NEBRASKA.

BROKEN BOW, Nebraska.—I do not think it is generally known that there is a little—a very little—good trout fishing in Nebraska. At least, I was not aware of the fact until a month ago. A business matter called me into the northern part of the State. At Ainsworth, the county seat of Brown county, on the F. E. & M. V. R. R., I found myself under the necessity of driving to Bassett, the county seat of the adjoining county. In conversation with the driver the subject of fish came up and he informed me that at Long Pine some very fine trout fishing could be had. On my expressing incredulity that there were any brook trout in Nebraska, he admitted that they might be pike or pickerel, he wasn't sure, and I dismissed the subject from my mind. However, when we crossed Long Pine Creek the appearance of the water and surroundings revived my interest, and when a fine half-pound trout, nicely planked, was placed before my plate at the dinner table at Long Pine, my doubts all vanished, and nothing short of a dire disaster could have kept me from going back to Lone Pine that evening. At the railroad eating house a large tank crowded with Eastern and rainbow trout confirmed both ears and appetite, and I made hasty preparations for a half-day's fishing the following morning. I borrowed the landlord's heavy bamboo rod, the only one in town, but no flies or leaders could be obtained. "These trout," said the landlord, "won't take flies. I've tried 'em. There are no worms here and we have to use minnows." As I was after trout for the sake of trout I did not object to the rather unsportsmanlike way of procuring them, so secured my minnows, drove up the stream about four miles, and came in after three or four hours with 16 trout weighing 6½ lbs.

This stream was stocked by the Government some ten years ago with both rainbow and Eastern brook trout, since which time the fish have been thriving and multiplying. The stream can be waded its entire length of 25 miles. Fishing goes on here the year around, and if this continues the fish will doubtless sooner or later be exterminated, especially as pike are beginning to find their way into the stream. In spite of the landlord's story, I saw fish rising to the cedar flies and am satisfied that good sport could be had, and fair success, with the brown hackle. Trout have been caught here weighing 5 lbs., and it is nothing uncommon to take a 2 or 3-pounder.

The new extension of the B. & M. R. R., reaching Sheridan in northern Wyoming, has opened up to us the fishing paradise of the West. One can reach the best streams of the Big Horn Mountains in an hour's drive from Sheridan. Here one does not care to save a catch of less than a pound weight. The streams are teeming with trout, the mountains with elk, deer, antelope and bear, the valleys with willow grouse. The scenery is unsurpassed, the accommodations are good, and as yet the fish and game know nothing of the destructiveness of civilization. This is without doubt the finest game region at present reached by any railroad in America. I shall take a trip there in July. Leaving Omaha at 10:15 A. M., Sheridan is reached at 3 P. M. the next day, but one change of cars being made, i. e., at the breakfast station of Edgemont in the southwest corner of South Dakota.

The Kekoskee fish story had about slipped out of my mind until last evening, when a friend (who, to his own misfortune, is not a reader of FOREST AND STREAM) capped the climax of a little round of fish stories by saying: "Well, gentlemen, you probably won't believe me, but up in Wisconsin a number of years ago—" "Hold on a minute," said I, "was it at Kekoskee?" Imagine my tumultuous feelings when he answered in the affirmative. As soon as I could calm my agitated mind I faintly begged him to go on. "Well, sir, the bullheads were so thick in the stream there that they backed wagons down to the water's edge and scooped up the fish with shovels. They used to sell them at ten cents a basketful, but fish were so plentiful that the price finally dropped to twenty-five cents a wagon load. They laid planks across the river and passed over on the backs of the fish." With a few inquiries I established beyond a doubt that this is the old reliable Kekoskee fish story, a little garbled from the Hough version, but enough of the salient points remaining to establish its authority. Further, this gentleman directed me to two other residents of this town, who corroborated his statements. If I ever had any doubts as to Mr. Hough's veracity or sanity they have all been dispelled, and I hereby announce myself as a true believer. C. P. H.

Montana Ditch Screens.

BOZEMAN, Mont., May 19.—*Editor Forest and Stream:* A new feature in the fish law is the placing of gates at the junction of ditches or drains from Sept. 1 to March 1, for what benefit is a mystery to me. Irrigation takes place here during the summer months—June, July and August. During the fall, winter and spring months most of the ditches are dry, as no water for irrigation is needed. But it is during the summer months that millions of fish perish on the cultivated fields during irrigation time; and at that time gates ought to be put at the heads of ditches to prevent fish from entering said ditches or drains. I understand that some Butte parties are going to test this new fish law. G.

THE MARZLUFF CASE.

ONE day last year I learned that a merchant in Glens Falls, N. Y., had, a day or two before, put a quantity of brook trout in a private pond on his own property, and that the trout were taken from a public brook in the State. This, if true, was a violation of Section 103 of the game law. I made some inquiry about the matter and was told that the merchant, Mr. J. B. Marzluff, had said to my informant that he had taken the trout from a public stream and had put them in a private pond, as he had a perfect right to do, and he understood the law fully, before and after he caught the trout. I conclude that by the time that I heard of the case Mr. Marzluff had become more familiar with the law and had changed his mind concerning his rights under it, for, instead of saying, as he was at first reported, that he did not care who knew of the transaction, he said nothing. The trout were caught on Sunday by Mr. Marzluff and several of the clerks from his store, and apparently there were no witnesses except the participants in the catching of the trout, and their lips were securely sealed. If I have a choice as to who shall be punished for violating the fish and game laws my leanings are toward the rich man, who should be informed in regard to the laws of his State, rather than toward the poor devil who may know nothing about the laws, and violates them to fill his empty stomach. I sent for Special State Game Protector William H. Burnett, and when he came not a lead could be found to follow, and as a last resort I sent him to Mr. Marzluff's pond, which was a small, shallow affair, to see if there were any trout under fin. among the lot.

To my surprise, he reported that all but two fish seemed to be under fin. in length, but he could swear to a certain number as being less than the legal length. I thought it better to have two witnesses to make absolutely sure, and another visit was made to the pond and a certain number of trout under the legal limit counted by two men; but the officer was recognized. The same afternoon a witness was found through whom the trout were traced to the brook from which they were taken, but there was reason to believe that if anything was to be done at the other end of the line it must be done at once or the cake would be dough. After a night drive the officer appeared in the mountains where the trout were caught. To be correct perhaps I should say the officer did not appear in the morning, but I have understood that a man did appear who wanted trout fishing and was directed to the stream and was told what to do, and as proof that the stream was a trout brook he was informed, incidentally as it were, that Mr. Marzluff came there on a certain Sunday and caught 138 trout, all under fin. in length, and it was more than intimated that they were caught in a net. That man went off down the brook and I hear that he has not yet returned, so he must have had good luck. Officer Burnett did get there, however, and there was a justice of the peace with him, and a woman and two men had an opportunity to tell under oath what they knew about Mr. Marzluff's skill as a fisherman for fingerling trout. Ordinarily it would be regarded as considerate on the part of an officer to come to one's house to take testimony and thus save a journey to court, but one of the men got mad about it, and said the officer and justice had no business in his house, although his wife had invited them in and offered them seats and a table on which to write, and he went off, as he said, to have the officer arrested. His errand proved to be nothing more serious than to reach Mr. Marzluff as quickly as possible and inform him that the jig was up, and he must prepare to call at the captain's office.

Stress has been laid upon the fact that Mr. Marzluff freely confessed that he caught 138 trout and that he put them in his pond, all unconscious that he was, in so doing, violating the law. So he did, but it was after the evidence was secured against him and it made not the least difference in the world whether he confessed or not, for the sworn evidence told the story as well as he could tell it, and it could be used in court to convict him even if he kept his mouth shut as tightly as he did during the weeks previous, when a confession would have amounted to something. He did not confess that he, or those that he employed, caught the trout in a net, while it is morally, and may be made legally, certain that a net was used to catch every trout that he put in his pond. However, the officer decided to let the confession count for something and so did not arrest Mr. Marzluff for the misdemeanor, but got an order from the Chief Game and Fish Protector to employ counsel and bring a suit in the name of the people for the penalty. This was done, the penalty amounting to something over \$1,200. Having brought the suit, Officer Burnett not desiring to persecute in the name of prosecution, got another order permitting the attorney for the people to settle the case for, I think, \$200, and the matter dragged its weary length along. Time to answer was asked for and granted over and over, and apparently there was no disposition on the part of the defendant to settle the case on any terms. I was somewhat surprised, for the action brought was not all there was to the case if the officer was disposed to press other charges. Finally the Chief Game Protector tried his hand at a settlement and came to see Marzluff and talked the matter all over in a most friendly spirit and decided that the State would settle for \$100, which was satisfactory to Mr. Marzluff.

Major Pond and Officer Burnett concluded that a long drawn out case was well out of the way when, to their surprise, for Major Pond had no previous knowledge of it, they were confronted by a copy of the following paper in the hands of Mr. Marzluff's attorney:

STATE OF NEW YORK,
CHIEF GAME AND FISH PROTECTOR'S OFFICE,
ALBANY, N. Y., April 17, 1893.

At a meeting of the Commissioners of Fisheries held Tuesday, April 1st, 1893, the following resolution was unanimously adopted: "Resolved, that in the interest of public policy the Commissioners of Fisheries recommend that the Chief Game and Fish Protector settle the case of the People vs. J. B. Marzluff without cost, if possible, to the defendant."

Copy of resolution certified to as correct.

EDWARD P. DOYLE,
Secretary, Commissioners of Fisheries.

To be sure the resolution does not amount, in court, to the paper that it is written on except to show the position of the Commissioners, and their apparent contempt for the law when a man of means is caught in the toils, and it does this so thoroughly that further comment is unnecessary. I have been told how the "pull" was worked, but that is of no moment, compared with the result, which speaks for itself. And such a result! Why, one is induced

to hold one's nose as he reads that when a man commits a misdemeanor the officials virtually charged with the punishment of the crime formally declare that it is in the interest of public policy that the violator shall go scot free. What are the laws for anyway?

I believe that not very long ago a man was arrested in the Catskill region for doing the very same thing that Mr. Marzluff is charged with, but public policy and a resolution of the Fish Commissioners did not come to his assistance, for the newspapers stated that he had to pay \$1,000 or more. Perhaps he could have got a "pull" cheaper. A friend of Mr. Marzluff told me that he thought it "a blanked poor law that would not permit a man to go out to the brooks and get a few little trout for his private pond." I told him to have the law changed; that was the remedy. But he did not know what such a law was for anyway. I told him that a member of a private club in an adjoining State informed me that in one year his club had bought 18,000 little trout from boys hired for a few cents per trout to catch them for the club's ponds. The State stocked the public streams for the people, then the club hired boys to catch the people's fish, and they were then put where the people could not catch them. That is what the law is for. Mr. Marzluff does not maintain a club, but his case comes under the law just the same. If the man of means is to go free after violating the law of the State, let the poor devil go also.

A. N. CHENEY.

THE "KINGFISHERS" IN CANADA.—II.

Black Bass in Big Basswood Lake.

WHEN we had fished above the camp for three or four miles until we got thoroughly acquainted with the water and almost ashamed to look a bass in the face, we tried below, and on down to the foot of the lake, and around on the north shore as far up as a farm across from camp, and found the fishing nearly as good as above; a trifle better, if anything, for the bass run a little larger, a good many of them up to nearly or quite 3lbs. We were told that bass had been taken out of this lake that weighed as high as 7 and 8lbs., but we had some doubts about it, as we fished it diligently for nearly a month and never got one that weighed a featherweight over 3lbs. If there were 8-pounders in it, we never had the luck to strike one of them. There are doubtless some large brook trout in the lake, but while we were there they were not in a very good biting humor; however, Kelpie and the Colonel took three, fishing off a rock they christened "trout point," that were of fair size, the smallest one weighing nearly a pound and the largest one 1½lbs.

But the bass fishing is unsurpassed and later in the season, September and October, Dyer says the lake trout are nearly as numerous as the bass are in the summer.

The Canada law says that only 12 bass a day shall be taken by one rod, but we frequently took many more than that number, never, however, taking more than 12 each back to the camp. The others were conscientiously and carefully returned to the water uninjured, and often nearly the entire catch of the day was returned, as we had no use for them, only as brother Dyer took them off our hands to cure and smoke for his winter use, or a neighbor would now and then drop around for a mess.

We never took to camp, even when six or seven of us were fishing, more than thirty or forty in a day, and we believed that in doing this we were complying with the spirit of the law, if not the letter of it. All that we did not use ourselves were turned over to brother Dyer (or the neighbors) to sun cure and smoke, and I have no doubt he made good use of them.

If our interpretation of the law was wrong we will be glad to be set right by Commissioner A. D. Stewart, through FOREST AND STREAM, for the information and benefit of ourselves and others who may want to go a fishin' over the border.

I fished one afternoon by myself (none of the others were out as the lake was very rough) and caught 45 bass that ran from 2½ to 2½lbs., and I was windbound for three hours of the time, the water being so rough that I was afraid to venture out. This was around the lower end of the lake. I took back to camp the last eleven taken and Dyer got eight of them to cure.

There are only a few places around the lake where a comfortable camp can be made and near Dyer's house is the best of them. On the level common back of the house is room for a hundred tents or more, but it would not be quite so handy to the water as we were.

Up the lake a couple of miles at the head of a deep bay is another fair camping place, near a landing where a road leads back to Soverby, and on the big island a short distance above another good camp could be made.

This island is about eighty rods long, as near as we could guess it, but it may be less, and a couple of hundred feet wide at the widest point. It is a solid rock rising 50 or 60ft. out of the water at the east end, but covered with enough soil to support a fairly thick growth of trees and bushes. The south side is low, only a few feet above the water, and all along this shore of it the water is shallow, 3 to 6, 10 and 15ft. deep, out four and five rods, till it pitches off deep in the channel between that and the main land. The bottom is a solid rock. The lake here is less than half a mile wide and the island is in the middle.

The fishing around this island is usually very fine, but I fished all around it one day, twice around without a nibble, and only the previous afternoon Charley had taken twenty-seven bass on the south shore near the head without moving his boat ten rods. (He would doubtless have been there yet, only he ran out of bait.) Another court in favor of the island as a camping place is that it is a charming, picturesque spot, and covered with huckleberries. A large many places around the lake, back on top of the hills, there are acres and acres of these insipid berries, and we bought handfuls of them, and the luscious wild red "rozberrys" of the neighbors at five cents a quart, and they are just about good and ripe from the middle of July on till they are gone.

There are four islands in the lake, the largest one above mentioned, another good-sized one near the extreme head, one at the entrance of one of the deep bays on the south shore, a stone's throw from the mainland, and a small patch of nearby solid rock, a few yards in area, three or four rods out in the lake from Loafer's Point in front of Dyer's house. This last stands only four or five feet above the water, and has no soil or vegetation on it except two or three stunted bushes that find a precarious "toe hold" in the crevices of the rock.

We did not find a spear of grass nor a bulrush growing up from the bottom around the entire circuit of the lake except at the head, at the mouth of Beaver Creek and at the mouth of the little stream connecting with Loon Lake; all the rest is rocky bottom, nor is there a spring to be found around the shore except a little puny stream a little larger than a lead pencil coming out of the hillside right at the boat landing at Dyer's, and a very fine cold spring branch on the north shore well down to the lower end of the lake. Snider and I found it one day while fishing around on that side when the lake was perfectly quiet, by the melody it made in tumbling over the rocks and into the lake. Only for the music it made we would not have found it, for the trees and bushes were so dense on the hillside and down to the very water's edge that it was entirely hidden from view. I looked for it several times afterward, but the wind was each time blowing down the lake, and the roaring of the surf drowned the whimper of the little brook, and I was unable to locate it.

But the lake water is clear and pure, and fairly cool, although not quite cold enough for a "satisfyin' beverage" on a hot July day.

We did not confine ourselves to fishing Big Basswood Lake alone; there were four others not hard to reach that needed investigating, and we put in several days at different times exploring their waters—except one, Little Basswood, lying five or six miles from the camp, and south of the big lake. Brother Dobie had sent us a rude sketch of the lakes and their relative positions, and had written the kinds of fish to be found in each one.

Little Basswood contained, he said, bass, pike and pickerel, the latter the Canadian name for pike perch or wall-eyed pike, and the Canada pike is the American pickerel. KINGFISHER.

ANGLERS ON CANADIAN WATERS.

THERE is no more ice on Canadian waters, but plenty of anglers have already taken up their position on them. Early last week the thick but water-soaked icy covering of Lake St. John broke up under the influence of a strong east wind and sank beneath the surface. The natives are now at work shamelessly taking the beautiful, bright, silvery ouananiche on coarse lines and coarser hooks baited with pieces of outouche and such-like enormities. This is principally along the Roberval shore of the lake. Any day now may bring the news that the fish have commenced to take the fly in the light rapids at the mouth of the Outichouan and also in the Metabetchouan pool. Last year they were rising freely before this time, but the season was a little earlier than it is this year. A large Quebec party is going out to the lake on Saturday.

Quebecers who are members of the Stadacona and Laurentide clubs along the line of the Lake St. John Railway, or of the new Triton Club, whose territory is in the Batiscan district, are daily leaving in quest of *fontinalis*, and quite a number left town on Saturday last. Reports from Lake Edward are to the effect that heavy fish were taken there last week with bait. Mr. A. Simons of Lake Beaufort, took his first trout this season out of that favorite water over a week ago. It weighed 17oz. and took a hackle.

The first American visitors to the trout waters in northern Quebec this season are Dr. Porter of Bridgeport, Conn., and Senator and Miss Read of the same place, who went up last Thursday to their club house at Lake Kiskisk, from which the ice had disappeared but a very few days previously. On the waters of this club, and especially at the outlet of the lake, the spring fishing is usually exceptionally good.

Messrs. Edward D. Toland and Sutherland Law of Philadelphia, members of the Moisie Fishing Club, are here on their way to their fishing grounds.

Salmon fishermen will be interested in knowing that the Quebec government is no longer to allow the Governor General of Canada the free control of the famous Cascapedia River, which is not even second in parts to the Restigouche. It will shortly be advertised for sale by auction, and it is understood that the upset price will be \$4,000 a year. As the Dominion of Canada pays its Governor-General an annual salary of \$50,000 a year, there does not certainly seem to be any reason why free fishing should be thrown in.

E. T. D. CHAMBERS.

QUEBEC, May 22.

P. S.—It may be useful to those who purpose for the first time trying spring fishing for ouananiche, to repeat that they should come well stocked with large flies of the Jock-Scott and silver-doctor varieties. Salmon sizes are not too large for this season of the year. This kind of fishing usually lasts for about three weeks or a little more.

E. T. D. C.

The Chicago Fly-Casting Club.

THERE were 12 members present at the regular meeting of the Chicago Fly-Casting Club in the Grand Pacific Hotel, Chicago, May 26. The minutes of the previous meeting, April 10, and the special meeting, April 20, were read and approved. Mr. J. E. Isgrigg, of Montgomery Ward & Co.'s talented staff, was elected to membership. The resignations of Messrs. C. E. Kenyon, J. S. Hair, C. P. Stivers, S. R. Ireland and Wm. Herrick were accepted. A communication from W. F. Dosé, private secretary to Gov. Altgeld, was read. It simply and briefly mentioned that the club's petition, in respect to the Fish Commission, had been submitted to the governor. A communication from Dr. J. A. Henshall informed the club that he accepted the position of director of tournaments. The secretary's report showed a balance of \$331.12. The executive committee had no report to make at that time. The matter of a souvenir key for each member was postponed till a later period for consideration. The motion which made the executive committee the tournament committee, with Dr. J. A. Henshall director of tournaments, was reconsidered. A motion to have a special tournament committee was carried. This committee will be appointed by the president. There was so much business for the executive committee to attend to that it was thought wise to relieve it of the tournament labor. The tournament committee has full charge of the conduct and arrangements of all tournaments and contests of 1895. There was a good deal of desultory conversation, after which the meeting adjourned to meet June 2. An informal vote of thanks was tendered the management of the Grand Pacific Hotel for courtesies and accommodations bestowed on the club.

B. WATERS.

BOSTON AND MAINE.

BOSTON, May 26.—The fishing parties are numerous since the ice has cleared from the Maine lakes. Even some of the fishermen who had made up their minds to forego fishing this spring and go to the World's Fair instead, have repented and are fitting out or have gone. The beautiful weather has been too much for their courage. I do believe that if it had been cold and rainy, not nearly as many would have started for their old fishing haunts.

Mr. H. H. Moses, of the wool trade, has started for Tamworth, N. H. From there he will go to the Connecticut Lakes for a fishing trip. Then he will come back to Sebago Lake, in Maine, and with Charlie Robinson, of So. Windham, will try the landlocked salmon. Charlie Robinson is a friend with about all the wool trade, being a woolen manufacturer, as was his father, Tom, beloved by everybody. Mr. Moses has a record of a 10lbs. salmon somewhere in the landlocked salmon lakes.

Mr. Gerome Hilbourn, manager for Gilman Bros., in the wholesale drug trade, and H. J. Pettingill, eastern agent of the Postal Telegraph Co., went to-day to Inglewood. One or two fishermen have already returned from those "happy hunting and fishing grounds," and they declare that they are pleased. Some of them have taken "almost too many" trout and landlocked salmon.

The Camp Stewart party left Boston on Friday evening. In the company are Mrs. M. T. Farley and Mr. Farley, of Farley, Harvey & Co., Mr. H. S. Kempton, of the Boston Herald staff, Miss Blanche M. Stanley, of Newton, Miss Hayward, of Brighton, and Mrs. Emma Moody and Mr. Moody, of the Boston Herald.

One of the largest and best known fishing parties of the season left Boston on Friday evening for the home of the Inglewood Club in New Brunswick. This is the fifth annual trip of the club members and officers, as well as guests. They went in their private car, and a happier party can scarcely be imagined. They were merchants and business men, starting on a well earned vacation. The club's preserve is attaining considerable popularity among anglers. The preserve embraces some twenty-five lakes and ponds, in which are brook trout, English brown trout and landlocked salmon. Sea salmon fry have recently been placed in these waters, and an extensive fishway constructed, promising additional attraction to sportsmen. One party has just returned from the preserve, and reports extremely high water but excellent fishing, and a large catch of landlocked salmon and trout.

The party leaving Friday night consisted of the following well-known business men: Henry P. Brigham, A. Noyes Whitcomb, James I. Wingate, Cyrus T. Clark, Edward S. Barker, Dr. F. M. Johnson, Henry K. Porter, J. Merrill Brown, Wm. H. Saywood, Wm. H. Mitchell and J. T. Dyer, of Boston; Harry B. Moore and Charles H. Adams, of Jamaica Plain; Andrew S. March, Samuel Shaw and Dr. James Utley, of Newton; Albion H. Brown and Henry E. Wright, of Somerville; Leroy S. Brown, Rufus C. Cushman, Herbert F. Sparrow and Henry D. Yerxa, of Cambridge; S. F. Hicks, of Arlington; J. Nelson Parker, of Billerica; Geo. C. Moore, of North Chelmsford; John A. Faulkner, of Lowell; George D. Finley, of New York.

Mr. Harry B. Moore is not unknown to the readers of FOREST AND STREAM for some of the good stories he has told. Others are likely to grow out of this trip. It is well known that he has been taking a vacation in story telling, in order to go a-fishing. At the breakfast table the other morning his mother reprimanded him for some of his stories, and Harry felt hurt about it, since he had supposed that for some days he should have been particularly respected for the amount of truth he had told of his former fishing and gunning expeditions. His cousin, George C. Moore, mentioned above, with Harry will be very likely to go to some lonely lake by themselves, and if on the way out they spring any good, practical jokes on each other the FOREST AND STREAM shall have them in due season.

Generally there has been considerable complaint of poor fishing in the streams in New Hampshire this spring, but later the reports are better. A friend informs Mr. J. W. Chickey, of the Boston Herald, that he has had excellent sport of late in the vicinity of Laconia. Mr. Chickey hopes to join this friend for a day with rod and line not many days hence.

SPECIAL.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

A Big Raid.

CHICAGO, Ill., May 24.—On last Saturday, State Fish Warden Fernandez, of Wisconsin, completed about the largest raid ever made on the illegal net fishermen of Lake Winnabago. He burned over 300 nets, as under the new law he is authorized to do. The confiscation was made at Oshkosh, and the Northwestern, of that city, has the following interview with Warden Fernandez, who says:

"There is a fishermen's association in this city to which all respectable fishermen belong. The lower class of fishermen do not belong to this organization, and so are not bound by its rules. Last season, during the period in which fishing with nets was allowed, the nets of the respectable fishermen were stolen by men not in the association. Ninety-five per cent. of the nets taken this year have been those which were stolen from the respectable fishermen last year. The fishermen did not like the provisions of the law last year, and so made another law which they thought was better in every way. According to the old law the game warden, after taking the nets had no authority to destroy them, but was compelled by the law to advertise the sale of them, and at an appointed day, sell them for whatever he could get for them. In many cases the very men from whom the nets were taken often bought them back again. The new law says that all nets, as soon as taken must be destroyed, and it gives any one, man or boy, the privilege of taken nets from any of the bodies of water and destroy them without saying anything to anybody."

Wisconsin is not a bad State when it comes to practical laws.

Bass are Biting.

Mr. Fred Knightheart, of the Central Hotel, of Mokena, Ill., writes me that bass fishing is good at Mokena now. The C. & E. I. Railroad renews its special rate of last year, \$1.50 round trip, and the Chicago anglers will soon be having sport on that pleasant bit of water. On the lakes to the north of here the bass have begun to

take bait and fly. It is better sportsmanship to wait till well in June. The season can not be an early one for spawning.

Mr. J. E. Fisher, of Riverside, Ind., in a letter to this office, says: "There has been a big run of fish up the Wabash River this spring. More bass went up this spring than have been noted for several years. Some of the boys have made big catches. The creeks would run clear before the river would, and the bass would go in the creeks to feed. We have kept out most of the nets and stopped the dynamite. Some of our supervisors have the sand to arrest the violators and make the fur fly every chance they get, but we haven't enough of that kind."

Trout in the North Country.

The waters of upper Wisconsin and the North Peninsula are now lower and clear enough to fish. I have word from a lumber camp, the Brule, that the fishing is good. Some good baskets have been taken in the streams around Watersweet. From the White River I have not heard, but the best fishing there is early, before the sucker speafers have driven away the trout. The next two weeks should show some trout reports. The C. E. Hollins party had good success in the Wausaukee country.

Dr. Tarleton H. Bean, representative of the U. S. Fish Commissioner at the World's Fair, has accepted an invitation to go after grayling on the Au Sable in June.

No flies or mosquitoes have yet made appearance in our trout country. By Aug. 15 the pest is nearly done. In some years one is never bothered at all. I have never had trouble with mosquitoes but once in my fishing in the Wisconsin and north Michigan woods. That was at the Eagle Waters in July.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

TROUT IN CONNECTICUT.

NOTWITHSTANDING the exceedingly dry fall and the universal belief that there would be no trout fishing this spring to speak of, I hear of a great many good catches fully equaling the average of former years.

Myron Church and two friends at Thomaston brought in fifty-three trout that weighed 76lbs.; another man walked out a little way and brought in a large basketful by dinner time.

Henry Wildman and Mr. Breston at Kent caught eighty-seven trout that weighed 35lbs., in four hours.

Willie Soule, son of County Commissioner Soule, caught three trout at New Milford weighing respectively 1½lbs., 1½lbs. and 1lb.; this was good for any one, more particularly good for a "ten-year-old."

Several pound-trout have been caught at Canaan, Cornwall, Norfolk and Winsted. I also heard of one 3lbs. trout caught at Great Barrington, over the line in Massachusetts.

By the way, all of the trout fry for the whole State of Connecticut come from the Taconic Trout Ponds at Sheffield, Mass. This is a most remarkable hatchery, having water from a boiling spring sufficient to run a saw mill, filling ninety-six pipes 1½in. in diameter under an 18in. pressure. The spring and brook for a long way never freeze in winter and are about an even temperature the year through. They have hatched this year 1,500,000 brook trout, 240,000 brown trout, 155,000 lake trout and 108,000 Atlantic salmon. About 500,000 of the brook trout belong to the State.

There is a good deal of dissatisfaction manifest regarding the unequal distribution of the trout fry and the getting of some of them to be put into posted waters. This the Commissioners try to guard against as much as possible, but still there is a lot of growling.

If we could only have an 8in. trout law instead of the present "6in. for sale" law, which does not amount to anything, all this stocking brooks year after year would be needless.

NOTLIKS.

The Second Largest Tarpon.

Mr. A. M. MCGREGOR, of New York, who owns a beautiful cottage here adjoining Prof. T. A. Edison's place, on Saturday last, May 6, caught with rod and reel a tarpon weighing 196lbs. The length of the fish was 7ft. 1in., and it girthed 4ft. 2in., a fine specimen of this wonderful game fish. By skillful handling he brought the fish to gaff in 25 minutes, and the word skillful is used in its fullest sense, for it requires skill and careful manipulation to land one of these monstrous fish, their weight and strength sufficient to break much stronger lines than are used in taking them. Mr. McGregor has been very successful in tarpon fishing this winter, having landed 13. Mrs. McGregor is also the possessor of a rod and reel all her own, and often accompanies her husband and son on their fishing excursions. She, too, has acquired the art of tarpon fishing and has landed six, averaging nearly 100lbs. each. Their son, Mr. B. B. McGregor, has caught one; a pretty good showing for one family, who only fish semi-occasionally. The following is a record of the tarpon taken by Mr. McGregor's family the past winter:

	Length.	Weight.
Dec. 29. A. M. McGregor.....	6ft. 9in.	133lbs.
Feb. 9. Mrs. A. M. McGregor.....	4ft. 9in.	40lbs.
Feb. 25. Mrs. A. M. McGregor.....	5ft. 7in.	85lbs.
Apr. 1. A. M. McGregor.....	6ft.	121lbs.
Apr. 5. A. M. McGregor.....	6ft. 3in.	127lbs.
Apr. 6. Mrs. A. M. McGregor.....	6ft. 7in.	85lbs.
Apr. 14. A. M. McGregor.....	5ft. 10in.	113lbs.
Apr. 18. A. M. McGregor.....	6ft.	100lbs.
Apr. 25. A. M. McGregor.....	6ft.	105lbs.
Apr. 25. B. B. McGregor.....	6ft. 3in.	125lbs.
May 2. A. M. McGregor.....	5ft. 11in.	104lbs.
May 2. A. M. McGregor.....	6ft. 1in.	128lbs.
May 2. Mrs. A. M. McGregor.....	6ft. 3in.	142lbs.
May 5. A. M. McGregor.....	6ft.	104lbs.
May 6. A. M. McGregor.....	5ft. 1in.	96lbs.
May 8. Mrs. A. M. McGregor.....	5ft. 8in.	93lbs.
May 9. Mrs. A. M. McGregor.....	5ft. 6in.	86lbs.
May 9. A. M. McGregor.....	5ft. 10in.	130lbs.
May 9. A. M. McGregor.....	6ft. 1in.	107lbs.
May 10. A. M. McGregor.....	6ft.	100lbs.

—Fort Myers Press.

London Gun and Fishing Club.

LONDON, Ont., May 11.—I have just returned from a trout fish on our new preserve, second to none in western Ontario. Three members besides myself caught 90 trout in six hours, with several under-sized thrown in again, all under 6in. being put back in the stream. The London Gun and Fishing Club has 200 members, and our weekly shoot takes place every Friday. Ontario stands second to no county in America for sport and plenty of sportsmen to enjoy it, but our American cousins are always welcome to have an outing with us.

T. G. DAVEY.

Onondaga County Waters.

The good work of the Anglers' Association in this county during the last few years is being appreciated by that class of sportsmen who believe in keeping within bounds of the law. It has required considerable effort on the part of the club to detect lawless hunting and fishing, and to bring trespassers of the law within the reach of the courts. The employment of a special game protector by the club has done much good. Many lawless sportsmen have been apprehended and punished, and the result has been to decrease the amount of illegal gaming in this county. With the assurance of the sympathy of the community in their efforts, the Anglers' Association have felt that they can stock the streams of this county with fish and have the co-operation of law-abiding citizens to assist in the execution and supporting of the law. At various times during the past year fry have been placed in the waters of this county. Including a shipment received by Henry Loftie yesterday, one half a million fry have been placed in the waters in this section. Yesterday 25,000 California trout were received by Henry Loftie, for distribution in the various suitable places in county. They will be placed in small brooks emptying into Onondaga creek.

The fish were distributed under the direction of Protector Harvey Jackson, of the Anglers' Association.

The shipment was distributed in Furnace Brook, in Card's Brook at Onondaga Valley, in Peck Brook near Jackson Tavern, and also in the brook beyond Dorwin Spring.—Syracuse Herald.

New Hampshire Camps.

COLEBROOK, N. H., May 15.—A. C. Wallace, of the Colebrook Fish Hatchery, has distributed 15,000 brook trout fry to Berlin, 10,000 to Lancaster, 10,000 to Ashland, 15,000 to Greenough Pond, 35,000 to Diamond Ponds, 30,000 in the Mohawk and other streams, and 30,000 landlocked salmon to Connecticut Lake. All the small fry will be distributed by June 10.

The sporting camps of the north country will soon be opened for the accommodation of sportsman tourists. Connecticut Lake House, Idlewild Camp and Sportsman's Cabin at the Connecticut Lakes opened May 16. Camp Diamond, at Diamond Ponds, opened May 18.

It will be gratifying to the many sportsmen who visit the Dead Diamond River, Wentworth's Location, N. H., to learn that Deer Lick Camp will be reopened under the management of F. A. Flint. With late additions the camp will accommodate forty. A new carry from the Aziscoos House makes the camp more easily accessible via Colebrook, Dixville Notch and Wilson's Mills. HATCHET.

Black Bass in Connecticut.

COLEBROOK, Conn., May 15.—You are evidently not up to the general feeling regarding bass in Connecticut. They are held in no favor and if a vote of the fishermen was taken they would be unanimous in favor of no protection at all. They rarely take bait or fly in Connecticut as they do elsewhere and are the most uncertain fish to catch we have. They have spoiled the pickerel, perch and bullhead fishing in almost every lake where introduced, and all would be pleased to see them exterminated.

T. S. S.

The Potomac.

WASHINGTON, D. C., May 22.—Up until the 13th inst. the Potomac has been muddy and the water cold, and no fish to speak of taken, but since then some fine strings have been caught. At the falls black bass and carp are plentiful; several 6-pound carp were taken. Bass from 1 to 5 pounds were caught. The carp seem to prefer the worm, while the bass are very fond of live minnows. At the Little Falls a great many perch and bass have been taken during the past week.

R. O. D.

Basswood Lake Trout.

SOWERBY, Algonia, Ont., May 20.—If any of you people down South wish any good trout fishing they had better come along at once. You can depend on six to seven weeks' good fishing from this time. The season has commenced, water 3 to 4ft. higher than last spring and very cold. This is the camp grounds where the Cincinnati Kingfishers put up their tents last summer.

G. F. D.

Sullivan County Trout.

LIBERTY, N. Y., May 16.—Andrew Beset caught seventy-two trout, one weighing 1½lbs. Frank Dellemater caught a fine string, one weighing 2½lbs. Frank Beaumont caught one 2½lbs., and some fishermen from the city have had very good luck.

GEO. COOPER.

Fishculture.

American Fisheries Society.

NO. 53 BROADWAY, New York, May 23.—Editor Forest and Stream: The annual meeting of the American Fisheries Society will be held Thursday, June 15, in the Michigan Building, Jackson Park, Chicago.

It is proposed that the Eastern members of the American Fisheries Society go to Chicago and return by special train. Arrangements can be made with the B. & O. for a special train at a cost for round trip of \$38, including Pullman car, for each person. The train will leave New York Monday, June 12, at 8 o'clock A. M., and will stop at Philadelphia for Pennsylvania members, arriving in Washington at 2 o'clock P. M. Five hours will be spent in Washington, the train leaving at 7 P. M. the same day and arriving in Chicago at 9 P. M. Tuesday, June 13. Wednesday, Thursday, Friday and Saturday will be spent in Chicago, and the train will leave that city at 4 P. M. on Saturday, returning by way of Niagara Falls, arriving at Niagara Falls Sunday morning at 9:30. Sunday will be spent at Niagara Falls, the train leaving at 6 o'clock Sunday night and arriving at New York over the New York, Ontario & Western Railroad at 7 o'clock Monday morning. The Pennsylvania members can leave train at Niagara Falls and return home by the Lehigh Valley R. R.

To get this special train 100 persons must subscribe, or near that number. If but twenty-five subscribe we can have a special car, but not a train. The advantages of a special train are many, as the cars can be arranged to suit our own convenience, and can be fitted up so that the ladies can have one car for their own use and the gentlemen a buffet car.

A number of members will take their families, and members can, if they wish, in addition invite one or more friends. The committee on entertainment at Chicago will arrange the programme there and secure hotel accommodations. Members deciding to go should notify me at once.

EDWARD P. DOYLE, Sec'y.

The Kennel.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

June 6 to 9, Wissahickon, Pa., Semholle Kennels, Sec'y, Chestnut Hill, Pa.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 19 to 22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 15.—American Field Trial Club trials, at Carlisle, Ind. W. J. Beeler, Sec'y, Columbus, Ind.
Nov. 20.—Eastern Field Trial Club's trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Our Bulldog Pictures.

Editor Forest and Stream:

Your bulldogs have compelled me recklessly to rush to the rescue of Mr. Tisdell. He is having an awful tussle with those pictures. He cannot believe that anything good can exist behind, in, around, above or beneath such amiable countenances. So he has no charity for those who admire or appear to admire, I confess to my own doubts, such dogs. To very many people their appearance is repugnant, and not encouraging to an intimate acquaintance. Back of 1840 my first playmates were a bulldog with the same fascinating face as portrayed, and a superb Newfoundland. My second bulldog was one which a party passing my cabin in the Nevada requested me to shoot when it came along, as it had its hip broken. When in the course of half an hour the beauty came along swinging a hindleg, it approached me in such perfect confidence and beseeching manner that I was disarmed. It allowed me to examine the hip and locate the fracture, with a very apparent intelligence and hopeful expectation of assistance. With the help of an old country Dutchman, I set the bone, splinted with shingles and bandaged with old shirts. Although pain was evident, the dog was perfectly submissive while I performed my first, last and only operation. No human being could be more careful and obedient under treatment and nursing, nor more grateful. When in a few weeks after, bandages were removed, that horrid, repellant-looking brute was prancing around me in a very ecstasy of delight and gratitude. One other bulldog, Dickens describing trait, which was just one more than his master had. Please don't imagine that I am forgetting Mr. Tisdell. I don't like bulldogs from choice. The aforementioned were forced upon me, and they developed a mutual liking from the necessity of the case, just as a frozen tramp appeals to man's sympathy sometimes. But the bear-eyed, blotched and dirty variety is not agreeable as a companion. A cheap chromo of setter, pointer, etc., is much more agreeable on the dining room wall than the original of the "Last day" or the "Conquerors."

There are very few people who do not express, on first view, a horror of the exceptional beauty in the utter ugliness of the perfect (nearly, of course) bulldog. The observations around the Philadelphia dog show ring when Mr. Mason was selecting the absolute winner in the classes he had adjudged, was a pretty fair sample of the general uneducated opinion. The two St. Bernards went out before King Lud, and when he went out there was a hearty good-bye to his "Royal Ugliness." Of course the crowd were uneducated dogmatically, and could not see why the beautiful Gem was banished, and Tired left the "sovereign of all" who surveyed. It was the verdict of dog knowledge, but it did not satisfy the human craving for "a thing of beauty and joy forever."

That's all I know about bulldogs. I don't want to get into a fight with good-natured bulldogs or FOREST AND STREAM. The result would be similar to the experience of two brawny sons of Erin, who only wanted some fun and got plenty of it, in kind. The two came into contact with Judge—, who was as ready with use of common sense as with law, said to be synonymous—(see Delmonico). The judge was a large, finely built man, about the size to give the sought for sport, but he declined to fight the two men, or even one. He said that he would tell them of where they would find a man who could whip them both, if they could induce him to fight. That he would not fight, and yet that if he did not convince them that he could whip them, that he, the judge, would pay their expense for a big jamboree. Then he gave them the address of a man, whose incredible strength was unknown even to himself. The would-be fighters found their man and told him that they had come to fight him. When he further declined they insisted that he had to fight them or convince them that the two together could not lick him. Appreciating the situation, he quickly had each by the coat collar going double quick to the door, and flung them, headlong, to the street. When the first one recovered from surprise and shock, he called, "Pat, I am convinced, are you?" The reply was, "Indeed I am that; and sport and the jamboree are gone to the devil altogether, and we'll make friends with the man who can handle us as babes. Mister! I hope you're not mad." Mister assured them that he had nothing to make him angry.

That is an awful long story just to illustrate the latent strength of peace-loving FOREST AND STREAM, but it has occurred so often to my mind, when some of our brothers have forgotten the amenities, that I feel justified in offering it. Being convinced myself, I hope Mr. Tisdell will join me in making friends with FOREST AND STREAM, and frankly admit that the bulldog may be just too sweet and lovely for anything—if one can only become fond of him. JUNIATA.

Where is the Cocker as a Working Spaniel?

Editor Forest and Stream:

Having owned two kennels of cocker spaniels since coming to this country, and having shot over other dogs in some of the best woodcock haunts in the East, I should like to point out to your readers that "Solus's" admirable letter is lacking in essentials, just as the tendency in both the judging and breeding of cocker spaniels in America is to favor a pretty dog lacking in essentials for field purposes. To the sportsman the test given is amusing, and shows how lack of experience is likely to injure the best interests of a breed. Fancy putting spaniels of all kinds through brush to test their field qualities; of course it demonstrated they could get where other dogs cannot. Field spaniels are bred long and low for this very purpose, but as Mr. Cecil Cox states, bone and weight are also necessary, they are able to get under the tangled undergrowth by being near the ground, but the ground is not bare, and substance and power united with life are absolutely necessary in order that they may be of some practical use to the sportsman. It is easy for an intelligent observer to see how far such essentials are valued in the awards at our dog shows.

The work of the cocker is different, the woodcock do not frequent the uplands, but even after heavy rains are always found in swampy lowlands, where the growth of grasses or plants is often so luxurious that a low show bench cocker

could not work, and could not be seen, even were he able to work, and if he had hunting instinct and bird sense to guide him forward. I did not use my cockers because they were lacking in all these points, although of the most approved strains. Where is the difficulty? Breeders have appreciated the necessity of getting dogs that can win, and have never thought of getting a standard, and judges that shall distinguish between the pet dog and the working cocker.

A strain of black cockers have been favored, and very handsome little dogs they are. Their instinct for game, suitability for work in the haunts of game birds are different questions, and do I hear something of field trials? I advocated such a year or two ago, and was met by a suggestion to have a leg tied, a dog without a nose, a sportsman without a diploma, and the dog with the best eye-sight wins. It is at times enough to make a saint give a smile of disgust.

"Uncle Dick" is to a great extent correct, and when there were none of the dogs he advocated presented to him, what else could he do than give the prizes to the most perfect specimens? I think there is a prize of cocker represented now that with judicious crossing will insure a dog of some use, and yet retain handsome appearances without going back to the faults of the very ancient order. Will those who are supposed to, provide for this, or must the breeders merely rear for sale to ladies for pets?

Much has been made of "Uncle Dick" being almost alone in his crusade. This is all to his credit. What did Thomas Paine say, "Have you not heard how it has gone with many a cause before now? First, few men heed it; next, most men condemn it; lastly, all men accept it—and the cause is won."

EDWIN H. MORRIS.

HACKENSACK, N. J., May 14.

A Fair Offer.

Editor Forest and Stream:

Although it is almost disgusting to be compelled to answer such disinterested (?) attacks of beaten exhibitors, it would look to most of your readers, so few having any idea at all what a great Dane should be, as if those disappointed exhibitors had a right to their audacity in assuming my incompetency to judge my home breed. One good point Mr. Goodman makes when he says "either I must be wrong or several other judges, and so it is." Will Mr. Goodman permit me to make him an offer, in which, if he and his dogs' judges are positive that I am wrong, there is nothing to lose and conclusive proof will be obtained as to who is right: Whether a mastiff-great Dane, if only large, no matter how unsound or crippled, or even tampered with—of the latter fact I will be only too glad to furnish proof to Mr. Goodman if he desires—dogs, whose principal recommendations are that they are the largest and bulkiest or—a dog, as active and sound as a terrier, properly balanced everywhere, with clean, well-arched neck, well-chiseled head, and that certain powerful elegance only found in a good typical dog. I will defray all expenses for Melac and Wenzel (I wish to say here that I consider Wenzel only a good dog, and no crack), to be sent through a reliable agency—for instance, Spratts—to three of the largest shows on the Continent, say two in Germany and one in Belgium or Holland. Of course to come under German judges, and if Melac beats Wenzel twice out of three times, the expenses are mine and the honors his; but if he loses, I expect him to at least agree to pay his part of the expense, dogs to be in reliable and disinterested hands.

It is almost a little too much of a good thing when Mr. Goodman takes the liberty to assert: "That he does not think me competent to know great Danes." Great Scott! This from a man whose only knowledge of great Danes comes from having handled one fair dog, with excellent body properties, but very indifferent in the principal characteristics of the breed—clean long neck and sharp, well-chiseled head, and who only won his laurels by default, nothing being against him, for which he is not to blame. If Hannibal the Great could beshown against him under another name, he would be beaten by Melac under most judges, who assume to know it all. Much as they know, I really should be curious to hear them express their knowledge, outside of names of great Danes, and that I can do myself, looking up catalogues and reports.

Gush and twaddle! Oh! yes, there is lots of it; but time will tell who is right, and I offer the opportunity now. Mr. Goodman certainly has the prerogative to withhold his entries where the judge does not suit his dogs, as he is in it for revenue only; and I do not blame him a bit for it, and give him credit for his straightforwardness in speaking like a man, without the mean, slurring tactics of so many. I had only consented to judge at New York on the urgent pressure of a number of fanciers, as I was only too well aware of the tendency in this country to produce another hot-house raised big cripple, unable to move, but as big as a calf; and such dogs are pressed to the front because they are big.

Does Mr. Goodman honestly believe that the celebrities in dogdom he names have any more right to their views than I, because they are excellent and approved judges of a number of breeds? I beg to differ with him; to them it is their fifth wheel and they take great Danes along to judge like any other breed, whereas my whole youth and also the years between 1882 and 1885 were spent in south Germany among the great Danes, and I think I am as competent to judge the dogs I have known from childhood up as any other man who judges them only because it is in his way of business. If I was not, my dear Mr. Goodman, I would have followed the general habit—let the dogs win who have won under authorities, and I would be perfectly safe. Just because I saw it was time for some one to make a break in this ruinous retrogression of the breed, I consented to judge, fully knowing the abuse I should reap, but I thought we had had enough of ruining the big breeds' soundness to obtain size only. If this pre-eminent characteristic—sound agility—cannot be preserved, and the lean head and arched clear neck give place to a poor, long mastiff type face, there is no use for great Danes at all. One thing Mr. Goodman can claim, and that is his fame will be always coupled with having ruined any decent entry for the World's Fair show, and this is, I suppose, satisfactory to him.

Was it Mr. Goodman's sporting sense which let him carry Mr. Hagans's Imperator in his crate from New York to Washington, never putting him on the bench, although he was always entered? It would be interesting to hear his and Mr. Hagans's reasons—condition, I suppose (!). *Volla tout!*

G. MUSS-ARNOLT.

Another Good Beagle Gone.

Editor Forest and Stream:

I suppose every breeder of thoroughbred stock has his disappointments, and I am having a share of them now. On Monday morning, May 22, I found my beagle bitch Pearl (A.K.C.S.B. 28,489) dead in her kennel. Pearl was in whelp to my imported Laick's Rattler, and was due on May 24. She is a great loss to me, as she was a good beagle, having won first prize at Danbury, 1892, and the Brooklyn, 1892; only times shown. She was also a good average field dog. She was bred to Laick's Rattler with the expectation of good results from the union, as she was especially adapted to him, owing to her general appearance and disposition. She seemed to be in perfect health until the day before she died, when she began to act rather quiet and laid around a good deal more than usual, and acted as if she had lost the use of her limbs. I intended to open her, but was so busy on that day I did not get a chance, and as the weather was very hot I had to bury her. During the twenty-five years I have bred dogs I have not had an experience like this before. Could it have been poison?

GEORGE LAICK.

TARRYTOWN, N. Y., May 26.

YONKERS DOG SHOW.

THE Yonkers Fanciers' Club, recently formed, held a capital little show May 25 to 27, at the Park Hill Casino, Yonkers, N. Y. The club has been organized among a few local fanciers of dogs and poultry, and while the quality of the dogs cannot be said to have been very good, still for an initial effort the show must be pronounced a success. Among the officers of the club who were particularly zealous in the conduct of the show were E. A. Lynde, the president, who also undertook the duties of superintendent; Geo. Langran, the treasurer, and Emil Garnjost, the secretary. Mr. Langran, who owns the Yonkers City Irish Setter Kennels, and has been identified with Irish setters and sporting dogs for many years, acted as ring steward. Mr. C. H. Mason judged all classes, and his task was not a very arduous one. With exception of St. Bernards, pointers and setters, there were few, if any, dogs that were above mediocre. This could scarcely have been otherwise; as somehow the owners of the good dogs seem unwilling, though they appreciate the glory of a win, to bench their dogs for three days for a blue ribbon alone.

The number of entries was 114, of which there were several absentees. The prominent residents of Yonkers did not support the show to the extent that we would have liked to have seen them do. There are numbers of good dogs kept by the many wealthy residents of this flourishing town and they should have supported the home event better. There were few entries from outside fanciers. Mr. Hyland, of Tarrytown, showed several well-known pointers, the Victoria Kennels also had two or three good setters, and Mr. Schmidt had several well-known St. Bernards and took the opportunity to bench a lot of pups with a view to sell. The building where the show was held is on the outskirts of the town, charmingly situated on the hillside at the edge of some woods. The building is used as a rink and is surrounded by windows, which were kept continually open, whereby a pleasant breeze played through the hall during the show, keeping the air cool and sweet. In fact, it was the nearest approach to an outdoor show, without actually being one, that we have ever seen.

Among those whom we noticed at the show were L. A. Van Zandt, W. H. Hyland, G. Muss-Arnolt, F. D. McEwen, Mr. and Mrs. Rueter, who owned the St. Bernard Leila at the time of her death, Mr. Hooley, Cyrus Wilcox, H. Graef, L. H. Spath, Ed. Booth, Arthur Trickett, Fred Schmidt, etc. The attendance during the day was next to nothing, but at night there was always a goodly gathering, so that the club cannot have sustained much loss. Their expenses were about \$400 and this was guaranteed before the show opened. The prize badges were broad pieces of ribbon, colored according to degree of merit, surmounted by a gilt star and with the prize and the initials of the club in gilt letters below. It is hardly necessary to go into any extended criticism of the breeds represented, as with few exceptions they will probably not be seen out of their native town. The benching was of the old wooden style, but neatly arranged. Spratts biscuits were fed under the care of "Capt." Murphy. Bannerman's disinfectant was used.

The winning mastiff dog Nero has a plain head, not enough stop, open flat feet, shelly body, good bone, but is a bit cowed. Grover, the pup, has a mean head but a better body than Nero, better ribs; however, both are poor ones.

In St. Bernards the winning dogs, Otis and Roland, Jr., are familiar to our readers. Mr. Schmidt showed them in good order, but the same cannot be said of Mount Morgan who, unfortunately, just recovering from a severe attack of distemper, looked about as bad as he well could do and should not have been benched; had he been in condition, however, he would have run the others close, as his head is better in shape than either. It would be unfair to criticize him further. Lady Bountiful had a fairly good win in the bitch class, though Fenton Peggy has lots of type, needs more volume of skull and stop, fair bone and good length of body; she is the dam of Leofric, a well known English prize winner and should be a useful brood bitch. Lady Bountiful had four pups with her but was looking fairly well considering. Norma, that we spoke of at Elmira, came third; she is but an ordinary one. Lady Edna, the winning pup, is straight behind, rather long-faced, good color and nice ear. The only smooth, Blademer, has a good skull but is pinched in muzzle, ring tail, open feet and shown hog fat; not much quality about him.

Great Dane entry absent. Newfoundlands were poor and had all the prizes been withheld no harm could have been done. The same may be said of the greyhounds, for with the exception of Flash, who was stated in the catalogue to be a "thoroughbred," there was nothing with any pretention to quality. Flash has a capital set of forelegs and feet, but is light and shelly in body, weak muzzle and too full in skull; the other prizes should have been withheld. Foxhounds were very nondescript, a bloodhoundy puppy, Sport, taking first; Dan, a full grown, heavy, coarse sort of bloodhound showing little foxhound quality, came in for second.

Pointers were better. Challenge classes were made for Mr. Hyland's Ossining and Lady Graphic, who were put down in good form. The winning heavy dog, Roy, has open flat feet, light eyes; bit straight in stifles and faulty in middle piece. Axtel King Don is too fine in muzzle, throaty and feet open; a fairly good dog otherwise. Touchstone was at Gloversville; he is plain in head and better behind than in front. Dash, he, got all he deserved; coarse. In light weight dogs the well known Ridgeview Faust won easily from Birt, whose coarse skull and throatiness are his most noticeable faults; fairly well ribbed but not depth of chest enough, fair going gear. Lad of Ossining, a promising son of his father, deserved third. In bitches, his sister, Lady of Ossining, is a nice stylish mover, too fine in muzzle, light in eye, flat loin, and feet could be closer knit, good behind. Fancy Fan, second, is rather straight in face, turns her toes out, is narrow in chest, light eye, a rather pretty lemon and white; Bronx Valley Pearl is short in neck and coarse, and heavy in shoulders, very light eye, good ribs, but just fair front, coarse tail; Snow Flake, vhc., has a short, chunky head and is throaty, but behind the shoulder is a rather well shaped bitch, good stifles, bone and front, and the best bodied bitch in the class. Lad and Lady of Ossining were the puppy winners; Felspar, second, has a light, sulpy muzzle.

English setters were headed by Deceive, a winner at Brooklyn and New York, and a son of Count Howard's; he has a good head, his body and feet could be better, legs good. The Earle was not in shape, is faulty behind, but nice head and type. Bronx Valley Duke is a little round and full in skull. Pride of Bronx has a plain head, light eye, good legs, but faulty in loin and not ribbed up enough. Gyp, vhc., rather coarse in skull, but head well shaped, good legs and mover. The bitch prizes were withheld, Floss, the only one present, being very weedy. The puppies were only mediocre.

Irish setters had several fairly good specimens. The winning dog, Londonderry, was reserve at New York; he is typical, good color, big in ear, little straight in hocks, and but for his wretchedly thin condition was about the best on hand. Celt, second, I could not find. Young Juno, rather short and plain in head, won in bitches and afterward took the special for best in show; she stands on good legs, is narrow in body throughout. Sally, from the same kennel, was shown fat, stands on good legs and feet, is hardly typical enough in head, should have more stop; good color; she is better as a dam, counting such good ones as Tim's Dandy and Young Tim as her sons. Lady Betty, third, is weak in head and dish-faced. Ruby Glencoe, vhc., has won prizes before; she is thick in skull now, head not long enough; she has a good body and color, however. Mr. Van Zandt showed the winning puppy, Alannah, winner at New York; she is weak in pasterns yet, muzzle should be stronger, nice skull, good

Mrs. J. F. Smyth, owner of Swiss Mountain Kennels, has sold the St. Bernard King Regent to Dr. L. C. Sauveur, owner of the Seminole Kennels, as a house pet. Mrs. Smyth did well in the bargain, as the dog has more than paid for his oats since he was imported.

English Setter Beverly.

Editor Forest and Stream:

While looking over the Answers to Correspondents in your issue of March 30, I was very much surprised to find a paragraph referring to a certain Beverly owned by "H. L. W., Adrian, Mich." The foundation of my surprise is the fact that I also am the owner of a Beverly, by Qui Vive and out of Bettina Bondhu. Like "H. L. W.," I at first received the name of my dog's dam as Bettina Bondhu. With a view to registering Beverly I wrote to the American Kennel Club, asking to be informed as to whether Qui Vive and Bettina Bondhu were registered. In answer I received the following under date of April 13, 1893:

In reply to your favor of April 9, would advise you that there is an English setter owned by Mr. W. E. Hobby, of Holly, N. Y., registered under the name of Qui Vive, No. 5,050. There is also an English setter registered under the name of Bettina Bondhu, registered under No. 14,482. This bitch is also owned by Mr. Hobby. There is no English setter registered under the name of Bettina Bondhu. Bettina Bondhu is undoubtedly the dam of your dog. A. D. LEWIS, Acting Sec'y.

I then wrote Mr. W. E. Hobby, of Holly, N. Y., and received this answer to my communication:

HOLLY, N. Y., April 18, 1893.—Dear Sir: Yours received. I am not, and never was, engaged in the business of breeding dogs, although I did breed your Beverly. His sire, Qui Vive, or Vick as we commonly call him, is a favorite shooting dog of mine. I took him to Kansas for three seasons, and he was very heavily shot over to chicken and also quail. I also took him to Alabama with me one winter (1889) and spent several weeks quail shooting. He is an exceptionally good all round field dog. I thought so much of him as a field dog that I bought Bettina Bondhu to breed her to him to get some of his progeny. The result was a litter of seven, of which I saved four. I kept the choicest, or what I thought was the choicest, of the litter. I have this dog now, and he is a good one every way. I sold one, Beverly, to Mr. Barry, and the other two I gave to friends of mine, and they have proved to be fine field dogs. The dam I sold to go to Ohio. W. E. HOBBY.

I purchased Beverly from Mr. Barry, through W. C. Crandall, of Springfield, N. Y. This proves my claim of title. "H. L. W." may have one from the same litter as my dog, but he has not the Beverly. H. C. DE PUT.

Minto, N. D., May 13.

Coursing at Newark, Cal.

THE meeting held at Newark, Cal., on the 14th, by the Occidental Coursing Club was one of the most enjoyable meetings ever held by that club. The ground was in good condition, the hares perfect demons, and the owners and spectators went away perfectly satisfied, as they always do when John Grace is in the saddle and Jas. Wren the slipper. Skyrocket, the winner, is thought on this coast to be the equal of any long-tail that ever chased a hare. This is his eighth first that he has won in open competition. He is certainly the fastest bound from the slips, and the best stayer that this coast has ever seen. The dog that gave him the hardest run was, strange to say, a sapling, barely 12 months old—Moondyne, said to be one of the Verdure Clad litters.

In the third round Salvator and Short Stop, a brother of Skyrocket, ran a pumping course which ended with honors even. The second course had a similar ending, and the third Salvator won, but was so thoroughly pumped that he is not expected to live, and it is almost certain that Short Stop will not survive.

SUMMARY.

First Round—J. O'Shea's Salvator beat T. Cooney's Jim Dandy, M. Tiernan's Long John beat C. Desmond's Lady Ruth, P. Curtis's Shortstop beat J. Buckley's Tom Moore, M. Tiernan's Glenfarrah beat H. J. Gerdes's Lookout, J. M. Perrigo's Longtellow beat T. Cooney's Skyball, H. J. Gerdes's Judge Morrow beat D. Lynch's Rely on Me, P. Curtis's Ex Franck beat J. Dugan's Pick Up, P. Curtis's Skyrocket beat D. J. Healey's Moondyne.

Second Round—Salvator beat Long John, Shortstop beat Glenfarrah, Longtellow beat Ex Franck, Skyrocket beat Judge Morrow.

Third Round—Salvator beat Shortstop, Skyrocket beat Longtellow.

Final—Skyrocket was declared the winner, Salvator being drawn.

Mr. Curtis made a present of the first purse to the club. On the same day the well and favorably known bitch Valley Queen won at a meeting at Ocean View, in a sixteen dog stake.

Flaps from the Beaver's Tail.

TORONTO, CAN.—Kingston, undeterred by the lack of interest displayed by the townspeople in last year's show, will have another try this year, and has filed a claim for dates with the C. K. C. for the week following Ottawa, or rather, Tuesday, Wednesday, Thursday and Friday of that week.

The Montreal Exposition Company have finally decided to hold a provincial exhibition from Monday, Sept. 4, to Saturday, Sept. 9. Whether a dog show will be held in connection is not yet settled, but I think it likely that such will be the case.

Dr. William Mole, V. S., is down to read a paper on "Cruelty" before the members of the Toronto Humane Society on the evening of Tuesday, May 30. I was glad to learn from Dr. Mole that since his removal to Toronto his veterinary practice has very greatly extended, especially in canine cases.

Mr. R. P. Forshaw, who recently removed from Toronto to Pittsburgh, Pa., is, I hear, going to reside for a time in St. Johns, Newfoundland.

Query: Now that the reciprocal arrangements between the A. K. C. and the C. K. C. have been severed by the former august body, can dogs which have qualified for challenge classes in the United States be shown in the open classes here and vice versa? If they can, won't our show managers have a most elegant time checking entries?

There is a very robust feeling here that the dissolution will prove a good thing for the C. K. C. A much larger number of American dogs are shown in Canada than Canadian dogs in the United States, and of course each entry means so much revenue to the C. K. C. If the A. K. C. desired to augment their income indirectly at the expense of their own members they have accomplished the end in view.

H. B. DONOVAN.

The A. K. C. and Outside Shows.

WE confess to more than surprise at seeing an editorial in a monthly journal, the *Sportsman's Review*, which tacitly suggests that all dogs exhibited at shows not held under A. K. C. rules shall be disqualified. This suggestion is made because, as they assert, of the harm that the A. K. C. club in a city will suffer because another club sees fit to give an independent show. This would be an arbitrary condition of affairs indeed, and an act that the A. K. C. would be far too wise to ever even suggest. There are very, very few cities which could support two shows in one year. Chicago could, and no doubt that New York might also do so, but for any other city to attempt such a thing would be sheer madness. The more shows we have, whether under A. K. C. rules or not, the more people will know what a good dog should be like and the more will they become imbued with a desire to possess one. The very argument advanced by our contemporary that "the longer a dog can win in the open class, the

more profitable he is to his owner" is the very argument that calls for some of the shows to be held outside of A. K. C. influence. The A. K. C. does not want for clubs or funds; it is no longer an infant to be coddled, it is a robust and vigorous child, all it needs now is proper training. That dogmen will show at any show where the inducements held out are tangible and not consisting altogether of "counting wins" has been fully proven.

When a lot of men give a dog show they do not as a rule undertake the affair in a philanthropic spirit. They expect to make both ends meet and in very few instances do they look upon it as a money-making venture. This in itself would act as a deterrent for a double event in the majority of cities or towns. The only fear is that speculators may crop up who, having no affiliation with dogmen proper, would be in it for keeps only, and there might eventually come along a show where the prize money would not be paid and some man or men pocket the cash. Exhibitors, however, would soon regulate this by demanding a guarantee, and just as likely any A. K. C. club may find itself in the same boat, and the only punishment it would incur would be the disqualification of the officers of the delinquent club; so it is as broad as long. But for the A. K. C. to disqualify all dogs exhibited at shows not held under their rules would be nonsense, and as in the case of the board of control and winter horse racing such a rule would of necessity soon be rescinded.

Understand, that we are not in favor of the formation of any club in a city that will conflict with a club already organized and that is doing its duty, but should that A. K. C. club not see fit to hold a show during any year, there is no reason why another club should not step in and hold one. The case of two clubs in San Francisco and Chicago is an example.

DOG CHAT.

Spaniel Field Trials.

The idea of holding field trials with spaniels seems to be gaining ground, and plans are being formed now which will no doubt result in the desired end. Of course a large number of starters cannot be depended upon, but that there are four or five already promised is sufficient to show that trials will be held. The committee that has the affair in hand is determined to put the thing through, and as valuable prizes in cash will be offered it is hoped that other entries will be drawn into the competition and that this meeting will not only be an interesting one, but the forerunner of a yearly fixture. The committee have cudgeled their brains to arrange some plan for the trials that will, to a great extent, avoid the almost certain delay and annoyance in finding suitable game if the trials are held in the rough, open country. The idea at present is to select a large field of 20 acres or more with about a quarter of it broom grass or low brush. At intervals of 20 or 30 yds. in this cover pigeons will be placed under small, light baskets. From each basket a cord will lie upon the ground, and running toward the handlers' starting point for about 15 or 20 yds., with pieces of white rag attached at intervals, so as to be readily seen by the handlers. This being ready, the handlers and dogs (two competing together) will be started toward the birds, which will be out of view, about 200 or 300 yds. away, up wind. In crossing the intervening open ground each handler will show under what control he has his spaniel, how he quarters his ground, and whether the dog knows what it is there for. Getting near the birds, the handlers will be ordered to pull the traps and kill when deemed advisable by the judges. Each dog then in proper turn will be ordered to seek and retrieve. Of course this plan is a mere makeshift that is almost necessary on account of the scarcity of partridge and woodcock and the thick swamps and rough country where these would be likely to be found, and through which the judges would find it next to impossible to follow the dogs or do the competing dogs justice in their awards. With the above arrangement it is thought that the main points—tractability, working qualities and retrieving—will be brought out. This plan would enable the committee to carry the trials through without discouraging delay. While no doubt many field sportsmen accustomed to using spaniels in the natural way will be inclined to smile at the above arrangement, it may be said that no less an authority than Mr. W. A. Coster, secretary of the Eastern Field Trials Club, thinks well of the plan, besides many other sportsmen to whom the subject has been broached. At any rate, the efforts of the spaniel men should be encouraged, and if any better or more feasible plan can be suggested we are sure the committee will be only too glad to adopt it. The gathering of spaniel men is expected to be an enjoyable one. At present we understand that good quarters can be had at the Bache Homestead at Morristown, N. J., where there are suitable grounds for the trials, and where, moreover, there is every likelihood of getting a shot at a real woodcock. A few pigeon matches may also be arranged and the time otherwise be enjoyably spent.

The Irish Setter Club Meeting.

The deferred meeting of the executive committee of the Irish Setter Club was held on May 26. The members present were C. T. Thompson, Dr. L. C. Sauveur and G. G. Davis, with E. B. Bishop, W. L. Washington, F. H. Perry and F. L. Cheney represented by proxies. There were thirteen new members elected, as follows: Geo. H. Thompson, Eaton, Pa.; A. M. Escobar, New York; Fred P. Heinz, Pittsburgh, Pa.; W. S. Boddy, Camden, N. J.; M. N. Fowler, Fonburg, Pa.; E. F. Badmington, Rockville, Ct.; E. W. Walker, Pittsburgh, Pa.; E. J. Nestler, Darlington, S. C.; C. B. Rutan, West Orange, N. J.; F. T. Dodge, W. S. Lolan, W. J. Monteith and J. Myrick, Jr., all of Portland, Oregon. It is but just to say that ten of these were brought into the club by Mr. Washington. It was decided to have the entries for the Derby Stake close July 15. The fees are to be \$10 to enter and \$10 to fill. The purses are \$125 to first, \$75 to second and \$50 to third. These are to be increased if the entries warrant it. It was resolved to hold the trials in the South, the exact place and time to be announced later. Any further information can be secured from the secretary, Dr. G. G. Davis, 1335 Walnut street, Philadelphia, Pa.

A Dog Show in Minneapolis.

The fanciers of Minneapolis held a meeting May 17 to form a kennel club. A committee was formed to draft constitution and by-laws, and application for membership will be made to the A. K. C. It is intended to have a show in connection with the Exposition, and the following are named as bench show committee: W. M. Brackett, Fred Eastman, H. E. McCullough, C. D. Barnum, Fred Pride and Mr. Carpenter. They will arrange the premium list at once. The officers are as follows: President, S. J. Carpenter; Vice-President, F. E. Eastman; Secretary, H. T. Van Dusen; Treasurer, W. M. Brackett; Superintendent, H. E. McCullough; Veterinary, H. E. Rowell; Directors, M. P. Whiting, Fred Pride and O. B. Clark.

World's Fair Show.

Mr. Buchanan has sent the following letter out, "It has been found advisable, owing to the improbability of contractors completing the buildings in which the kennel exhibit is to be held, to postpone the exhibit, which was to begin June 12, to September 19, 20, 21 and 22. A full, complete and separate premium list, with added classes will be issued early

i n June, and I have every assurance that I will be able at that time to announce the judges for the exhibit. I regret that the postponement was made necessary, but it will be for the best interest of the exhibit as a whole, and that is what we are all working for. We have a number of letters from exhibitors who would prefer sending their dogs here in September rather than in June. W. I. BUCHANAN.

Mr. Raper Sails.

Mr. Geo. Raper sailed for England on the Etruria last Saturday. A number of friends saw him off and wished him *bon voyage*. He was delighted with his long trip, and when we asked him how he was treated out West, answered "Never better; it's a grand country and they are a grand lot of fellows." He thinks they have a good lot of dogs in California, but the Seattle show did not compare so well. Mr. Raper will get home in time to judge at Munich.

Yonkers Show.

The Yonkers show scored a success. The attendance, we are told, on the last day was exceedingly good. Mr. Hugh Thompson, who worked hard for the show, was presented with an umbrella. The *Herald* prize for handsomest dog was awarded to Fred Schmidt's Otos and the smallest dog was adjudged to be Mount Morgan Kennels' Nugget, weighing 12oz. During the show Professor Hampton amused the folks with his troupe of trained dogs and cats.

The Luse Case.

The National Greyhound Club held a meeting yesterday, at noon, in the Astor House, New York. The committee, consisting of Messrs. McDougall, Williams and L. F. Bartels, appointed by the club to investigate the Luse case, reported that there was no fraud shown and the charges against Mr. Luse were not proven.

Another Crack.

Mr. Reick, the proprietor of the New York St. Bernard Kennels, is about to sail from England, where he has been looking for a crack or two to replace Refuge II. He has cabled as follows: "May 27.—Bought best dog pup in England." May 29: "Bought Young Bute."

American Field Trial Club Derby.

Entries for this stake are open till June 5; Mr. John Davidson judges all stakes; W. J. Beck, Columbus, Ind., is the secretary.

It is probable that before long we shall hear of a field trial club with headquarters at Los Angeles, Cal. The *Pacific Field Sports* intimates that the dogmen of that vicinity are hard at work getting up such an organization. Held about the time that the Pacific Coast Club holds its annual event such trials should take well, as it is stated there are plenty of birds and the best of grounds in the Los Angeles section of the State.

We have an inquiry from a correspondent for a Newfoundland-trained to retrieve humanity from the water. Such a dog can win fame on the boards, as our correspondent wishes to use him in a new spectacular show entitled "On the Trail."

Mr. Mortimer has gone into black and tans. He imported recently the youngster Glenwood, a likely looking sort, that will do some winning. Another importation is the Basset hound Royal Hector that will hold its own with anything we have over here. We predict that these dogs will yet become more popular.

Arthur Trickett, so long known as Mr. Moore's kennel manager, started last Friday for Little Rock, Ark., to take charge of Mr. Pratt's kennels. This gentleman owns Alton II. and several good bitches, among them Wyoming Belle, lately purchased from Mr. Sears. We wish Mr. Trickett every success, and Mr. Pratt is to be congratulated on the move.

Mr. G. V. L. Mellinger, secretary of the Ohio Field Trials Club, has sent out notice that the club's trials will be postponed to Nov. 23, in order to accommodate many of its patrons, who are anxious to run in its trials and those held in Indiana. Their former dates conflicted with the American Field Trials Club.

Mr. Waters writes us that Mr. W. J. Beck, secretary of the American Field Trials Club, was injured by a fall recently, which will lay him up for a few days. It is hard to down a good man, however, so he expects to be on deck very soon.

The Concord Kennels, of Detroit, have sold the black and tan bitch Rosa Mack to John Bean, of Canton, O., and the cocker bitch Chloe II. to a Chicago party. The same kennels have recently purchased the cocker bitch Stella G. from Alfred Geddes.

We regret to say that Messrs. Heppner & Bernheimer's great Dane Helios, that was reported sick last week, died last Sunday. This dog is a loss to the breed; he was considered very typical, and at 14 months old weighed 165 lbs. Mr. Heppner will probably sail for Europe shortly and will return with a number of great Dane purchases.

There is an off week on account of the holiday, but there are several new advertisements in the kennel columns. L. H. Miller offers a number of trained sporting dogs; Geo. E. Gray, the noted trainer, offers trained Irish setters; E. Booth, prize St. Bernards; A. Knoblauch, toy spaniels and Tutti Frutti in the stud; Saloon, mastiff dog; W. J. Fieles, black and tan terrier; Seacroft Kennels, Russian wolfhounds; Heppner Kennels, great Dane dog.

Our special report of the Seattle (Washington Territory) show arrived too late for press this week. There were 133 entries; St. Bernards, English setters and Irish setters were the best breeds represented. Mr. Raper judged and the show is said to have been a success.

The Manchester Kennel Company was constituted by articles filed in the County Clerk's office at Louisville, Ky., May 17. The incorporators are P. L. Atherton, Louisville; F. R. King, Leighton, Ala., and A. M. Young, Manchester, Tenn. The capital stock is placed at \$6,000. They will breed "bird" dogs principally.

If the International coursing meeting is held it will be at Huron, S. D. It is hardly probable, however, that the meeting will come off, on the original lines at any rate, as the subscriptions have not come up to expectations.

He Loves Dogs.

THIS is what the editor of the Kingston (N. Y.) *Freeman* has to say: "We regard it as a cheering indication of the advance of civilization, that the dog poisoner is extending his operations year by year. The rights of men ought to be paramount to those of mere animals, and no man should be subjected against his will to the bites, or even the muddy and slimy caresses of dogs. The idea of minding its own business is entirely foreign to the canine mind, and for that reason no dog has any business on a public highway unless accompanied by a keeper."

Canoeing.

The A. C. A. Year Book.

This advance copy of the Year Book of the American Canoe Association, which we have just received from Mr. R. Easton Burns, the sec'y-treas., compares very favorably with past issues, and reflects great credit on Com. Cotton and Mr. Burns, who are responsible for its production. In addition to the rules, lists of members and canoes, summary of races and the reports of the various officers and committees for the past year; it contains portraits of Com. Cotton, Sec'y-Treas. Burns and Ex-Com. Winne. Maps of the camp are given, and a good railroad map showing the various routes to the St. Lawrence. Several songs with music, and two canoeing poems by Miss E. Pauline Johnson and Miss Annie Rothwell add to the interest of the book. The following important information as to transportation and races has not yet been published:

A. C. A. REGATTA PROGRAMME, 1893.

Regular Events.

- No. 1. Paddling and sailing combined— $\frac{1}{2}$ miles alternately, total 3 miles. Time limit $1\frac{1}{2}$ hours.
- No. 2. Paddling— $\frac{1}{2}$ mile straightaway.
- No. 3. Sailing— $\frac{1}{2}$ mile, same rig and ballast as in race 1. Time 2 hours. These three races to constitute the "Record" races.
- No. 4. Trophy paddling—1 mile, straightaway. Exempt from one-man-one-canoe rule.
- No. 5. Paddling—Open canoes, not under 55lbs. weight, minimum beam 30in., minimum depth 11in., single blade, $\frac{1}{2}$ mile straightaway. For special prize presented by secretary-treasurer.
- No. 6. Unlimited sailing race—No limits to rig or ballast, 6 miles. Time limit $2\frac{1}{2}$ hours. Starters in the trophy race to be selected from this race. See Rule V.
- No. 7. Trophy sailing—No limit to rig or ballast, 9 miles. Time limit $3\frac{1}{2}$ hours. Starters to be selected as by Rule V.
- No. 8. Novice sailing—No limit to rig or ballast, distance 3 miles. Time limit $1\frac{1}{2}$ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1892.
- No. 9. Club sailing race— $\frac{1}{2}$ miles. Time limit, 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men; all men entered must have become members of the club they represent before the first day of the A. C. A. meet.
- No. 10. Cruising race, sailing—Commodore's prize. Open to "general purpose" or "cruising" canoes, distance 3 miles. Time limit, 2 hours. Sail limit, 55ft., ordinary single drop centerboard, or leeboards for open canoes. Open canoes to be classed as cruisers.

Other Events.

- No. 11. Sailing—The Orilla cup. Open to members of the Northern Division only, $\frac{1}{2}$ miles, no limit to rig or ballast. Time limit, $2\frac{1}{2}$ hours.
- No. 12. Paddling tandem—Open canoes, single blades, $\frac{1}{2}$ mile, straightaway.
- No. 13. Paddling war canoe race—Conditions and details will be published in the official organs of the Association.
- No. 14. Paddling club fours— $\frac{1}{2}$ mile, straightaway.
- No. 15. Sailing upset and maneuvering—No special appliances, no limit to ballast, at signal throw paddle over stern and recover; second signal, canoe to be heeled over until top of foremast touches the water; canoes to be righted and cross finish line under sail. Time limit $\frac{1}{2}$ hour.
- No. 16. Paddling upset—Usual conditions, no special appliances.
- No. 17. Hurry scurry—Run, swim and paddle short distances.
- No. 18. Gymnastics.
- No. 19. Skiff sailing—This race to be run under the management of and conditions to be named by the St. Lawrence River Sailing Association. It is added as an additional attraction and will probably come off on one of the open days.

Camp Rules.

1. A member of the executive committee will act each day as executive officer and will be obeyed accordingly.
2. Daily before 10 o'clock tents and grounds must be put in order, all refuse, papers, etc., must be ready for removal by the camp cart. Members will be held responsible for the appearance of their tents and the surrounding grounds.
3. The commodore and secretary will be at headquarters for transaction of business each day from 10 A. M. to 11 A. M. Immediately upon arrival members will register at headquarters, when badges will be issued and camp dues received.
4. Flags will be raised at 8 A. M. and lowered at sunset.
5. Tents may be located by owners, subject to the approval of the camp site committee, and with due regard for the thoroughfares and lines.
6. Camp will be open daily from 10 A. M. to 5 P. M. Guests may be invited by card to be obtained of the secretary. Between 10 A. M. and 5 P. M. no guest will be expected in camp except by invitation for occasions specially announced by bulletin boards.
7. The A. C. A. year badge must be conspicuously worn. For protection of members and their property particular stress is laid on it.
8. Neither guests nor members from main camp will be expected in the ladies' camp before 10 A. M. or between the hours of 5 and 7 P. M. At 11 P. M. all guests and members from the main camp are expected to leave the ladies' camp, except when present by special invitation announced on bulletin board.
9. On Thursdays, Aug. 17 and 24, visitors are invited from 10 to 6, during which hours the rules governing admission of guests to camp will be suspended.
10. Visiting canoes must land at the steamboat wharf or at headquarters unless otherwise directed by officers in charge.
11. After 11 P. M. quiet must be maintained in camp.
12. As these rules are few and simple as possible, the orderly and creditable appearance of the camp is intrusted to the members generally.
13. Non-Members.—By-Laws, Sec. 2: Every member attending the general A. C. A. camp shall pay \$1.00 entrance expenses. Non-members when accompanying members may be admitted to the camp at the discretion of the commodore and secretary, provided that, if they spend more than two nights in camp, the members introducing them shall pay \$2 each, the same dues and camp charges as members.
14. Water Parade and Illumination.—A special effort will be made to decorate and illuminate the camp. The executive officers urge members to bring colored lanterns, flags and colored fire. An illuminated parade will take place if possible. The camp will open on Thursday, Aug. 10 and will terminate on Aug. 25.

W. H. COTTON, Commodore.

A. C. A. MEET, AUGUST 11 TO 26, 1893.

Site.

Once again will the Annual Meet of the A. C. A. return to the famed St. Lawrence River, and the locality selected for the camp is Brophy's Point, five miles below Kingston. This ground is now known as Long Island Park, so named after the island, of which it forms a prominent feature.

There is a good wharf and deep water suitable for large steamers, so that canoes and baggage can be landed easily and safely. The point is covered with hardwood trees, and the spot selected for the camp has been well underbrushed.

The beach is of such a nature that canoe stages can be easily constructed, and the bathing is excellent. A glance at the map will show the large extent of this ground, and as it has all been leased by the A. C. A., members not desiring to join the general camp are at liberty to select their own sites subject to the approval of the camp site committee.

Squaw Point is splendidly situated at a convenient distance from the general camp on rising ground, with hardwood trees and good turf. This camp will also have a good canoe beach.

Mess.

Arrangements have been made for the general mess, and no pains will be spared to make this first class in every respect. There is a good dining pavilion, well roofed in, insuring comfort during bad weather. Ice will be supplied at low cost.

Camp Store.

Mr. Brophy will conduct a camp store on the ground, which will be supplied with all necessities for camp life. Lanterns, candles, coal-oil, fireworks, etc., for decorative purposes, will be on sale. Laundry work left at camp store will be attended to.

Lumber.

Lumber for flooring, floats, etc., can be procured from the camp site committee at reasonable rates.

How to Reach Camp.

From the U. S.—Cape Vincent and Clayton are the objective points for the camp. The New York Central & Hudson River R. R. and its leased line, the Rome, Watertown & Ogdensburg R. R., form the connecting link between New York City and places in New York State at these points. At Clayton connection will be made daily (Sunday excepted) with the new steamer Empire State, which will leave Clayton about 10:30 A. M. for Kingston, calling at Brophy's Point at 11:30 A. M. We give below the time table of the Wagner car service, which is not likely to vary much this year. Cape Vincent can also be

reached by the same lines, and there connection will be made with the steamers of the St. Lawrence River Steamboat Company for Kingston and the camp. This steamer leaves Cape Vincent on the arrival of the R. V. & O. trains at 9:40 A. M. and 7 P. M., arriving at Kingston at 11:40 A. M. and 7 P. M.

Time Table—New York and Clayton:

Leave New York, daily.....	7:30 P. M.
Albany.....	11:35 "
Utica.....	12:35 "
Arrive Clayton, ".....	5:45 A. M.
Camp, ".....	11:30 "
New York and Cape Vincent:	
Leave New York.....	9:15 P. M.
Albany.....	5:25 A. M.
Utica.....	5:50 "
Arrive Cape Vincent.....	9:40 "
Kingston.....	11:40 "
Camp.....	4:30 P. M.

Passengers from Boston may either come via Boston and Albany or Fitchburg Railroad to Albany, and thence to Clayton or Cape Vincent by N. Y. C. & H. R. R. or via Montreal by G. T. R. Special through tickets to Brophy's Point and return will be placed on sale at all important points on the N. Y. C. & R. W. & O. roads. The following will be special rates of fare:

Boston to Brophy's Point and return.....	\$14 25
New York " " ".....	9 25
Albany " " ".....	5 75
Utica " " ".....	5 75
Syracuse " " ".....	5 75
Rome " " ".....	5 75
Buffalo " " ".....	6 00
Rochester " " ".....	6 00

From Canada—Kingston will be the objective point for the camp and will be most conveniently reached from all points by Grand Trunk Railway and Richelieu & Ontario Navigation Co., whose boats always stop daily at Clayton. By special arrangements with the Canadian railroads, the rate to Kingston and return will be fare and one-third. Canoes and duffie up to 200lb. free, as baggage.

From Kingston. 4 P. M. Further service yet to be arranged for.

Customs.

All canoes and equipment will be admitted free of duty, on the understanding that they will be returned in thirty days. An officer will be stationed at Brophy's Point to avoid the necessity of going to Kingston before proceeding to camp.

Photographic Dark Room.

A suitable dark room will be erected for the use of members interested in photography.

Regatta Committee—Gen. Robert S. Oliver, Albany, N. Y.; W. J. Read, Bobcaygeon, Ont.; T. S. Oxholm, Yonkers, N. Y.; J. B. Carruthers, chairman, Kingston, Ont.

Camp Site Committee—R. Apollonio, Winchester, Mass.; W. B. Skinner, chairman, Kingston, Ont.; Hon. Justice C. P. Davidson, Montreal, Quebec.

Transportation Committee—W. E. Christie, Montreal, Quebec; H. S. Miller, Albany, N. Y.

Signalling Committee—R. A. Wadsworth, Signal Officer, Hartford, Conn.; F. W. Gisborne, Assistant Signal Officer, Ottawa, Ont.

The following circular has been sent out by the regatta committee: "The regatta committee of the A. C. A. desire to make an earnest appeal to members and outside members for prize flags to be presented for competition at the coming annual meet to be held in August. If any member cannot send a flag, a contribution to the prize fund would be equally acceptable, and a prize would be purchased in donor's name by the committee. All contributions and flags sent to the commodore or the chairman of the regatta committee will be duly acknowledged."

J. B. CARRUTHERS, Chairman Regatta Com.

KINGSTON, May 19.

KINGSTON, May 28.—*Editor Forest and Stream:* I wish to say a few words regarding the A. C. A. year book, just issued, to apologize for its being a little late in production, due in some measure to its being printed in (comparatively) an out of the way place, and perhaps in a larger degree to the inexperience of the editor. We have tried to make the book as accurate as possible, but in spite of careful proof-reading a few errors will creep in, and I can only ask those members who are affected thereby to remember that "To err is human, to forgive divine." The cost of the year book to the Association has been almost met by the advertisements it contains, and the attention of members is drawn to these advertisements, in the hope that they will endeavor to patronize those firms who have contributed ads.

The two poems were written especially for this book.

R. EASTON BURNS, Sec'y A. C. A.

Red Dragon C. C.

Taz interest displayed during the past winter by the members has been fruitful to the club. The membership has been increased and the financial condition is better than at any previous time in its history.

The season's sports will be inaugurated on Saturday, June 3, on the Delaware River in front of the club house at Wissinoming on the New York division, P. R. R., where the spring regatta will take place. The committee have concluded upon three events, viz.: the sailing, single and tandem paddling races. Great interest has been manifested in the coming event. Many of the old canoes have been renovated and changes made to improve their sailing qualities. Messrs. H. McCormick and Finamore have new Sharpie canoes, differing materially in design from any Sharpie canoes heretofore sailed, with which they intend carrying off the prizes. Apropos of new boats, Mr. Hamilton is having a 16x30 canoe built by the St. Lawrence Co., which may reach here before the races; Mr. Fleischman has a new decked paddling canoe, Mr. Scott a new canoe yawl 15x12, A. Fleischman an 18ft. cruiser. The two gentlemen last named will cruise in Chesapeake Bay the coming summer. All the above boats are the design of H. McCormick, who is gaining quite a reputation, as all crafts designed by him have fully met their owners' expectations as fast sailers.

Invitations to be extended to all canoe clubs in our vicinity and any canoeists desiring to enter any of the events will please send their name to M. D. Wilt, 1427 North Fifteenth street, Philadelphia. A. C. A. rules will govern the races.

F. O. G.

Mahn-a-Wauks.

MILWAUKEE, May 20.—The canoeing season was auspiciously inaugurated to-day by the Mahn-a-Wauk Canoe Club. A fair breeze prevailed and the fastest canoes in the fleet were out. Huntington's Canoe No. 2, built by Sauve; Hansen's fin-keel Avis, winner of the W. C. A. trophy last year, and Electra, built for A. W. Fries, commanded the greatest attention. The Sharpie canoes hereabouts were prepared for the Mahn-a-Wauk's regatta committee and have prepared an interesting programme of races which will give members of the club a fine season's sport. The opening day will be May 30. In the morning there will be a paddling and sailing race and in the afternoon two more sailing events, one a maneuvering race. On July 4 the programme will be the same as on Memorial Day, except that a man-over-board-race will take the place of the maneuvering race. The races on Saturday afternoons will be started promptly at 4 o'clock. This year the club will try a novelty in canoe sailing and paddling, by handicapping all events. The opinion prevails that prettier and more exciting finishes will be made in this way.

A. W. FRIESE.

A. C. A. Membership.

Northern Division: B. W. Folger, J. Shaw Skinner, P. H. Macarn Dr. O. W. Daly and W. S. R. Much, Kingston, Ontario.

CANOE NEWS NOTES.

The annual club book of the Humber Yawl Club, is specially good this year, the illustrations being excellent.

We have received from Mr. J. H. Rushton his new catalogue for 1893, entitled "The World's Columbian Exposition Edition." Mr. Rushton has a very fine exhibit at Columns 31 and 32, E. Transportation Building. The catalogue contains full descriptions and illustrations of the very large line of boats and canoes made by him.

Yachting.

The racing yachts about the Solent this past week had a breezy time of it, and the new 40-raters Lais and Vendetta have had a fine time canvas-stretching. Varuna also has been under way. The small class racing was somewhat interfered with by the strong wind, but the winning crews were delighted. The bandbox style of construction was severely tried, and, in one or two cases, with something very like collapsing sides. We hope a lesson has been learned, and that the craze for gaining a trifle out of a pound or two reduction in weight will be modified in consequence.—*Field.*

The Alterations to Navahoe.

On Monday of last week, after several delays and postponements, Navahoe was docked on the large dry dock of the Providence Dry Dock Company, at East Providence, for the alteration to her ballast. The work was intrusted to the firm of Thos. Phillips & Co., of Providence, engineers, machine builders and founders, and much of it was done in the shops before the yacht was docked. The requisite amount of lead, some 20 tons, was cast in twelve pieces of varying width, each about 4ft. long, the heaviest weighing over three tons. The middle pieces were 3ft. 3in. wide on top, 10 $\frac{1}{2}$ to 11in. deep, and of semi-elliptical cross section. Where the garboards come down to the keel plate on each side is an open angle, and to fill this and make a smooth surface a projecting lip about $\frac{1}{2}$ in. wide and deep was cast along the upper edges of each piece. After the pieces were bolted in place this lip was turned up with a heavy hammer and driven into the angle between the plates, the surplus lead being afterward planed off.

After the lead pieces were cast the holes for the bolts were carefully marked from templates made from the boat and showing all floors and angles. The pieces were then turned over and counterbored for the bolt-heads with a special cutter made at the works, together with a number of other special tools. Two small vertical engines were taken over to the dock, one as a reserve in case of accident, the other being set up beside the yacht on the floor of the dock. A counter shaft and tightening pulley was rigged on the side of the dock, and a cotton rope rove off to drive a flexible shaft, which in turn operated a portable drill.

Each block was fitted on special skids and rolled on to the dock and under the yacht, then large screws and hydraulic jacks were used to lift and hold the pieces in place. When finally the lead was put in place between the keel and lead, the drill was set to work and the holes, eight in each of the largest blocks, were drilled through the keel plate and up into the inside lead. A reamer and tap followed the drill, the counterbore was inserted, and then the bolt, of 1in. Tobin bronze, was set up with a box wrench. After the bolt was in a short cylinder of lead about 3 $\frac{1}{2}$ in. diameter, made to fit the counterbore, was driven in with a sledge and finally smoothed off level with the bottom of the keel.

The work was carried on by a large number of men under the superintendence of Mr. George R. Phillips, the head of the firm, but much of it was slow and tedious in spite of all preparation. Holes were drilled, reamed and tapped for 73 bolts.

When finished the job presented an excellent appearance, the keel was fair and smooth from end to end, the new lead neatly joined to the steel bottom, the under side of the keel being a semi-ellipse instead of a flat surface.

The worst part of the work was the removal of the same weight of lead from the inside of the hull, a very slow and difficult task. The lead was practically cast solid, a couple of layers of pigs being laid in and molten lead poured over them to fuse them together, after which a couple of new layers were laid and treated in the same way. In removing this lead it was necessary to chip it out in small pieces with a hammer and chisel, a very slow proceeding.

While on the dock the bottom of the yacht was painted with common brown metallic paint and then with an English anti-fouling composition of light color. Mr. Carroll was present every day, coming up on the first train from Newport and returning at night. The work was not completed until Monday. The yacht is now ready for her trip across, and will probably leave Newport within the next ten days.

YACHT NEWS NOTES.

Messrs. Seabury & Co. have been very busy at their shops at Nyack. The 30ft. steam launch Alva, Mr. W. K. Vanderbilt, owner, has been transferred from Newport to Nyack, where she is being got ready for this season's work. She will be crated for shipment abroad, to go via steamer Tauric of the White Star Line, to Laird Bros., Birkenhead, Eng., and will be used as tender on Mr. Vanderbilt's new steam yacht Valiant. This is the launch that was carried on the davits of the Alva, and transferred the crew of the Alva to the dock at the time of the collision, and towed the lifeboats from that point to Newport, distance about eighty-five miles through the ocean. In the regatta at Nice during March, 1892, this launch beat the Baron de Rothschild's launch Eros. The steam launch D. & H., designed and built by the firm for the Delaware & Hudson Canal Co., was launched on May 22. She is 35ft. long, 6ft. 9in. beam, and 2ft. draft. This boat is of special value to the D. & H. service. She is a 20-hp. boat, and the stern is so arranged so as to prevent the boat causing waves while she is making. The forward part of the launch is fitted as a cabin and office for the paymaster, with w.c. and wash room in after cabin. There is a roomy cockpit aft, covered with a canopy top roof. The machinery consists of a Seabury fore and aft compound engine, and a Seabury patent safety water tube boiler. The speed of the launch is 9 miles per hour, and she is not required to run any faster. The launch is to be used by the Superintendent and Paymaster of the D. & H. Canal Co., and is specially adapted for this purpose. The steam yacht Charlotte, belonging to Mr. W. J. Riker, N. Y. C., has gone into commission. The steam yacht Espadon, owned by Mr. F. DeCoppett, was also put in commission at the yards a few days ago. She will be used in vicinity of New Brunswick, N. J.

At Clay & Torbensen's yards, Gloucester, N. J., the following work is in hand: Folly, the 27-footer of Mr. E. H. Austin's, is now being overhauled and having a new spray board put on. The 25ft. steam sounding launch Nell, for the use of the Government engineers at Cincinnati, was launched last week; she is a beautiful boat in every respect, and well maintained the high standard of work set by this firm. Mr. James R. Hopkins's 30ft. yawl Wiff is now in the water; she is over 10ft. 6in. 20-hp. yawl. She is a 20-hp. boat, fitted with compound engine of about 12 miles an hour. The new 27ft. open steam launch for Mr. R. A. Shattuck is still on the stocks. She will spend the summer at Bar Harbor. She will have a six horse-power double-acting fore and aft compound engine and an oil burning boiler of the sectional safety water tube type. The 55ft. steam yacht for Mr. F. C. Fowler, designed by the firm, is now nearly completed and will probably be launched this week.

The schooner Alert has just been seized by R. M. Olcott, in a suit against her owner, John N. Luning to recover \$53,878.38. The suit has brought to light the fact that Mr. Luning, who lately returned from Europe, has married since his return, and as alleged has conveyed his property in New York State to his wife.

It appears that the plans for a yacht harbor at the World's Fair have been abandoned. Marshall D. Wilder, who was prominent in advocating the establishment of such a refuge, calls on the Fair officials to cancel the broadcast invitations sent out to yachtmen. He says that should they come and a southwest gale blow up, a dozen or more of the boats would inevitably be smashed or sunk.—*Chicago Journal.*

The Plymouth (Mass.) Y. C. has arranged the following events: May 30 open, June 17 open, July 4 open, Aug. 3 ladies' day, Sept. 4 outside race, Sept. 16 open, Oct. 7 open.

Puritan has been sold by Com. J. Malcolm Forbes, to a New York yachtman.

The annual election of the Mobile Y. C. on May 13 resulted as follows: Com., W. B. Curran; Vice-Com., W. H. Sadler; Sec'y-Treas., J. K. Vincent; Governing Committee, S. S. Woodhull, T. E. Hogg and L. C. Dorgan, Jr.

Vesta, steam yacht, designed by H. J. Gielow for H. A. Laughlin, of Pittsburgh, was launched at Wintringham's yard on May 25.

Narona, 30-footer, designed by Charles Olmstead, was launched at Wintringham's yard on May 25. Mr. Olmstead's other 30-footer will be named Anita, and the 25ft. fin mahogany boat will be named Gavelin. The former is ready for launching, but the latter has not yet received her keel.

Lounger, yawl, Mr. Hammond, built at Wintringham's last fall, returned to the yard a week since after a winter at Biscayne Bay. She went down through the canals, but came back outside.

Mr. Maxwell's fleet includes two small yachts for his boys, one the Myrtle, the other a new Clapham craft.

Harbinger, the noted 35ft. Cape cat, has been sold by J. R. Hooper, owner of Handsel, to Capt. Bill Daly, of Boston.

The new jib and mainsail racing boat designed by S. N. Small and built by Drake, of South Boston, is named Hylades.

Colonia has been officially measured. She is 149.41 tons gross and 136.22 tons net. Navahoe is 113.30 tons gross and 107.54 tons net. The official number of Colonia is 138,956, and her letters in the international code are K. L. Q. P.

The Boston Globe of May 28 contains an interesting summary of the local clubs between Cape Cod and Cape Ann, showing a promising amount of activity in building and refitting for the smaller races.

Early last week an attempt was made to launch the Waterhouse fin-keel Carmita at Lawley's, but she stuck on the ways and was not finally floated until Saturday. She is now nearly fitted out, and will soon be in commission.

RIFLE NOTES.

An interesting incident to those who were on the inside took place in one of our shooting parks last week. A rifleman of known ability had ordered a new barrel for his rifle from a New York gunsmith who has a reputation for getting up barrels for shooting lubricated bullets without cleaning. The barrel was fitted to the rifle, tested and delivered to the shooter. The shooter took the rifle out and tried it, and not getting satisfactory results, brought it back and said it was no good—in fact, condemned it. The gunsmith advised the shooter to take it out again and give it another trial. To which the shooter replied, "Very well. I will take it over to my friend Mr. —" mentioning another well-known rifleman. "We will try it; but I tell you the barrel is no good." Now the gunsmith, knowing the peculiarities of the rifle crank and having a natural feeling of sensitiveness for his reputation as a gunsmith, says to himself, "I will give those cranks a little dose of bitters." So he unscrews the barrel in question from the action and replaces it with another which belongs to a rifle that is known far and wide for its close shooting qualities, saying to himself, "It's a dollar to a doughnut that they condemn this barrel." The rifle was taken out and tried from a muzzle rest. The two cranks fired shot after shot, the most of them good, but now and then one that they did not "inspect;" and the final verdict was that the barrel was not right. Where the fault lay they could not say; there was no lead in barrel. In cleaning it out after shooting it some time, one crank said to the other, "I can't understand it at all, that barrel seems to be perfect!"

There is a report in circulation that one of the crack riflemen of Europe will make his appearance in America within a few weeks prepared to meet the best offhand riflemen that this country can produce. If this individual should happen to strike New York there is no doubt that he will find a few innocents who will be pleased to give him a little preliminary practice before striking for the woolly West.

After the close of the Zettler Club prize shoot which took place a few days since, and while the tired shooters were sitting around the

festive board regalling the inner man, the subject of match shooting was discussed to some extent. A Jerseyman made the statement that New Jersey could produce five men who were strong and able enough to outshoot in a 100 shot match any five men that could be produced in the United States. This assertion created a slight sensation among the group of shooters present, and there was some talk of taking five men from New York city and call the enthusiastic Jerseyman down, but up to the present moment there does not appear to have been any movement made on the part of the New York riflemen to bring the matter to a head.

Excelsior Rifle Club.

The regular weekly gallery shoot of the Excelsior Club was held at its headquarters, No. 78 Montgomery street, Jersey City, on Tuesday night, May 23. Six members were on hand to participate in the medal competition. C. Bauchel made the fine score of 247. The scores of the members are appended. Ten shots, possible 250, distance 75ft.: C. Bauchel 247, J. Speicher 244, C. Thomas 243, W. J. Hennessey 240, R. A. Duff 222, L. A. Ryer 220.

At the weekly outdoor shoot at Armbruster's Park, on Friday afternoon, May 26, only three members put in an appearance, who scored: L. P. Hanson 223, C. Ward 212, Wm. Weber 207.

Independent N. Y. Schutzen Corps.

The Independent N. Y. Corps, under the lead of Captain Wm. V. Weber, assembled in Washington Park on Wednesday, May 24. The weather was fine. Ernest Fisher made 115 points (5 shots) out of a possible 125, on the ring target. Messrs. Walther and Kuhn tied on the man target each with a score of 57. That undecided tie from the winter gallery shoot for the club medal between B. Walther and Gus Zimmerman was shot off to day. Each contestant shot three shots on the man target, possible 60. Walther made 52 and Zimmerman 50. Scores on the ring target, 5 shots, possible 125: E. Fisher 115, Ceb. Krauss 110, Wm. Hayes 107, Ignatz Marten 107, Fred Simon 105, F. Pittschler 83, J. Lowie 83, M. Kuhn 75.

Man target, 3 shots, possible 60: M. Kuhn 57, B. Walther 57, Gus. Zimmerman 56, J. Marten 56, Wm. Hayes 55, Geb. Krauss 55, E. Fisher 55, Fred. Simon 54, H. Weber 53, Alex. Stein 53, F. Pittschler 52.

Point target, 5 shots, possible 20 (4in. centre): Gus Zimmerman 19, Alex. Stein 18, Fred. Simon 17, Geb. Krauss 17, E. Fisher 16, H. Weber 16, J. Marten 16, M. Baab 15, F. Pittschler 14, H. Sulzer 14, A. Stolzenberger 14, M. Kuhn 13, M. Sternkopf 13, J. Lower 13, F. Bauer 13, W. Loell 13, J. Volz 12, M. Heoman 12, W. Kurtzer 10, M. Zuschlag 8.

Greenville Rifle Club.

The weekly gallery shoot of the club was held at its headquarters on Friday night, May 26. Eleven members participated in the competition for class medals. George Purkess was high with 242. The scores are appended, 10 shots, possible 250: Geo. Purkess 242, Wm. H. Robedoux 237, C. Boag 237, C. H. Chevant 236, G. Plaisted 236, W. C. Collins 236, J. Boag 235, J. Spahn 235, Henry Gotthardt 237, Joseph Kaiser 225, John Hill 224.

The weekly outdoor shoot took place in Armbruster's Park on Saturday afternoon, May 27. The weather conditions at the start were not favorable for high scores on account of the changable light, but late in the afternoon the conditions were improved and some good scores were made. Fred Ross led the others with a score of 228, Plaisted and Dorrier tying with 222 each. The scores are appended, 10 shots, possible 250, distance 215yds.: Fred Ross 228, George W. Plaisted 222, M. Dorrier 222, C. H. Chevant 214, O. C. Boyce 214, Wm. H. Robedoux 212, C. Schelein 210, J. Boag 207, J. Spahn 203, John Hill 189.

Beideman Rifle Club.

BEIDEMAN, N. J., May 23.—The following shows the weekly shoot of the Beideman Rifle Club, week ending May 20; conditions, 25yds., strictly off-hand targets, 14in. ring, possible 250: A. J. Yergy 247, E. L. Gardiner 243, J. L. Wood 242, W. Gilbert 235.

MISSOURI STATE TOURNAMENT.

KANSAS CITY, May 20.—The Missouri State Fish and Game Protective Association held its sixteenth annual convention and tournament in this city the past week. The attendance was only fair but the sport was of a high order. The convention was held at the Midland Hotel on Monday evening, with R. D. Mize, of Independence, presiding in the absence of President J. J. Owens. The roll call of club members showed nine clubs represented, viz., the Kansas City, Independence, O. K., of Kansas City, St. Joseph's Sportsmen Club, the St. Joseph, Gates City, Washington Park, Forester, Stock Yards and the Belt Line, of Kansas City. Owing to the fact that the St. Louis Gun Club had not then arrived, the question of place of holding the next tournament was laid over until Wednesday afternoon, at which time St. Louis was selected as the place for the next State shoot and the following officers elected. President, L. D. Dozier, of St. Louis; Vice President, Dr. J. G. Parrish, of St. Louis; Recording Secretary and Treasurer, John Coles, of St. Louis; and Corresponding Secretary, Charles Hartman.

Judge J. E. Guinotte offered a resolution indorsing the reappointment of Judge Jackson L. Smith, of the Kansas City Court of Appeals as a member of the Missouri Fish Commission. Judge Smith is an able jurist, and has been particularly active in drafting and securing the passage of laws for the protection of the fish and game, and on motion the resolution was unanimously adopted and the secretary instructed to forward a copy of the resolution to Governor Stone, and to invite the State Amateur Shooting Association to co-operate with this Association in urging Judge Smith's reappointment.

A lengthy discussion followed in relation to the proposed killing of game out of season and a committee of six was appointed to investigate thoroughly the laws now on the statute books and provide ways and means for the enforcement of such laws as are now being violated. The committee was also instructed to make an effort to secure the passage of a law at the next session of the Legislature to provide for district game wardens whose duty it shall be to enforce the laws and prosecute all violators. Judges J. E. Guinotte, James Whitfield, M. F. Myers, George Schroeder, Dr. J. G. Parrish and W. Q. Dallmeyer were named as the committee.

The principal events of the week were the race for the teams of four representing the various gun clubs of the State Association for the State championship and the individual State championship race. The team race was at 15 birds to each man and was won by the O. K. Gun Club of Kansas City, which was an exceptionally strong one, being composed of J. A. R. Elliott, A. L. Bennett, J. B. Porter and J. L. Porter. The Independence Gun Club took second honors, the Kansas City Gun Club third, the St. Louis Gun Club fourth and the Foresters fifth. There was the greatest interest manifested in the individual State championship race, which is a new idea. Henceforth the St. Louis Gun Club media had been recognized as the individual championship trophy, but it was only a 10 bird race and was subject to unsatisfactory conditions, and the State Association waived all claim to the St. Louis medal and established a championship event, which provides for a 25-bird race, entrance fee only the price of the birds, and the club or clubs under whose auspices the State tournament is held is required to hang up a suitable trophy, which becomes the property of the winner. The Independence Gun Club were quite liberal in the matter of the trophy, and offered a handsome solid gold watch valued at \$150, which is to be suitably inscribed. The conditions of the race require that this race must be to a finish and shot out until some one shooter shall have shown his superiority over the rest. This event is a popular one, as evidenced by the fact that there were 53 entries in the race, although the attendance was rather light. J. A. R. Elliott and J. E. Riley tied on 25 straight for the honor, and in the shoot-off at 5 birds Elliott won, as Riley lost his fifth bird, a hard-flying straightaway. For second place J. F. Schmelzer & Sons offered an A. L. C. Smith hammerless gun, which was won by A. L. Bennett, who shot out V. W. Flowerree and L. W. Scott, who had tied him on 24. There was some disappointment at Bennett's winning a bird, as it was expected that he would be in for the championship, and a battle royal between him and Elliott had been looked forward to. The two-man team shoot was also an interesting one and was won by A. L. Bennett and F. C. Maegley, of the O. K. Gun Club, who each made straight scores.

The birds on the whole were a better than average lot of strong flyers with the exception of the Turkey, when considerable flagging was necessary. The tournament took place at Elliott's new grounds at Washington Park, about midway between this city and Independence. The grounds are conceded to be the best in the country by all the visiting shooters who were present, being supplied with all the modern conveniences for live bird and target shooting. The club house is on a high knoll that gives a clear view of the entire field, and spectators are not permitted to go near the score arranged for the spectators.

The inaugural dash was a 10-bird sweepstakes, \$5 entrance, and brought out twenty-four contestants. Frank Nofsinger, who won the Gate City medal on Saturday after a hot race with Burrell on 19 straight, was in great form and killed his 10 straight in a clean manner which gave him a title of first money, \$29.90, and the sweepstakes. As Budd and Elliott, after shooting out Riley, second money, \$16.20, was divided by Chouteau and Batcheller; Mason won third, \$10.80, and Mize fourth, \$5.40. The score:

Nofsinger.....	1211111111-10	Elliott.....	1211111111-10
A. L. Bennett.....	1211111111-10	Chouteau.....	1230111132-9
Budd.....	1211111111-10	Riley.....	1230111132-9
Mize.....	1211111111-10	Higgins.....	1230111132-9
Halliwel.....	1211111111-10	Batcheller.....	1011121121-8
Burrell.....	1010102320-6	Riley.....	1121121212-10
Tramp.....	1010102320-6	Biederman.....	1121002121-8
Cogswell.....	1210101112-8	Williams.....	0030311230-5
Burd.....	1211111111-10	Mason.....	1230111132-9
W. Bennett.....	1211111111-10	Flowerree.....	1211111111-10
Hershey.....	1000221000-4	Denn.....	0301002120-6

The next was a 10-bird sweep, \$7.50 entrance, and there were thirty-two contestants. The first money, \$37.30, was divided by Bennett, German, Riley and Cogswell on 10 straight, and second money, \$42.90, was cut up by Elliott, Kearns, Mason, Burrell and Baker. There was an interesting shoot off for third money, \$28.60, as there were fourteen shooters and Carter and Nye tied after killing a straightaway. Fourth money, \$14.30, was divided by Biederman and Knoche. The score:

A. L. Bennett.....	1221232222-10	Higgins.....	0120121232-8
Budd.....	1021111111-8	Hershey.....	1021121132-8
Riley.....	1212232222-10	Baker.....	1311210111-9
Essig.....	1012222222-8	Williams.....	0103003111-5
Burrell.....	1012111111-8	Gordon.....	1220221232-8

Smith.....	1222301010-5	Mulligan.....	1111021120-8

The target races on Monday were as follows:

No. 1, 15 targets, \$2:

Halliwel.....	1101111111-8	Irwin.....	1011111111-8
A. L. Bennett.....	1101111111-8	Burrell.....	0101001010-7
Mize.....	1101111111-8	W. Bennett.....	1101111111-8
Budd.....	1101111111-8	Elliott.....	1011101111-8

First money, \$5.80, divided by A. Bennett and Mize; second, \$3.45, W. Bennett and Elliott; third, \$2.30, Irwin.

No. 2, 10 targets, \$1:

Mize.....	1101111111-9	Pearce.....	1101101111-8
A. Bennett.....	1011111011-8	Hershey.....	1011111111-9
Budd.....	1101111011-8	W. Bennett.....	1101101010-6
Halliwel.....	1101111011-8	Riley.....	1011011011-7

First money, \$2.90, Elliott; second, \$1.75, divided by Mize and Hershey; third, \$1.75, divided by ties on 8.

No. 3, 10 targets, \$1:

Halliwel.....	1110101011-7	Bryant.....	1111101111-9
Mize.....	1101101011-7	Moore.....	1101111111-10
A. L. Bennett.....	1101101111-9	Scott.....	1010111111-8
Rickmers.....	1101101111-9	W. Bennett.....	0110101011-7

First money, \$2.60, Moore; second money, \$1.55, A. Bennett and Bryant divided; third, \$1.05, Scott.

No. 4, 10 targets, \$1:

Budd.....	1101101011-9	A. L. Bennett.....	1111111111-10
Riley.....	1101010101-6	Batcheller.....	1111101111-9
Baldwin.....	1111101011-8	Elliott.....	1011010111-7
Halliwel.....	1101101011-6	Hershey.....	1111111111-10
Mize.....	1111101011-9	W. Bennett.....	1101111111-8

First money, \$3.25, divided by A. L. Bennett, A. Bennett, second, \$1.95, divided by ties on 9; third, \$1.30, Baldwin and W. Bennett.

No. 5, 5 pairs targets, \$1:

Rudd.....	11 11 11 11 11-9	Scott.....	11 11 11 11 11-9
Elliott.....	11 11 11 11 11-9	Bryant.....	11 01 11 11 11-8
Rickmers.....	11 11 11 11 11-9	Gordon.....	11 11 11 11 11-8
Halliwel.....	11 10 11 11 11-9	W. Bennett.....	01 10 11 11 11-7
Baker.....	11 11 11 11 11-9	A. L. Bennett.....	11 11 11 11 11-10
Moore.....	11 11 11 11 11-9		

First money \$3.25, A. L. Bennett; second \$1.95, div. by Rickmers and Scott; third \$1.30, div. by Baker and Bryant

No. 6, 15 targets, \$1.50:

Riley.....	1111111111-14	Gordon.....	101111110011-11
Halliwel.....	10 1101110101-10	Budd.....	110111101111-13
Keene.....	0010101011-9	Scott.....	111111111111-14
Batcheller.....	101011111111-13	Rickmers.....	111111111111-15
Durkee.....	100011101011-10	Burrell.....	111101111011-13
Knoche.....	011010110111-10	Harding.....	101101011011-11
Kearns.....	010110101001-7	V. Bennett.....	110111101111-12
Elliott.....	011010101111-10	Bryant.....	1010011111001-10
A. L. Bennett.....	011111111111-13		

First money, \$5.48, Rickmers; second \$4.10, div. by Riley and Scott; third \$2.75, div. by ties on 13; fourth \$1.37, W. Bennett.

No. 7, 10 targets, \$1:

Mize.....	0111111111-9	Scott.....	1111110111-9
A. L. Bennett.....	0101111111-8	Rickmers.....	1111101110-8
Dudd.....	1010101111-7	Hershey.....	1111011010-8
Durkee.....	1101010111-7	Bryant.....	1111011010-8
Biederman.....	0101101111-7	Riley.....	1111110100-7
Batcheller.....	1011101111-7	Elliott.....	1111111111-10
Halliwel.....	1101001111-6	Keene.....	0011111111-8
Baker.....	1100101010-6	Harding.....	1010001001-3
W. Bennett.....	0101011111-6		

First money, \$5.50, Elliott; second, \$3.30, divided by Mize and Scott; third, \$2.30, divided by Burrell and Hershey.

No. 8, 10 targets, \$1:

Budd.....	1111111111-9	A. L. Bennett.....	1111110101-8
Mize.....	1110101111-8	Hershey.....	1111101111-9
Bryant.....	1111000111-8	Rickmers.....	1111101010-7
Elliott.....	0101100011-5	Scott.....	1111111111-10
Higgins.....	0000011111-5	Burrell.....	1111111110-9
Keene.....	1111101011-7		

\$1.43, divided by ties on 8.

No. 9, 10 targets, unknown angles, \$1:

A. L. Bennett.....	1111100001-6	Elliott.....	0111101111-8
Burrell.....	1110101010-6	Keene.....	1110110101-8
Budd.....	0101111111-8	W. Bennett.....	1101111010-7
Mize.....	0111000111-6		

First money, \$1.75, Keene; second, \$1.05, W. Bennett; third, 70 cents, Burrell.

The Second Day.

Live bird shoot No. 3, for teams of two members of the State Association, 10 birds to each man:

A. L. Bennett.....	1211121212-10	W. S. Halliwel.....	2101112121-9
F. Maegley.....	1211222222-10	Geo. Youmans.....	0123020202-6
F. J. Smith.....	2201121212-9	H. Dick.....	2121011112-9
W. Baker.....	0123020202-6	J. H. Hill.....	0123020202-6
D. S. Gordon.....	1211222222-10	W. Cogswell.....	1210211020-7
J. E. Riley.....	2202011212-7	R. D. Mize.....	1210211020-7
G. Hammond.....	0022010202-6	J. A. R. Elliott.....	2110111111-9
J. H. Durkee.....	2001020121-5	J. K. Guinotte.....	0221222222-9
E. Chouteau.....	2120202122-9	J. B. Burrell.....	2020102302-6
W. Kearns.....	2120220101-7	W. Bennett.....	0222202012-7
Underwood.....	2121212121-9	C. Williams.....	2121212121-9
D. S. Gordon.....	1010211121-8	J. Black.....	1101212121-9
J. W. Batcheller.....	1011212121-8	V. W. Flowerree.....	0001212122-7
M. F. Myers.....	1012111102-8	C. F. Holmes.....	2201021230-7

First money, \$51.80, Bennett and Maegley; second, \$38.85, Williams; Black; third, \$25.90, Elliott and Guinotte; fourth, \$12.95, divided by ties on 17.

No. 4, 10 live birds, \$7.50:

Keck.....	1212210221-9	Hershey.....	212021200-7
Halliwel.....	1212210221-9	Hill.....	1112121212-10
Kearns.....	1212210221-9	Batcheller.....	0223001011-9
Burrell.....	1112220222-8	Dick.....	2202111122-9
Williams.....	1112220222-8	Mitchell.....	1002300100-4
Dennis.....	1012211012-9	"Blue Eyes".....	2222020222-7

The Fifth Day.

Sweepstakes shooting was resumed Friday after the championship race was completed, and the first was a 10 bird sweep, \$7.50 entrance. Irwin.....021212212-9 Riley.....022222212-9 Mize.....121202212-6 Kearns.....022221112-10 Coggswell.....110222212-8 Baker.....121110101-8 "Blue Eyes".....202222102-7 Mulligan.....110222122-9 Burrell.....221022120-8 Hershey.....111211101-9 Smith.....1201012212-8 Elliott.....111211101-9 Bennett.....212022212-8 Mason.....121212211-10 Higgins.....202221000-6

First money, \$31.44, was divided by Mason and Kearns; second, \$28.55, Budd; third, \$15.72, Smith and Bennett; fourth, \$7.80, by Coggswell and "Blue Eyes."

The target races commenced to lag during the day, and what races were shot were not of much importance, the entries being light.

The visitors all left for home Friday evening, and but little shooting was done yesterday, one small live bird sweep and a few target sweeps, with about half a dozen tries closing the tournament. The tournament has been a successful one for the management. Nearly 3,000 birds were disposed of and about 6,000 targets. Dr. W. F. Carver arrived here to-day, and Elliott has a friend who thinks of backing the local man against "Evil Spirit" for any amount from \$100 to \$1,000 a side.

W. F. Carver.

Coney Island Athletic Club Cup.

The fifth contest of the series for the Coney Island Athletic Club's silver cup, representing the championship of Kings county gun clubs, was held at Dexter Park on Tuesday, May 28.

The weather was as fine as any trap-shooter could wish for, and Miller furnished a lot of fast-flying birds that tested the skill of the marksmen.

The eight clubs originally entered were represented, but only one of the Northside Gun Club shot out his score. The other seven had out their full complement, and some live shooting was witnessed. On the part of the Atlantic Rod and Gun Club, the veterans J. B. Voorhees, C. E. Morris and Henry Balzer, made straight scores of 15 and sent their club to the front with a total of 68. The young Vernon Rod and Gun Club tied with New Utrecht Rod and Gun Club with 64 each. W. H. Thompson, of the former, and E. Nostrand, of the latter, scored 15 straight each. E. Helgans, of the Parkway, was the only other straight scorer. Captain Shepherd, of the Crescents, was the one to make a score of 14. The Coney Island Rod and Gun Club scored 61 for third place, the Parkway coming next with 58, the Crescents 55, and the Glenmores last with 51. Some remarkably fine shots were made by C. E. Norris, J. B. Voorhees, H. Balzer, W. Selover, C. Murphy, C. Plate, J. Bennett, E. Helgans, John Rathjen, C. Furguesen, Jr., and G. E. Nostrand.

The standing of the teams that have completed their scores to date is as follows: New Utrecht Rod and Gun Club 317, Atlantic Rod and Gun Club 309, Coney Island Rod and Gun Club 305, Vernon Rod and Gun Club 296, Parkway Rod and Gun Club 289, Glenmore Rod and Gun Club 280. The scores:

WESTERN TRAPS.

The following letter received by the Western office of FOREST AND STREAM explains itself. The simplicity and equity of the system make it worthy of careful consideration. Each shooter receives a return in the ratio of his skill. It is presented by Mr. A. L. W. Knox, Masonic Temple, Chicago.

"Now that the trap-shooting season is fully opened up, I thought I would submit to you a plan on the much-talked-of subject, the division of purses, something that will help out the young shooter at the club shoots and tournaments, and at the same time hold down the crack shots. The idea, in a few words, is pay them all alike for what they break. For instance, take a shoot of ten entries. We will say, before commencing to shoot, that the six highest scores take the pot (all ties counting as one score). The following example will more closely define the idea, viz:

20 birds, \$2.25 entrance. Score: A breaks 20, B breaks 18, C breaks 18, D breaks 17, E breaks 16, F breaks 14, G breaks 14, H breaks 13, I breaks 11, J breaks 9.

Purse \$2.50, less cost of birds, 14, \$2.50, total \$20. This was to go to the six highest scores. They broke 117 targets. Now, pay each contestant according to his score, and it is 17 cents for each target broken.

A, 20x17 cents, gets.....	\$3.40
B, 18x17 cents, gets.....	3.05
C, 18x17 cents, gets.....	3.05
D, 17x17 cents, gets.....	2.75
E, 16x17 cents, gets.....	2.50
F, 14x17 cents, gets.....	2.35
G, 14x17 cents, gets.....	2.35

\$19.85

"The odd money goes toward the birds. This accrues by paying even money to the contestants. The practically does away with the dividing of purses, and, while it does not pay the high score fellows as much money as the old plan, it pays them well enough and encourages the young shooter, as he will say, 'I saved my bacon, anyway,' and thus does not get discouraged, but comes again and again. Why? Because he knows he has a fair and reasonable show, and is not paying out continually as he was under the old 40, 30, 20 and 10¢ way, when he had but a meager show to get anything back, and if he did it was on a divide with somebody. This plan will work at any number of targets and all kinds of purses. It is simply: Divide the purse after taking out cost of birds by the sum total of the broken targets of the number of scores you wish it to be divided among. It will pay them all the same amount per target for what they have broken."

"The top notches may say: 'Why, we ought to have more money for our skill.' Yes, but what this system is for is to help the young shooter, give him a chance to learn to shoot. The average shooter is tired of being a 'sucker' at the tournaments throughout the country. If you don't think this is so, look over the scores of our tournaments taking place throughout the country, and you will find more professionals than you did two years ago by an average of ten to one. Some thing should be done to help the young shooter. This is my plan. Let us hear from others."

The handbook and programme of the 19th annual convention and tournament of the Illinois States Sportsmen's Association is beautifully gotten up—an artistic production of the printer's art. It is elegantly illustrated with cuts of the different buildings of the World's Columbian Exposition, and a birds-eye view of the World's Fair grounds also is presented. Rules governing live bird and inanimate flying targets are given in full. In all, 48 pages of matter are presented. W. L. Shepard, sec-treas., 164 La Salle street, Chicago.

The international Columbia prize shooting, from June 1 to Sept. 1, in the park of the Chicago Trap-Shooters' Association has a programme which shows a variety of events. The Bullseye Target (4in. bullseye in 12in. circular black) 60ft., King Target (25in. ring target), 1st, 150 and King medal, value \$50; Columbia Target (25in. ring target), Stich Target (4in. bullseye circular black, 1st, \$50). People's Target, Nan Target, Standard Target and Team Target. The events have a multitude of cash prizes, varying from \$500 to first, to \$1 for the smaller ones. Address A. Boese, 49 La Salle street, Chicago.

B. WATERS.

The Tournament at Putney.

The first tournament of the Putney (Vt.) Rod and Gun Club was held May 25 and 26, and although the attendance was not so large as expected, still was a fairly successful shoot. The weather was all that could be desired, excepting a strong wind the first day that was directly behind the targets, and made their flight very swift and uneven. The grounds are completely surrounded by trees, making a dark green back ground, which also helped to keep the scores down. Among the visitors present were Mr. Ames of New London, Conn., who likes to set Partridge and Kestrel targets to all who desire first class good shooting. Mr. Warren of the Hub Target Co., Messrs. Bolt, Blamey, Whitcomb and Winchester of Holyoke, who are always ready to shoot, also several from Townsend, Vt. Others that were expected failed to show up, but the few who came had a good time. Hub targets were used, in expert bluecock traps. Nos. 2, 4 and 7 were at 5 singles, 1, 3, 9, 12, 14 at 10 singles, 5 at 15 singles and 8 at 20 singles with \$10, added money, 6 and 11 at 5 pairs, and No. 10 at 6 singles and 2 pair.

First Day.

W E DUCK CALLS.

Grubb's Improved Illinois River Duck Call. The most natural-toned call made; easy to blow; not easy to get out of repair, having a fine tempered reed; makes it so you can call teal, woodcock and bluebird, as well as mallard. This is the only call you can do this with. Price 55 cents.
Same as above, made of red cedar, silver mounted, with silver reed which gives it perfect tone, \$1 Every one warranted. Address
